Primary Authors: Bert Rich, Mary Beth Roeser

Contributing Authors: David McDermid, Sarika Surampudi

Contributors: Nipun Agarwal, Rick Anderson, Mark Bauer, Neerja Bhatt, Tudor Bosman, George Cande, Wilson Chan, Sumanta Chatterjee, Eugene Chong, Connie Dialeris Green, Harvey Eneman, Bruce Ernst, Ira Greenberg, Steve Harris, Thuvan Hoang, Lilian Hobbs, Namit Jain, Hakkan Jakobsson, Bob Jenkins, Mark Johnson, Jonathan Klein, Sushil Kumar, Tirthankar Lahiri, Bill Lee, Yunrui Li, Juan Loaiza, Rich Long, Diana Lorentz, Catherine Luu, Neil MacNaughton, Ari Mozes, Gopal Mulagund, Subramanian Muralidhar, Ravi Murthy, Karuna Muthiah, Arvind Nithrakashyap, Ronald Obermarck, Kant Patel, Christopher Racicot, Mark Ramacher, Shankar Raman, Suvendu Ray, Ann Rhee, Kathy Rich, Vivian Schupmann, Debbie Steiner, Malai Stalin, Seema Sundara, Juan Tellez, Alex Tsukerman, Kothanda Umamageswaran, Randy Urbano, Steve Vivian, Eric Voss, Tak Wang, Steve Wertheimer, Andy Witkowski, Daniel Wong, Graham Wood, Brian Wright, Aravind Yalamanchi, Qin Yu, Mohamed Ziauddin

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Part I Initialization Parameters

1 Initialization Parameters

1.1 Uses of Initialization Parameters	1-1
1.1.1 Types of Initialization Parameters	1-2
1.1.1.1 Derived Parameters	1-2
1.1.1.2 Operating System-Dependent Parameters	1-2
1.1.1.3 Variable Parameters	1-2
1.2 Basic Initialization Parameters	1-3
1.3 Parameter Files	1-3
1.3.1 Server Parameter Files	1-3
1.3.2 Initialization Parameter Files	1-4

1.3.2.1	About the Character Set of Parameter Values	1-4
1.3.2.2	Specifying Values in an Initialization Parameter File	1-5
1.4	Changing Parameter Values in a Parameter File	1-7
1.4.1	Parameters by Functional Category	1-8
1.4.2	Modifiable Parameters	1-16
1.4.3	Displaying Current Parameter Values	1-23
1.4.4	Parameters You Should Not Specify in the Parameter File	1-24
1.4.5	When Parameters Are Set Incorrectly	1-24
1.5	Reading the Parameter Descriptions	1-24
1.6	Initialization Parameter Descriptions	1-25
1.7	ACTIVE_INSTANCE_COUNT	1-26
1.8	ADG_ACCOUNT_INFO_TRACKING	1-27
1.9	ADG_REDIRECT_DML	1-27
1.10	ALLOW_GLOBAL_DBLINKS	1-28
1.11	ALLOW_GROUP_ACCESS_TO_SGA	1-29
1.12	ALLOW_ROWID_COLUMN_TYPE	1-29
1.13	APPROX_FOR_AGGREGATION	1-30
1.14	APPROX_FOR_COUNT_DISTINCT	1-31
1.15	APPROX_FOR_PERCENTILE	1-31
1.16	AQ_TM_PROCESSES	1-32
1.17	ARCHIVE_LAG_TARGET	1-33
1.18	ASM_DISKGROUPS	1-34
1.19	ASM_DISKSTRING	1-35
1.20	ASM_IO_PROCESSES	1-36
1.21	ASM_POWER_LIMIT	1-36
1.22	ASM_PREFERRED_READ_FAILURE_GROUPS	1-37
1.23	AUDIT_FILE_DEST	1-38
1.24	AUDIT_SYS_OPERATIONS	1-39
1.25	AUDIT_SYSLOG_LEVEL	1-40
1.26	AUDIT_TRAIL	1-41
1.27	AUTOTASK_MAX_ACTIVE_PDBS	1-43
1.28	AWR_PDB_AUTOFLUSH_ENABLED	1-44
1.29	AWR_PDB_MAX_PARALLEL_SLAVES	1-45
1.30	AWR_SNAPSHOT_TIME_OFFSET	1-46
1.31	BACKGROUND_CORE_DUMP	1-46
1.32	BACKGROUND_DUMP_DEST	1-47
1.33	BACKUP_TAPE_IO_SLAVES	1-48
1.34	BITMAP_MERGE_AREA_SIZE	1-49
1.35	BLANK_TRIMMING	1-49
1.36	BLOCKCHAIN_TABLE_MAX_NO_DROP	1-50
1.37	CIRCUITS	1-51
1.38	CLIENT_RESULT_CACHE_LAG	1-52

1.39	CLIENT_RESULT_CACHE_SIZE	1-52
1.40	CLIENT_STATISTICS_LEVEL	1-53
1.41	CLONEDB	1-54
1.42	CLONEDB_DIR	1-55
1.43	CLUSTER_DATABASE	1-55
1.44	CLUSTER_DATABASE_INSTANCES	1-56
1.45	CLUSTER_INTERCONNECTS	1-57
1.46	COMMIT_LOGGING	1-58
1.47	COMMIT_POINT_STRENGTH	1-58
1.48	COMMIT_WAIT	1-59
1.49	COMMIT_WRITE	1-59
1.50	COMMON_USER_PREFIX	1-60
1.51	COMPATIBLE	1-62
1.52	CONNECTION_BROKERS	1-63
1.53	CONTAINER_DATA	1-64
1.54	CONTAINERS_PARALLEL_DEGREE	1-65
1.55	CONTROL_FILE_RECORD_KEEP_TIME	1-66
1.56	CONTROL_FILES	1-67
1.57	CONTROL_MANAGEMENT_PACK_ACCESS	1-67
1.58	CORE_DUMP_DEST	1-68
1.59	CPU_COUNT	1-69
1.60	CPU_MIN_COUNT	1-70
1.61	CREATE_BITMAP_AREA_SIZE	1-71
1.62	CREATE_STORED_OUTLINES	1-72
1.63	CURSOR_BIND_CAPTURE_DESTINATION	1-73
1.64	CURSOR_INVALIDATION	1-73
1.65	CURSOR_SHARING	1-74
1.66	CURSOR_SPACE_FOR_TIME	1-74
1.67	DATA_GUARD_MAX_IO_TIME	1-76
1.68	DATA_GUARD_MAX_LONGIO_TIME	1-76
1.69	DATA_GUARD_SYNC_LATENCY	1-77
1.70	DATA_TRANSFER_CACHE_SIZE	1-78
1.71	DB_nK_CACHE_SIZE	1-78
1.72	DB_BIG_TABLE_CACHE_PERCENT_TARGET	1-79
1.73	DB_BLOCK_BUFFERS	1-81
1.74	DB_BLOCK_CHECKING	1-82
1.75	DB_BLOCK_CHECKSUM	1-83
1.76	DB_BLOCK_SIZE	1-84
1.77	DB_CACHE_ADVICE	1-85
1.78	DB_CACHE_SIZE	1-86
1.79	DB_CREATE_FILE_DEST	1-87
1.80	DB_CREATE_ONLINE_LOG_DEST_n	1-88

1.81	DB_DOMAIN	1-89
1.82	DB_FILE_MULTIBLOCK_READ_COUNT	1-90
1.83	DB_FILE_NAME_CONVERT	1-91
1.84	DB_FILES	1-92
1.85	DB_FLASH_CACHE_FILE	1-92
1.86	DB_FLASH_CACHE_SIZE	1-93
1.87	DB_FLASHBACK_RETENTION_TARGET	1-94
1.88	DB_INDEX_COMPRESSION_INHERITANCE	1-95
1.89	DB_KEEP_CACHE_SIZE	1-96
1.90	DB_LOST_WRITE_PROTECT	1-96
1.91	DB_NAME	1-97
1.92	DB_PERFORMANCE_PROFILE	1-98
1.93	DB_RECOVERY_FILE_DEST	1-98
1.94	DB_RECOVERY_FILE_DEST_SIZE	1-99
1.95	DB_RECYCLE_CACHE_SIZE	1-100
1.96	DB_SECUREFILE	1-100
1.97	DB_ULTRA_SAFE	1-102
1.98	DB_UNIQUE_NAME	1-103
1.99	DB_UNRECOVERABLE_SCN_TRACKING	1-104
1.100	DB_WRITER_PROCESSES	1-104
1.101	DBFIPS_140	1-105

Part IV Appendixes

A Database Limits

A.1	Datatype Limits	A-1
A.2	Physical Database Limits	A-3
A.3	Logical Database Limits	A-4
A.4	Process and Runtime Limits	A-6

B SQL Scripts

B.1	Creating the Data Dictionary	B-1
B.2	Creating Additional Data Dictionary Structures	B-2
B.3	The "NO" Scripts	B-5
B.4	Upgrade Scripts	B-6
B.5	Java Scripts	B-6

C Oracle Wait Events

C.1	Classes of Wait Events	C-1
C.2	Descriptions of Common Wait Event Parameters	C-2
C.3	Descriptions of Wait Events	C-5
C.3.1	alter system set dispatcher	C-5
C.3.2	ARCH Remote Write	C-5
C.3.3	ASYNC Remote Write	C-5
C.3.4	BFILE check if exists	C-5
C.3.5	BFILE check if open	C-6
C.3.6	BFILE closure	C-6
C.3.7	BFILE get length	C-6
C.3.8	BFILE get name object	C-6
C.3.9	BFILE get path object	C-7
C.3.10	BFILE internal seek	C-7
C.3.11	BFILE open	C-7
C.3.12	BFILE read	C-7
C.3.13	broadcast mesg queue transition	C-7
C.3.14	broadcast mesg recovery queue transition	C-8
C.3.15	buffer busy waits	C-8
C.3.16	buffer deadlock	C-9
C.3.17	buffer latch	C-9
C.3.18	buffer read retry	C-10
C.3.19	checkpoint completed	C-10
C.3.20	cleanup of aborted process	C-10
C.3.21	control file parallel write	C-10
C.3.22	control file sequential read	C-11
C.3.23	control file single write	C-11
C.3.24	cursor: mutex S	C-11
C.3.25	cursor: mutex X	C-12
C.3.26	cursor: pin S	C-12
C.3.27	cursor: pin S wait on X	C-12
C.3.28	cursor: pin X	C-12
C.3.29	db file async I/O submit	C-13

C.3.30	db file parallel read	C-13
C.3.31	db file parallel write	C-13
C.3.32	db file scattered read	C-14
C.3.33	db file sequential read	C-14
C.3.34	db file single write	C-15
C.3.35	DFS db file lock	C-15
C.3.36	DFS lock handle	C-16
C.3.37	direct path read	C-16
C.3.38	direct path sync	C-16
C.3.39	direct path write	C-17
C.3.40	Disk file operations I/O	C-17

E.2	Statistics Descriptions	E-1

F Background Processes

Index

Preface

This manual provides reference information about database initialization parameters, static data dictionary views, dynamic performance views, database limits, and SQL scripts that are part of the Oracle Database.

This preface contains these topics:

- [Audience](#)
- [Documentation Accessibility](#)
- [Diversity and Inclusion](#)
- [Related Documents](#)
- [Conventions](#)

Audience

Oracle Database Reference is intended for database administrators, system administrators, and database application developers.

To use this document, you need to be familiar with the following:

- Oracle database management system (DBMS) concepts
- Your operating system environment

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Related Documents

For more information, see these Oracle resources:

- *Oracle Database Concepts* for a comprehensive introduction to the concepts and terminology used in this manual
- *Oracle Database Administrator's Guide* for information about administering Oracle Database
- *Oracle Database Upgrade Guide* for the procedures for upgrading a previous release of Oracle to the new release
- *Oracle Database SQL Language Reference* for information on Oracle's SQL commands and functions
- *Oracle Database Development Guide* for information about developing database applications within Oracle Database

The complete documentation set for Oracle Database is available on the Oracle Help Center:
<http://docs.oracle.com/database/>

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Changes in This Release for Oracle Database Reference

This preface lists changes in *Oracle Database Reference*:

- [Changes in Oracle Database 19c, Release Update 19.22](#)
- [Changes in Oracle Database 19c, Release Update 19.16](#)
- [Changes in Oracle Database 19c, Release Update 19.13](#)
- [Changes in Oracle Database 19c, Release Update 19.11](#)
- [Changes in Oracle Database 19c, Release Update 19.10](#)
- [Changes in Oracle Database 19c, Release Update 19.6](#)
- [Changes in Oracle Database 19c, Release Update 19.4](#)
- [Changes in Oracle Database 19c](#)

Changes in Oracle Database 19c, Release Update 19.23

The following initialization parameter is new in Oracle Database 19c, Release Update 19.23:

- [SESSION_EXIT_ON_PACKAGE_STATE_ERROR](#)

Changes in Oracle Database 19c, Release Update 19.22

The following initialization parameter is new in Oracle Database 19c, Release Update 19.22:

- [OGG_ONLINE_DDL](#)

The following initialization parameter is changed in Oracle Database 19c, Release Update 19.22:

- The [PRE_PAGE_SGA](#) initialization parameter is deprecated. The value of [PRE_PAGE_SGA](#) is always set to [TRUE](#) on Exadata systems. Any attempt to set this parameter to [FALSE](#) on an Exadata system will not take effect.

Changes in Oracle Database 19c, Release Update 19.21

The following initialization parameter is new in Oracle Database 19c, Release Update 19.21:

- [MAIN_WORKLOAD_TYPE](#)

Changes in Oracle Database 19c, Release Update 19.16

The following initialization parameters are new in Oracle Database 19c, Release Update 19.16:

- [IDENTITY_PROVIDER_CONFIG](#)
- [IDENTITY_PROVIDER_TYPE](#)
- [TABLESPACE_ENCRYPTION](#)

Changes in Oracle Database 19c, Release Update 19.13

New AE Analytic Views

Oracle Database 19c, Release Update 19.13, introduces `AE` ("all edition") analytic views. Each new `AE` analytic view corresponds to an existing non-`AE` analytic view. `AE` views have the same columns as their non-`AE` counterparts, plus a column that displays the name of the application edition where the editioned object is defined.

The following table lists the new `AE` analytic views, divided into three categories: analytic view views, attribute dimension views, and hierarchy views. For brevity, only the `ALL_` views are listed. The corresponding `DBA_` and `USER_` views are also available and are documented in this guide.

Analytic View Views	Attribute Dimension Views	Hierarchy Views
ALL_ANALYTIC_VIEW_ATTR_CLS_AE	ALL_ATTRIBUTE_DIM_ATTR_CLS_AE	ALL_HIER_CLASS_AE
ALL_ANALYTIC_VIEW_BAS_MEAS_AE	ALL_ATTRIBUTE_DIM_ATTRS_AE	ALL_HIER_COLUMNS_AE
ALL_ANALYTIC_VIEW_CLASS_AE	ALL_ATTRIBUTE_DIM_CLASS_AE	ALL_HIER_HIER_ATTR_CLASS_AE
ALL_ANALYTIC_VIEW_CLC_MEAS_AE	ALL_ATTRIBUTE_DIM_JN_PTHS_AE	ALL_HIER_HIER_ATTRIBUTES_AE
ALL_ANALYTIC_VIEW_COLUMNS_AE	ALL_ATTRIBUTE_DIM_KEYS_AE	ALL_HIER_JOIN_PATHS_AE
ALL_ANALYTIC_VIEW_DIM_CLS_AE	ALL_ATTRIBUTE_DIM_LEVELS_AE	ALL_HIER_LEVEL_ID_ATTRS_AE
ALL_ANALYTIC_VIEW_DIMS_AE	ALL_ATTRIBUTE_DIM_LVL_ATRS_AE	ALL_HIER_LEVELS_AE
ALL_ANALYTIC_VIEW_HIER_CLS_AE	ALL_ATTRIBUTE_DIM_LVL_CLS_AE	ALL_HIERARCHIES_AE
ALL_ANALYTIC_VIEW_HIERS_AE	ALL_ATTRIBUTE_DIM_ORD_ATRS_AE	
ALL_ANALYTIC_VIEW_KEYS_AE	ALL_ATTRIBUTE_DIM_TABLES_AE	
ALL_ANALYTIC_VIEW_LEVELS_AE	ALL_ATTRIBUTE_DIMENSIONS_AE	
ALL_ANALYTIC_VIEW_LVL_CLS_AE		
ALL_ANALYTIC_VIEW_LVLGRPS_AE		
ALL_ANALYTIC_VIEW_MEAS_CLS_AE		
ALL_ANALYTIC_VIEWS_AE		

Changes in Oracle Database 19c, Release Update 19.11

The following initialization parameter is new in Oracle Database 19c, Release Update 19.11:

- [DRCP_DEDICATED_OPT](#)

The following static data dictionary views are new in Oracle Database 19c, Release Update 19.11:

- [DBA_ACCHK_EVENTS](#)
- [DBA_ACCHK_EVENTS_SUMMARY](#)
- [DBA_ACCHK_STATISTICS](#)
- [DBA_ACCHK_STATISTICS_SUMMARY](#)
- [ALL_IMMUTABLE_TABLES](#), [DBA_IMMUTABLE_TABLES](#), and [USER_IMMUTABLE_TABLES](#)

Changes in Oracle Database 19c, Release Update 19.10

The following initialization parameters are new in Oracle Database 19c, Release Update 19.10:

- [BLOCKCHAIN_TABLE_MAX_NO_DROP](#)
- [CONTAINER_DATA](#)
- [MAX_AUTH_SERVERS](#)
- [MIN_AUTH_SERVERS](#)
- [OPTIMIZER_REAL_TIME_STATISTICS](#)

The following static data dictionary views are new in Oracle Database 19c, Release Update 19.10:

- [ALL_BLOCKCHAIN_TABLES](#), [DBA_BLOCKCHAIN_TABLES](#), and [USER_BLOCKCHAIN_TABLES](#)
- [ALL_CERTIFICATES](#), [DBA_CERTIFICATES](#), and [USER_CERTIFICATES](#)
- [DBA_LOGMNR_DICTIONARY_BUILDLOG](#)

Changes in Oracle Database 19c, Release Update 19.6

The following initialization parameter is new in Oracle Database 19c, Release Update 19.6:

- [OPTIMIZER_SESSION_TYPE](#)

Changes in Oracle Database 19c, Release Update 19.4

The following initialization parameter is new in Oracle Database 19c, Release Update 19.4:

- [IGNORE_SESSION_SET_PARAM_ERRORS](#)

Changes in Oracle Database 19c

This section lists changes in *Oracle Database Reference* for Oracle Database 19c.

See *Oracle Database New Features Guide* for a complete list of new features for this release.

New Features

This section lists new features in this manual for Oracle Database 19c.

The following initialization parameters are new in Oracle Database 19c:

- [ADG_REDIRECT_DML](#)
- [ALLOW_ROWID_COLUMN_TYPE](#)
- [CLIENT_STATISTICS_LEVEL](#)
- [CPU_MIN_COUNT](#)
- [DATA GUARD_MAX_IO_TIME](#)
- [DATA GUARD_MAX_LONGIO_TIME](#)

- [ENABLE_IMC_WITH_MIRA](#)
- [LOB_SIGNATURE_ENABLE](#)
- [MAX_DATAPUMP_PARALLEL_PER_JOB](#)
- [MAX_IDLE_BLOCKER_TIME](#)
- [UNIFIED_AUDIT_COMMON_SYSTEMLOG](#)

 **Note:**

See [Initialization Parameters](#) for more information about these initialization parameters.

The following static data dictionary views are new in Oracle Database 19c:

- [ALL_TRIGGERS_AE](#), [DBA_TRIGGERS_AE](#), and [USER_TRIGGERS_AE](#)
- [DBA_AUTO_INDEX_CONFIG](#)
- [DBA_AUTO_STAT_EXECUTIONS](#)
- [DBA_PDB_SNAPSHOTFILE](#)
- [DBA_RAT_CAPTURE_SCHEMA_INFO](#)
- [DBA_REGISTRY_BACKPORTS](#)
- [DBA_SQL_QUARANTINE](#)

 **Note:**

[Static Data Dictionary Views](#) for more information about these static data dictionary views

The following dynamic performance views are new in Oracle Database 19c:

- [GV\\$AQ_PARTITION_STATS](#) and [V\\$AQ_PARTITION_STATS](#)
- [GV\\$ASM_ACFSAUTORESIZE](#) and [V\\$ASM_ACFSAUTORESIZE](#)
- [GV\\$MEMOPTIMIZE_WRITE_AREA](#) and [V\\$MEMOPTIMIZE_WRITE_AREA](#)
- [GV\\$SHARED_SERVER_STAT](#) and [V\\$SHARED_SERVER_STAT](#)
- [GV\\$SQL_TESTCASES](#) and [V\\$SQL_TESTCASES](#)

 **Note:**

[GV\\$ Views](#) and [Dynamic Performance Views](#) for more information about these dynamic performance views

Deprecated Features

The following features are deprecated in Oracle Database 19c, and may be desupported in a future release:

- The [CLUSTER_DATABASE_INSTANCES](#) initialization parameter
- The [PRE_PAGE_SGA](#) initialization parameter (starting with Oracle Database 19c, Release Update 19.22)
- The [SERVICE_NAMES](#) initialization parameter

Desupported Features

The following features are desupported in Oracle Database 19c:

- The `MAX_CONNECTIONS` attribute of the `LOG_ARCHIVE_DEST_n` initialization parameter, for Oracle Data Guard redo transport
- The `EXAFUSION_ENABLED` initialization parameter
- The `O7_DICTIONARY_ACCESSIBILITY` initialization parameter
- Oracle Streams is desupported. As a result, the following views are desupported:

```
ALL_STREAMS_COLUMNS
ALL_STREAMS_MESSAGE_RULES
ALL_STREAMS_RULES
ALL_STREAMS_UNSUPPORTED
DBA_STREAMS_ADMINISTRATOR
DBA_STREAMS_COLUMNS
DBA_STREAMS_MESSAGE_RULES
DBA_STREAMS_RULES
DBA_STREAMS_SPLIT_MERGE
DBA_STREAMS_SPLIT_MERGE_HIST
DBA_STREAMS_STMTS
DBA_STREAMS_STMT_HANDLERS
DBA_STREAMS_TRANSFORMATIONS
DBA_STREAMS_UNSUPPORTED
V$STREAMS_CAPTURE
V$STREAMS_MESSAGE_TRACKING
V$STREAMS_TRANSACTION
```

- Extended Datatype Support (EDS) is desupported. As a result, the following views are desupported:

```
DBA_LOGSTDBY_EDS_SUPPORTED
DBA_LOGSTDBY_EDS_TABLES
```

Part I

Initialization Parameters

Database initialization parameters can be specified in a parameter file to start or configure an instance.

This part contains the following chapter:

- [Initialization Parameters](#)

1

Initialization Parameters

This chapter contains detailed descriptions (in alphabetical order) of the database initialization parameters.

This chapter contains the following topics:

- [Uses of Initialization Parameters](#)
- [Basic Initialization Parameters](#)
- [Parameter Files](#)
- [Changing Parameter Values in a Parameter File](#)
- [Reading the Parameter Descriptions](#)
- [Initialization Parameter Descriptions](#)

1.1 Uses of Initialization Parameters

Initialization parameters are used to perform various functions.

For example, initialization parameters are used to:

- Set limits for the entire database
- Set user or process limits
- Set limits on database resources
- Affect performance (these are called **variable parameters**)

Variable parameters are of particular interest to database administrators, because these parameters are used primarily to improve database performance.

Database administrators can use initialization parameters to:

- Optimize performance by adjusting memory structures, such as the number of database buffers in memory
- Set database-wide defaults, such as the amount of space initially allocated for a context area when it is created
- Set database limits, such as the maximum number of database users
- Specify names of files or directories required by the database

Many initialization parameters can be fine-tuned to improve database performance. Other parameters should never be altered or should be altered only under the supervision of Oracle Support Services.

All initialization parameters are optional. Oracle has a default value for each parameter. This value may be operating system-dependent, depending on the parameter.

1.1.1 Types of Initialization Parameters

The Oracle database server has derived parameters, operating system-dependent parameters, and variable parameters.

- [Derived Parameters](#)
- [Operating System-Dependent Parameters](#)
- [Variable Parameters](#) (these can be dynamic parameters or any of the preceding ones)

1.1.1.1 Derived Parameters

Some initialization parameters are **derived**, meaning that their values are calculated from the values of other parameters. Normally, you should not alter values for derived parameters, but if you do, then the value you specify will override the calculated value.

For example, the default value of the `SESSIONS` parameter is derived from the value of the `PROCESSES` parameter. If the value of `PROCESSES` changes, then the default value of `SESSIONS` changes as well, unless you override it with a specified value.

1.1.1.2 Operating System-Dependent Parameters

The valid values or value ranges of some initialization parameters depend upon the host operating system. For example, the parameter `DB_BLOCK_BUFFERS` indicates the number of data buffers in main memory, and its maximum value depends on the operating system. The size of those buffers, set by `DB_BLOCK_SIZE`, has an operating system-dependent default value.

See Also:

Your operating system-specific Oracle documentation for more information on operating system-dependent Oracle parameters and operating system parameters

1.1.1.3 Variable Parameters

The variable initialization parameters offer the most potential for improving system performance. Some variable parameters set capacity limits but do not affect performance. For example, when the value of `OPEN_CURSORS` is 10, a user process attempting to open its eleventh cursor receives an error. Other variable parameters affect performance but do not impose absolute limits. For example, reducing the value of `DB_BLOCK_BUFFERS` does not prevent work even though it may slow down performance.

Increasing the values of variable parameters may improve your system's performance, but increasing most parameters also increases the system global area (SGA) size. A larger SGA can improve database performance up to a point. In virtual memory operating systems, an SGA that is too large can degrade performance if it is swapped in and out of memory. Operating system parameters that control virtual memory working areas should be set with the SGA size in mind. The operating system configuration can also limit the maximum size of the SGA.

1.2 Basic Initialization Parameters

Most databases should only need to have the database basic initialization parameters set to run properly and efficiently.

Oracle advises you to become familiar with the basic parameters and only use other parameters when directed to by feature documentation or in special circumstances. The following is a list of the database basic initialization parameters:

CLUSTER_DATABASE
COMPATIBLE
CONTROL_FILES
DB_BLOCK_SIZE
DB_CREATE_FILE_DEST
DB_CREATE_ONLINE_LOG_DEST_<n>
DB_DOMAIN
DB_NAME
DB_RECOVERY_FILE_DEST
DB_RECOVERY_FILE_DEST_SIZE
DB_UNIQUE_NAME
INSTANCE_NUMBER
LDAP_DIRECTORY_SYSAUTH
LOG_ARCHIVE_DEST_<n>
LOG_ARCHIVE_DEST_STATE_<n>
NLS_DATE_LANGUAGE
NLS_TERRITORY
OPEN_CURSORS
PGA_AGGREGATE_TARGET
PROCESSES
REMOTE_LISTENER
REMOTE_LOGIN_PASSWORDFILE
SESSIONS
SGA_TARGET
SHARED_SERVERS
STAR_TRANSFORMATION_ENABLED
UNDO_TABLESPACE

1.3 Parameter Files

A **parameter file** is a file that contains a list of initialization parameters and a value for each parameter. You specify initialization parameters in a parameter file that reflect your particular installation.

Oracle supports the following two types of parameter files:

- Server Parameter Files
- Initialization Parameter Files

1.3.1 Server Parameter Files

A **server parameter file** is a binary file that acts as a repository for initialization parameters.

The server parameter file can reside on the computer where the Oracle database server executes. Initialization parameters stored in a server parameter file are persistent, in that any changes made to the parameters while an instance is running can persist across instance shutdown and startup.

 **See Also:**

Oracle Database Administrator's Guide for an introduction to and detailed information about managing and using server parameter files and initialization parameter files

1.3.2 Initialization Parameter Files

An **initialization parameter file** is a text file that contains a list of initialization parameters.

 **Note:**

See "[About the Character Set of Parameter Values](#)" for more information about the character set to use when specifying values in an initialization parameter file.

The following are sample entries in an initialization parameter file:

```
PROCESSES = 100
OPEN_LINKS = 12
GLOBAL_NAMES = true
```

The name of the initialization parameter file varies depending on the operating system. For example, it can be in mixed case or lowercase, or it can have a logical name or a variation of the name `init.ora`. Also supplied is an `initdw.ora` file, which contains suggested parameter settings for data warehouses and data marts. The database administrator can choose a different file name for the initialization parameter file.

Refer to your operating system-specific Oracle documentation for the default locations and filenames for initialization parameter files on your operating system. The initialization parameter file is read by the client-side tool used to start the server (such as SQL*Plus).

Sample initialization parameter files are provided on the Oracle distribution medium for each operating system. A sample file is sufficient for initial use, but you will probably want to modify the file to tune the database for best performance. Any changes will take effect after you completely shut down and restart the instance.

1.3.2.1 About the Character Set of Parameter Values

Only characters from the default character set of the database platform are supported in parameter values. For all platforms except IBM z/OS and Fujitsu BS2000 the default platform character set is US7ASCII (7-bit ASCII).

The database behavior is undefined when parameter values with unsupported characters are specified. When using the `ALTER SYSTEM` statement to set a parameter value in a server parameter file, make sure only supported characters are used. The database does not always report an error when a value with unsupported characters is specified.

The initialization parameter file is a client-side file. When used, it is located on the host on which you start SQL*Plus to start up a database instance. The initialization parameter file must be written in the client character set as specified by the `NLS_LANG` client setting. However, parameter values should not contain characters not supported by the default character set of the database.

1.3.2.2 Specifying Values in an Initialization Parameter File

This section describes several aspects of setting parameter values in an initialization parameter file.

1.3.2.2.1 Rules Governing Initialization Parameter Files

This section describes the rules that govern the specification of parameters in initialization parameter files.

- An initialization parameter file should contain only parameters and comments. A pound sign (#) starts a comment line. The rest of the line is ignored.
- Comments must use the same character set as parameter values.
- You can specify parameters in any order.
- Case (upper or lower) in filenames is significant only if case is significant on the host operating system.
- To enter several parameters on one line, use spaces between parameter names and values, as in the following example:

```
PROCESSES = 100 CPU_COUNT = 1 OPEN_CURSORS = 10
```

- Some parameters, such as `ROLLBACK_SEGMENTS`, accept multiple values. Any of the following represent valid syntax.
 - Enter multiple values enclosed in parentheses and separated by commas. For example:

```
ROLLBACK_SEGMENTS = (SEG1, SEG2, SEG3, SEG4, SEG5)
```

- Enter multiple values without parentheses and commas. For example:

```
ROLLBACK_SEGMENTS = SEG1 SEG2 SEG3 SEG4 SEG5
```

- Enter multiple values, one per line. For example:

```
ROLLBACK_SEGMENTS = SEG1
ROLLBACK_SEGMENTS = SEG2
ROLLBACK_SEGMENTS = SEG3
ROLLBACK_SEGMENTS = SEG4
ROLLBACK_SEGMENTS = SEG5
```

If you enter values for one parameter on multiple lines, then the entries must be on consecutive lines. If they are not, then the first entry will not be processed properly. For example, in the following entry the setting for `SEG3` and `SEG4` will override the setting for `SEG1` and `SEG2`:

```
ROLLBACK_SEGMENTS = SEG1 SEG2
OPEN_CURSORS = 10
ROLLBACK_SEGMENTS = SEG3 SEG4
```

- A backslash (\), also known as an escape character, indicates continuation of the parameter specification. If a backslash continues a line, then the continued line must have no leading spaces. For example:

```
ROLLBACK_SEGMENTS = (SEG1, SEG2, \
SEG3, SEG4, SEG5)
```

- You can use the `IFILE` initialization parameter to embed the contents of another initialization parameter file into the current initialization parameter file.
- Enclose in quotation marks any parameter values that contain spaces or tabs. You can use either single or double quotation marks unless otherwise indicated. For example:

```
NLS_TERRITORY = 'CZECH REPUBLIC'
```

 **Note:**

Listing parameters in alphabetical order in the initialization parameter file can help you to find them and can help ensure that each parameter is specified only once.

- Enclose in quotation marks any parameter value that contains a special character.

 **See Also:**

- Your operating system-specific Oracle documentation for more information on initialization parameter files
- "["IFILE"](#)"

1.3.2.2.2 Using Special Characters in Parameter Values

If a parameter value contains a special character, then the special character must be preceded by a backslash or the entire parameter value must be enclosed in quotation marks.

For example, you can specify special characters using either of the following:

```
DB_DOMAIN = 'JAPAN.ACME#.COM'
```

```
DB_DOMAIN = JAPAN.ACME\#.COM
```

[Table 1-1](#) lists the special characters you can use in initialization parameter files.

Table 1-1 Special Characters in Initialization Parameter Files

Character	Name	Description
#	Number sign	Comment
(Left parenthesis	Start list of values
)	Right parenthesis	End list of values
"	Double quotation mark	Start or end of quoted string
'	Single quotation mark	Start or end of quoted string
=	Equal sign	Separator of keyword and values
,	Comma	Separator of elements
-	Minus sign	Precedes UNIX-style keywords

Table 1-1 (Cont.) Special Characters in Initialization Parameter Files

Character	Name	Description
\	Backslash	Escape character

If a special character must be treated literally in an initialization parameter file, then it must either be preceded by the backslash character, or the entire string containing the special character must be enclosed in quotation marks.

1.3.2.2.3 Using the Escape Character

In an initialization parameter file, a backslash (\) can also signify a line continuation. If the backslash is followed by an alphanumeric character, then the backslash is treated as a normal character in the input.

If it is not followed by an alphanumeric character, then the backslash is treated either as a backslash or as a continuation character.

 **See Also:**

["Rules Governing Initialization Parameter Files"](#)

1.3.2.2.4 Using Quotation Marks

Quotation marks can be nested in two ways in an initialization parameter file.

The first method is to double the quotation marks in the nested string. For example:

```
NLS_DATE_FORMAT = '''Today is'' MM/DD/YYYY'
```

The second method is to alternate single and double quotation marks. For example:

```
NLS_DATE_FORMAT = '"Today is" MM/DD/YYYY'
```

1.4 Changing Parameter Values in a Parameter File

You can change the value of a parameter in a parameter file in several ways.

- By editing an initialization parameter file
In most cases, the new value takes effect the next time you start an instance of the database.
- By issuing an `ALTER SYSTEM SET ... SCOPE=SPFILE` statement to update a server parameter file
- By issuing an `ALTER SYSTEM RESET` statement to clear an initialization parameter value.

 **See Also:**

[Oracle Database Administrator's Guide](#) for more information about using the `ALTER SYSTEM RESET` statement to clear initialization parameter values

1.4.1 Parameters by Functional Category

This section lists initialization parameters by their functional category.

- **ANSI Compliance**

1.4.2 Modifiable Parameters

You can modify some initialization parameters using the `ALTER SESSION` or `ALTER SYSTEM` statements while an instance is running.

Use the following syntax to modify initialization parameters:

```
ALTER SESSION SET parameter_name = value
ALTER SYSTEM SET parameter_name = value [DEFERRED]
```

Whenever a parameter is modified using the `ALTER SYSTEM` statement, the Oracle Database records the statement that modifies the parameter in the alert log.

The `ALTER SESSION` statement changes the value of the specified parameter for the duration of the session that invokes the statement. The value of the parameter does not change for other sessions in the instance. The value of the following initialization parameters can be changed with `ALTER SESSION`:

```
ALLOW_ROWID_COLUMN_TYPE
APPROX_FOR_AGGREGATION
APPROX_FOR_COUNT_DISTINCT
APPROX_FOR_PERCENTILE
AQ_TM_PROCESSES
ASM_DISKSTRING
ASM_POWER_LIMIT

The `ALTER SYSTEM ... DEFERRED` statement does not modify the global value of the parameter for existing sessions, but the value will be modified for future sessions that connect to the database. The value of the following initialization parameters can be changed with `ALTER SYSTEM ... DEFERRED`:

AUDIT_FILE_DEST
BACKUP_TAPE_IO_SLAVES
CLIENT_STATISTICS_LEVEL
OBJECT_CACHE_MAX_SIZE_PERCENT
OBJECT_CACHE_OPTIMAL_SIZE
OLAP_PAGE_POOL_SIZE
PRIVATE_TEMP_TABLE_PREFIX
RECYCLEBIN
SESSION_CACHED_CURSORS
SORT_AREA_RETAINED_SIZE
SORT_AREA_SIZE

1.4.3 Displaying Current Parameter Values

You can use the `SQL*Plus SHOW PARAMETERS` statement to see the current settings for initialization parameters.

For example:

```
SQL> SHOW PARAMETERS
```

This statement displays all parameters in alphabetical order, along with their current values.

Enter the following text string to display all parameters having `BLOCK` in their names:

```
SQL> SHOW PARAMETERS BLOCK
```

You can use the `SPOOL` command to write the output to a file.

1.4.4 Parameters You Should Not Specify in the Parameter File

You should not specify these types of parameters in your parameter files:

- Parameters that you never alter unless instructed to do so by Oracle to resolve a problem
- Derived parameters, which normally do not need altering because their values are calculated automatically by the Oracle database server

1.4.5 When Parameters Are Set Incorrectly

When a parameter is set incorrectly, the effect can be different for different parameters, or based on how low or high the parameter is set.

Some parameters have a minimum setting below which an Oracle instance will not start. For other parameters, setting the value too low or too high may cause Oracle to perform badly, but it will still run. Also, Oracle may convert some values outside the acceptable range to usable levels.

If a parameter value is too low or too high, or you have reached the maximum for some resource, then Oracle returns an error. Frequently, you can wait a short while and retry the operation when the system is not as busy. If a message occurs repeatedly, then you should shut down the instance, adjust the relevant parameter, and restart the instance.

1.5 Reading the Parameter Descriptions

This section describes the properties that are documented in the initialization parameter descriptions.

PARAMETER_NAME

Property	Description
Parameter type	<p>Specifies the type of the parameter:</p> <ul style="list-style-type: none">• A Boolean parameter accepts either <code>true</code> or <code>false</code> as its value.• A string parameter accepts any sequence of characters as its value, subject to the syntax for the parameter.• An integer parameter accepts a 4-byte value that can range from 0 to $2^{32} - 1$.• A parameter file parameter accepts an initialization parameter file specification as its value.• A big integer parameter accepts an 8-byte value that can range from 0 to $2^{64} - 1$. You specify a value for a big integer as an integer together with an optional modifier such as K, M, or G, which respectively denotes kilobytes, megabytes, or gigabytes. <p>For example, 1000, 100 KB, 50 MB and 2 GB are valid specifications for big integers.</p>
Syntax	For string and big integer parameters, specifies the valid syntax for specifying the parameter.

Property	Description
Default value	Specifies the value that the parameter assumes if a value is not explicitly specified. For most initialization parameters, the value that is documented for the Default value property is obtained by querying the <code>DEFAULT_VALUE</code> column in the <code>V\$PARAMETER</code> view for the parameter.
Modifiable	Specifies whether the parameter can be changed for the current session (by an <code>ALTER SESSION</code> statement) or for all sessions in the current instance (by an <code>ALTER SYSTEM</code> statement): <ul style="list-style-type: none"> • <code>ALTER SESSION</code> overrides the instance-wide setting of the parameter for the current session only. You can restore the instance-wide setting for that session only by issuing another <code>ALTER SESSION</code> statement. • <code>ALTER SYSTEM</code> can be used to change the value in the server parameter file (SPFILE) of any initialization parameter. Such a change takes effect only in subsequent instances. The parameter descriptions indicate only those parameters that can be modified for the current instance.
Modifiable in a PDB	Specifies whether the parameter can be modified in a PDB (Yes) or not (No) For most initialization parameters, the value that is documented for the Modifiable in a PDB property is obtained by querying the <code>ISPDB_MODIFIABLE</code> column in the <code>V\$PARAMETER</code> view for the parameter.
Range of values	Specifies the valid range of values that this parameter can assume, shown as a minimum and maximum value. Not applicable to all parameters.
Basic	Specifies whether the parameter is a basic initialization parameter or not
Oracle RAC	Specifies how the values for this parameter must be specified for multiple instances in an Oracle Real Application Clusters environment. Not applicable to all parameters.

For each parameter, paragraphs following these details further describe the parameter and the effects of different settings.

 **See Also:**

["V\\$PARAMETER"](#)

1.6 Initialization Parameter Descriptions

The remainder of this chapter describes the initialization parameters in alphabetical order.

Initialization parameter values apply to the entire database, not to an individual user, unless otherwise specified.

 **Note:**

Parameters that have become obsolete are not documented.

 **See Also:**

- *Oracle Database Upgrade Guide* for information about obsolete parameters
- Your system release bulletins or other operating system-specific Oracle documentation

1.7 ACTIVE_INSTANCE_COUNT

ACTIVE_INSTANCE_COUNT enables you to designate one instance in a two-instance cluster as the primary instance and the other instance as the secondary instance. This parameter has no functionality in a cluster with more than two instances.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	1 or >= the number of instances in the cluster. (Values other than 1 have no effect on the active or standby status of any instances.)
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

 **Note:**

The ACTIVE_INSTANCE_COUNT parameter is deprecated. It is retained for backward compatibility only.

When you set this parameter to 1, the first instance you start up becomes the primary instance and accepts client connections. The second instance starts up as a secondary instance and can accept client connections only if the first instance fails. In such an event, the secondary instance becomes the primary instance.

When the failed instance can once again be started up, it starts up as the secondary instance, and will not accept client connections unless the current primary instance fails.

 **Note:**

This parameter functions only in a cluster with only two instances.

1.8 ADG_ACCOUNT_INFO_TRACKING

`ADG_ACCOUNT_INFO_TRACKING` controls login attempts of users on Oracle Active Data Guard standby databases. It extends the control of user account security information.

Property	Description
Parameter type	String
Syntax	<code>ADG_ACCOUNT_INFO_TRACKING = { LOCAL GLOBAL }</code>
Default value	LOCAL
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Setting `ADG_ACCOUNT_INFO_TRACKING` to `LOCAL` (the default value) continues to enforce the default behavior, by maintaining a local copy of users account information in the standby's in-memory view. Login failures are only tracked locally on a per database basis, and login is denied when the failure maximum is reached.

Setting the parameter to `GLOBAL` triggers a more secure behavior, by maintaining a single global copy of users account information across all Data Guard databases (primary and standby). Login failures across all databases in the Data Guard configuration count towards the maximum count and logins anywhere will be denied when the count is reached. This setting improves security against login attacks across a production database and all Active Data Guard standby databases.

1.9 ADG_REDIRECT_DML

Use `ADG_REDIRECT_DML` to enable or disable automatic redirection of DML operations from a standby to the primary in Oracle Active Data Guard environments.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	<code>ALTER SYSTEM</code> Can be modified at the session level with a special <code>ALTER SESSION</code> command. See details below.
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	Different instances can use different values.

Automatic redirection of DML operations to the primary can be configured at the system level or the session level. The session level setting overrides the system level setting.

- To enable automatic redirection of DML operations to the primary at the system level, set `ADG_REDIRECT_DML` to true.

- To disable automatic redirection of DML operations to the primary at the system level, set `ADG_REDIRECT_DML` to `false`.
- To enable automatic redirection of DML operations from a standby to the primary for the current session, issue the following SQL statement:

```
ALTER SESSION ENABLE ADG_REDIRECT_DML;
```

- To disable automatic redirection of DML operations from a standby to the primary for the current session, issue the following SQL statement:

```
ALTER SESSION DISABLE ADG_REDIRECT_DML;
```

See Also:

Oracle Data Guard Concepts and Administration for more information about automatic redirection of DML operations

Note:

This parameter is available starting with Oracle Database 19c.

1.10 ALLOW_GLOBAL_DBLINKS

`ALLOW_GLOBAL_DBLINKS` specifies whether LDAP lookup for database links is allowed for the database.

Property	Description
Parameter type	Boolean
Syntax	<code>ALLOW_GLOBAL_DBLINKS = { FALSE TRUE }</code>
Default value	<code>FALSE</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

The following values can be set:

- `FALSE`: LDAP lookup for a database link's definition is not allowed for the database.
- `TRUE`: LDAP lookup for a database link's definition is allowed for the database.

1.11 ALLOW_GROUP_ACCESS_TO_SGA

ALLOW_GROUP_ACCESS_TO_SGA controls group access to shared memory on UNIX platforms.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	The same value must be used on all instances.

The default value is `false`, which means that database shared memory is created with `owner` access only. In Oracle Database releases prior to Oracle Database 12c Release 2 (12.2.0.1), database shared memory was created with `owner` and `group` access.

When this parameter is set to `true`, database shared memory is created with `owner` and `group` access. This behavior grants permissions to DBAs to manage shared memory outside the database, but also allows DBAs to read and write to shared memory, which may not be desirable for certain installations.

1.12 ALLOW_ROWID_COLUMN_TYPE

ALLOW_ROWID_COLUMN_TYPE determines whether table columns of data type ROWID are allowed to be created.

Note:

This parameter is valid only for Oracle Autonomous Database on dedicated Exadata infrastructure. On other types of Oracle databases, the value of this parameter is ignored and `ROWID` columns are always allowed to be created.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances should use the same value

Values:

- `false`

Columns of data type `ROWID` are not allowed.

You cannot specify `ROWID` columns when creating tables, nor can you add `ROWID` columns to existing tables. If the value of this parameter is changed from `true` to `false` at a time when `ROWID` columns exist in the database, then those columns are allowed to remain. However, Oracle recommends that you leave this parameter set to its default value of `false` and avoid introducing `ROWID` columns into Oracle Autonomous Database on dedicated Exadata infrastructure.

- `true`

Columns of data type `ROWID` are allowed.

If you choose this setting, be aware that `ROWID` columns are incompatible with rolling upgrade operations and other internal operations that physically move table rows. At a minimum, database activities involving `ROWID` columns should be suspended during upgrades. Applications using `ROWID` columns should introduce correctness validation to mitigate against logical errors in the application if a row relocates.

 **Note:**

This parameter is available starting with Oracle Database 19c.

1.13 APPROX_FOR_AGGREGATION

`APPROX_FOR_AGGREGATION` replaces exact query processing for aggregation queries with approximate query processing.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	<code>true false</code>
Basic	No
Oracle RAC	Different instances can use different values.

Data analysis applications heavily use aggregate function and analytic function queries. Aggregation functions and analytic functions require sorting of large volumes of data, and exact query answering requires lots of memory, and can be time consuming. With approximate query processing, the results of aggregate function and analytic function queries are returned much faster than with exact query processing. Approximate query processing is useful for situations where a tolerable amount of error is acceptable in order to obtain faster query results.

The values that can be set are:

- `false`:

Approximate query processing is not used for aggregation queries and analytic queries.

- `true`: Approximate query processing is used for aggregation queries and analytic queries.

 See Also:

- "[APPROX_FOR_COUNT_DISTINCT](#)"
- "[APPROX_FOR_PERCENTILE](#)"

1.14 APPROX_FOR_COUNT_DISTINCT

`APPROX_FOR_COUNT_DISTINCT` automatically replaces `COUNT (DISTINCT expr)` queries with `APPROX_COUNT_DISTINCT` queries.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Different instances can use different values.

Query results for `APPROX_COUNT_DISTINCT` queries are returned faster than the equivalent `COUNT (DISTINCT expr)` queries. `APPROX_COUNT_DISTINCT` queries are useful for situations where a tolerable amount of error is acceptable in order to obtain faster query results than with a `COUNT (DISTINCT expr)` query.

 See Also:

- "[APPROX_FOR_AGGREGATION](#)"
- "[APPROX_FOR_PERCENTILE](#)"

1.15 APPROX_FOR_PERCENTILE

`APPROX_FOR_PERCENTILE` converts exact percentile functions to their approximate percentile function counterparts.

Property	Description
Parameter type	String
Syntax	<code>APPROX_FOR_PERCENTILE = { NONE PERCENTILE_CONT PERCENTILE_CONT DETERMINISTIC PERCENTILE_DISC PERCENTILE_DISC DETERMINISTIC ALL ALL DETERMINISTIC }</code>
Default value	none
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes

Property	Description
Basic	No
Oracle RAC	Different instances can use different values.

Approximate percentile function queries are faster than their exact percentile function query counterparts, so they can be useful in situations where a tolerable amount of error is acceptable in order to obtain faster query results.

The values that can be set are:

- **NONE:**
No queries are converted. This is the default value.
- **PERCENTILE_CONT:**
Converts PERCENTILE_CONT queries to APPROX_PERCENTILE queries.
- **PERCENTILE_CONT DETERMINISTIC:**
Converts PERCENTILE_CONT queries to APPROX_PERCENTILE DETERMINISTIC queries.
- **PERCENTILE_DISC:**
Converts PERCENTILE_DISC queries to APPROX_PERCENTILE queries.
- **PERCENTILE_DISC DETERMINISTIC:**
Converts PERCENTILE_DISC queries to APPROX_PERCENTILE DETERMINISTIC queries.
- **ALL:**
Converts both PERCENTILE_CONT queries and PERCENTILE_DISC queries to APPROX_PERCENTILE queries.
- **ALL DETERMINISTIC:**
Converts both PERCENTILE_CONT and PERCENTILE_DISC queries to APPROX_PERCENTILE DETERMINISTIC queries.

See Also:

- "[APPROX_FOR_AGGREGATION](#)"
- "[APPROX_FOR_COUNT_DISTINCT](#)"
- *Oracle Database SQL Language Reference* for information about APPROX_MEDIAN aggregate functions
- *Oracle Database SQL Language Reference* for information about APPROX_PERCENTILE aggregate functions

1.16 AQ_TM_PROCESSES

AQ_TM_PROCESSES controls time monitoring on queue messages and controls processing of messages with delay and expiration properties specified.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 40
Basic	No

You do not need to specify a value for this parameter because Oracle Database automatically determines the number of processes and autotunes them, as necessary. Therefore, Oracle highly recommends that you leave the `AQ_TM_PROCESSES` parameter unspecified and let the system autotune.

The default value for `AQ_TM_PROCESSES` is used if the client does not explicitly set a value for the parameter in the `init.ora` file or using the `ALTER SYSTEM` statement.

Note:

If you want to disable the Queue Monitor Coordinator, then you must set `AQ_TM_PROCESSES` to 0 in your parameter file. Oracle strongly recommends that you do NOT set `AQ_TM_PROCESSES` to 0.

See Also:

Oracle Database Advanced Queuing User's Guide for more information about this parameter

1.17 ARCHIVE_LAG_TARGET

`ARCHIVE_LAG_TARGET` forces a log switch after the specified amount of time elapses.

Property	Description
Parameter type	Integer
Default value	0 (disabled)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 or any integer in [60, 7200]
Basic	No
Oracle RAC	Multiple instances should use the same value

A 0 value disables the time-based thread advance feature; otherwise, the value represents the number of seconds. Values larger than 7200 seconds are not of much use in maintaining a reasonable lag in the standby database. The typical, or recommended value is 1800 (30

minutes). Extremely low values can result in frequent log switches, which could degrade performance; such values can also make the archiver process too busy to archive the continuously generated logs.

 **See Also:**

Oracle Database Administrator's Guide for more information about setting this parameter

1.18 ASM_DISKGROUPS

ASM_DISKGROUPS specifies a list of disk group names that an Oracle ASM instance mounts at startup when the ALTER DISKGROUP ALL MOUNT statement is issued.

Property	Description
Parameter type	String
Syntax	ASM_DISKGROUPS = <i>diskgroup</i> [, <i>diskgroup</i>] ...
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Comma-separated list of strings, up to 30 characters
Basic	No
Oracle RAC	Multiple instances can have different values.

 **Note:**

This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.

The Oracle ASM instance startup process executes ALTER DISKGROUP ALL MOUNT unless the NOMOUNT startup option is specified.

The ASM_DISKGROUPS parameter is dynamic. If you are using a server parameter file (SPFILE), then you do not have to manually alter the value of ASM_DISKGROUPS in most situations. Oracle ASM automatically adds a disk group to the parameter when the disk group is successfully created or mounted. Oracle ASM also automatically removes a disk group from the parameter when the disk group is dropped. However, the SPFILE is not updated on a manual dismount.

Issuing the ALTER DISKGROUP...ALL MOUNT or ALTER DISKGROUP...ALL DISMOUNT command does not affect the value of this parameter.

Supporting Up to 511 Disk Groups for an Oracle ASM Instance

In Oracle Database 12c Release 1 or later, Oracle ASM configurations support up to 511 disk groups. Oracle ASM configurations with Oracle Database releases before 12c Release 1 can only support up to 63 disk groups.

 See Also:

Oracle Automatic Storage Management Administrator's Guide for more information about and examples of using this parameter

1.19 ASM_DISKSTRING

`ASM_DISKSTRING` specifies an operating system-dependent value used by Oracle ASM to limit the set of disks considered for discovery.

Property	Description
Parameter type	String
Syntax	<code>ASM_DISKSTRING = discovery_string [, discovery_string] ...</code>
Default value	The null string; Oracle Automatic Storage Management discovery finds all disks in an operating system-specific location to which the Oracle Automatic Storage Management instance has read/write access.
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values. Different nodes might see the same disks under different names; however, each instance must be able to use its <code>ASM_DISKSTRING</code> to discover the same physical media as the other nodes in the cluster.

 Note:

This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.

When a new disk is added to a disk group, each Oracle ASM instance that has the disk group mounted must be able to discover the new disk using the value of `ASM_DISKSTRING`.

In most cases, the default value will be sufficient. Using a more restrictive value may reduce the time required for Oracle ASM to perform discovery, and thus improve disk group mount time or the time for adding a disk to a disk group. A "?" at the beginning of the string gets expanded to the Oracle home directory. Depending on the operating system, wildcard characters can be used. It may be necessary to dynamically change `ASM_DISKSTRING` before adding a disk so that the new disk will be discovered.

An attempt to dynamically modify `ASM_DISKSTRING` will be rejected and the old value retained if the new value cannot be used to discover a disk that is in a disk group that is already mounted.

 See Also:

Oracle Automatic Storage Management Administrator's Guide for more information and examples of using this parameter

1.20 ASM_IO PROCESSES

`ASM_IO PROCESSES` specifies the number of I/O worker processes to be started in an Oracle IOServer instance.

Property	Description
Parameter type	Integer
Default value	20
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 – 32
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is applicable only in an Oracle IOServer instance, which runs out of an Oracle Grid Infrastructure home.

The default value should work in most cases. However, under heavy I/O load, there may be some delays associated with posting processes out of I/O waits. In this case, a slightly higher value than the default may be appropriate.

1.21 ASM_POWER_LIMIT

`ASM_POWER_LIMIT` specifies the maximum power on an Oracle ASM instance for disk rebalancing.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 11 ¹
Basic	No
Oracle RAC	Multiple instances can have different values.

¹ Beginning with Oracle Database 11g Release 2 (11.2.0.2), if the COMPATIBLE.ASM disk group attribute is set to 11.2.0.2 or higher, then the range of values is 0 to 1024.

Note:

- This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.
- In an Oracle Exadata or Oracle Data Appliance environment, you cannot set this parameter to 0.

The higher the limit, the faster rebalancing will complete. Lower values will take longer, but consume fewer processing and I/O resources.

If the `POWER` clause of a rebalance operation is not specified, then the default power will be the value of `ASM_POWER_LIMIT`.

See Also:

Oracle Automatic Storage Management Administrator's Guide for more information about using this parameter

1.22 ASM_PREFERRED_READ_FAILURE_GROUPS

`ASM_PREFERRED_READ_FAILURE_GROUPS` specifies the failure groups that contain preferred read disks. Preferred disks are instance specific.

Property	Description
Parameter type	String
Syntax	<code>ASM_PREFERRED_READ_FAILURE_GROUPS = '<diskgroup_name>.<failure_group_name>, ...'</code>
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The value is different on different nodes

Note:

The `ASM_PREFERRED_READ_FAILURE_GROUPS` initialization parameter is deprecated in Oracle Database 12c Release 2 (12.2.0.1) and may be unsupported in a future release. It is replaced by the `PREFERRED_READ.ENABLED` disk group attribute.

See *Oracle Automatic Storage Management Administrator's Guide* for more information about the `PREFERRED_READ.ENABLED` disk group attribute.

To reset the parameter value to null, issue the following statement, which updates the server parameter file (SP file), then reboot Oracle ASM so that the change takes effect:

```
alter system reset asm_preferred_read_failure_groups;
```

See Also:

Oracle Automatic Storage Management Administrator's Guide for more information about this parameter

1.23 AUDIT_FILE_DEST

`AUDIT_FILE_DEST` specifies the operating system directory into which the audit trail is written when the `AUDIT_TRAIL` initialization parameter is set to `os`, `xml`, or `xml,extended`.

Property	Description
Parameter type	String
Syntax	<code>AUDIT_FILE_DEST = 'directory'</code>
Default value	<p>The first default value is: <code>ORACLE_BASE/admin/ORACLE_SID/adump</code></p> <p>The second default value, which is used if the first default value does not exist or is unusable, is: <code>ORACLE_HOME/rdbms/audit</code></p> <p>Both of these default values are for UNIX systems. Other platforms may have different defaults.</p> <p>In a multitenant container database (CDB), both of these default values will be appended with the GUID of the pluggable database (PDB) to store audit records that belong to the PDB. For example, if the PDB's GUID is <code>03E1F908EE04252CE053B280E80AAAA3</code>, the first default directory will be: <code>ORACLE_BASE/admin/ORACLE_SID/adump/03E1F908EE04252CE053B280E80AAAA3</code></p> <p>You can use the <code>V\$CONTAINERS</code> view to query a PDB's GUID.</p>
Modifiable	<code>ALTER SYSTEM ... DEFERRED</code>
Modifiable in a PDB	No
Basic	No

 **Note:**

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

The audit records will be written in XML format if the `AUDIT_TRAIL` initialization parameter is set to `xml` or `xml, extended`. It is also the location to which mandatory auditing information is written and, if so specified by the `AUDIT_SYS_OPERATIONS` initialization parameter, audit records for user `SYS`.

In a multitenant container database (CDB), the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per pluggable database (PDB) in a CDB, this initialization parameter cannot be configured for individual PDBs.

 **See Also:**

- *Oracle Multitenant Administrator's Guide* for conceptual information about CDBs and PDBs
- *Oracle Multitenant Administrator's Guide* for information about managing CDBs and PDBs
- "[V\\$CONTAINERS](#)"
- "[V\\$PDBS](#)"

1.24 AUDIT_SYS_OPERATIONS

`AUDIT_SYS_OPERATIONS` enables or disables the auditing of directly issued user SQL statements with `SYS` authorization. These include SQL statements directly issued by users when connected with the `SYSASM`, `SYSBACKUP`, `SYSDBA`, `SYSDG`, `SYSKM`, or `SYSOPER` privileges, as well as SQL statements that have been executed with `SYS` authorization using the PL/SQL package `DBMS_SYS_SQL`.

Property	Description
Parameter type	Boolean
Default value	TRUE
Modifiable	No
Modifiable in a PDB	No
Range of values	TRUE FALSE
Basic	No

 **Note:**

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

The audit records are written to the operating system's audit trail. The audit records will be written in XML format if the `AUDIT_TRAIL` initialization parameter is set to `xml` or `xml, extended`.

On UNIX platforms, if the `AUDIT_SYSLOG_LEVEL` parameter has also been set, then it overrides the `AUDIT_TRAIL` parameter and SYS audit records are written to the system audit log using the `SYSLOG` utility.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

1.25 AUDIT_SYSLOG_LEVEL

`AUDIT_SYSLOG_LEVEL` allows SYS and standard OS audit records to be written to the system audit log using the `SYSLOG` utility.

Property	Description
Parameter type	String
Syntax	<code>AUDIT_SYSLOG_LEVEL = 'facility_clause.priority_clause'</code>
Syntax	<code>facility_clause ::=</code> <code>{ USER LOCAL[0 1 2 3 4 5 6 7] SYSLOG </code> <code>DAEMON KERN MAIL AUTH LPR NEWS UUCP CRON }</code>
Syntax	<code>priority_clause ::=</code> <code>{ NOTICE INFO DEBUG WARNING ERR CRIT ALERT </code> <code>EMERG }</code>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No
Examples	<code>AUDIT_SYSLOG_LEVEL = 'KERN.EMERG';</code> <code>AUDIT_SYSLOG_LEVEL = 'LOCAL1.WARNING';</code>

 **Note:**

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

If you use this parameter, it is best to assign a file corresponding to every combination of facility and priority (especially `KERN_EMERG`) in `syslog.conf`. Sometimes these are assigned to print to the console in the default `syslog.conf` file. This can become annoying and will be useless as audit logs. Also, if you use this parameter, it is best to set the maximum length of syslog messages in the system to 512 bytes.

 **Note:**

Audit records written to the system audit log could get truncated to 512 bytes, and different parts of the same audit record may not be joined to get the original complete audit record.

 **See Also:**

Oracle Database Security Guide for information about configuring syslog auditing

If `AUDIT_SYSLOG_LEVEL` is set and `SYS` auditing is enabled (`AUDIT_SYS_OPERATIONS = TRUE`), then `SYS` audit records are written to the system audit log. If `AUDIT_SYSLOG_LEVEL` is set and standard audit records are being sent to the operating system (`AUDIT_TRAIL = os`), then standard audit records are written to the system audit log.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

1.26 AUDIT_TRAIL

`AUDIT_TRAIL` enables or disables database auditing.

Property	Description
Parameter type	String
Syntax	<code>AUDIT_TRAIL = { none os db [, extended] xml [, extended] }</code>
Default value	<code>none</code>
Modifiable	No
Modifiable in a PDB	No

Property	Description
Basic	No

 **Note:**

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Values

- none

Disables standard auditing. This value is the default if the AUDIT_TRAIL parameter was not set in the initialization parameter file or if you created the database using a method other than Database Configuration Assistant. If you created the database using Database Configuration Assistant, then the default is db.

- os

Directs all audit records to an operating system file. Oracle recommends that you use the os setting, particularly if you are using an ultra-secure database configuration.

- db

Directs audit records to the database audit trail (the SYS.AUD\$ table), except for records that are always written to the operating system audit trail. Use this setting for a general database for manageability.

If the database was started in read-only mode with AUDIT_TRAIL set to db, then Oracle Database internally sets AUDIT_TRAIL to os. Check the alert log for details.

- db, extended

Performs all actions of AUDIT_TRAIL=db, and also populates the SQL bind and SQL text CLOB-type columns of the SYS.AUD\$ table, when available. These two columns are populated only when this parameter is specified. When standard auditing is used with DB, EXTENDED, then virtual private database (VPD) predicates and policy names are also populated in the SYS.AUD\$ table.

If the database was started in read-only mode with AUDIT_TRAIL set to db, extended, then Oracle Database internally sets AUDIT_TRAIL to os. Check the alert log for details.

- xml

Writes to the operating system audit record file in XML format. Records all elements of the AuditRecord node except Sql_Text and Sql_Bind to the operating system XML audit file.

- xml, extended

Performs all actions of AUDIT_TRAIL=xml, and includes SQL text and SQL bind information in the audit trail.

You can use the `SQL AUDIT` statement to set auditing options regardless of the setting of this parameter.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

Examples

The following statement sets the `db, extended` value for the `AUDIT_TRAIL` parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=db, extended scope=spfile;  
System altered.
```

```
SQL>
```

The following statement sets the `xml, extended` value for the `AUDIT_TRAIL` parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=xml, extended scope=spfile;  
System altered.
```

```
SQL>
```

The following statement sets the `db` value for the `AUDIT_TRAIL` parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=db scope=spfile;  
System altered.
```

```
SQL>
```

See Also:

- *Oracle Database Security Guide* for information about configuring unified audit policies
- *Oracle Database Upgrade Guide* to learn more about traditional non-unified auditing

1.27 AUTOTASK_MAX_ACTIVE_PDBS

`AUTOTASK_MAX_ACTIVE_PDBS` enables you to specify the maximum number of PDBs that can schedule automated maintenance tasks at the same time (during a maintenance window).

Property	Description
Parameter type	Integer
Default value	2
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No

Property	Description
Range of values	0 to the number of PDBs in the CDB
Basic	No
Oracle RAC	The same value should be used on all instances.

This parameter only affects PDBs. The CDB\$ROOT container (CDB root) for a CDB can always schedule and run maintenance tasks during a maintenance window.

The default value is 2. Therefore, by default, two PDBs and the CDB root can run tasks at the same time during a maintenance window.

This parameter can be set only in the CDB root, not in a PDB.

See Also:

- "[ENABLE_AUTOMATIC_MAINTENANCE_PDB](#)" for information on disabling or enabling the running of automated maintenance tasks for specific PDBs or for all the PDBs in CDB
- *Oracle Database Administrator's Guide* for more information about managing automated database maintenance tasks

1.28 AWR_PDB_AUTOFLUSH_ENABLED

`AWR_PDB_AUTOFLUSH_ENABLED` enables you to specify whether to enable or disable automatic Automatic Workload Repository (AWR) snapshots for all the PDBs in a CDB or for individual PDBs in a CDB.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	The same value must be used on all instances.

Note:

The value of this parameter in CDB\$ROOT (the root of a CDB) has no effect in the root. Automatic AWR snapshots are always enabled in the root, regardless of the setting of this parameter.

The default value of `AWR_PDB_AUTOFLUSH_ENABLED` is `false`. Thus, by default, automatic AWR snapshots are disabled for all the PDBs in a CDB.

When you change the value of `AWR_PDB_AUTOFLUSH_ENABLED` in the CDB root, the new value takes effect in all the PDBs in the CDB.

Therefore, if you change the value of `AWR_PDB_AUTOFLUSH_ENABLED` in the CDB root to `true`, the value of `AWR_PDB_AUTOFLUSH_ENABLED` is also changed to `true` in all of the PDBs, so that automatic AWR snapshots are enabled for all the PDBs.

You can also change the value of `AWR_PDB_AUTOFLUSH_ENABLED` in any of the individual PDBs in a CDB, and the value that is set for each individual PDB will be honored. This enables you to enable or disable automatic AWR snapshots for individual PDBs.

When a new PDB is created, or a PDB from a previous database release is upgraded to the current database release, automatic AWR snapshots are enabled or disabled for the PDB based on the current value of `AWR_PDB_AUTOFLUSH_ENABLED` in the root.

See Also:

- *Oracle Database Performance Tuning Guide* for more information about Automatic Workload Repository (AWR)
- *Oracle Database Performance Tuning Guide* for more information about AWR snapshots

1.29 AWR_PDB_MAX_PARALLEL_SLAVES

`AWR_PDB_MAX_PARALLEL_SLAVES` enables a DBA to allocate the correct amount of resources to enable quick and timely Automatic Workload Repository (AWR) flushes for multitenant container databases (CDBs).

Property	Description
Parameter type	Integer
Default value	10
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 – 30
Basic	No
Oracle RAC	Different instances can use different values.

Use `AWR_PDB_MAX_PARALLEL_SLAVES` to control the amount of resources dedicated to AWR snapshot flushing in pluggable databases (PDBs). With this parameter, a DBA can modify the maximum number of MMON slave processes (`Mnnn` background processes) that can concurrently be used to handle AWR flush operations for the entire CDB.

For CDBs with a large number of PDBs enabled to create automatic AWR snapshots, a DBA can increase this parameter to enable timely AWR flushing. For CDBs with a small number of PDBs enabled, the value of this parameter can be decreased to reduce the concurrency and the chance of performance spikes.

Note that this parameter is set in the root of a CDB and determines the maximum degree of parallelism used to create AWR automatic snapshots for PDBs.

 See Also:

- "[AWR_PDB_AUTOFLUSH_ENABLED](#)" for information about enabling the automatic creation of AWR PDB snapshots
- *Oracle Database Concepts* for an introduction to AWR
- "[Background Processes](#)" for more information about the MMON and Mn_{nnn} background processes

1.30 AWR_SNAPSHOT_TIME_OFFSET

`AWR_SNAPSHOT_TIME_OFFSET` specifies an offset for the Automatic Workload Repository (AWR) snapshot start time.

Property	Description
Parameter type	Integer
Default value	There is no offset by default.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 - 3599, or the special value 1000000
Basic	No
Oracle RAC	Multiple instances should use the same value

AWR snapshots normally start at the top of the hour (12:00, 1:00, 2:00, and so on). This parameter allows DBAs to specify an offset for the AWR snapshot start time.

This is a useful parameter to avoid CPU spikes from multiple instances all starting their AWR snapshots at the same time. If you have a large system with many instances on it (like many Exadata installations), and you are experiencing such CPU spikes, this parameter can be very useful.

The parameter is specified in seconds. Normally, you set it to a value less than 3600. If you set the special value 1000000 (1,000,000), you get an automatic mode, in which the offset is based on the database name.

The automatic mode is an effective way of getting a reasonable distribution of offset times when you have a very large number of instances running on the same node.

1.31 BACKGROUND_CORE_DUMP

`BACKGROUND_CORE_DUMP` specifies whether Oracle includes the SGA in the core file for Oracle background processes.

Property	Description
Parameter type	String
Syntax	<code>BACKGROUND_CORE_DUMP = { partial full }</code>
Default value	partial

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- **partial**
Oracle does not include the SGA in the core dump.
- **full**
Oracle includes the SGA in the core dump.

 **See Also:**

["SHADOW_CORE_DUMP"](#)

1.32 BACKGROUND_DUMP_DEST

`BACKGROUND_DUMP_DEST` specifies the pathname (directory or disc) where debugging trace files for the background processes (LGWR, DBW n , and so on) are written during Oracle operations.

Property	Description
Parameter type	String
Syntax	<code>BACKGROUND_DUMP_DEST = { pathname directory }</code>
Default value	Operating system-dependent
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any valid local path, directory, or disk
Basic	No

 **Note:**

The `BACKGROUND_DUMP_DEST` parameter is deprecated in Oracle Database 12c Release 1 (12.1.0.1).

An **alert log** in the directory specified by `BACKGROUND_DUMP_DEST` logs significant database events and messages. Anything that affects the database instance or global database is recorded here. The alert log is a normal text file. Its file name is operating system-dependent. For platforms that support multiple instances, it takes the form `alert_sid.log`, where `sid` is the system identifier. This file grows slowly, but without limit, so you might want to delete it periodically. You can delete the file even when the database is running.

 **Note:**

This parameter is ignored by the diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the `DIAGNOSTIC_DEST` initialization parameter.

 **See Also:**

- *Oracle Database Administrator's Guide* for more information on the `DIAGNOSTIC_DEST` initialization parameter
- "["USER_DUMP_DEST"](#)" for information on setting a destination for server process trace files

1.33 BACKUP_TAPE_IO_SLAVES

`BACKUP_TAPE_IO_SLAVES` specifies whether I/O server processes (also called **slaves**) are used by Recovery Manager to back up, copy, or restore data to tape.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SYSTEM ... DEFERRED</code>
Modifiable in a PDB	No
Range of values	<code>true false</code>
Basic	No

When the value is set to `true`, Oracle uses an I/O server process to write to or read from a tape device. When the value is set to `false` (the default), Oracle does not use I/O server process for backups. Instead, the shadow process engaged in the backup accesses the tape device.

 **Note:**

You cannot perform duplexed backups unless you enable this parameter. Otherwise, Oracle returns an error. When this parameter is enabled, Recovery Manager will configure as many server processes as needed for the number of backup copies requested.

 **See Also:**

- *Oracle Database Backup and Recovery User's Guide* for more information on duplexed backups
- "[DBWR_IO_SLAVES](#)"

1.34 BITMAP_MERGE_AREA_SIZE

`BITMAP_MERGE_AREA_SIZE` specifies the amount of memory Oracle uses to merge bitmaps retrieved from a range scan of the index.

Property	Description
Parameter type	Integer
Default value	1048576 (1 MB)
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

 **Note:**

Oracle does not recommend using the `BITMAP_MERGE_AREA_SIZE` parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting `PGA_AGGREGATE_TARGET` instead. `BITMAP_MERGE_AREA_SIZE` is retained for backward compatibility.

`BITMAP_MERGE_AREA_SIZE` is relevant only for systems containing bitmap indexes. A larger value usually improves performance, because the bitmap segments must be sorted before being merged into a single bitmap.

 **See Also:**

Oracle Database SQL Tuning Guide for more information on using bitmap indexes for performance

1.35 BLANK_TRIMMING

`BLANK_TRIMMING` specifies the data assignment semantics of character datatypes.

Property	Description
Parameter type	Boolean

Property	Description
Default value	false
Modifiable	No
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Values

- TRUE
Allows the data assignment of a source character string or variable to a destination character column or variable even though the source length is longer than the destination length. In this case, however, the additional length over the destination length must be all blanks, else an exception condition is raised. This value complies with the semantics of SQL-92 Transitional Level and above.
- FALSE
Disallow the data assignment if the source length is longer than the destination length and reverts to SQL92 Entry Level semantics.

 **See Also:**

Oracle Database Globalization Support Guide for more information on how using this parameter can help prevent data truncation issues during character set migration

1.36 BLOCKCHAIN_TABLE_MAX_NO_DROP

BLOCKCHAIN_TABLE_MAX_NO_DROP lets you control the maximum amount of idle time that can be specified when creating a blockchain table or an immutable table. The idle time represents the length of time the table must be inactive before it can be dropped. When explicitly set by a user, the only value allowed for this parameter is 0.

Property	Description
Parameter type	Integer
Default value	None
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	None or 0
Basic	No
Oracle RAC	The same value must be used on all instances.

When creating a blockchain table or an immutable table with the SQL statement `CREATE TABLE`, you can specify the clause `NO DROP UNTIL number DAYS IDLE`. This clause specifies the number of days the table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped.

- If `BLOCKCHAIN_TABLE_MAX_NO_DROP` is set to 0, then when a user creates a blockchain table or an immutable table, and specifies the `NO DROP UNTIL number DAYS IDLE` clause, the value of `number` must be 0:

```
CREATE BLOCKCHAIN TABLE ... NO DROP UNTIL 0 DAYS IDLE ...
CREATE IMMUTABLE TABLE ... NO DROP UNTIL 0 DAYS IDLE ...
```

This allows the table to be dropped at any time, regardless of how long the table has been inactive.

- If `BLOCKCHAIN_TABLE_MAX_NO_DROP` is not set, then when a user creates a blockchain table or an immutable table, and specifies the `NO DROP UNTIL number DAYS IDLE` clause, any number value can be specified for `number`.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.10.

 **See Also:**

Oracle Database SQL Language Reference for information about the `CREATE TABLE` statement

1.37 CIRCUITS

`CIRCUITS` specifies the total number of virtual circuits that are available for inbound and outbound network sessions.

Property	Description
Parameter type	Integer
Default value	4294967295
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

It is one of several parameters that contribute to the total SGA requirements of an instance.

You should not specify a value for this parameter unless you want to limit the number of virtual circuits.

 **See Also:**

- *Oracle Database Concepts* for more information on memory structures
- *Oracle Database Concepts* for more information on processes

1.38 CLIENT_RESULT_CACHE_LAG

CLIENT_RESULT_CACHE_LAG specifies the maximum time (in milliseconds) since the last round trip to the server, before which the OCI client query execute makes a round trip to get any database changes related to the queries cached on the client.

Property	Description
Parameter type	Big integer
Syntax	CLIENT_RESULT_CACHE_LAG = <i>integer</i>
Default value	3000
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No

 **See Also:**

Oracle Call Interface Programmer's Guide for more information about the client query cache feature

1.39 CLIENT_RESULT_CACHE_SIZE

CLIENT_RESULT_CACHE_SIZE specifies the maximum size of the client per-process result set cache (in bytes).

Property	Description
Parameter type	Big integer
Syntax	CLIENT_RESULT_CACHE_SIZE = <i>integer</i> [K M G]
Default value	0
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No

All OCI client processes inherit this maximum size. Setting a nonzero value enables the client query cache feature. This can be overridden by the client configuration parameter `OCI_RESULT_CACHE_MAX_SIZE`.

 **See Also:**

Oracle Call Interface Programmer's Guide for more information about the client query cache feature

1.40 CLIENT_STATISTICS_LEVEL

`CLIENT_STATISTICS_LEVEL` controls whether database clients report network statistics to the database.

This parameter applies only to clients that use Oracle Call Interface (OCI) to connect to the database.

Property	Description
Parameter type	String
Syntax	<code>CLIENT_STATISTICS_LEVEL = { TYPICAL OFF }</code>
Default value	TYPICAL
Modifiable	<code>ALTER SYSTEM ... DEFERRED</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Database clients sometimes have performance issues when interacting with the database over a network (LAN or WAN). You can use this parameter to enable clients to collect network statistics and periodically send them to the database, where the statistics are displayed in `AWR` and `v$` views. These statistics include TCP and SQL*Net statistics. They complement existing database statistics and can be used to analyze, troubleshoot, and tune potential network performance or configuration issues.

Possible values:

- `TYPICAL`

This setting enables clients to collect network statistics and periodically report them to the database.

- `OFF`

This setting disables this feature. Clients will not report network statistics to the database.

When you modify this parameter, the new setting applies only to subsequent new connections to database clients.

 **Note:**

To view a complete listing of the statistics that are collected and reported when this feature is enabled, issue the following SQL statement:

```
SELECT name FROM V$STATNAME
  WHERE name LIKE 'Client%' ORDER BY name;

NAME
-----
Client Advertised Receive Window
Client Advertised Send Window
Client Data Segments In
Client Data Segments Out
Client Lost Packets
Client Path Maximum Transmission Unit(MTU)
Client Send Congestion Window
Client Time (usec) Busy Sending Data
Client Time (usec) Busy Sending Data under Congestion
Client Time (usec) Last Ack Received
Client Time (usec) Last Ack Sent
Client Time (usec) Last Data Received
Client Time (usec) Last Data Sent
Client Time (usec) Limited by Receive Window
Client Time (usec) Limited by Send Buffer
Client Time (usec) Round Trip Time
Client Time (usec) Round Trip Time Variance
Client Total Bytes Acked
Client Total Bytes Received
Client Total Number of Retransmitted Packets
```

 **Note:**

This parameter is available starting with Oracle Database 19c.

1.41 CLONEDB

CLONEDB should be set on Direct NFS Client CloneDB databases. When this parameter is set, the CloneDB database uses the database backup as the backing store for the datafiles.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false

Property	Description
Basic	No
Oracle RAC	The same value should be set for all instances.

 **See Also:**

- See *Oracle Database Administrator's Guide* for more information about cloning databases on network attached storage (NAS).
- "[CLONEDB_DIR](#)"

1.42 CLONEDB_DIR

CLONEDB_DIR sets the directory path where CloneDB bitmap files should be created and accessed.

Property	Description
Parameter type	String
Syntax	CLONEDB_DIR = <i>string</i>
Default value	\$ORACLE_HOME/dbs
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	In an Oracle RAC environment, this parameter should be set to a shared location that is accessible from all the instances.

By default the CloneDB bitmap file is created under the \$ORACLE_HOME/dbs directory. This directory may not be in a shared location in an Oracle RAC environment, and therefore this parameter is provided to identify a shared location where CloneDB specific files can be created.

 **See Also:**

- "["CLONEDB"](#)"

1.43 CLUSTER_DATABASE

CLUSTER_DATABASE is an Oracle RAC parameter that specifies whether Oracle RAC is enabled.

Property	Description
Parameter type	Boolean
Default value	false

Property	Description
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	Yes
Oracle RAC	For all instances, the value must be set to true.

**See Also:**

Oracle Real Application Clusters Administration and Deployment Guide for an introduction to Oracle RAC

1.44 CLUSTER_DATABASE_INSTANCES

CLUSTER_DATABASE_INSTANCES is an Oracle RAC parameter that specifies the number of instances that are configured as part of the cluster database.

Property	Description
Parameter type	Integer
Default value	If CLUSTER_DATABASE is set to false, then 1 If CLUSTER_DATABASE is set to true, the number of configured Oracle RAC instances
Modifiable	No
Modifiable in a PDB	No
Range of values	Any nonzero value
Basic	No
Oracle RAC	Multiple instances should have the same value.

You must set this parameter for every instance. Normally you should set this parameter to the number of instances in your Oracle RAC environment. A proper setting for this parameter can improve memory use.

**Note:**

The CLUSTER_DATABASE_INSTANCES parameter is deprecated in Oracle Database 19c, and may be unsupported in a future release. Starting with Oracle Database 19c, the number of configurable Oracle RAC instances is derived from Oracle Clusterware.

 See Also:

- *Oracle Database SQL Tuning Guide* for more information about parallel execution
- *Oracle Real Application Clusters Administration and Deployment Guide* for information on Oracle Real Application Clusters

1.45 CLUSTER_INTERCONNECTS

CLUSTER_INTERCONNECTS can be used in Oracle Real Application Clusters environments to indicate cluster interconnects available for use for the database traffic.

Property	Description
Parameter type	String
Syntax	CLUSTER_INTERCONNECTS = <i>ifn</i> [: <i>ifn</i>] ...
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	One or more IP addresses, separated by colons
Basic	No

Use this parameter to override the default interconnect configured for the database traffic, which is stored in the cluster registry. This procedure also may be useful with Data Warehouse systems that have reduced availability requirements and high interconnect bandwidth demands.

CLUSTER_INTERCONNECTS specifically overrides the following:

- Network classifications stored by `oifcfg` in the OCR.
- The default interconnect chosen by Oracle.

If you want to load-balance the interconnect, then Oracle recommends that you use link-bonding at the operating system level, even if you have two databases on the same server, so that multiple interconnects use the same address. Note that multiple private addresses provide load balancing, but do not provide failover unless bonded. If you specify multiple addresses in `init.ora` using `CLUSTER_INTERCONNECTS`, instead of bonding multiple addresses at the operating system level, then typically availability is reduced, because each network interface card failure will take down that instance.

Refer to your vendor documentation for information about bonding interfaces. Some vendor bonding architectures may require the use of this parameter.

If you have multiple database instances on Oracle Real Application Clusters nodes and want to use a specific interface for each instance, then you can set the `CLUSTER_INTERCONNECTS` initialization parameter to the IP address for each database instance. For example:

```
hr1.init.ora.cluster_interconnects="192.0.2.111"
oltp3.init.ora.cluster_interconnects="192.0.2.112"
```

If the Oracle RAC interconnect is configured to run on a different interface than the Oracle Clusterware interconnect, then this configuration can cause reduced availability, as failovers or

instance evictions can be delayed if the Oracle RAC interconnect fails while the Oracle Clusterware NIC remains up.

 **See Also:**

Oracle Real Application Clusters Administration and Deployment Guide for additional information about using CLUSTER_INTERCONNECTS

1.46 COMMIT_LOGGING

COMMIT_LOGGING is an advanced parameter used to control how redo is batched by Log Writer.

Property	Description
Parameter type	String
Syntax	COMMIT_LOGGING = { IMMEDIATE BATCH }
Default value	There is no default value.
Modifiable	Yes (at both session-level and system-level)
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Each instance may have its own setting

If COMMIT_LOGGING is altered after setting COMMIT_WAIT to FORCE_WAIT, then the FORCE_WAIT option is no longer valid.

1.47 COMMIT_POINT_STRENGTH

COMMIT_POINT_STRENGTH specifies a value that determines the **commit point site** in a distributed transaction.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to 255
Basic	No

 **Note:**

This parameter is relevant only in distributed database systems.

The node in the transaction with the highest value for `COMMIT_POINT_STRENGTH` will be the commit point site.

The commit point site of a database should reflect the amount of critical shared data in the database. For example, a database on a mainframe computer typically shares more data among users than one on a personal computer. Therefore, `COMMIT_POINT_STRENGTH` should be set to a higher value for the mainframe computer.

The commit point site stores information about the status of transactions. Other computers in a distributed transaction require this information during Oracle's two-phase commit, so it is desirable to have machines that are always available as commit point sites. Therefore, set `COMMIT_POINT_STRENGTH` to a higher value on your more available machines.

See Also:

- *Oracle Database Concepts* and *Oracle Database Administrator's Guide* for information on two-phase commit
- Your operating system-specific Oracle documentation for the default value of this parameter

1.48 COMMIT_WAIT

`COMMIT_WAIT` is an advanced parameter used to control when the redo for a commit is flushed to the redo logs.

Property	Description
Parameter type	String
Syntax	<code>COMMIT_WAIT = { NOWAIT WAIT FORCE_WAIT }</code>
Default value	There is no default value.
Modifiable	Yes (at both session-level and system-level)
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Each instance may have its own setting

Be aware that the `NOWAIT` option can cause a failure that occurs after the database receives the commit message, but before the redo log records are written. This can falsely indicate to a transaction that its changes are persistent. Also, it can violate the durability of ACID (Atomicity, Consistency, Isolation, Durability) transactions if the database shuts down unexpectedly.

If the parameter is set to `FORCE_WAIT`, the default behavior (immediate flushing of the redo log buffer with wait) is used. If this is a system setting, the session level and transaction level options will be ignored. If this is a session level setting, the transaction level options will be ignored. If `COMMIT_WAIT` is altered after it has been set to `FORCE_WAIT`, then the `FORCE_WAIT` option is no longer valid.

1.49 COMMIT_WRITE

`COMMIT_WRITE` is an advanced parameter used to control how redo for transaction commits is written to the redo logs.

Property	Description
Parameter type	String
Syntax	<code>COMMIT_WRITE = '{IMMEDIATE BATCH},{WAIT NOWAIT}'</code>
Default value	If this parameter is not explicitly specified, then database commit behavior defaults to writing commit records to disk before control is returned to the client. If only IMMEDIATE or BATCH is specified, but not WAIT or NOWAIT, then WAIT mode is assumed. If only WAIT or NOWAIT is specified, but not IMMEDIATE or BATCH, then IMMEDIATE mode is assumed. Be aware that the NOWAIT option can cause a failure that occurs after the database receives the commit message, but before the redo log records are written. This can falsely indicate to a transaction that its changes are persistent. Also, it can violate the durability of ACID (Atomicity, Consistency, Isolation, Durability) transactions if the database shuts down unexpectedly.
Modifiable	Yes (at both session-level and system-level). Values supplied for COMMIT_WRITE in an ALTER SYSTEM or ALTER SESSION statement must be separated by a comma.
Modifiable in a PDB	Yes
Range of values	Single-quoted, comma-separated list of either IMMEDIATE or BATCH, and either WAIT or NOWAIT.
Basic	No
Oracle RAC	Each instance may have its own setting

The IMMEDIATE and BATCH options control how redo is batched by Log Writer. The WAIT and NOWAIT options control when the redo for a commit is flushed to the redo logs.

 **Note:**

The COMMIT_WRITE parameter is deprecated. It is retained for backward compatibility only. It is replaced by the COMMIT_LOGGING and COMMIT_WAIT parameters.

1.50 COMMON_USER_PREFIX

COMMON_USER_PREFIX specifies a prefix that the names of common users, roles, and profiles in a multitenant container database (CDB) must start with.

Property	Description
Parameter type	String
Syntax	<code>COMMON_USER_PREFIX = prefix</code>
Default value	In a CDB root, C## is the default value. In an application root, the empty string is the default value.
Modifiable	No
Modifiable in a PDB	No However, you can modify this parameter in an application root.

Property	Description
Basic	No
Oracle RAC	Multiple instances must have the same value

Names of local users, roles, and profiles must not start with the same prefix. A case-insensitive comparison of the prefixes for user, role, and profile names to the value of this parameter is done.

When a value is set for `COMMON_USER_PREFIX`, Oracle will require that the names of common users, roles, and profiles start with the string assigned to this parameter.

The names of users, roles, and profiles created using this prefix must be valid names.

Regardless of the value of the `COMMON_USER_PREFIX` parameter, the names of local users, roles, and profiles cannot start with `C##`. Similarly, the names of application common users and local users in an application PDB cannot start with `C##`.

⚠ Caution:

You can change the value of the `COMMON_USER_PREFIX` parameter, but do so only with great care.

If `COMMON_USER_PREFIX` is set to an empty string, Oracle will *not* enforce any restrictions on the names of common or local users, roles, and profiles.

Setting this parameter to an empty string will result in no restrictions being placed on names of common and local users, roles, and profiles, which could lead to conflicts between the names of local and common users, roles, and profiles when a PDB is plugged into a different CDB, or when opening a PDB that was closed when a common user was created.

>Note:

`COMMON_USER_PREFIX` can be set in the context of an application container.

If you set `COMMON_USER_PREFIX` in the application root to a non-null value, then the application common user should start with that prefix, and a local user created in an application PDB cannot start with that prefix.

By default, `COMMON_USER_PREFIX` is the empty string in an application root.

>Note:

When you query the `V$PARAMETER` or `V$SYSTEM_PARAMETER` view, a value of `NONE` is returned for the `DEFAULT_VALUE` column for the `COMMON_USER_PREFIX` parameter.

However, the database enforces a default value of `C##` for a CDB root and a default value of the empty string for an application root.

 **See Also:**

- *Oracle Database SQL Language Reference* for information about valid user names
- *Oracle Database SQL Language Reference* for information about valid role names
- *Oracle Database SQL Language Reference* for information about valid profile names
- *Oracle Multitenant Administrator's Guide* for more information about the multitenant architecture

1.51 COMPATIBLE

`COMPATIBLE` enables you to use a new release of Oracle while ensuring the ability to downgrade the database to an earlier release.

Property	Description
Parameter type	String
Syntax	<code>COMPATIBLE = release_number</code>
Default value	19.0.0
Modifiable	No
Modifiable in a PDB	No
Range of values	11.2.0 to default release Values must be specified as at least three decimal numbers with each pair separated by a dot, such as 19.0.0 or 19.0.0.0.0
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

The `COMPATIBLE` parameter specifies the Oracle version number that the database disk format must be compatible with. The database can be downgraded to the version specified in the `COMPATIBLE` parameter or any later version.

Setting `COMPATIBLE` ensures that new features do not write data formats or structures to disk that are not compatible with the earlier release, preventing a future downgrade. Features that require a higher value of `COMPATIBLE` to work correctly may be restricted or disabled to ensure downgrades are possible.

Typically, users keep `COMPATIBLE` unchanged when upgrading their Oracle software. After upgrade, users will run the new release of the Oracle software for a few weeks to ensure that the new release is working correctly. Afterwards, users can choose to update `COMPATIBLE` to the latest version to take advantage of the new features.

 **Notes:**

- The value of the COMPATIBLE parameter can be increased to a higher version, but it can never be decreased to a lower version.
- The value of the COMPATIBLE parameter should not be changed for a Release Update (RU) or Release Update Revision (RUR). For example, assume you are running Oracle Database 19c and the value of COMPATIBLE is 19.0.0. You then apply Oracle Database Release Update 19.6.0.0.0. Do not set the value of COMPATIBLE to 19.6.0; leave it set to 19.0.0.
- When using a standby database, this parameter must have the same value on both the primary and standby databases.
- When you set the value of the COMPATIBLE parameter to 12.2.0, the maximum size of SQL identifiers is increased from 30 bytes to 128 bytes.

 **See Also:**

Oracle Database Upgrade Guide for more information on setting this parameter

1.52 CONNECTION_BROKERS

CONNECTION_BROKERS is used to specify connection broker types, the number of connection brokers of each type, and the maximum number of connections per broker.

Property	Description
Parameter type	String
Syntax	CONNECTION_BROKERS = broker_description[,...]
Syntax	broker_description ::= ((type_clause) (brokers_clause) [(broker_options)])
Syntax	type_clause ::= TYPE={ DEDICATED EMON POOLED } Indicates the broker type. This is a mandatory parameter.
Syntax	brokers_clause ::= BROKERS=integer Indicates the number of brokers of the specified type. This is a mandatory parameter. The specified integer value must be greater than or equal to 0. If set to 0, brokers will not accept new connections, but existing connections will continue as normal.
Syntax	broker_options ::= CONNECTIONS=integer The maximum number of connections per broker. This is an optional parameter. If the specified integer value is greater than the maximum allowed for the platform, the maximum allowed for the platform is used.

Property	Description
Default value	The default value for the initialization parameter will contain the DEDICATED and EMON broker types. Certain types of brokers are only started when certain features are enabled, so their configuration will only apply if the broker is needed.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value should be set on all instances

The connection brokers are used in these cases:

- DEDICATED brokers are used by the multiprocess and multithreaded Oracle features. See *Oracle Database Concepts* for more information about these features.
- DEDICATED brokers are also used when the `USE_DEDICATED_BROKER` initialization parameter is set to `true`. See "[USE_DEDICATED_BROKER](#)" for more information about the `USE_DEDICATED_BROKER` initialization parameter.
- EMON brokers are used when there is a client registered for notification over 12c AQ queues. It is not on by default. See *Oracle Database Advanced Queuing User's Guide* for more information about AQ queues.
 - POOLED brokers are used whenever a Database Resident Connection Pooling (DRCP) pool is active. See *Oracle Database Concepts* for more information about DRCP pooling.

The POOLED broker does not appear in the parameter by default. In this case, the DRCP fields are used. If you specify the POOLED broker in the parameter, then that specification will override the DRCP fields, and further attempts to set the DRCP fields will then throw an error. Oracle recommends that the parameter be used instead of the DRCP fields.

To make it easier to modify the list, individual entries are indexed using the `TYPE` so it is not necessary to re-specify the entire list. For example, to adjust the number of DEDICATED brokers:

```
alter system set connection_brokers = '((TYPE=DEDICATED) (BROKERS=2))'
```

1.53 CONTAINER_DATA

Use `CONTAINER_DATA` to control whether queries on extended data-linked objects from within a PDB return rows from both the root and the PDB, or rows from only the PDB.

Property	Description
Parameter type	String
Syntax	<code>CONTAINER_DATA = { ALL CURRENT CURRENT_DICTIONARY }</code>
Default value	ALL
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

This parameter controls the behavior of queries on the following types of objects:

- Extended data-linked application common objects

This type of object stores shared data in an application root, and also allows application PDBs to store local data that is unique to each application PDB.

When this type of object is queried from an application root, only the shared data in the application root is returned.

When this type of object is queried from an application PDB, the value of the CONTAINER_DATA initialization parameter controls the query result as follows:

- ALL: The query returns both the shared data in the application root and the local data pertaining to the application PDB
 - CURRENT: The query returns only the local data pertaining to the application PDB
 - CURRENT_DICTIONARY: The query returns both the shared data in the application root and the local data pertaining to the application PDB
- Extended data-linked Oracle-supplied data dictionary objects

This type of object stores data pertaining to the CDB root, as well as data pertaining to individual PDBs.

When this type of object is queried from the CDB root, only data pertaining to the CDB root is returned.

When this type of object is queried from a PDB, the value of the CONTAINER_DATA initialization parameter controls the query result as follows:

- ALL: The query returns data pertaining to both the CDB root and the PDB
- CURRENT: The query returns only data pertaining to the PDB
- CURRENT_DICTIONARY: The query returns only data pertaining to the PDB

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.10.

1.54 CONTAINERS_PARALLEL_DEGREE

CONTAINERS_PARALLEL_DEGREE can be used to control the degree of parallelism of a query involving containers().

Property	Description
Parameter type	Integer
Default value	65535
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Cannot be set to a value lower than 2 or higher than 65535.
Basic	No
Oracle RAC	Different values can be set on different instances.

The value of `CONTAINERS_PARALLEL_DEGREE`, if set, will override the default DOP for a `containers()` query.

By default, a `containers()` query uses a degree of parallelism equal to $(1 + \text{number of open PDBs})$ in the case of CDB root and $(1 + \text{number of open application PDBs})$ in the case of application root.

If the value of `CONTAINERS_PARALLEL_DEGREE` is lower than 65535, then this value is used as the degree of parallelism of a query involving `containers()`. Otherwise (when the value is 65535), the default degree of parallelism is $(1 + \text{number of open PDBs})$ or $(1 + \text{number of open application PDBs})$ as described above.

See Also:

- *Oracle Multitenant Administrator's Guide* for more information about CDB roots
- *Oracle Multitenant Administrator's Guide* for more information about application roots

1.55 CONTROL_FILE_RECORD_KEEP_TIME

`CONTROL_FILE_RECORD_KEEP_TIME` specifies the minimum number of days before a reusable record in the control file can be reused.

Property	Description
Parameter type	Integer
Default value	7 (days)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 365 (days)
Basic	No

In the event a new record must be added to a reusable section and the oldest record has not aged enough, the record section expands. If this parameter is set to 0, then reusable sections never expand, and records are reused as needed.

If the number of reusable records in the control file exceeds the circular reuse record limit `UB4MAXVAL`, then reusable records will be overwritten even if `CONTROL_FILE_RECORD_KEEP_TIME` has not elapsed. `UB4MAXVAL` is defined in the `oratypes.h` header file, which is found in the `public` directory. Its value may vary according to the operating system you are using.

Note:

This parameter applies only to records in the control file that are circularly reusable (such as archive log records and various backup records). It does not apply to records such as data file, tablespace, and redo thread records, which are never reused unless the corresponding object is dropped from the tablespace.

 See Also:

- "[CONTROL_FILES](#)"
- *Oracle Database Backup and Recovery User's Guide* for more information about this parameter

1.56 CONTROL_FILES

`CONTROL_FILES` specifies one or more names of control files, separated by commas.

Property	Description
Parameter type	String
Syntax	<code>CONTROL_FILES = filename [, filename] ...</code> Note: The control file name can be an OMF (Oracle Managed Files) name. This occurs when the control file is re-created using the <code>CREATE CONTROLFILE REUSE</code> statement.
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to 8 filenames
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Every database has a **control file**, which contains entries that describe the structure of the database (such as its name, the timestamp of its creation, and the names and locations of its data files and redo files).

Oracle recommends that you multiplex multiple control files on different devices or mirror the file at the operating system level.

 See Also:

Oracle Database Administrator's Guide for information about specifying control files at database creation

1.57 CONTROL_MANAGEMENT_PACK_ACCESS

`CONTROL_MANAGEMENT_PACK_ACCESS` specifies which of the Server Manageability Packs should be active.

Property	Description
Parameter type	String
Syntax	<code>CONTROL_MANAGEMENT_PACK_ACCESS = { NONE DIAGNOSTIC DIAGNOSTIC+TUNING }</code>

Property	Description
Default value	Enterprise Edition: DIAGNOSTIC+TUNING All other editions: NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

The following packs are available:

- The DIAGNOSTIC pack includes AWR, ADDM, and so on.
 - The TUNING pack includes SQL Tuning Advisor, SQLAccess Advisor, and so on.
- A license for DIAGNOSTIC is required for enabling the TUNING pack.

Values

- NONE
Both packs are not available.
- DIAGNOSTIC
Only the DIAGNOSTIC pack is available.
- DIAGNOSTIC+TUNING
Both packs are available. This is the default.

 **See Also:**

Oracle Database Licensing Information User Manual

1.58 CORE_DUMP_DEST

CORE_DUMP_DEST specifies the directory where Oracle dumps core files.

Property	Description
Parameter type	String
Syntax	CORE_DUMP_DEST = <i>directory</i>
Default value	ORACLE_HOME/DBS
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

CORE_DUMP_DEST is primarily a UNIX parameter and may not be supported on your platform.

 **Note:**

This parameter is ignored by the new diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the `DIAGNOSTIC_DEST` initialization parameter.

 **See Also:**

"[DIAGNOSTIC_DEST](#)"

1.59 CPU_COUNT

`CPU_COUNT` specifies the number of CPUs available for Oracle Database to use.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to unlimited
Basic	No
Oracle RAC	The same value should be used on all instances.

On CPUs with multiple CPU threads, it specifies the total number of available CPU threads. Various components of Oracle Database are configured based on the number of CPUs, such as the Optimizer, Parallel Query, and Resource Manager.

If `CPU_COUNT` is set to 0 (its default setting), then Oracle Database continuously monitors the number of CPUs reported by the operating system and uses the current count. If `CPU_COUNT` is set to a value other than 0, then Oracle Database will use this count rather than the actual number of CPUs, thus disabling dynamic CPU reconfiguration.

When Resource Manager is managing CPU (`RESOURCE_MANAGER_PLAN` is set), then the database's CPU utilization is limited to `CPU_COUNT` CPU threads. This feature is called Instance Caging. If Resource Manager is enabled at the CDB level, then the PDB's CPU utilization is limited to the PDB's `CPU_COUNT`.

 **Note:**

Setting `CPU_COUNT` to a value greater than the current number of CPUs results in an error. However, if `CPU_COUNT` is set to a value greater than the current number of CPUs in the initialization parameter file, then `CPU_COUNT` is capped to the current number of CPUs.

 **Note:**

When a value is not explicitly set for `CPU_COUNT`, the maximum default value for `CPU_COUNT` is 2 for an Oracle ASM Proxy instance, 4 for an Oracle ASM instance, and 8 for an Oracle IOServer instance.

 **See Also:**

- "[CPU_MIN_COUNT](#)"
- *Oracle Database VLDB and Partitioning Guide* for information about how `CPU_COUNT` is used to determine the default degree of parallelism for a single instance or Oracle RAC configuration when the `PARALLEL` clause is specified but no degree of parallelism is listed
- *Oracle Database Administrator's Guide* for an example of how CPU resources are allocated if you enable instance caging and set a maximum utilization limit in a resource plan

1.60 CPU_MIN_COUNT

`CPU_MIN_COUNT` specifies the minimum number of CPUs required by a pluggable database (PDB) at any given time.

Property	Description
Parameter type	String
Syntax	<code>CPU_MIN_COUNT = 'value'</code>
Default value	The value of <code>CPU_COUNT</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of Values	Decimal values from 0.1 through 0.95, where the decimal value is a multiple of 0.05 Integer values from 1 up to and including the value of <code>CPU_COUNT</code>
Basic	No
Oracle RAC	The same value should be used on all instances.

This parameter specifies the minimum number of CPUs required by a PDB at any given time. For multi-threaded CPUs, this number corresponds to CPU threads, not CPU cores.

You can set this parameter at the CDB level, and for each individual PDB. This enables you to control each PDBs minimum share of CPU utilization within a CDB. If the sum of the `CPU_MIN_COUNT` values across all open PDBs in a CDB is equal to the value of `CPU_MIN_COUNT` for the CDB, then the CDB instance is considered full. If the sum exceeds the value of `CPU_MIN_COUNT` for the CDB, then the CDB instance is over-provisioned. Oracle does not prevent you from over-provisioning a CDB.

Resource Manager is enabled at the CDB level by setting the `RESOURCE_MANAGER_PLAN` at the root level to the name of a CDB resource plan. If the CDB resource plan has no configured CPU directives, that is, the `SHARES` and `UTILIZATION_LIMIT` directives are unset, then Resource Manager uses the `CPU_COUNT` and `CPU_MIN_COUNT` settings for the PDB to manage CPU utilization.

 **Note:**

Setting this parameter to a very low value can result in insufficient CPU allocation and poor performance.

 **Note:**

This parameter is available starting with Oracle Database 19c.

 **See Also:**

["CPU_COUNT"](#)

1.61 CREATE_BITMAP_AREA_SIZE

`CREATE_BITMAP_AREA_SIZE` specifies the amount of memory (in bytes) allocated for bitmap creation.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

This parameter is relevant only for systems containing bitmap indexes.

 **Note:**

Oracle does not recommend using the `CREATE_BITMAP_AREA_SIZE` parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting `PGA_AGGREGATE_TARGET` instead. `CREATE_BITMAP_AREA_SIZE` is retained for backward compatibility.

A larger value may speed up index creation.

Cardinality is the number of unique values in a column in relation to the number of rows in the table. If cardinality is very small, you can set a small value for this parameter. For example, if cardinality is only 2, then the value can be in kilobytes rather than megabytes. As a general rule, the higher the cardinality, the more memory is needed for optimal performance.

 **See Also:**

Oracle Database SQL Tuning Guide for more information on using bitmap indexes

1.62 CREATE_STORED_OUTLINES

`CREATE_STORED_OUTLINES` determines whether Oracle automatically creates and stores an outline for each query submitted during the session.

Property	Description
Parameter type	String
Syntax	<code>CREATE_STORED_OUTLINES = { true false category_name }</code> <code>[NOOVERWRITE]</code>
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- `true`

Enables automatic outline creation for subsequent queries in the same session. These outlines receive a unique system-generated name and are stored in the `DEFAULT` category. If a particular query already has an outline defined for it in the `DEFAULT` category, then that outline will remain and a new outline will not be created.

- `false`

Disables automatic outline creation during the session. This is the default.

- `category_name`

Enables the same behavior as `true` except that any outline created during the session is stored in the `category_name` category.

- `NOOVERWRITE`

`NOOVERWRITE` specifies that this system setting will not override the setting for any session in which this parameter was explicitly set. If you do not specify `NOOVERWRITE`, then this setting takes effect in all sessions.

 **See Also:**

Oracle Database SQL Tuning Guide for more information on setting this parameter

1.63 CURSOR_BIND_CAPTURE_DESTINATION

CURSOR_BIND_CAPTURE_DESTINATION determines the location at which bind variables that are captured from SQL cursors are available.

Property	Description
Parameter type	String
Syntax	CURSOR_BIND_CAPTURE_DESTINATION = { off memory memory+disk }
Default value	memory+disk
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- **off**
Bind variables are not captured from SQL cursors.
- **memory**
Bind variables are captured from SQL cursors, and are available only in memory (v\$ views).
- **memory+disk**
Bind variables are captured from SQL cursors, and are available in memory (v\$ views) and disk (Automatic Workload Repository tables, SQL Tuning Set tables, and so on).
When you specify this value with a SQL ALTER SESSION or ALTER SYSTEM statement, enclose the value in single quotes or double quotes. For example:

```
ALTER SESSION SET CURSOR_BIND_CAPTURE_DESTINATION = 'memory+disk';
ALTER SYSTEM SET CURSOR_BIND_CAPTURE_DESTINATION = "memory+disk";
```

1.64 CURSOR_INVALIDATION

CURSOR_INVALIDATION controls whether deferred cursor invalidation or immediate cursor invalidation is used for DDL statements by default.

Property	Description
Parameter type	String
Syntax	CURSOR_INVALIDATION = { DEFERRED IMMEDIATE }
Default value	IMMEDIATE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can have different values.

Deferred invalidation reduces the number of cursor invalidations and spreads the recompilation workload over time. Note that when the recompilation workload is spread over time, a cursor may run with a sub-optimal plan until it is recompiled, and may incur small execution-time overhead.

Prior to Oracle Database 12c Release 2 (12.2.0.1), immediate cursor invalidation was used.

This parameter provides system or session level default for the DEFERRED or IMMEDIATE option for the INVALIDATION clause in DDL statements.

When this parameter is set to DEFERRED, an application can take advantage of reduced cursor invalidation without making any other application changes.

When this parameter is set to IMMEDIATE, the application will experience the same cursor invalidation behavior as in Oracle Database 12c Release 1 (12.1).

1.65 CURSOR_SHARING

CURSOR_SHARING determines what kind of SQL statements can share the same cursors.

Property	Description
Parameter type	String
Syntax	CURSOR_SHARING = { EXACT FORCE }
Default value	EXACT
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- FORCE

Allows the creation of a new cursor if sharing an existing cursor, or if the cursor plan is not optimal.

- EXACT

Only allows statements with identical text to share the same cursor.

 **See Also:**

Oracle Database SQL Tuning Guide before setting the CURSOR_SHARING parameter to learn about the performance implications

1.66 CURSOR_SPACE_FOR_TIME

CURSOR_SPACE_FOR_TIME lets you use more space for cursors to save time.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

 **Note:**

The CURSOR_SPACE_FOR_TIME parameter is deprecated. It is retained for backward compatibility only.

This parameter affects both the shared SQL area and the client's private SQL area.

Most users will not need to set this parameter because of the significantly enhanced concurrency modifications introduced in Oracle Database 10g Release 2 (10.2.0.2) and later.

Values

- true

Shared SQL areas are kept pinned in the shared pool. As a result, shared SQL areas are not aged out of the pool as long as an open cursor references them. Because each active cursor's SQL area is present in memory, execution is faster. However, the shared SQL areas never leave memory while they are in use. Therefore, you should set this parameter to `true` only when the shared pool is large enough to hold all open cursors simultaneously.

In addition, a setting of `true` retains the private SQL area allocated for each cursor between executions instead of discarding it after cursor execution, saving cursor allocation and initialization time.

- false

Shared SQL areas can be deallocated from the library cache to make room for new SQL statements.

 **Note:**

If this parameter is set to `true`, then the `SERIAL_REUSE` parameter is disabled.

 **See Also:**

- "[SERIAL_REUSE](#)"

1.67 DATA_GUARD_MAX_IO_TIME

DATA_GUARD_MAX_IO_TIME sets the maximum number of seconds that can elapse before a process is considered hung while performing a regular I/O operation in an Oracle Data Guard environment. Regular I/O operations include read, write, and status operations.

 **See Also:**

"[DATA_GUARD_MAX_LONGIO_TIME](#)," which enables you to set the timeout for long I/O operations, such as open and close operations, in an Oracle Data Guard environment

Property	Description
Parameter type	Integer
Default value	240
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	10 to 7200
Basic	No
Oracle RAC	Different instances can use different values.

 **Note:**

This parameter is available starting with Oracle Database 19c.

1.68 DATA_GUARD_MAX_LONGIO_TIME

DATA_GUARD_MAX_LONGIO_TIME sets the maximum number of seconds that can elapse before a process is considered hung while performing a long I/O operation in an Oracle Data Guard environment. Long I/O operations include open and close operations.

Property	Description
Parameter type	Integer
Default value	240
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	10 to 7200
Basic	No
Oracle RAC	Different instances can use different values.

Note:

This parameter is available starting with Oracle Database 19c.

See Also:

"[DATA_GUARD_MAX_IO_TIME](#)"

1.69 DATA GUARD SYNC LATENCY

`DATA_GUARD_SYNC_LATENCY` controls how many seconds the Log Writer (LGWR) process waits beyond the response of the first in a series of Oracle Data Guard SYNC redo transport mode connections.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to the number of seconds specified by the <code>NET_TIMEOUT</code> attribute for the <code>LOG_ARCHIVE_DEST_n</code> parameter
Basic	No
Oracle RAC	The same value must be used on all instances.

The default value is 0, which means that the LGWR will wait up to the number of seconds specified by the `NET_TIMEOUT` attribute of the `LOG_ARCHIVE_DEST_n` parameter for each SYNC standby destination.

For example, in an Oracle Data Guard configuration that has two standbys which receive redo in SYNC mode, you would define `LOG_ARCHIVE_DEST_2` and `LOG_ARCHIVE_DEST_3` to use SYNC transport with `DATA_GUARD_SYNC_LATENCY` set to a value of 2 seconds. When redo needs to be sent to the standbys, it is sent to both the `LOG_ARCHIVE_DEST_2` and `LOG_ARCHIVE_DEST_3` connections in parallel and the LGWR will wait for acknowledgement. If `LOG_ARCHIVE_DEST_2` responds with its message acknowledging that the redo has been received first, the LGWR will not wait for `LOG_ARCHIVE_DEST_3` to respond for more than 2 extra seconds (`DATA_GUARD_SYNC_LATENCY`). If `LOG_ARCHIVE_DEST_3` does not respond within those 2 seconds the LGWR disconnects from `LOG_ARCHIVE_DEST_3`, putting it into the error state. Redo continues to be sent to `LOG_ARCHIVE_DEST_2` as usual. After the duration of the `REOPEN` attribute for `LOG_ARCHIVE_DEST_3` has elapsed, the LGWR reconnects to `LOG_ARCHIVE_DEST_3` and redo transfer continues. In this manner, the maximum impact of having the second SYNC standby would be restricted to 2 seconds more than having only one SYNC standby, while allowing the Oracle Data Guard configuration to maintain the desired protection level.

LGWR will never wait longer than the value of the `NET_TIMEOUT` attribute of the `LOG_ARCHIVE_DEST_n` parameter, regardless of the value of `DATA_GUARD_SYNC_LATENCY`.

 See Also:["LOG_ARCHIVE_DEST_n"](#)

1.70 DATA_TRANSFER_CACHE_SIZE

DATA_TRANSFER_CACHE_SIZE sets the size of the data transfer cache (in bytes) used to receive data blocks (typically from a primary database in an Oracle Data Guard environment) for consumption by an instance during execution of an RMAN RECOVER ... NONLOGGED BLOCK command.

Property	Description
Parameter type	Big integer
Syntax	DATA_TRANSFER_CACHE_SIZE = <i>integer</i> [K M G]
Default value	If SGA_TARGET is set, then if DATA_TRANSFER_CACHE_SIZE is not specified, the default size of the data transfer cache is 0 (internally determined by Oracle Database). If SGA_TARGET is set and DATA_TRANSFER_CACHE_SIZE is specified, then the user-specified value indicates the minimum value for the data transfer cache. If SGA_TARGET is not set, the data transfer cache will not be available.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 – 512M, rounded up to the next granule size
Basic	No
Oracle RAC	Multiple instances can have different values.

This initialization parameter needs to be set only for databases that do not use Automatic Memory Management and that use the RMAN RECOVER ... NONLOGGED BLOCK command.

1.71 DB_nK_CACHE_SIZE

DB_nK_CACHE_SIZE (where *n* = 2, 4, 8, 16, 32) specifies the size of the cache for the *n*K buffers.

Property	Description
Parameter type	Big integer
Syntax	DB_[2 4 8 16 32]K_CACHE_SIZE = <i>integer</i> [K M G]
Default value	0 (additional block size caches are not configured by default)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

You can set this parameter only when `DB_BLOCK_SIZE` has a value other than nK . For example, if `DB_BLOCK_SIZE=4096`, then it is illegal to specify the parameter `DB_4K_CACHE_SIZE` (because the size for the 4 KB block cache is already specified by `DB_CACHE_SIZE`).

Do not set this parameter to zero if there are any online tablespaces with an nK block size.

Operating system-specific block size restrictions apply. For example, you cannot set `DB_32K_CACHE_SIZE` if the operating system's maximum block size is less than 32 KB. Also, you cannot set `DB_2K_CACHE_SIZE` if the minimum block size is greater than 2 KB.

 **See Also:**

Your operating system-specific Oracle documentation for more information on block size restrictions

1.72 DB_BIG_TABLE_CACHE_PERCENT_TARGET

`DB_BIG_TABLE_CACHE_PERCENT_TARGET` specifies the cache section target size for automatic big table caching, as a percentage of the buffer cache.

Property	Description
Parameter type	String
Syntax	<code>DB_BIG_TABLE_CACHE_PERCENT_TARGET = string</code>
Default value	0
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances can have different values, but it is recommended to keep the big table cache section size uniform.

Automatic big table caching enables parallel queries and serial queries to use the buffer cache, which enhances the in-memory query capabilities of Oracle Database. Automatic big table caching is designed primarily to enhance performance for data warehouse workloads, but it also improves performance in mixed workloads.

Starting in Oracle Database 12c Release 1 (12.1.0.2), table scans can use a different algorithm in the following scenarios:

- Parallel queries:

In single-instance and Oracle Real Application Clusters (Oracle RAC) databases, parallel queries can use the automatic big table cache when the `DB_BIG_TABLE_CACHE_PERCENT_TARGET` initialization parameter is set to a nonzero value, and the `PARALLEL_DEGREE_POLICY` initialization parameter is set to `AUTO` or `ADAPTIVE`.

- Serial queries:

In a single-instance configuration only, serial queries can use the automatic big table cache when the `DB_BIG_TABLE_CACHE_PERCENT_TARGET` initialization parameter is set to a nonzero value.

When a nonzero value is specified for the DB_BIG_TABLE_CACHE_PERCENT_TARGET parameter, the value indicates the percentage of the buffer cache to reserve for the big table cache. The largest value that can be specified with the DB_BIG_TABLE_CACHE_PERCENT_TARGET parameter is 90, which reserves 10% of the buffer cache for usage besides table scans.

The default value of this parameter is 0. Therefore, automatic big table caching is not enabled by default. When automatic big table caching is not enabled, queries might run using the least recently used (LRU) mechanism for cached reads, or might decide to use direct reads for the table scan.

If a large table is about the size of the combined size of the big table cache of all instances, the table will be partitioned and cached or mostly cached on all instances. With in-memory parallel query, this could eliminate most disk reads for queries on the table, or the database could intelligently read from disk only for the portion of the table that does not fit in the big table cache. If the big table cache cannot cache all the tables to be scanned, only the most frequently accessed tables will be cached, and the rest will be read via direct read automatically.

Use these guidelines when setting the parameter:

- If you do not enable automatic degree of parallelism (DOP) in your Oracle RAC environment, do not set this parameter because the big table cache is not used in that situation.
- When setting this parameter, consider the workload mix: how much of the workload is for OLTP; insert, update, and random access; and how much of the workload involves table scans. Because data warehouse workloads often perform large table scans, you may consider giving the big table cache section a higher percentage of buffer cache space for data warehouses.
- This parameter can be dynamically changed if the workload changes. The change could take some time to reach the target (depending on the current workload) because buffer cache memory might be actively used at that time.

Note:

Automatic big table caching uses temperature and object-based algorithms to track medium and big tables. Oracle will cache very small tables, but they will not be tracked by automatic big table caching.

See Also:

- "[PARALLEL_DEGREE_POLICY](#)"
- See "[V\\$BT_SCAN_CACHE](#)" and "[V\\$BT_SCAN_OBJ_TEMPS](#)" for more information about the big table cache
- *Oracle Database VLDB and Partitioning Guide* for more information about this parameter and about automatic big table caching

1.73 DB_BLOCK_BUFFERS

DB_BLOCK_BUFFERS specifies the number of database buffers in the buffer cache.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	50 to an operating system-specific maximum
Basic	No
Oracle RAC	Multiple instances can have different values, and you can change the values as needed.

 **Note:**

DB_BLOCK_BUFFERS cannot be combined with the dynamic DB_CACHE_SIZE parameter; combining these parameters in the same parameter file will produce an error.

DB_BLOCK_BUFFERS is one of several parameters that contribute to the total memory requirements of the SGA of an instance.

This parameter, together with DB_BLOCK_SIZE, determines the total size of the buffer cache. Effective use of the buffer cache can greatly reduce the I/O load on the database. DB_BLOCK_SIZE can be specified only when the database is first created, so you use DB_BLOCK_BUFFERS to control the size of the buffer cache.

 **Note:**

The DB_BLOCK_BUFFERS initialization parameter is deprecated. It is maintained for backward compatibility.

Oracle recommends that you use DB_CACHE_SIZE instead.

 **See Also:**

"DB_CACHE_SIZE"

1.74 DB_BLOCK_CHECKING

`DB_BLOCK_CHECKING` specifies whether Oracle Database performs block checking for database blocks.

Property	Description
Parameter type	String
Syntax	<code>DB_BLOCK_CHECKING = { FALSE OFF LOW MEDIUM TRUE FULL }</code>
Default value	FALSE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes, with the following restriction: If block checking is enabled for a CDB, then you cannot subsequently disable block checking in any of its PDBs. That is, if the value of <code>DB_BLOCK_CHECKING</code> in a CDB is LOW, MEDIUM, TRUE, or FULL, and you then attempt to set the value of <code>DB_BLOCK_CHECKING</code> in one of its PDBs to FALSE or OFF, an error will occur.
Basic	No

Values

- OFF or FALSE

No block checking is performed for blocks in user tablespaces. However, semantic block checking for `SYSTEM` tablespace blocks is always turned on.

- LOW

Basic block header checks are performed after block contents change in memory (for example, after `UPDATE`, `INSERT` or `DELETE` statements, or after inter-instance block transfers in Oracle RAC).

- MEDIUM

All `LOW` checks and full semantic checks are performed for all objects except indexes (whose contents can be reconstructed by a drop+rebuild on encountering a corruption).

- FULL or TRUE

All `LOW` and `MEDIUM` checks and full semantic checks are performed for all objects.

Oracle checks a block by going through the data in the block, making sure it is logically self-consistent. Block checking can often prevent memory and data corruption. Block checking typically causes 1% to 10% overhead in most applications, depending on workload and the parameter value. Specific DML overhead may be higher. The more updates or inserts in a workload, the more expensive it is to turn on block checking. You should set `DB_BLOCK_CHECKING` to `FULL` if the performance overhead is acceptable.

For backward compatibility, the use of `FALSE` (implying `OFF`) and `TRUE` (implying `FULL`) is preserved.

Caution:

Before enabling block checking with this parameter, Oracle recommends that you detect and repair any logical corruptions in the database. Otherwise, a block that contains logical corruption will be marked as "soft corrupt" after block checking is enabled and the block is modified by a DML statement. This will result in ORA-1578 errors and the block will be unreadable. For more information about detecting and repairing logical corruptions, see *Oracle Database Backup and Recovery User's Guide*.

See Also:

Oracle Database Administrator's Guide for more information about this parameter

1.75 DB_BLOCK_CHECKSUM

`DB_BLOCK_CHECKSUM` determines whether `DBWn` and the direct loader will calculate a checksum (a number calculated from all the bytes stored in the block) and store it in the cache header of every data block when writing it to disk.

Property	Description
Parameter type	String
Syntax	<code>DB_BLOCK_CHECKSUM = { OFF FALSE TYPICAL TRUE FULL }</code>
Default value	TYPICAL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Checksums are verified when a block is read - only if this parameter is `TYPICAL` or `FULL` and the last write of the block stored a checksum. In `FULL` mode, Oracle also verifies the checksum before a change application from update/delete statements and recomputes it after the change is applied. In addition, Oracle gives every log block a checksum before writing it to the current log.

Most of the log block checksum is done by the generating foreground processes, while the `LGWR` or the `LGWR` slave processes (`LGnn` processes) perform the rest of the work, for better CPU and cache efficiency.

If this parameter is set to `OFF`, `DBWn` calculates checksums only for the `SYSTEM` tablespace, but not for user tablespaces. In addition, no log checksum is performed when this parameter is set to `OFF`.

Checksums allow Oracle to detect corruption caused by underlying disks, storage systems, or I/O systems. If set to `FULL`, `DB_BLOCK_CHECKSUM` also catches in-memory corruptions and stops them from making it to the disk. Turning on this feature in `TYPICAL` mode causes only an additional 1% to 2% overhead. In the `FULL` mode it causes 4% to 5% overhead. Oracle recommends that you set `DB_BLOCK_CHECKSUM` to `TYPICAL`.

For backward compatibility the use of TRUE (implying TYPICAL) and FALSE (implying OFF) values is preserved.

 **See Also:**

Oracle Database Backup and Recovery Reference for more information about this parameter

1.76 DB_BLOCK_SIZE

`DB_BLOCK_SIZE` specifies (in bytes) the size of Oracle database blocks.

Property	Description
Parameter type	Integer
Default value	8192
Modifiable	No
Modifiable in a PDB	No
Range of values	2048 to 32768, but your operating system may have a narrower range
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

 **Note:**

Set this parameter at the time of database creation. Do not alter it afterward.

Typical values for `DB_BLOCK_SIZE` are 4096 and 8192. The value of this parameter must be a multiple of the physical block size at the device level.

The value for `DB_BLOCK_SIZE` in effect at the time you create the database determines the size of the blocks. The value must remain set to its initial value.

For Oracle Real Application Clusters (Oracle RAC), this parameter affects the maximum value of the `FREELISTS` storage parameter for tables and indexes. Oracle uses one database block for each freelist group. Decision support system (DSS) and data warehouse database environments tend to benefit from larger block size values.

 **Note:**

64-bit operating systems support a maximum `DB_BLOCK_SIZE` value of 32768

 See Also:

- *Oracle Database Administrator's Guide* for information on setting this parameter
- *Oracle Database SQL Language Reference* for information on freelist groups

1.77 DB_CACHE_ADVICE

`DB_CACHE_ADVICE` enables or disables statistics gathering used for predicting behavior with different cache sizes through the `V$DB_CACHE_ADVICE` performance view.

Property	Description
Parameter type	String
Syntax	<code>DB_CACHE_ADVICE = { ON READY OFF }</code>
Default value	If <code>STATISTICS_LEVEL</code> is set to <code>TYPICAL</code> or <code>ALL</code> , then <code>ON</code> If <code>STATISTICS_LEVEL</code> is set to <code>BASIC</code> , then <code>OFF</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No

Values

- **OFF**
Advisory is turned off and the memory for the advisory is not allocated.
- **READY**
Advisory is turned off but the memory for the advisory remains allocated. Allocating the memory before the advisory is actually turned on avoids the risk of an error when you switch the parameter to `ON`.
If the parameter is switched to this state from `ON`, the contents of the view are preserved and the memory for the advisory is retained.
If the parameter is switched to this state from `OFF`, you may get an error.
- **ON**
Advisory is turned on. CPU and memory overheads are incurred. Attempting to set the parameter to this state when it is already in the `OFF` state may result in an error. Otherwise, the view (`V$DB_CACHE_ADVICE`) is reset and statistics are gathered to the newly refreshed view.
If the parameter is in the `READY` state, you can set it to `ON` without any errors because the memory is already allocated. The view is reset and statistics are displayed in the newly refreshed view.

 See Also:

["V\\$DB_CACHE_ADVICE"](#)

1.78 DB_CACHE_SIZE

DB_CACHE_SIZE specifies the size of the DEFAULT buffer pool for buffers with the primary block size (the block size defined by the DB_BLOCK_SIZE initialization parameter).

Property	Description
Parameter type	Big integer
Syntax	DB_CACHE_SIZE = <i>integer</i> [K M G]
Default value	If SGA_TARGET is set: If the parameter is not specified, then the default is 0 (internally determined by the Oracle Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If SGA_TARGET is not set, then the default is either 48 MB or 4 MB * number of CPUs, whichever is greater
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

The value must be at least 4M * number of cpus (smaller values are automatically rounded up to this value). A user-specified value larger than this is rounded up to the nearest granule size. A value of zero is illegal because it is needed for the DEFAULT memory pool of the primary block size, which is the block size for the SYSTEM tablespace.

 **Note:**

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it indicates a possible minimum value for the PDB usage of the memory pool.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- If the `SGA_TARGET` initialization parameter is set at the CDB level, then the following requirement must be met:
 - The value of `DB_CACHE_SIZE` set in a PDB must be less than or equal to 50% of the `SGA_TARGET` value at the CDB level.
- If the `SGA_TARGET` initialization parameter is set at the PDB level, then the following requirement must be met:
 - The value of `DB_CACHE_SIZE` set in a PDB must be less than or equal to 50% of the `SGA_TARGET` value at the PDB level.
- If the `SGA_TARGET` initialization parameter is not set, but the `DB_CACHE_SIZE` initialization parameter is set at the CDB level, then the following requirement must be met:
 - The value of `DB_CACHE_SIZE` set in a PDB must be less than or equal to 50% of the `DB_CACHE_SIZE` value at the CDB level.

When you set `DB_CACHE_SIZE` in a PDB to a value that does not meet these requirements, you receive an error.

 **See Also:**

- *Oracle Database Performance Tuning Guide* and *Oracle Database Administrator's Guide* for more information on setting this parameter
- *Oracle Multitenant Administrator's Guide* for more information about the initialization parameters that control the memory usage of PDBs

1.79 DB_CREATE_FILE_DEST

`DB_CREATE_FILE_DEST` specifies the default location for Oracle-managed datafiles.

Property	Description
Parameter type	String
Syntax	<code>DB_CREATE_FILE_DEST = directory disk group</code>
Default value	There is no default value.

Property	Description
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	Yes

This location is also used as the default location for Oracle-managed control files and online redo logs if none of the DB_CREATE_ONLINE_LOG_DEST_n initialization parameters are specified.

If a file system directory is specified as the default location, then the directory must already exist; Oracle does not create it. The directory must have appropriate permissions that allow Oracle to create files in it. Oracle generates unique names for the files, and a file thus created is an Oracle Managed File.

 **See Also:**

Oracle Database Administrator's Guide for more information on setting this parameter and on Oracle Managed Files

1.80 DB_CREATE_ONLINE_LOG_DEST_n

DB_CREATE_ONLINE_LOG_DEST_n (where n = 1, 2, 3, ... 5) specifies the default location for Oracle-managed control files and online redo logs.

Property	Description
Parameter type	String
Syntax	DB_CREATE_ONLINE_LOG_DEST_[1 2 3 4 5] = directory disk group
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	Yes

If more than one DB_CREATE_ONLINE_LOG_DEST_n parameter is specified, then the control file or online redo log is multiplexed across the locations of the other DB_CREATE_ONLINE_LOG_DEST_n parameters. One member of each online redo log is created in each location, and one control file is created in each location.

Specifying at least two parameters provides greater fault tolerance for the control files and online redo logs if one of the locations should fail.

If a file system directory is specified as the default location, then the directory must already exist; Oracle does not create it. The directory must have appropriate permissions that allow Oracle to create files in it. Oracle generates unique names for the files, and a file thus created is an Oracle Managed File.

 **See Also:**

Oracle Database Administrator's Guide for more information on setting this parameter and on Oracle Managed Files

1.81 DB_DOMAIN

In a distributed database system, `DB_DOMAIN` specifies the logical location of the database within the network structure.

Property	Description
Parameter type	String
Syntax	<code>DB_DOMAIN = domain_name</code>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Any legal string of name components, separated by periods and up to 128 characters long (including the periods).
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

You should set this parameter if this database is or ever will be part of a distributed system. The value consists of the extension components of a global database name, consisting of valid identifiers (any alphanumeric ASCII characters), separated by periods.

 **Note:**

Oracle recommends that you specify `DB_DOMAIN` as a unique string for all databases in a domain.

This parameter allows one department to create a database without worrying that it might have the same name as a database created by another department. If one sales department's `DB_DOMAIN` is `JAPAN.EXAMPLE.COM`, then their `SALES` database (`SALES.JAPAN.EXAMPLE.COM`) is uniquely distinguished from another database with `DB_NAME = SALES` but with `DB_DOMAIN = US.EXAMPLE.COM`.

If you omit the domains from the name of a database link, Oracle expands the name by qualifying the database with the domain of your local database as it currently exists in the data dictionary, and then stores the link name in the data dictionary. `DB_DOMAIN` should start with an alphabetic character and exclude these characters:

```
"!@%^&*()+=\\|`~[{}];:\\\",<>/?"
```

 See Also:

- *Oracle Database Administrator's Guide* for more information on setting this parameter
- The data dictionary view "[GLOBAL_NAME](#)"

1.82 DB_FILE_MULTIBLOCK_READ_COUNT

`DB_FILE_MULTIBLOCK_READ_COUNT` specifies the maximum number of blocks read in one I/O operation during a sequential scan.

Property	Description
Parameter type	Integer
Default value	The default value corresponds to the maximum I/O size that can be efficiently performed and is platform-dependent
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

`DB_FILE_MULTIBLOCK_READ_COUNT` is one of the parameters you can use to minimize I/O during table scans. The total number of I/Os needed to perform a full table scan depends on such factors as the size of the table, the multiblock read count, and whether parallel execution is being utilized for the operation.

The default value of this parameter is a value that corresponds to the maximum I/O size that can be performed efficiently. This value is platform-dependent and is 1MB for most platforms.

Because the parameter is expressed in blocks, it will be set to a value that is equal to the maximum I/O size that can be performed efficiently divided by the standard block size. Note that if the number of sessions is extremely large the multiblock read count value is decreased to avoid the buffer cache getting flooded with too many table scan buffers.

Even though the default value may be a large value, the optimizer will not favor large I/Os if you do not set this parameter. It will favor large I/Os only if you explicitly set this parameter to a large value.

Online transaction processing (OLTP) and batch environments typically have values in the range of 4 to 16 for this parameter. DSS and data warehouse environments tend to benefit most from maximizing the value of this parameter. The optimizer is more likely to choose a full table scan over an index if the value of this parameter is high.

The maximum value is the operating system's maximum I/O size expressed as Oracle blocks ($(\text{max I/O size})/\text{DB_BLOCK_SIZE}$). If you set this parameter to a value greater than the maximum, then Oracle uses the maximum.

 See Also:

Oracle Database Performance Tuning Guide for information about how setting this parameter incorrectly can cause excessive I/O waits for some execution plans

1.83 DB_FILE_NAME_CONVERT

`DB_FILE_NAME_CONVERT` is useful for creating a duplicate database for recovery purposes. It converts the filename of a new datafile on the primary database to a filename on the standby database.

Property	Description
Parameter type	String
Syntax	<pre>DB_FILE_NAME_CONVERT = 'string1' , 'string2' , 'string3' , 'string4' , ...</pre> <p>Where:</p> <ul style="list-style-type: none"> • <code>string1</code> is the pattern of the primary database filename • <code>string2</code> is the pattern of the standby database filename • <code>string3</code> is the pattern of the primary database filename • <code>string4</code> is the pattern of the standby database filename <p>You can enclose each string in single or double quotation marks.</p> <p>You can specify as many pairs of primary and standby replacement strings as required. However, starting with Oracle Database 12c Release 2 (12.2), Oracle recommends that you limit the number of pairs to 99.</p> <p>Example:</p> <pre>DB_FILE_NAME_CONVERT = '/dbs/t1/','/dbs/t1/ s','/dbs/t2/','/dbs/t2/s'</pre>
Default value	There is no default value.
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Basic	No

If you add a datafile to the primary database, you must add a corresponding file to the standby database. When the standby database is updated, this parameter converts the datafile name on the primary database to the datafile name on the standby database. The file on the standby database must exist and be writable, or the recovery process will halt with an error.

Set the value of this parameter to one or more pairs of strings. The first string in a pair is the pattern found in the datafile names on the primary database. The second string in a pair is the pattern found in the datafile names on the standby database.

If you specify an odd number of strings (the last string has no corresponding replacement string), an error is returned during startup. If the filename being converted matches more than one pattern in the pattern/replace string list, the first matched pattern takes effect. There is no limit on the number of pairs that you can specify in this parameter (other than the hard limit of the maximum length of multivalue parameters). However, starting with Oracle Database 12c Release 2 (12.2), Oracle recommends that you limit the number of pairs to 99.

You can also use `DB_FILE_NAME_CONVERT` to rename the datafiles in the clone control file when setting up a clone database during tablespace point-in-time recovery.

 **See Also:**

- *Oracle Database Backup and Recovery User's Guide* for more information about database backup and recovery
- *Oracle Data Guard Concepts and Administration* for more information about Oracle Data Guard

1.84 DB_FILES

`DB_FILES` specifies the maximum number of database files that can be opened for this database.

Property	Description
Parameter type	Integer
Default value	200
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Minimum: the largest among the absolute file numbers of the datafiles in the database Maximum: operating system-dependent
Basic	No
Oracle RAC	Multiple instances must have the same value.

The maximum valid value is the maximum number of files, subject to operating system constraint, that will ever be specified for the database, including files to be added by `ADD DATAFILE` statements.

If you increase the value of `DB_FILES`, then you must shut down and restart all instances accessing the database before the new value can take effect. If you have a primary and standby database, then they should have the same value for this parameter.

 **See Also:**

- *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment
- Your operating system-specific Oracle documentation for the default value of this parameter

1.85 DB_FLASH_CACHE_FILE

`DB_FLASH_CACHE_FILE` specifies file name(s) for the flash memory or disk group representing a collection of flash memory, for use with Database Smart Flash Cache.

Property	Description
Parameter type	String
Syntax	DB_FLASH_CACHE_FILE = <i>filename [,filename]... disk group</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

You can specify up to 16 file names for flash memory devices. For example, if there are three flash raw devices:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
```

Specifying this parameter without also specifying the DB_FLASH_CACHE_SIZE initialization parameter is not allowed.

 **See Also:**

["DB_FLASH_CACHE_SIZE"](#)

1.86 DB_FLASH_CACHE_SIZE

DB_FLASH_CACHE_SIZE specifies the size of the Database Smart Flash Cache (flash cache). This parameter may only be specified at instance startup.

Property	Description
Parameter type	Big integer
Syntax	DB_FLASH_CACHE_SIZE = <i>integer [K M G T] [, integer [K M G T]]...</i>
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to (DB_BLOCK_SIZE * 256 MB) <ul style="list-style-type: none"> • If DB_BLOCK_SIZE=2 KB, then 0 - 512 GB • If DB_BLOCK_SIZE=4 KB, then 0 - 1 TB • If DB_BLOCK_SIZE=8 KB, then 0 - 2 TB • If DB_BLOCK_SIZE=16 KB, then 0 - 4 TB • If DB_BLOCK_SIZE=32 KB, then 0 - 8 TB
Basic	No

You can specify up to 16 file sizes, for each of the flash memory devices specified with DB_FLASH_CACHE_FILE. For example, if there are three flash raw devices, you can specify the sizes of each device as follows:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 32G, 64G
```

If your flash cache consists of one flash cache device, you can dynamically change this parameter to 0 for that flash cache device (disabling the flash cache) after the database is started. You can then reenable the flash cache by setting this parameter for the device back to the original value when the database was started. Dynamic resizing of DB_FLASH_CACHE_SIZE or reenabling flash cache to a different size is not supported.

If your flash cache includes multiple flash cache devices, you can dynamically change the parameter to 0 for a particular flash cache device (turning it off) after the database is started. You can then reenable that flash cache device by setting this parameter for the device back to the original value it had when the database was started (turning it back on).

For example, to turn off the /dev/raw/sdb flash cache device:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 0, 64G
```

And, to turn the /dev/raw/sdb flash cache device back on again:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 32G, 64G
```

See Also:

["DB_FLASH_CACHE_FILE"](#)

1.87 DB_FLASHBACK_RETENTION_TARGET

DB_FLASHBACK_RETENTION_TARGET specifies the upper limit (in minutes) on how far back in time the database may be flashed back.

Property	Description
Parameter type	Integer
Default value	1440 (minutes)
Modifiable	ALTER SYSTEM ... SID='*'
Modifiable in a PDB	No
Range of values	0 to $2^{31} - 1$
Basic	No

How far back one can flashback a database depends on how much flashback data Oracle has kept in the fast recovery area.

See Also:

[Oracle Data Guard Broker](#) for enabling Flashback Database on Oracle Data Guard primary and target standby databases

1.88 DB_INDEX_COMPRESSION_INHERITANCE

DB_INDEX_COMPRESSION_INHERITANCE dictates how index creation inherits compression attributes.

Property	Description
Parameter type	String
Syntax	DB_INDEX_COMPRESSION_INHERITANCE = { TABLESPACE TABLE ALL NONE }
Default value	NONE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Values:

- TABLESPACE
Index inheritance is based on tablespace attributes.
- TABLE
Index inheritance is based on table attributes.
- ALL
Index inheritance is based on table settings. However, if the table does not have default compression attributes, then index inheritance is based on tablespace attributes.
- NONE
There is no index inheritance from the table or tablespace.

If the CREATE INDEX statement specifies compression attributes, then the value of DB_INDEX_COMPRESSION_INHERITANCE is ignored, and there is no inheritance from the table or tablespace. When there is table inheritance or tablespace inheritance (and the tablespace does not have an explicit index compression clause), then the following matrix is used:

Table/Tablespace Level Compression	Inherited Compression for Index
OLTP	ADVANCED LOW
QUERY LOW, QUERY HIGH	ADVANCED HIGH
ARCHIVE LOW, ARCHIVE HIGH	ADVANCED HIGH

 **Note:**

The value of `DB_INDEX_COMPRESSION_INHERITANCE` is ignored when creating an index owned by `SYS`. Such indexes do not inherit index compression attributes from tables or tablespaces. If you want to compress an index owned by `SYS`, you must explicitly specify the index compression attributes in the `CREATE INDEX` or `ALTER INDEX` statement.

 **See Also:**

Oracle Database Administrator's Guide for more information about index compression

1.89 DB_KEEP_CACHE_SIZE

`DB_KEEP_CACHE_SIZE` specifies the size of the `KEEP` buffer pool.

Property	Description
Parameter type	Big integer
Syntax	<code>DB_KEEP_CACHE_SIZE = integer [K M G]</code>
Default value	0 (<code>DB_KEEP_CACHE_SIZE</code> is not configured by default)
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

The size of the buffers in the `KEEP` buffer pool is the primary block size (the block size defined by the `DB_BLOCK_SIZE` initialization parameter).

 **See Also:**

- "[DB_RECYCLE_CACHE_SIZE](#)"
- *Oracle Database Performance Tuning Guide* for information on setting these parameters and on using multiple buffer pools

1.90 DB_LOST_WRITE_PROTECT

`DB_LOST_WRITE_PROTECT` enables or disables lost write detection.

Property	Description
Parameter type	String
Syntax	DB_LOST_WRITE_PROTECT = { NONE TYPICAL FULL }
Default value	NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	In Oracle RAC instances, the parameter value is systemwide.

A data block lost write occurs when an I/O subsystem acknowledges the completion of the block write, while in fact the write did not occur in the persistent storage.

When the parameter is set to `TYPICAL` on the primary database, the instance logs buffer cache reads for read/write tablespaces in the redo log, which is necessary for detection of lost writes.

When the parameter is set to `FULL` on the primary database, the instance logs reads for read-only tablespaces and read/write tablespaces.

When the parameter is set to `TYPICAL` or `FULL` on the standby database or on the primary database during media recovery, the instance performs lost write detection.

When the parameter is set to `NONE` on either the primary database or the standby database, no lost write detection functionality is enabled.

1.91 DB_NAME

`DB_NAME` specifies a database identifier of up to 8 characters.

Property	Description
Parameter type	String
Syntax	<code>DB_NAME = database_name</code>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance. Multiple instances must have the same value.

This parameter must be specified and must correspond to the name specified in the `CREATE DATABASE` statement.

If you have multiple databases, the value of this parameter should match the Oracle instance identifier of each one to avoid confusion with other databases running on the system. The value of `DB_NAME` must be the same in both the standby and production initialization parameter files.

The database name specified in either the `STARTUP` command or the `ALTER DATABASE ... MOUNT` statement for each instance of the cluster database must correspond to the `DB_NAME` initialization parameter setting.

The following characters are valid in a database name: alphanumeric characters, underscore (_), number sign (#), and dollar sign (\$). No other characters are valid. The database name must start with an alphabetic character. Oracle removes double quotation marks before processing the database name. Therefore you cannot use double quotation marks to embed other characters in the name. The database name is case insensitive.

 **See Also:**

Oracle Database Administrator's Guide and *Oracle Real Application Clusters Administration and Deployment Guide* for more information on setting this parameter

1.92 DB_PERFORMANCE_PROFILE

`DB_PERFORMANCE_PROFILE` specifies the performance profile for a database or a pluggable database (PDB).

Property	Description
Parameter type	String
Syntax	<code>DB_PERFORMANCE_PROFILE = string</code>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be set on all instances.

A performance profile supports easier management for hundreds of databases or PDBs.

On Oracle Exadata, the performance profile for the regular database or CDB is pushed down to the Exadata storage cells. The performance profile is used for the management of Exadata I/O Resource Manager.

A CDB resource plan can specify different resource controls for a performance profile using the `DBMS_RESOURCE_MANAGER.CREATE_CDB_PROFILE_DIRECTIVE` procedure. A PDB with a matching performance profile will use the specified controls.

The value of `DB_PERFORMANCE_PROFILE` can be up to 30 characters and is not case sensitive.

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for information about the `DBMS_RESOURCE_MANAGER.CREATE_CDB_PROFILE_DIRECTIVE` procedure.

1.93 DB_RECOVERY_FILE_DEST

`DB_RECOVERY_FILE_DEST` specifies the default location for the fast recovery area.

Property	Description
Parameter type	String
Syntax	DB_RECOVERY_FILE_DEST = <i>directory</i> <i>disk group</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM ... SID='*''
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

The fast recovery area contains multiplexed copies of current control files and online redo logs, as well as archived redo logs, flashback logs, and RMAN backups.

Specifying this parameter without also specifying the DB_RECOVERY_FILE_DEST_SIZE initialization parameter is not allowed.

See Also:

- Oracle Database Backup and Recovery User's Guide for information on setting up and configuring the fast recovery area
- "[DB_RECOVERY_FILE_DEST_SIZE](#)"

1.94 DB_RECOVERY_FILE_DEST_SIZE

DB_RECOVERY_FILE_DEST_SIZE specifies (in bytes) the hard limit on the total space to be used by target database recovery files created in the fast recovery area.

Property	Description
Parameter type	Big integer
Syntax	DB_RECOVERY_FILE_DEST_SIZE = <i>integer</i> [K M G]
Default value	0
Modifiable	ALTER SYSTEM ... SID='*''
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Note that neither block 0 nor the OS block header of each Oracle file is included in this size. Allow an extra 10% for this data when computing the actual disk usage required for the fast recovery area.

 **See Also:**

- *Oracle Database Backup and Recovery User's Guide* for information on setting up and configuring the fast recovery area
- "[DB_RECOVERY_FILE_DEST](#)"

1.95 DB_RECYCLE_CACHE_SIZE

`DB_RECYCLE_CACHE_SIZE` specifies the size of the `RECYCLE` buffer pool.

Property	Description
Parameter type	Big integer
Syntax	<code>DB_RECYCLE_CACHE_SIZE = integer [K M G]</code>
Default value	0 (<code>DB_RECYCLE_CACHE_SIZE</code> is not configured by default)
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

The size of the buffers in the `RECYCLE` pool is the primary block size (the block size defined by the `DB_BLOCK_SIZE` initialization parameter).

 **See Also:**

- "[DB_KEEP_CACHE_SIZE](#)"
- *Oracle Database Performance Tuning Guide* for information on setting these parameters and on using multiple buffer pools

1.96 DB_SECUREFILE

`DB_SECUREFILE` specifies whether to treat LOB files as SecureFiles.

Property	Description
Parameter type	String
Syntax	<code>DB_SECUREFILE = { NEVER PERMITTED PREFERRED ALWAYS IGNORE }</code>

Property	Description
Default value	PERMITTED if the COMPATIBLE initialization parameter is set to 11.2.0.1, 11.2.0.2, or 11.2.0.3, or PREFERRED if the COMPATIBLE initialization parameter is set to 12.0.0.0 or higher
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- NEVER

Any LOBs that are specified as SecureFiles are created as BasicFiles LOBs. All SecureFiles-specific storage options and features (for example, compress, encrypt, deduplicate) will cause an exception. The BasicFiles LOB defaults will be used for storage options not specified.

- PERMITTED

LOBs are allowed to be created as SecureFiles.

- PREFERRED

All LOBs are created as SecureFiles unless BASICFILE is explicitly specified in the LOB storage clause or the tablespace is a Manual Segment Space Management tablespace. When PREFERRED is set, cases where BASICFILE would otherwise be inherited from the partition or column level LOB storage are ignored; the LOBs will be created as SecureFiles instead.

- ALWAYS

Attempts to create all LOBs as SecureFiles LOBs but creates any LOBs not in an Automatic Segment Space Managed (ASSM) tablespace as BasicFiles LOBs, unless SECUREFILE is explicitly specified. Any BasicFiles LOB storage options that are specified will be ignored and the SecureFiles LOB defaults will be used for all storage options not specified.

- IGNORE

The SECUREFILE keyword and all SecureFiles options are ignored.

If the COMPATIBLE initialization parameter is not set to 11.1.0 or higher, then LOBs are not treated as SecureFiles.

If there is a LOB column with two partitions (one that has a tablespace for which ASSM is enabled and one that has a tablespace for which ASSM is not enabled), then LOBs in the partition with the ASSM-enabled tablespace will be treated as SecureFiles and LOBs in the other partition will be treated as BasicFiles.

If an application is not certified with SecureFiles, the value of the DB_SECUREFILE initialization parameter can be set to PERMITTED to get the default behavior of Oracle Database 11g.

 See Also:

Oracle Database SecureFiles and Large Objects Developer's Guide for an example of setting this parameter using the `ALTER SYSTEM` statement

1.97 DB_ULTRA_SAFE

`DB_ULTRA_SAFE` sets the default values for other parameters that control protection levels.

Property	Description
Parameter type	String
Syntax	<code>DB_ULTRA_SAFE = { OFF DATA_ONLY DATA_AND_INDEX }</code>
Default value	OFF
Modifiable	No
Modifiable in a PDB	No
Basic	No

Values

- OFF
 - When any of `DB_BLOCK_CHECKING`, `DB_BLOCK_CHECKSUM`, or `DB_LOST_WRITE_PROTECT` are explicitly set, no changes are made.
- `DATA_ONLY`
 - `DB_BLOCK_CHECKING` will be set to MEDIUM.
 - `DB_LOST_WRITE_PROTECT` will be set to TYPICAL.
 - `DB_BLOCK_CHECKSUM` will be set to FULL.
- `DATA_AND_INDEX`
 - `DB_BLOCK_CHECKING` will be set to FULL.
 - `DB_LOST_WRITE_PROTECT` will be set to TYPICAL.
 - `DB_BLOCK_CHECKSUM` will be set to FULL.

 See Also:

- "`DB_BLOCK_CHECKING`"
- "`DB_BLOCK_CHECKSUM`"
- "`DB_LOST_WRITE_PROTECT`"

1.98 DB_UNIQUE_NAME

DB_UNIQUE_NAME specifies a globally unique name for the database.

Property	Description
Parameter type	String
Syntax	DB_UNIQUE_NAME = <i>database_unique_name</i>
Default value	Database instances: the value of DB_NAME Oracle Automatic Storage Management instances: +ASM
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Databases with the same DB_NAME within the same DB_DOMAIN (for example, copies of a database created for reporting or a physical standby) must have a unique DB_UNIQUE_NAME. Every database's DB_UNIQUE_NAME must be unique within the enterprise.

The value of DB_UNIQUE_NAME can be up to 30 characters and is case insensitive. The following characters are valid in a database name: alphanumeric characters, underscore (_), number sign (#), and dollar sign (\$).

 **Note:**

DB_UNIQUE_NAME is used by several components within an Oracle instance to default file names or file paths, such as the default for the DG_BROKER_CONFIG_FILE initialization parameter. In these cases, on UNIX platforms, the dollar sign (\$) character will be removed from the path or file name, because the character is used by Oracle to define the start of an environment variable substitution within a path or file name.

 **Note:**

As part of their operations, some database tools or utilities create a string that uniquely identifies a database. The string may include the DB_UNIQUE_NAME for a database, and other identifying information for the database, such as the database SID. Oracle Database restricts some identifiers to 30 characters, so using a short DB_UNIQUE_NAME can help prevent ORA-00972 "identifier is too long" messages from database tools and utilities that create a string that includes the DB_UNIQUE_NAME.

 See Also:

Oracle Data Guard Concepts and Administration and *Oracle Database Administrator's Guide* for more information on setting this parameter

1.99 DB_UNRECOVERABLE_SCN_TRACKING

DB_UNRECOVERABLE_SCN_TRACKING enables or disables the tracking of unrecoverable (NOLOGGING) direct-path INSERT and direct-path load operations.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances must have the same value

When the value is set to true, updates are made to the controlfile that maintains the V\$DATAFILE.UNRECOVERABLE_CHANGE# and V\$DATAFILE.UNRECOVERABLE_TIME columns. When the value is set to false, updates are not made to the controlfile. Setting this parameter to false may improve performance of direct-path NOLOGGING operations.

1.100 DB_WRITER_PROCESSES

DB_WRITER_PROCESSES specifies the initial number of Database Writer Processes for an instance. This parameter is useful for systems that modify data heavily.

Property	Description
Parameter type	Integer
Default value	1 or CPU_COUNT / 8, whichever is greater. If the number of processor groups is less than 100 but greater than the number of Database Writer Processes, then the number of Database Writer Processes is adjusted to be a multiple of the number of processor groups. If the number of Database Writer Processes is greater than or equal to the number of processor groups, then there is no adjustment. For Oracle Solaris on SPARC systems, the default value of this parameter is calculated using an internal algorithm.
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to 100
Basic	No

There can be 1 to 100 Database Writer Processes. The names of the first 36 Database Writer Processes are DBW0-DBW9 and DBWa-DBWz. The names of the 37th through 100th Database Writer Processes are BW36-BW99.

 **See Also:**

- [Background Processes](#) for additional information about the Database Writer Process
- [Oracle Database Concepts](#) for information on when the Database Writer Process writes dirty buffers to disk

1.101 DBFIPS_140

DBFIPS_140 enables Transparent Data Encryption (TDE) and `DBMS_CRYPTO` PL/SQL package program units to run in a mode compliant to the Federal Information Processing Standard (subsequently known as "FIPS mode").

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	All instances must use the same value.

Set this parameter to `true` to use TDE and `DBMS_CRYPTO` in FIPS mode. This means that only FIPS-compliant algorithms may be used. By default, this parameter is set to `false`. When this parameter is set to `false`, all algorithms (FIPS-compliant or not) may be used.

 **See Also:**

- [Oracle Database Security Guide](#) for information about configuring Oracle Database FIPS 140 settings
- [Oracle Database Security Guide](#) for a table that describes the effect of setting the value of `DBFIPS_140` to `true` or `false` on different platforms

1.102 DBWR_IO_SLAVES

`DBWR_IO_SLAVES` specifies the number of I/O server processes used by the `DBW0` process.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to operating system-dependent
Basic	No

DBWR_IO_SLAVES is relevant only on systems with only one database writer process (DBW0). The DBW0 process and its server processes always write to disk. By default, the value is 0 and I/O server processes are not used.

If you set DBWR_IO_SLAVES to a nonzero value, the number of I/O server processes used by the ARCH and LGWR processes is set to 4. However, the number of I/O server processes used by Recovery Manager is set to 4 only if asynchronous I/O is disabled (either your platform does not support asynchronous I/O or `disk_asynch_io` is set to `false`).

Typically, I/O server processes are used to simulate asynchronous I/O on platforms that do not support asynchronous I/O or that implement it inefficiently. However, you can use I/O server processes even when asynchronous I/O is being used. In that case the I/O server processes will use asynchronous I/O.

I/O server processes are also useful in database environments with very large I/O throughput, even if asynchronous I/O is enabled.

See Also:

- "[BACKUP_TAPE_IO_SLAVES](#)"
- *Oracle Database Performance Tuning Guide* for more information about this parameter

1.103 DDL_LOCK_TIMEOUT

DDL_LOCK_TIMEOUT specifies a time limit for how long DDL statements will wait in a DML lock queue.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 1,000,000 (in seconds)
Basic	No

A value of zero indicates a status of NOWAIT. The maximum value of 1,000,000 seconds will result in the DDL statement waiting forever to acquire a DML lock.

If a lock is not acquired before the timeout period expires, then an error is returned.

See Also:

- *Oracle Database Administrator's Guide* for more information about the `DDL_LOCK_TIMEOUT` parameter
- *Oracle Database Development Guide* for information about nonblocking and blocking DDL

1.104 DEFAULT_SHARING

`DEFAULT_SHARING` sets the value of the sharing clause in statements creating objects in an application root.

Property	Description
Parameter type	String
Syntax	<code>DEFAULT_SHARING = { NONE METADATA DATA EXTENDED DATA }</code>
Default value	For types of objects that support sharing, <code>METADATA</code> is the default. For types of objects that do not support sharing, <code>NONE</code> is the default.
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances must have the same value

Specifying `SHARING=` in the create DDL overrides the value of the `DEFAULT_SHARING` parameter.

Example

Issuing the following `ALTER SYSTEM` statement in an application root sets the default value of the sharing clause to `NONE` in the server parameter file for the application root:

```
ALTER SYSTEM SET DEFAULT_SHARING = NONE SCOPE = SPFILE;
```

1.105 DEFERRED_SEGMENT_CREATION

`DEFERRED_SEGMENT_CREATION` specifies the semantics of deferred segment creation.

Property	Description
Parameter type	Boolean
Default value	<code>true</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes

Property	Description
Range of values	true false
Basic	No

If set to true, then segments for tables and their dependent objects (LOBs, indexes) will not be created until the first row is inserted into the table.

Before creating a set of tables, if it is known that a significant number of them will not be populated, then consider setting this parameter to true. This saves disk space and minimizes install time.

1.106 DG_BROKER_CONFIG_FILEn

DG_BROKER_CONFIG_FILEn (where n = 1, 2) specifies the names for the Data Guard broker configuration files.

Property	Description
Parameter type	String
Syntax	DG_BROKER_CONFIG_FILE[1 2] = <i>filename</i>
Default value	Operating system-dependent
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	One filename
Basic	No

Every database that is part of a Data Guard broker configuration has two broker configuration files, which contain entries that describe the state and properties of the configuration (such as the sites and databases that are part of the configuration, the roles and properties of each of the databases, and the state of each of the elements of the configuration). Two files are provided to always maintain the last known good state of the configuration.

If DG_BROKER_CONFIG_FILEn is not explicitly defined, then it is set to an operating system-specific default value at instance startup. This parameter can be altered only when the Data Guard broker is not running. See "[DG_BROKER_START](#)" for information on how to stop and start the broker.

 **See Also:**

[Oracle Data Guard Broker](#) for more information about setting this parameter

1.107 DG_BROKER_START

DG_BROKER_START enables Oracle to determine whether the Oracle Data Guard broker should be started.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM...SID='*''
Modifiable in a PDB	No
Range of values	true false
Basic	No

The Oracle Data Guard broker consists of background processes, foreground processes, and the system global area (SGA). The background and foreground processes are non-fatal processes that exist as long as the instance exists, whenever this parameter is set to true.

If the database is never going to be configured in an Oracle Data Guard broker configuration, then you can leave this parameter unspecified and accept the default value of false. If the database is part of an Oracle Data Guard broker configuration, then you can simplify automatic startup of the broker by setting this parameter to true in the initialization parameter file.

 **See Also:**

Oracle Data Guard Broker for examples of using this parameter to start the Oracle Data Guard broker

1.108 DIAGNOSTIC_DEST

As of Oracle Database 11g Release 1 (11.1), the diagnostics for each database instance are located in a dedicated directory that is specified by the `DIAGNOSTIC_DEST` initialization parameter.

Property	Description
Parameter type	String
Syntax	<code>DIAGNOSTIC_DEST = { pathname directory }</code>
Default value	Derived from the value of the <code>\$ORACLE_BASE</code> environment variable. If <code>\$ORACLE_BASE</code> is not set, then derived from <code>ORACLE_BASE</code> as set by the Oracle Universal Installer. If <code>ORACLE_BASE</code> is not set, then <code>\$ORACLE_HOME/rdbms/log</code> is used.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No
Oracle RAC	This parameter can be set on each instance. Oracle recommends that each instance in a cluster specify a <code>DIAGNOSTIC_DEST</code> directory location that is located on shared disk and that the same value for <code>DIAGNOSTIC_DEST</code> be specified for each instance.

The structure of the directory specified by `DIAGNOSTIC_DEST` is as follows:

`<diagnostic_dest>/diag/rdbms/<dbname>/<instname>`

This location is known as the Automatic Diagnostic Repository (ADR) Home. For example, if the database name is `proddb` and the instance name is `proddb1`, the ADR home directory would be `<diagnostic_dest>/diag/rdbms/proddb/proddb1`.

The following files are located under the ADR home directory:

- Trace files - located in subdirectory `<adr-home>/trace`
- Alert logs - located in subdirectory `<adr-home>/alert`. In addition, the `alert.log` file is now in XML format, which conforms to the Oracle ARB logging standard.
- Core files - located in the subdirectory `<adr-home>/cdump`
- Incident files - the occurrence of each serious error (for example, ORA-600, ORA-1578, ORA-7445) causes an incident to be created. Each incident is assigned an ID and dumping for each incident (error stack, call stack, block dumps, and so on) is stored in its own file, separated from process trace files. Incident dump files are located in `<adr-home>/incident/<inccdir#>`. You can find the incident dump file location inside the process trace file.

 **See Also:**

Oracle Automatic Storage Management Administrator's Guide for an example of the diagnostic directory for an Oracle ASM instance

1.109 DISK_ASYNCNCH_IO

`DISK_ASYNCNCH_IO` controls whether I/O to datafiles, control files, and logfiles is asynchronous (that is, whether parallel server processes can overlap I/O requests with CPU processing during table scans).

Property	Description
Parameter type	Boolean
Default value	<code>true</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No

If your platform supports asynchronous I/O to disk, Oracle recommends that you leave this parameter set to its default value. However, if the asynchronous I/O implementation is not stable, you can set this parameter to `false` to disable asynchronous I/O. If your platform does not support asynchronous I/O to disk, this parameter has no effect.

If you set `DISK_ASYNCNCH_IO` to `false`, then you can increase `DB_WRITER_PROCESSES` or use `DBWR_IO_SLAVES` to simulate asynchronous I/O.

 See Also:

- "[DB_WRITER_PROCESSES](#)"
- "[DBWR_IO_SLAVES](#)"
- *Oracle Database Performance Tuning Guide* for more information about choosing between multiple DBWR processes and I/O slaves

1.110 DISPATCHERS

`DISPATCHERS` configures dispatcher processes in the shared server architecture.

Property	Description
Parameter type	String
Syntax	<code>DISPATCHERS = 'dispatch_clause'</code>
Syntax	<pre>dispatch_clause ::= (PROTOCOL = protocol) (ADDRESS = address) (DESCRIPTION = description) [options_clause]</pre>
Syntax	<pre>options_clause ::= (DISPATCHERS = integer SESSIONS = integer CONNECTIONS = integer MULTIPLEX = {1 ON YES TRUE 0 OFF NO FALSE BOTH IN OUT} LISTENER = tnsname SERVICE = service INDEX = integer)</pre>
Default value	If <code>SHARED_SERVERS</code> is greater than 0, then <code>DISPATCHERS</code> defaults to ' <code>(PROTOCOL=tcp)</code> ', causing 1 TCP/IP dispatcher to be created.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No

The parsing software supports a name-value syntax to enable the specification of attributes in a position-independent, case-insensitive manner. For example:

```
DISPATCHERS = '(PROTOCOL=TCP) (DISPATCHERS=3)'
```

Attributes may be specified using the full attribute name or any substring beginning with the first 3 characters. For example, `SESSIONS` can be specified as `SES`, `SESS`, `SESSI`, and so on.

Specify only one of the following attributes: `PROTOCOL`, `ADDRESS`, or `DESCRIPTION`. If you specify either `ADDRESS` or `DESCRIPTION`, then you can specify additional network attributes. Doing so supports multi-homed hosts.

dispatch_clause

- PROTOCOL
The network protocol for which the dispatcher generates a listening endpoint.
- ADDRESS
The network protocol address of the endpoint on which the dispatchers listen.
- DESCRIPTION
The network description of the endpoint on which the dispatchers listen, including the protocol address.

options_clause

- DISPATCHERS
The initial number of dispatchers to start. The default is 1.
- SESSIONS
The maximum number of network sessions to allow for each dispatcher. The default is operating system-specific. Most operating systems have a default of 16 KB.
- CONNECTIONS
The maximum number of network connections to allow for each dispatcher. The default is operating system-specific.
- MULTIPLEX
Enables the Oracle Connection Manager session multiplexing feature.
 - The values 1, ON, YES, TRUE, and BOTH indicate that Network Session Multiplex is enabled for both incoming and outgoing network connections.
 - The value IN indicates that Network Session Multiplex is enabled for incoming network connections.
 - The value OUT indicates that Network Session Multiplexing is enabled for outgoing network connections.
 - The values 0, NO, OFF, and FALSE indicate that Network Session Multiplexing is disabled for both incoming and outgoing network connections. This is the default.
- LISTENER
Specifies the network name of an address or address list of the Oracle Net listeners with which the dispatchers will register.

The LISTENER attribute facilitates administration of multi-homed hosts. This attribute specifies the appropriate listeners with which the dispatchers will register. The LISTENER attribute takes precedence over the LOCAL_LISTENER and REMOTE_LISTENER parameters. See "[LOCAL_LISTENER](#)" and "[REMOTE_LISTENER](#)".
- SERVICE
Specifies one or more names by which clients can connect to the dispatchers. The SERVICE attribute takes precedence over any settings configured by using the SRVCTL command-line utility, the GDSCTL command-line utility, or the DBMS_SERVICE PL/SQL package.
- INDEX

Use this attribute in an `ALTER SYSTEM SET DISPATCHERS` statement to indicate which dispatcher configuration you want to modify. (If you specify `INDEX` in the initialization parameter file, the Oracle Database ignores it.) In an `ALTER SYSTEM` statement, `INDEX` specifies the order in which the parameter's values were initialized. The value ranges from 0 (for the first dispatcher configuration) to one less than the total number of dispatcher configurations you define.

For example, if you specify 3 dispatcher configurations in the initialization parameter file, you would modify the third dispatcher configuration by specifying `INDEX=2` in the `ALTER SYSTEM` statement. You could also add another dispatcher configuration in the `ALTER SYSTEM` statement by specifying `INDEX=3`.

If `INDEX` is not specified in the `ALTER SYSTEM` statement, then the `PROTOCOL`, `ADDRESS`, or `DESCRIPTION` attributes must be specified, and if a dispatcher configuration matching this `PROTOCOL`, `ADDRESS`, or `DESCRIPTION` exists, then that configuration will be modified. Otherwise, a new configuration will be added.

See Also:

- "[SHARED_SERVERS](#)"

1.111 DISTRIBUTED_LOCK_TIMEOUT

`DISTRIBUTED_LOCK_TIMEOUT` specifies the amount of time (in seconds) for distributed transactions to wait for locked resources.

Property	Description
Parameter type	Integer
Default value	60
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to $2^{31} - 1$
Basic	No

See Also:

Oracle Database Concepts for more information on data concurrency

1.112 DML_LOCKS

`DML_LOCKS` specifies the maximum number of DML locks—one for each table modified in a transaction.

Property	Description
Parameter type	Integer
Default value	Derived: 4 * TRANSACTIONS
Modifiable	No
Modifiable in a PDB	No
Range of values	20 to unlimited; a setting of 0 disables enqueues
Basic	No
Oracle RAC	You must set this parameter for every instance, and all instances must have positive values or all must be 0.

A **DML lock** is a lock obtained on a table that is undergoing a DML operation (insert, update, delete). The `DML_LOCKS` value should equal the grand total of locks on tables currently referenced by all users. For example, if three users are modifying data in one table, then three entries would be required. If three users are modifying data in two tables, then six entries would be required.

The default value assumes an average of four tables referenced for each transaction. For some systems, this value may not be enough.

Enqueues are shared memory structures that serialize access to database resources. If you set the value of `DML_LOCKS` to 0, enqueues are disabled and performance is slightly increased. However, you should be aware of the following restrictions when you set you `DML_LOCKS` to 0:

- You cannot use `DROP TABLE`, `CREATE INDEX` statements
- You cannot use explicit lock statements such as `LOCK TABLE IN EXCLUSIVE MODE`
- Enterprise Manager cannot run on any instances for which `DML_LOCKS` is set to 0

Oracle holds more locks during parallel DML than during serial execution. Therefore, if your database supports a lot of parallel DML, you may need to increase the value of this parameter.

See Also:

- *Oracle Database Concepts* for a discussion of lock and enqueue resources needed for parallel DML
- *Oracle Database Concepts* for more information on data concurrency

1.113 DNFS_BATCH_SIZE

`DNFS_BATCH_SIZE` controls the number of asynchronous I/O's that can be queued by an Oracle process when Direct NFS Client is enabled.

Property	Description
Parameter type	Integer
Default value	4096
Modifiable	No

Property	Description
Modifiable in a PDB	No
Range of values	0 - 4096
Basic	No

In environments where the NFS server cannot handle a large number of outstanding asynchronous I/O requests, use this parameter to limit the number of I/O's issued by an Oracle foreground process. The recommended setting for this parameter is to start at 128 and increase or decrease it based on NFS server performance.

 **See Also:**

Oracle Database Performance Tuning Guide for additional information about the `DNFS_BATCH_SIZE` initialization parameter

1.114 DRCP_DEDICATED_OPT

Use `DRCP_DEDICATED_OPT` to enable or disable the use of dedicated optimization with Database Resident Connection Pooling (DRCP).

Dedicated optimization makes DRCP behave like a dedicated server when the number of connections to the DRCP broker is less than the DRCP maximum size.

Property	Description
Parameter type	String
Syntax	<code>DRCP_DEDICATED_OPT = { YES NO }</code>
Default value	YES
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No
Oracle RAC	Different instances can use different values.

When the value of this parameter is set to `YES`, the use of dedicated optimization with DRCP is enabled. When it is set to `NO`, the use of dedicated optimization with DRCP is disabled.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.11.

 **See Also:**

Oracle Database Administrator's Guide for more information about setting this parameter

1.115 DST_UPGRADE_INSERT_CONV

DST_UPGRADE_INSERT_CONV specifies whether internal operators will be allocated on top of TIMESTAMP WITH TIME ZONE (TSTZ) columns of tables which have not been upgraded during the upgrade window of daylight saving time patching for TIMESTAMP WITH TIME ZONE data.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Values

- true

Internal operators will be allocated on top of TSTZ columns of tables which have not been upgraded. This is the default.

- false

Internal operators will not be allocated on top of TSTZ columns of tables which have not been upgraded.

When DST_UPGRADE_INSERT_CONV is set to true during the upgrade window of the daylight saving time patching process:

- SELECT queries on tables with TSTZ data which have not been upgraded will use internal operators on top of TSTZ columns to present TSTZ data as if they were recorded using the new time zone translation rules.
- DML on tables with TSTZ data which have not been upgraded will use internal operators on top of TSTZ columns to ensure that the TSTZ data is recorded using the old time zone translation rules in order to be consistent with the existing TSTZ data in the same tables.

 **Note:**

Oracle strongly recommends that this parameter is set to `true` throughout the upgrade window of the daylight saving time patching process. This parameter reduces the performance impact since indexes on TSTZ columns will be disabled whenever internal operators are allocated. If the parameter is set to `false`, then indexes will be used and this may affect performance of queries against TSTZ data during the DST upgrade window. Turning off this parameter during the upgrade window may corrupt data on disk when DMLs occur for tables with TSTZ data which have not yet been upgraded.

 **See Also:**

Oracle Database Globalization Support Guide for more information about this parameter

1.116 ENABLE_AUTOMATIC_MAINTENANCE_PDB

`ENABLE_AUTOMATIC_MAINTENANCE_PDB` can be used to enable or disable the running of automated maintenance tasks for all the PDBs in a CDB or for individual PDBs in a CDB.

Property	Description
Parameter type	Boolean
Default value	<code>true</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	The same value should be used for all instances.

 **Note:**

The value of this parameter in `CDB$ROOT` (the root of a CDB) has no effect in the root. Automated maintenance tasks are always run in the root, regardless of the setting of this parameter.

By default, the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` is `true` in `CDB$ROOT` (the root container in the CDB) and in the individual PDBs in a CDB. This means that by default, automated maintenance tasks are run for the CDB root and all the PDBs in the CDB.

When you change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in the CDB root, the new value takes effect in the root and in all the PDBs in the CDB.

Therefore, if you change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in the CDB root to `false`, the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` is also changed to `false` in all of the PDBs in the CDB.

You can also change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in any of the individual PDBs in a CDB, and the value that is set for each individual PDB will be honored. This enables you to enable or disable automated maintenance tasks for individual PDBs.

 **See Also:**

- "[AUTOTASK_MAX_ACTIVE_PDBS](#)" for information about specifying the maximum number of PDBs that can schedule automated maintenance tasks at the same time
- *Oracle Database Administrator's Guide* for more information about managing automated database maintenance tasks

1.117 ENABLE_DDL_LOGGING

`ENABLE_DDL_LOGGING` enables or disables the writing of a subset of data definition language (DDL) statements to a DDL log.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SESSION</code> , <code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	<code>true</code> <code>false</code>
Basic	No

The DDL log is a file that has the same format and basic behavior as the alert log, but it only contains the DDL statements issued by the database. The DDL log is created only for the RDBMS component and only if the `ENABLE_DDL_LOGGING` initialization parameter is set to `true`. When this parameter is set to `false`, DDL statements are not included in the DDL log, but they are included in the alert log.

The DDL log contains one log record for each DDL statement issued by the database. The DDL log is included in IPS incident packages.

There are two DDL logs that contain the same information. One is an XML file, and the other is a text file. The DDL log is stored in the `log/ddl` subdirectory of the ADR home.

When `ENABLE_DDL_LOGGING` is set to `true`, the following DDL statements are written to the log:

- `ALTER/CREATE/DROP/TRUNCATE CLUSTER`
- `ALTER/CREATE/DROP FUNCTION`
- `GRANT`
- `ALTER/CREATE/DROP INDEX`

- ALTER/CREATE/DROP OUTLINE
- ALTER/CREATE/DROP PACKAGE
- ALTER/CREATE/DROP PACKAGE BODY
- ALTER/CREATE/DROP PROCEDURE
- ALTER/CREATE/DROP PROFILE
- REVOKE
- ALTER/CREATE/DROP SEQUENCE
- CREATE/DROP SYNONYM
- ALTER/CREATE/DROP/RENAME/TRUNCATE TABLE
- ALTER/CREATE/DROP TRIGGER
- ALTER/CREATE/DROP TYPE
- ALTER/CREATE/DROP TYPE BODY
- DROP USER
- ALTER/CREATE/DROP VIEW

 **Note:**

The DDL statement written to the log may be truncated. You can use DDL triggers to view the entire DDL statement. See *Oracle Database PL/SQL Language Reference* for more information about DDL triggers.

 **See Also:**

Oracle Database Licensing Information User Manual for licensing information for the `ENABLE_DDL_LOGGING` initialization parameter.

1.118 ENABLE_DNFS_DISPATCHER

`ENABLE_DNFS_DISPATCHER` enables dispatcher support for the Oracle Direct NFS client.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	All instances should use the same value.

When this parameter is set to `true` in the initialization parameter file, dispatcher processes will be spawned for the Oracle Direct NFS client.

The number of dispatcher processes spawned is calculated as one-eighth of the value of the `CPU_COUNT` parameter.

 **See Also:**

"[CPU_COUNT](#)"

1.119 ENABLE_GOLDENGATE_REPLICATION

`ENABLE_GOLDENGATE_REPLICATION` controls services provided by the RDBMS for Oracle GoldenGate (both capture and apply services).

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	All instances must have the same setting

Set this to `true` to enable RDBMS services used by Oracle GoldenGate.

This parameter primarily controls supplemental logging required to support logical replication of new data types and operations. The redo log file is designed to be applied physically to a database, therefore the default contents of the redo log file often do not contain sufficient information to allow logged changes to be converted into SQL statements. Supplemental logging adds extra information into the redo log files so that replication can convert logged changes into SQL statements without having to access the database for each change.

Previously these extra changes were controlled by the supplemental logging DDL. Now the `ENABLE_GOLDENGATE_REPLICATION` parameter must also be set to enable the required supplemental logging for any new data types or operations.

All enhancements to supplemental logging required to support logical replication are also controlled by this parameter.

The RDBMS services controlled by this parameter also include (but are not limited to):

- Transparent Data Encryption (including Tablespace Encryption) utilities used by GoldenGate Extract
- Service to read redo logs used by GoldenGate Extract
- Service to suppress triggers used by GoldenGate Replicat
- Service to handle transient duplicate handling used by GoldenGate Replicat
- Service to bypass referential integrity checking used by GoldenGate Replicat
- Services required to run Oracle GoldenGate in Integrated Extract and Integrated Replicat

 **Note:**

You must purchase a license in order to use Oracle GoldenGate. Refer to *Oracle GoldenGate Licensing Information* and ensure that you have obtained the appropriate licensing before setting this parameter to `true`.

1.120 ENABLE_IMC_WITH_MIRA

`ENABLE_IMC_WITH_MIRA` enables or disables the In-Memory Column Store and Oracle Data Guard Multi-Instance Redo Apply, at the same time, on an Active Data Guard standby database.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter is relevant only on the instance where MRP0 is spawned at the start of Redo Apply on a standby database.

 **Note:**

This parameter is available starting with Oracle Database 19c.

1.121 ENABLE_PLUGGABLE_DATABASE

`ENABLE_PLUGGABLE_DATABASE` is a bootstrap initialization parameter to create a CDB.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No

This parameter enables a database in `NOMOUNT` startup mode to know that it is a CDB.

This parameter must be set in `init.ora` before creating a CDB.

 **Note:**

See *Oracle Multitenant Administrator's Guide* for more information about CDBs and PDBs.

1.122 ENABLED_PDBS_ON_STANDBY

`ENABLED_PDBS_ON_STANDBY` specifies which pluggable databases (PDBs) to replicate on an Oracle Data Guard standby database.

Property	Description
Parameter type	String
Syntax	<code>ENABLED_PDBS_ON_STANDBY = PDB-list</code>
Default value	* if no value is specified for this parameter in the <code>init.ora</code> file
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No
Oracle RAC	All instances should use the same value.

 **Note:**

This parameter is meaningful only on standby databases. Its settings are ignored on a primary database.

PDB-list accepts a list of PDB names represented by glob patterns such as “PDB?” or “PDB*a”, “PDB2”. The glob pattern rules are like those of UNIX shells. The asterisk (*) and question mark (?) wildcard characters are supported. The ? wildcard character matches exactly one unknown character, and the * wildcard character matches any number of unknown characters. Also, the minus sign (-) character can be used as the first character in a PDB name to indicate that the PDB should be excluded on the standby database.

The following characters are valid in a PDB name: alphanumeric characters, underscore (_), number sign (#), and dollar sign (\$). No other characters are valid. Oracle removes double quotation before processing the PDB name. Therefore you cannot use double quotation marks to embed other characters in the name. The PDB name is case insensitive. These are the same naming conventions as for a database name (as described in the `DB_NAME` initialization parameter description).

These rules apply for the `ENABLED_PDBS_ON_STANDBY` parameter:

- Any PDB names that match glob patterns starting with minus sign (-) will not be part of the standby database.
- If a PDB name matches several patterns in the *PDB-list* at the same time, the rightmost matched pattern has the highest precedence.
- If this parameter is not specified in the `init.ora` file, it is assumed that “*” is specified by default.

- If one or more patterns are specified in this parameter, it is assumed that “-*” is implicitly specified in the leftmost position. For example, `ENABLED_PDBS_ON_STANDBY="PDB1", "PDB2"` is equivalent to `ENABLED_PDBS_ON_STANDBY="-*", "PDB1", "PDB2"`. It means that a PDB name that does not match any patterns is not allowed to be part of the standby.

Examples

These examples assumes that nine new PDBs named PDB1A, PDB1B, PDB1C, PDB2A, PDB2B, PDB2C, PDB3A, PDB3B, and PDB3C are being added to the primary database.

- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="*"` on STANDBY1, then all nine PDBs will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="PDB1*"` on STANDBY1, then PDB1A, PDB1B, and PDB1C will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="PDB*A"` on STANDBY1, then PDB1A, PDB2A, and PDB3A will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="PDB1*", "-PDB*A"` on STANDBY1, then PDB1B and PDB1C will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="*", "-PDB*A", "-PDB*B"` on STANDBY1, then PDB1C, PDB2C and PDB3C will be created on STANDBY1. All other PDBs match “*”, and the rightmost pattern has the higher precedence, so they are excluded on the standby.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="*", "-PDB*A", "PDB2A"` on STANDBY1, then PDB1A and PDB3A are excluded, but all other PDBs including PDB2A will be created.

1.123 ENCRYPT_NEW_TABLESPACES

`ENCRYPT_NEW_TABLESPACES` specifies whether to encrypt newly created user tablespaces.

Property	Description
Parameter type	String
Syntax	<code>ENCRYPT_NEW_TABLESPACES = { CLOUD_ONLY ALWAYS DDL }</code>
Default value	<code>CLOUD_ONLY</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be specified for all instances.

The values that can be specified for the `ENCRYPT_NEW_TABLESPACES` parameter have the following meanings:

- `CLOUD_ONLY`:

When a user tablespace is created in the Oracle Cloud, it is transparently encrypted with Advanced Encryption Standard 128 (AES 128) if the `ENCRYPTION ... ENCRYPT` clause for the SQL `CREATE TABLESPACE` statement is not specified. When a user tablespace is created in an on-premises database, the `ENCRYPTION` clause of the `CREATE TABLESPACE` statement determines if the tablespace is encrypted.

`CLOUD_ONLY` is the default value.

- **ALWAYS:**
Whether the user tablespace is created in the Oracle Cloud or in an on-premises database, the tablespace will be transparently encrypted with AES128 if the `ENCRYPTION ... ENCRYPT` clause is not specified in the `CREATE TABLESPACE` statement.
- **DDL:**
Whether the user tablespace is created in the Oracle Cloud or in an on-premises database, the `CREATE TABLESPACE` statement will follow the specified DDL. If no `ENCRYPTION` clause is specified, then the tablespace will not be encrypted. If the `ENCRYPTION USING ... ENCRYPT` clause is specified, then the specified algorithm will be used to encrypt the tablespace. If `ENCRYPTION ENCRYPT` is specified, but no algorithm is specified, then the tablespace will be encrypted with the default AES128 algorithm.

 **See Also:**

- *Oracle Database Advanced Security Guide* for more information about tablespace encryption
- *Oracle Database SQL Language Reference* for more information about the `CREATE TABLESPACE` statement

1.124 EVENT

`EVENT` is a parameter used only to debug the system.

Property	Description
Parameter type	String
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No

Do not alter the value of this parameter except under the supervision of Oracle Support Services staff.

1.125 EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION

`EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION` specifies the location of the secure external keystore.

Property	Description
Parameter type	String
Syntax	<code>EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION = file-location</code>
Default value	No default value
Modifiable	No

Property	Description
Modifiable in a PDB	No
Basic	No
Oracle RAC	This parameter can be set on each instance. Oracle recommends that if the instances have a shared location, then use a directory on the shared location for this parameter and set the same value on all Oracle RAC instances. If the database does not have a shared location, then each instance of the database will have its own directory and the value should be set per-instance.

TDE keystore credentials can be stored in a secure external keystore to automate Transparent Data Encryption (TDE) operations.

To automate the setting of the Master Key in a newly-provisioned PDB, set `EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION` so that the CDB knows the location of the secure external keystore.

When a file specification is set with this parameter, the secure external keystore is looked for in that location. If the secure external keystore is not found in that location, then this parameter is ignored.

See Also:

[Oracle Database Advanced Security Guide](#) for more information about using TDE

1.126 FAL_CLIENT

`FAL_CLIENT` specifies the FAL (fetch archive log) client name that is used by the FAL service, configured through the `FAL_SERVER` initialization parameter, to refer to the FAL client.

Property	Description
Parameter type	String
Syntax	<code>FAL_CLIENT = string</code>
Default value	There is no default value.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No

The value is an Oracle Net service name, which is assumed to be configured properly on the FAL server system to point to the FAL client (standby database).

See Also:

[Oracle Data Guard Concepts and Administration](#) for more information about FAL server

1.127 FAL_SERVER

FAL_SERVER specifies the FAL (fetch archive log) server for a standby database.

Property	Description
Parameter type	String
Syntax	<code>FAL_SERVER = string</code>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

The value is an Oracle Net service name, which is assumed to be configured properly on the standby database system to point to the desired FAL server.

 **See Also:**

Oracle Data Guard Concepts and Administration for more information about FAL server

1.128 FAST_START_MTTR_TARGET

FAST_START_MTTR_TARGET enables you to specify the number of seconds the database takes to perform crash recovery of a single instance.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 3600 seconds
Basic	No
Oracle RAC	Multiple instances can have different values, and you can change the values at run time.

When specified, FAST_START_MTTR_TARGET is overridden by LOG_CHECKPOINT_INTERVAL.

 See Also:

- *Oracle Database Performance Tuning Guide* for an example of setting the lower bound for this parameter
- *Oracle Database Performance Tuning Guide* for an example of setting the upper bound for this parameter
- *Oracle Database Performance Tuning Guide* for an example of selecting a preliminary value for this parameter

1.129 FAST_START_PARALLEL_ROLLBACK

`FAST_START_PARALLEL_ROLLBACK` specifies the degree of parallelism used when recovering terminated transactions.

Property	Description
Parameter type	String
Syntax	<code>FAST_START_PARALLEL_ROLLBACK = { HIGH LOW FALSE }</code>
Default value	LOW
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes This parameter is modifiable in a PDB in Oracle Database 19c, starting with Release Update 19.17.
Basic	No

Terminated transactions are transactions that are active before a system failure. If a system fails when there are uncommitted parallel DML or DDL transactions, then you can speed up transaction recovery during startup by using this parameter.

Values

- FALSE
Parallel rollback is disabled
- LOW
Limits the maximum degree of parallelism to `2 * CPU_COUNT`
- HIGH
Limits the maximum degree of parallelism to `4 * CPU_COUNT`

If you change the value of this parameter, then transaction recovery will be stopped and restarted with the new implied degree of parallelism.

 **See Also:**

Oracle Database VLDB and Partitioning Guide for more information about this parameter

1.130 FILE_MAPPING

FILE_MAPPING specifies whether file mapping is enabled.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

 **Note:**

The FILE_MAPPING initialization parameter is deprecated. It is still supported for backward compatibility.

The FMON background process is started to manage the mapping information when file mapping is enabled.

 **See Also:**

Oracle Database Administrator's Guide for more information about the file mapping feature

1.131 FILEIO_NETWORK_ADAPTERS

FILEIO_NETWORK_ADAPTERS specifies a list of network adapters that can be used to access the disk storage.

Property	Description
Parameter type	String
Syntax	FILEIO_NETWORK_ADAPTERS = <i>adapter_name</i> [, <i>adapter_name</i>] ...
Default value	There is no default value.
Modifiable	No

Property	Description
Modifiable in a PDB	No
Range of values	One or more network adapter names, separated by commas
Basic	No

On platforms where the database files reside in network attached storage, this parameter provides the storage access library the list of network adapters that can be used to access the storage.

The network adapter name is a fully qualified address name of the network card that can be accessed through the host name database or using the Network Information Service. The components of the adapter name are separated by periods. For example, the following is a fully qualified adapter name:

ib1.oracle.com

1.132 FILESYSTEMIO_OPTIONS

`FILESYSTEMIO_OPTIONS` specifies I/O operations for file system files.

Property	Description
Parameter type	String
Syntax	<code>FILESYSTEMIO_OPTIONS = { none setall directIO asynch }</code>
Default value	Varies by database version and operating system.
Modifiable	No
Modifiable in a PDB	No
Basic	No

 **See Also:**

Oracle Database Performance Tuning Guide for information about setting this parameter before running I/O calibration

1.133 FIXED_DATE

`FIXED_DATE` enables you to set a constant date that `SYSDATE` will always return instead of the current date.

Property	Description
Parameter type	String
Syntax	<code>FIXED_DATE = [YYYY-MM-DD-HH24:MI:SS (or the default Oracle date format) NONE]</code>
Default value	There is no default value.
Modifiable	<code>ALTER SYSTEM</code>

Property	Description
Modifiable in a PDB	Yes
Basic	No

To undo a fixed date setting, specify `FIXED_DATE=NONE`. This parameter is useful primarily for testing. The value can be in the format shown above or in the default Oracle date format, without a time.

1.134 FORWARD_LISTENER

`FORWARD_LISTENER` specifies the name of a listener to which a connection must be forwarded by an existing set of remote listeners.

Property	Description
Parameter type	String
Syntax	<code>FORWARD_LISTENER = listener-name</code>
Default value	NULL
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	A different value can be set on different instances.

The parameter is useful when it is difficult to change an existing client connect string, for example, after an offsite database has been moved into the Oracle Cloud. With the `FORWARD_LISTENER` parameter, clients can continue to connect to their offsite listener, and the offsite listener forwards the connection to the Oracle Cloud listener.

Once a forward listener has been configured through the `FORWARD_LISTENER` parameter, the `LOCAL_LISTENER` parameter can be cleared by setting its value to `-oracle-none-` so that all the connections coming to an existing set of remote listeners configured through the `REMOTE_LISTENER` parameter are forwarded only to listeners configured through `FORWARD_LISTENER`.

The `FORWARD_LISTENER` parameter can also be specified in the `LISTENER_NETWORKS` parameter.

Examples

The following setup can be used to forward all the database connections coming to an existing customer SCAN listener to the Oracle Cloud SCAN listener.

```
REMOTE_LISTENER=customer-scan
FORWARD_LISTENER=oracle-cloud-scan
LOCAL_LISTENER=oracle-none-
```

 See Also:

- "[LOCAL_LISTENER](#)"
- "[REMOTE_LISTENER](#)"
- "[LISTENER_NETWORKS](#)"
- *Oracle Clusterware Administration and Deployment Guide* for information about SCAN listeners

1.135 GCS_SERVER PROCESSES

`GCS_SERVER PROCESSES` specifies the number of background GCS server processes (`LMSn` and `LMnn`) to serve the inter-instance traffic among Oracle RAC instances.

If there is high Cache Fusion congestion on the system, the number of GCS server processes could be increased to reduce Cluster wait time. Additionally, the number of GCS server processes could be increased to reduce the application brownout time associated with Cluster reconfiguration and Dynamic Re-mastering (DRM).

Property	Description
Parameter type	Integer
Default value	Oracle calculates the default value as follows (in order of precedence): <ol style="list-style-type: none"> 1. If <code>CLUSTER_DATABASE</code> is set to <code>false</code>, then 0 2. If Oracle ASM, then 1 3. If 1 - 3 CPUs, then 1 4. If 4 - 15 CPUs, then 2 5. If 128 or more CPUs and SGA is 100 GB or more, then $(CPUs / 6)$. If the result includes a fraction, then the fraction is disregarded. 6. Otherwise, the value is $2 + (CPUs / 32)$. If the result includes a fraction, then the fraction is disregarded. For example, if you have 20 CPUs, then $2 + (20 / 32)$ would equal 2 GCS processes. 7. On NUMA-enabled systems with 32 or more CPUs, the value is rounded up to a multiple of the number of NUMA processor groups, with a limit of $(CPUs / 4)$ rounded down to a multiple of the number of NUMA processor groups.
Modifiable	No
Modifiable in a PDB	No
Range of values	0 if Oracle RAC is disabled (<code>CLUSTER_DATABASE</code> is set to <code>false</code>) 1 to 100 if Oracle RAC is enabled (<code>CLUSTER_DATABASE</code> is set to <code>true</code>)
Basic	No
Oracle RAC	Multiple instances can have different values.

GCS server processes are only seen in an Oracle RAC environment.

1.136 GLOBAL_NAMES

GLOBAL_NAMES specifies whether a database link is required to have the same name as the database to which it connects.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

If the value of GLOBAL_NAMES is false, then no check is performed. If you use or plan to use distributed processing, then Oracle recommends that you set this parameter to true to ensure the use of consistent naming conventions for databases and links in a networked environment.

 **See Also:**

Oracle Database Administrator's Guide for more information on setting this parameter

1.137 GLOBAL_TXN_PROCESSES

GLOBAL_TXN_PROCESSES specifies the initial number of GTXn background processes (GTX0, ... GTX9 and GTx0, ... GTxj) per instance to support global (XA) transactions in an Oracle RAC environment.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 20
Basic	No
Oracle RAC	Multiple instances can have different values.

If you want to disable the GTXn background processes, then you must set GLOBAL_TXN_PROCESSES to 0 in your parameter file. Setting this parameter to 0 will disable the XA support on an Oracle RAC database. Error ORA-55712 will be returned if you try to run XA transactions on an Oracle RAC database with this parameter set to 0. You can change the setting to a nonzero value at run time to turn on the support for XA.

GLOBAL_TXN_PROCESSES is useful for systems that process global (XA) transactions heavily. You do not need to specify a value for this parameter since Oracle Database automatically

determines the number of processes and autotunes them, as necessary. GTXn background processes are only seen in an Oracle RAC environment.

 **See Also:**

Oracle Database Development Guide for more information about this parameter

1.138 HASH_AREA_SIZE

HASH_AREA_SIZE specifies the maximum amount of memory, in bytes, to be used for hash joins.

Property	Description
Parameter type	Integer
Default value	Derived: $2 * \text{SORT_AREA_SIZE}$
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Range of values	0 to operating system-dependent
Basic	No

 **Note:**

Oracle does not recommend using the HASH_AREA_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA_AGGREGATE_TARGET instead. HASH_AREA_SIZE is retained for backward compatibility.

HASH_AREA_SIZE is relevant to parallel execution operations and to the query portion of DML or DDL statements.

 **See Also:**

- *Oracle Database Concepts* for information on hash joins in general

1.139 HEAT_MAP

Use HEAT_MAP to enable or disable both the Heat Map and Automatic Data Optimization (ADO) features.

Property	Description
Parameter type	String
Syntax	HEAT_MAP = { ON OFF }

Property	Description
Default value	OFF
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	If specified, use the same value on all instances

Setting the `HEAT_MAP` initialization parameter to `ON` causes the database to track read and write access of all segments, as well as modification of database blocks, due to DMLs and DDLs. These activities are not tracked for objects in the `SYSTEM` and `SYSAUX` tablespaces.

See Also:

- *Oracle Database VLDB and Partitioning Guide* for more information about enabling and disabling the Heat Map feature
- *Oracle Database VLDB and Partitioning Guide* for more information about Heat Map tracking

1.140 HI_SHARED_MEMORY_ADDRESS

`HI_SHARED_MEMORY_ADDRESS` specifies the starting address at run time of the system global area (SGA).

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Basic	No

This parameter is ignored on platforms that specify the SGA's starting address at linktime.

On 64-bit platforms, use `HI_SHARED_MEMORY_ADDRESS` to specify the high-order 32 bits of a 64-bit address. Use `SHARED_MEMORY_ADDRESS` to specify the low-order 32 bits of the address (see "["SHARED_MEMORY_ADDRESS"](#)"). If both parameters are 0 or unspecified, the SGA address defaults to a platform-specific location.

1.141 HS_AUTOREGISTER

`HS_AUTOREGISTER` enables or disables automatic self-registration of Heterogeneous Services (HS) agents.

Property	Description
Parameter type	Boolean

Property	Description
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

When enabled, information is uploaded into the server's data dictionary to describe a previously unknown agent class or a new agent version.

Oracle recommends that you set this parameter to true. Oracle incurs less overhead when establishing subsequent connections through the same agent if self-registered information is available in the server's data dictionary.

See Also:

Oracle Database Heterogeneous Connectivity User's Guide for more information about using HS agents

1.142 IDENTITY_PROVIDER_CONFIG

Use IDENTITY_PROVIDER_CONFIG to configure the database to use Microsoft Azure Active Directory (Azure AD) as an external identity provider.

Property	Description
Parameter type	String
Syntax	<pre>IDENTITY_PROVIDER_CONFIG = '{ "application_id_uri" : "string", "tenant_id" : "string", "app_id" : "string" }'</pre>
	Where:
	<ul style="list-style-type: none"> The application_id_uri value is obtained from the registered application, to be mapped in the JWT "aud" (audience) claim. It must be domain qualified and start with "https://" to specify the OCI database to access. The tenant_id value is obtained from the tenant configuration and is also available on the database application registration overview page. The app_id value is obtained from the registered resource application and is also available on the database application registration overview page.
Default value	None
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Property	Description
Oracle RAC	The same value must be used on all instances.

This parameter is effective only when the database is enabled to use Azure AD as an external identity provider, that is, when the `IDENTITY_PROVIDER_TYPE` initialization parameter is set to `AZURE_AD`. You must use this parameter to specify Azure AD configuration settings.

Example:

```
ALTER SYSTEM SET IDENTITY_PROVIDER_CONFIG =
'{ "application_id_uri" : "https://example.com/pdb1",
  "tenant_id" : "111a1111-a11a-111a-11111111111a",
  "app_id" : "11aa1a1-aaaa-1111-1111-1111aa111111" }'
SCOPE=BOTH;
```

 **Note:**

Setting the value of this parameter is only one step in a series of steps for configuring the database to use Azure AD. Refer to *Oracle Database Security Guide* for the complete steps before you set this parameter.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.16.

 **Note:**

This parameter is not available to update directly for Oracle Autonomous Database Serverless.

 **See Also:**

["IDENTITY_PROVIDER_TYPE"](#)

1.143 IDENTITY_PROVIDER_TYPE

`IDENTITY_PROVIDER_TYPE` specifies an external identity provider for the database.

Property	Description
Parameter type	String

Property	Description
Syntax	<code>IDENTITY_PROVIDER_TYPE = { AZURE_AD OCI_IAM NONE }</code>
Default value	NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Values:

- **AZURE_AD** - Enables the database to use Microsoft Azure Active Directory (Azure AD) as an external identity provider.
When you specify this value, you must also specify configuration settings for Azure AD by setting the `IDENTITY_PROVIDER_CONFIG` initialization parameter.
- **OCI_AM** - Enables the database to use Oracle Cloud Infrastructure Identity and Access Management (OCI IAM) as an external identity provider.
When you specify this value, there is no need to specify configuration settings with the `IDENTITY_PROVIDER_CONFIG` initialization parameter.
- **NONE** - The database will not use Azure AD or OCI IAM as an external identity provider.

 **Note:**

Setting the value of this parameter is only one step in a series of steps for configuring an external identity provider for the database. Refer to *Oracle Database Security Guide* for the complete set of steps for configuring Azure AD or OCI IAM before you set this parameter value.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.16.

 **Note:**

This parameter is not available to update directly for Oracle Autonomous Database Serverless.

 **See Also:**

["IDENTITY_PROVIDER_CONFIG"](#)

1.144 IFILE

Use `IFILE` to embed another parameter file within the current parameter file.

Property	Description
Parameter type	Parameter file
Syntax	<code>IFILE = parameter_file_name</code>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	Valid parameter filenames
Basic	No
Oracle RAC	Multiple instances can have different values.

For example:

```
IFILE = COMMON.ORA
```

You can have up to three levels of nesting. In this example, the file `COMMON.ORA` could contain a second `IFILE` parameter for the file `COMMON2.ORA`, which could contain a third `IFILE` parameter for the file `GCPARMS.ORA`. You can also include multiple parameter files in one parameter file by listing `IFILE` several times with different values:

```
IFILE = DBPARMS.ORA
IFILE = GCPARMS.ORA
IFILE = LOGPARMS.ORA
```

 **Note:**

You must list multiple entries on contiguous lines of the parameter file.

1.145 IGNORE_SESSION_SET_PARAM_ERRORS

`IGNORE_SESSION_SET_PARAM_ERRORS` controls whether the database ignores errors when clients attempt to modify session parameter values.

Property	Description
Parameter type	String
Syntax	<code>IGNORE_SESSION_SET_PARAM_ERRORS = parameter_name [, parameter_name] ...</code>
Default value	None
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances should use the same value.

The `IGNORE_SESSION_SET_PARAM_ERRORS` parameter allows you to change the outcome of the following scenario:

1. An Oracle database uses PDB lockdown profiles to prevent certain initialization parameters from being modified with the `ALTER SESSION` statement.
2. A database client attempts to modify one of those parameters with the `ALTER SESSION` statement. The client has no knowledge that the parameter is locked down.
3. The database returns an error to the client.

To prevent the database from returning an error in the preceding scenario, set the value of `IGNORE_SESSION_SET_PARAM_ERRORS` to a comma-separated list of locked down initialization parameters. Thereafter, if a client attempts to modify one of those parameters with the `ALTER SESSION` statement, the database will ignore the modification attempt and indicate to the client that the operation was successful.

You can set the `IGNORE_SESSION_SET_PARAM_ERRORS` parameter while connected to a specific PDB, or you can apply it to all PDBs by setting it in the CDB root.

Example

The `CURSOR_INVALIDATION` and `CURSOR_SHARING` parameters are locked down in one of the PDBs in your database. If a client application attempts to modify either of these parameters, you want the database to ignore the request and allow the application to continue running without incurring an error. To achieve this, you can connect to the PDB and set the `IGNORE_SESSION_SET_PARAM_ERRORS` parameter. For example:

```
ALTER SYSTEM SET IGNORE_SESSION_SET_PARAM_ERRORS = CURSOR_INVALIDATION,
CURSOR_SHARING;
```

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.4.

1.146 INMEMORY_ADG_ENABLED

`INMEMORY_ADG_ENABLED` indicates whether in-memory for Active Data Guard is enabled in addition to the in-memory cache size.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	The same value should be used on all instances. If the value for this parameter is changed on one instance, the parameter's value should be changed to the same value on the other instances.

For Active Data Guard, media recovery needs to retrieve in-memory objects when applying redo and to invalidate the related objects after the query advance. This parameter controls whether media recovery does the retrieving and invalidating.

This parameter should be set on standby databases. The value of this parameter is meaningless on a primary database.

If the standby is an Oracle RAC instance, then all the different standby instances must have this parameter set to the same value.

This parameter is a dynamic system-modifiable parameter whose value can be changed only when Active Data Guard recovery is not running.

If you start multi-instance redo apply (MIRA) Active Data Guard recovery, all instances involved in MIRA must have the parameter set to the same value, otherwise MIRA will signal an error.

Example

If the standby is an Oracle RAC instance, this parameter should be set to the same value on all the Oracle RAC instances:

```
SQL> alter system set inmemory_adg_enabled=true sid='*';
```

See Also:

- "[INMEMORY_SIZE](#)"
- *Oracle Database In-Memory Guide* for more information about deploying an In-Memory Column Store (IM column store) in an Active Data Guard environment

1.147 INMEMORY_AUTOMATIC_LEVEL

INMEMORY_AUTOMATIC_LEVEL is used to enable the Automatic In-Memory feature, which automates the management of the In-Memory Column Store (IM column store) to help ensure that the working data set is in the IM column store at all times.

Property	Description
Parameter type	String
Syntax	INMEMORY_AUTOMATIC_LEVEL = { LOW MEDIUM OFF }
Default value	OFF
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

Typically, among all the IM enabled segments, only a subset is actively queried at any time. This subset is known as the working data set. The working data set is expected to change over time for many applications.

`INMEMORY_AUTOMATIC_LEVEL` attempts to keep the working data set in the IM column store at all times by moving segments in and out of the IM column store based on access patterns.

Oracle recommends that you provision enough memory for the working data set to fit in the IM column store.

The following values can be set:

- `LOW`: When this value is set, the database evicts cold segments from the IM column store when it is under memory pressure.
- `MEDIUM`: When this value is set, the database evicts cold segments from the IM column store when it is under memory pressure. This level includes an additional optimization that ensures that any hot segment that was not populated because of memory pressure is populated first.
- `OFF`: When this value is set, Automatic In-Memory is disabled. This value returns the IM column store to the behavior that existed prior to Oracle Database 18c. If you do not expect a stable working data set, set the parameter to `OFF`. This is the default value.

See Also:

- *Oracle Database Licensing Information User Manual* to learn which database offerings support the Automatic In-Memory feature
- *Oracle Database In-Memory Guide* for more information about configuring the Automatic In-Memory feature

1.148 INMEMORY_CLAUSE_DEFAULT

`INMEMORY_CLAUSE_DEFAULT` enables you to specify a default In-Memory Column Store (IM column store) clause for new tables and materialized views.

Note:

The setting of this parameter has no effect on In-Memory external tables or hybrid partitioned tables.

Property	Description
Parameter type	String
Syntax	<code>INMEMORY_CLAUSE_DEFAULT = '[INMEMORY] [NO INMEMORY] [other-clauses]'</code>
Syntax	other-clauses::= <code>[compression-clause] [priority-clause] [rac-clause]</code>
Syntax	compression-clause::= <code>NO MEMCOMPRESS MEMCOMPRESS FOR { DML QUERY [LOW HIGH] CAPACITY [LOW HIGH] }¹</code>
Syntax	priority-clause::= <code>PRIORITY { LOW MEDIUM HIGH CRITICAL NONE }¹</code>

Property	Description
Syntax	rac-clause ::= [distribute-clause] [duplicate-clause] ¹
Syntax	distribute-clause ::= DISTRIBUTE [AUTO BY ROWID RANGE] ¹
Syntax	duplicate-clause ::= NO DUPLICATE DUPLICATE [ALL] ¹
Default value	An empty string
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value

¹ See [Table 1-2](#) for more information about this clause.

If the `INMEMORY_CLAUSE_DEFAULT` parameter is unset or set to an empty string (the default), only tables and materialized views explicitly specified as `INMEMORY` will be populated into the IM column store. Setting the value of the `INMEMORY_CLAUSE_DEFAULT` parameter to `NO INMEMORY` has the same effect as setting it to the default value.

If the `INMEMORY_CLAUSE_DEFAULT` parameter is set, then any *newly created* table or materialized view specified as `INMEMORY` will inherit unspecified attributes from this parameter. This can force certain in-memory options by default that are not explicitly specified in the syntax. For example, if the `INMEMORY_CLAUSE_DEFAULT` parameter is set to `MEMCOMPRESS FOR CAPACITY LOW` and a table is created as `INMEMORY PRIORITY HIGH`, then the table is treated as if it was declared as `INMEMORY MEMCOMPRESS FOR CAPACITY LOW PRIORITY HIGH`.

If `INMEMORY` is specified as part of this parameter, then all newly created tables and materialized views will be populated into the IM column store, except tables and materialized views explicitly specified as `NO INMEMORY`. For example, if this parameter is set to `INMEMORY MEMCOMPRESS FOR CAPACITY HIGH`, then all new tables will be created as if this clause were present in the SQL `CREATE TABLE` statement. If there is a default `INMEMORY` value for the tablespace for a given segment, then it will override the value for this parameter.

Table 1-2 Meaning of INMEMORY_CLAUSE_DEFAULT Parameter Values

Syntax	Description
<code>INMEMORY</code>	Specifies that all newly-created tables and materialized views populate the IM column store unless they are specified as <code>NO INMEMORY</code> in the SQL <code>CREATE TABLE</code> or <code>CREATE MATERIALIZED VIEW</code> statement
<code>NO INMEMORY</code>	Specifies that only tables and materialized views explicitly specified as <code>INMEMORY</code> in the SQL <code>CREATE TABLE</code> or <code>CREATE MATERIALIZED VIEW</code> statements populate the IM column store
<code>compression-clause</code>	Specifies that in-memory compression should be used for the instance. Use the <code>MEMCOMPRESS FOR</code> values to specify the in-memory compression level.
<code>NO MEMCOMPRESS</code>	When <code>NO MEMCOMPRESS</code> is specified, no in-memory compression is done in the IM column store.

Table 1-2 (Cont.) Meaning of INMEMORY_CLAUSE_DEFAULT Parameter Values

Syntax	Description
MEMCOMPRESS FOR	MEMCOMPRESS FOR is used to indicate the in-memory compression level for the IM column store.
DML	When DML is specified, the IM column store is optimized for DML operations, and some lightweight in-memory compression may be done.
QUERY	When QUERY is specified, the in-memory compression level is for high performance. If QUERY is specified without LOW or HIGH, it defaults to QUERY LOW.
QUERY LOW	When QUERY LOW is specified, the in-memory compression level provides the highest performance.
QUERY HIGH	When QUERY HIGH is specified, the in-memory compression level provides a balance between compression and performance, weighted toward performance.
CAPACITY	When CAPACITY is specified without LOW or HIGH, it defaults to CAPACITY LOW.
CAPACITY LOW	When CAPACITY LOW is specified, the in-memory compression level is a balance between compression and performance, weighted toward capacity.
CAPACITY HIGH	When CAPACITY HIGH is specified, the in-memory compression level is for highest capacity.
priority-clause	Specifies the priority to use when populating tables in the IM column store. Use the PRIORITY values to specify the priority. By default, the population of a table in the IM column store can be delayed until the database determines it is useful. On database instance startup, tables are populated in priority order.
PRIORITY NONE	When PRIORITY NONE is specified, the population of a table in the IM column store can be delayed until the database determines it is useful. This is the default value when no priority is specified.
PRIORITY LOW	When PRIORITY LOW is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority specified.
PRIORITY MEDIUM	When PRIORITY MEDIUM is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority and PRIORITY LOW specified.
PRIORITY HIGH	When PRIORITY HIGH is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority, PRIORITY LOW, and PRIORITY MEDIUM specified.
PRIORITY CRITICAL	When PRIORITY CRITICAL is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority, PRIORITY LOW, PRIORITY MEDIUM, and PRIORITY HIGH specified.
rac-clause	Specifies how tables in the IM column store will be managed among Oracle Real Application Clusters (Oracle RAC) instances. Use the distribute-clause and duplicate-clause to specify how tables in the IM store will be managed in Oracle RAC instances. For a non-Oracle RAC database, these settings have no effect, because the whole table or partition has to be on the single instance.

Table 1-2 (Cont.) Meaning of INMEMORY_CLAUSE_DEFAULT Parameter Values

Syntax	Description
distribute-clause	Specifies how a table is distributed among Oracle RAC instances.
DISTRIBUTE AUTO	Specifies that the database will automatically decide how to distribute tables in the IM column store across the Oracle RAC instances based on the type of partitioning and the value of the duplicate-clause. DISTRIBUTE AUTO is the default, and it is also used when DISTRIBUTE is specified by itself.
DISTRIBUTE BY ROWID RANGE	Specifies that the tables in the IM column store will be distributed by rowid range to different Oracle RAC instances.
duplicate-clause	Specifies how many copies of each In-Memory Compression Unit (IMCU) of the tables in the IM column store will be spread across all the Oracle RAC instances. Note: The duplicate-clause is only applicable if you are using Oracle Real Application Clusters (Oracle RAC) on an engineered system. Otherwise, the duplicate-clause is ignored and there is only one copy of each IMCU in memory.
NO DUPLICATE	Data is not duplicated across Oracle RAC instances. This is the default.
DUPLICATE	Data is duplicated on another Oracle RAC instance, resulting in data existing on a total of two Oracle RAC instances.
DUPLICATE ALL	Data is duplicated across all Oracle RAC instances. If you specify DUPLICATE ALL, then the database uses the DISTRIBUTE AUTO setting, regardless of whether or how you specify the distribute-clause.

Examples

The following statement causes no tables to populate the IM column store:

```
alter system set INMEMORY_CLAUSE_DEFAULT='NO INMEMORY'
scope=both;
```

The following statement causes new tables and materialized views (except those specified as NO INMEMORY) to populate the IM column store at the high capacity compression level:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY MEMCOMPRESS FOR CAPACITY HIGH'
scope=both;
```

The following statement causes new tables (even those specified as NO INMEMORY) to populate the IM column store at the highest performance compression level at LOW priority:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY MEMCOMPRESS FOR QUERY LOW PRIORITY LOW'
scope=both;
```

The following statement causes new tables (even those specified as NO INMEMORY) to populate the IM column store without any in-memory compression:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY NO MEMCOMPRESS'
scope=both;
```

The following statement causes tables in the IM column store to be duplicated on every Oracle RAC instance, unless on a non-engineered system. For a non-engineered system, the duplicate-clause (DUPLICATE ALL) will be ignored and tables in the column store will be automatically distributed across the Oracle RAC instance, with only one copy of each IMCU in the tables in the IM column store:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY MEMCOMPRESS FOR QUERY
DISTRIBUTE AUTO DUPLICATE ALL'
scope=both;
```

The following statement sets the value of the INMEMORY_CLAUSE_DEFAULT parameter back to its default value, the empty string:

```
alter system set
INMEMORY_CLAUSE_DEFAULT=''
scope=both;
```

1.149 INMEMORY_EXPRESSIONS_USAGE

INMEMORY_EXPRESSIONS_USAGE controls which In-Memory Expressions (IM expressions) are populated into the In-Memory Column Store (IM column store) and are available for queries.

Property	Description
Parameter type	String
Syntax	INMEMORY_EXPRESSIONS_USAGE = { STATIC_ONLY DYNAMIC_ONLY ENABLE DISABLE }

Property	Description
Default value	ENABLE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

The four values for this parameter are:

- **STATIC_ONLY**: Tables enabled for in-memory and containing certain data types such as Oracle numbers or JSON will have these columns populated in the IM column store using a more efficient representation. Note that this setting will increase the in-memory footprint for some tables. A static configuration enables the IM column store to cache OSON (binary JSON) columns, which are marked with an IS_JSON check constraint. Internally, an OSON column is a hidden virtual column named `SYS_IME_OSON`. In contrast, a dynamic configuration automatically creates and populates frequently used expressions.
- **DYNAMIC_ONLY**: IM expressions will be automatically created and populated into the IM column store, if used in conjunction with PL/SQL procedure `DBMS_INMEMORY.IME_CAPTURE_EXPRESSIONS`. Note that setting this value will increase the in-memory footprint for some tables.
- **ENABLE**: Both static and dynamic IM expressions will be populated into the IM column store and available to be used by queries. Note that setting this value will increase the in-memory footprint for some tables. This is the default value.
- **DISABLE**: No IM expressions of any kind will be populated into the IM column store.

Changing the mode of a parameter does not have an immediate effect on existing in-memory data. For example, if the `inmemory_expressions_usage` clause is changed from **DYNAMIC_ONLY** to **DISABLE**, the stored IM expressions are not immediately removed. The next repopulation will not bring back the expressions in memory, thereby effectively removing the expressions.

See Also:

- "[INMEMORY_VIRTUAL_COLUMNS](#)"
- *Oracle Database In-Memory Guide* for more information about IM expressions

1.150 INMEMORY_FORCE

`INMEMORY_FORCE` allows you to specify whether tables and materialized views that are specified as `INMEMORY` are populated into the In-Memory Column Store (IM column store) or not.

Property	Description
Parameter type	String

Property	Description
Syntax	<code>INMEMORY_FORCE = { DEFAULT OFF BASE_LEVEL CELLMEMORY_LEVEL }</code>
Default value	DEFAULT
Modifiable	You can use <code>ALTER SYSTEM</code> to dynamically modify this parameter setting as follows: <ul style="list-style-type: none"> • From <code>DEFAULT</code> to <code>OFF</code> • From <code>OFF</code> to <code>DEFAULT</code> • From <code>BASE_LEVEL</code> to <code>DEFAULT</code> • From <code>CELLMEMORY_LEVEL</code> to <code>DEFAULT</code> • From <code>CELLMEMORY_LEVEL</code> to <code>OFF</code> All other modifications of this parameter require you to update the initialization file and restart the instance.
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

The following values can be set:

- `DEFAULT`

The IM column store is populated with objects that are specified as `INMEMORY`.

- `OFF`

Even if the IM column store is configured on this instance, no objects are populated in memory.

- `BASE_LEVEL`

Enables Database In-Memory Base Level. The Base Level lets you to experiment with Oracle Database In-Memory features without purchasing the Oracle Database In-Memory option. This setting is available starting with Oracle Database 19c, Release Update 19.8.

When the Base Level is enabled, the value of the `INMEMORY_SIZE` initialization parameter is limited to 16 GB for a CDB. In an Oracle RAC environment, the value of `INMEMORY_SIZE` is limited to 16 GB for each instance. The compression level for all objects and columns is automatically and transparently set to `QUERY LOW`. Automatic In-Memory is disabled, and In-Memory Column Store feature tracking is tracked for "In-Memory Base Level" rather than "In-Memory Column Store." The CellMemory feature is disabled for Oracle Exadata.

- `CELLMEMORY_LEVEL`

CellMemory is an Exadata feature that allows you to use Exadata Smart Flash Cache to populate data in in-memory columnar format. In older releases of Oracle Database, in order to use the CellMemory feature, you were required to enable the IM column store (by setting `INMEMORY_SIZE` to a value greater than 0), even if you had no intention of using the IM column store. This incurred the overhead of enabling the IM column store without any benefit. Starting with Oracle Database 19c, Release Update 19.8, you can use the CellMemory feature without enabling the IM column store by setting `INMEMORY_FORCE=CELLMEMORY_LEVEL` and `INMEMORY_SIZE=0`. With these settings, the IM column store is not enabled and queries can use CellMemory to scan objects.

Note that if the value of `INMEMORY_SIZE` is greater than 0, then setting `INMEMORY_FORCE=CELLMEMORY_LEVEL` is equivalent to setting `INMEMORY_FORCE=DEFAULT`. The IM column store is enabled, even if you only use CellMemory.

1.151 INMEMORY_MAX_POPULATE_SERVERS

`INMEMORY_MAX_POPULATE_SERVERS` specifies the maximum number of background populate servers to use for In-Memory Column Store (IM column store) population, so that these servers do not overload the rest of the system.

Property	Description
Parameter type	Integer
Default value	Half of the value of <code>CPU_COUNT</code> or the <code>PGA_AGGREGATE_TARGET</code> value divided by 512M, whichever is less. See the " CPU_COUNT " description for information about how <code>CPU_COUNT</code> is calculated.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	0 to a value based on the number of cores in the system.
Basic	No
Oracle RAC	All instances should use the same value.

This parameter has meaning only if the `INMEMORY_SIZE` parameter is also set to a positive value.

The value to use for this parameter depends on the number of cores in the system. A certain percentage of CPU should be allocated for in-memory background population, and this parameter should be set accordingly. You can also set this parameter to 0 to temporarily disable populate tasks on the system from executing.

 **Note:**

Be careful not to set the value of this parameter too high. If it is set close to the number of cores or higher, no CPU could be left for the rest of the system to run.

 **Note:**

The IM column store is not populated if this parameter is set to 0.

 **See Also:**

1.152 INMEMORY_OPTIMIZED_ARITHMETIC

`INMEMORY_OPTIMIZED_ARITHMETIC` encodes the `NUMBER` data type in in-memory tables compressed with `QUERY LOW` as a fixed-width native integer scaled by a common exponent.

Property	Description
Parameter type	String
Syntax	<code>INMEMORY_OPTIMIZED_ARITHMETIC = { ENABLE DISABLE }</code>
Default value	DISABLE
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different values can be specified on different instances.

The Oracle Database `NUMBER` format can incur a significant performance overhead when executing queries because arithmetic operations cannot be performed natively in hardware.

When `INMEMORY_OPTIMIZED_ARITHMETIC` is set to `ENABLE`, for tables compressed with `QUERY LOW`, `NUMBER` columns are encoded as a fixed-width native integer scaled by a common exponent. This In-Memory optimized number format enables fast calculations using SIMD hardware. By using SIMD vector processing, arithmetic operations, simple aggregations, and group-by aggregations can benefit significantly.

Not all row sources in the query processing engine have support for the In-Memory optimized number format. Therefore, the IM column store must store both the traditional Oracle Database `NUMBER` data type and the In-Memory optimized number type. This means that the acceleration in analytic query performance comes at a cost of increased space overhead.

When `INMEMORY_OPTIMIZED_ARITHMETIC` is set to `DISABLE` (the default), the database does not use the optimized encoding.

If `INMEMORY_OPTIMIZED_ARITHMETIC` is set to `ENABLE` and then to `DISABLE`, the optimized number format for existing IMCUs is not dropped immediately. Instead, as the IM column store repopulates IMCUs, the new IMCUs do not use the optimized encoding.

 **See Also:**

Oracle Database In-Memory Guide for details about the improved performance and increased space overhead when `INMEMORY_OPTIMIZED_ARITHMETIC` is enabled

1.153 INMEMORY_QUERY

`INMEMORY_QUERY` is used to enable or disable in-memory queries for the entire database at the session or system level.

Property	Description
Parameter type	String
Syntax	<code>INMEMORY_QUERY = { ENABLE DISABLE }</code>
Default value	<code>ENABLE</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

This parameter is helpful when you want to test workloads with and without the use of the In-Memory Column Store (IM column store).

This parameter enables in-memory queries for the entire database by default when the `INMEMORY_SIZE` parameter is specified.

Set this parameter to `DISABLE` if you want to disable in-memory queries.

 **See Also:**

- "[INMEMORY_CLAUSE_DEFAULT](#)"
- "[INMEMORY_FORCE](#)"
- "[INMEMORY_MAX_POPULATE_SERVERS](#)"
- "[INMEMORY_SIZE](#)"
- *Oracle Database In-Memory Guide* for an introduction to the IM column store
- *Oracle Database In-Memory Guide* for more information about the IM column store

1.154 INMEMORY_SIZE

INMEMORY_SIZE sets the size of the In-Memory Area, which contains the IM Column Store (IM column store) on a database instance.

Property	Description
Parameter type	Big integer
Syntax	INMEMORY_SIZE = <i>integer</i> [K M G]
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the amount of memory left in the SGA after other allocations
Basic	No
Oracle RAC	All instances should use the same value.

The default value is 0, which means that the IM column store is not used.

The database must be restarted after setting this parameter to enable the IM column store.

The minimum size to which this parameter can be set is 100 MB.

Typically this parameter should be set to at least the size needed to accommodate all the tables that will use the IM column store. It can be set higher to allow for growth of those tables or to accommodate other tables that will use the IM column store in the future.

This parameter can also be set per PDB to limit the maximum size of the IM column store for that PDB. Note that the sum of the PDB values do not have to equal the CDB value, and the sum of the PDB values may even be greater than the CDB value.

Unless this parameter is specifically set on a PDB, each PDB inherits the CDB value, which means they can use all of the available IM column store.

The value specified for this parameter counts toward SGA_TARGET. For example, if you set SGA_TARGET to 10 GB and you set INMEMORY_SIZE to 2 GB, then 20% of the SGA_TARGET setting is allocated to the In-Memory Area.

Unlike other SGA components such as the buffer cache and shared pool, the In-Memory Area size is not controlled by automatic memory management. The database does not automatically shrink the In-Memory Area when the buffer cache or shared pool requires more memory, or increase the In-Memory Area when it runs out of space. You can only increase the size of the In-Memory Area by manually adjusting the INMEMORY_SIZE initialization parameter.

In-Memory Dynamic Scans require the Resource Manager. Therefore, the Resource Manager is automatically enabled when you change the value of INMEMORY_SIZE from 0 to a non-zero value. No specific resource plan is required.

Database In-Memory Base Level allows a maximum of 16 GB for the size of the In-Memory area. Therefore, if Database In-Memory Base Level is enabled (the value of the INMEMORY_FORCE initialization parameter is set to BASE_LEVEL), then the value of INMEMORY_SIZE cannot exceed 16 GB for a CDB. In an Oracle RAC environment, the value of INMEMORY_SIZE is limited to 16 GB for each instance.

1.155

INMEMORY_TRICKLE_REPOPULATE_SERVERS_PERCENT

`INMEMORY_TRICKLE_REPOPULATE_SERVERS_PERCENT` limits the maximum number of background populate servers used for In-Memory Column Store (IM column store) repopulation, as trickle repopulation is designed to use only a small percentage of the populate servers.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 50
Basic	No
Oracle RAC	All instances should use the same value.

The value for this parameter is a percentage of the `INMEMORY_MAX_POPULATE_SERVERS` initialization parameter value.

For example, if this parameter is set to 5 and `INMEMORY_MAX_POPULATE_SERVERS` is set to 10, then on average half of a core is used for trickle repopulation.

The default value of 1 is good in most cases. In some cases, if you want to disable trickle repopulate, this parameter can be set to 0. If you want to keep the system more aggressively up to date (at the expense of more background CPU), you can set the parameter to higher values such as 5 or 10.

A value of greater than 50 is not allowed, so that at least half of the populate servers are available for other (re)populate tasks. On some systems, a value of less than 50 can be problematic, depending on other workload.

This parameter has meaning only if the `INMEMORY_SIZE` parameter is also set to a positive value.

1.156 INMEMORY_VIRTUAL_COLUMNS

INMEMORY_VIRTUAL_COLUMNS controls which user-defined virtual columns are stored as In-Memory virtual columns (IM columns).

Property	Description
Parameter type	String
Syntax	INMEMORY_VIRTUAL_COLUMNS = { ENABLE MANUAL DISABLE }
Default value	MANUAL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

IM virtual columns improve query performance by avoiding the necessity of repeated calculations. Also, the database can scan and filter IM virtual columns using techniques such as SIMD vector processing.

These values can be set for the parameter:

- **ENABLE:** For a table or partition that has been enabled for in-memory storage, all virtual columns will be stored in-memory at the default table or partition memcompress level unless:
 - They have been explicitly excluded using the no inmemory syntax.
 - They have been altered to have a different memcompress level than the base table or partition, in which case they will be stored at the specified memcompress level.
- **MANUAL:** This is the default value for the parameter. For a table or partition that has been enabled for in-memory storage, no virtual columns will be stored in-memory unless:
 - They have been explicitly marked for inmemory, in which case they will be stored in-memory at the table or partition memcompress level.
 - They have been marked for inmemory with a different memcompress level than the base table or partition, in which case they will be stored at the specified memcompress level.
- **DISABLE:** For a table or partition that has been enabled for in-memory storage, no virtual columns will ever be stored in-memory. Any changes to the inmemory_column_clause for a virtual column including changes in memcompress level will be recorded, but not acted upon with regards to population of virtual columns.

See Also:

- "[INMEMORY_EXPRESSIONS_USAGE](#)"
- *Oracle Database In-Memory Guide* for more information about IM virtual columns

1.157 INSTANCE_ABORT_DELAY_TIME

INSTANCE_ABORT_DELAY_TIME specifies how much time to delay an internal initiated instance abort (in seconds), such as when a fatal process dies or an unrecoverable instance error occurs.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 and higher
Basic	No
Oracle RAC	Different instances should use the same value.

This parameter does not apply to a shutdown abort operation or any abort necessary to implement a user command.

Setting this parameter to a value greater than 0 enables a DBA to take some actions before an abort occurs due to a fatal error. Note that since the instance is in a fatal state, the DBA should not be too ambitious with the actions taken because some processes and/or resources may be corrupted or unavailable, making complex actions impossible. Oracle does not guarantee what is possible when an instance is in this state. A message is written to the alert log when the delayed abort is initiated. The value will not apply in the case of PMON death.

The larger the specified value, the longer the instance stays up, and the potential increases for other problems to occur. If you set this parameter, Oracle recommends setting it to a value between 0 and 60.

1.158 INSTANCE_GROUPS

Used with the PARALLEL_INSTANCE_GROUP parameter, INSTANCE_GROUPS lets you restrict parallel query operations to a limited number of instances.

Property	Description
Parameter type	String
Syntax	INSTANCE_GROUPS = <i>group_name</i> [, <i>group_name</i>] ...
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	One or more instance group names, separated by commas
Basic	No
Oracle RAC	Multiple instances can have different values.

 **Note:**

The `INSTANCE_GROUPS` parameter is deprecated. It is retained for backward compatibility only.

`INSTANCE_GROUPS` is an Oracle RAC parameter that you can specify only in parallel mode.

This parameter specifies one or more instance groups and assigns the current instance to those groups. If one of the specified groups is also specified in the `PARALLEL_INSTANCE_GROUP` parameter, then Oracle allocates query processes for a parallel operation from this instance.

 **See Also:**

- *Oracle Real Application Clusters Administration and Deployment Guide* for more information on parallel query execution in a Real Application Clusters environment
- "["PARALLEL_INSTANCE_GROUP"](#)"

1.159 INSTANCE_MODE

`INSTANCE_MODE` indicates whether the instance is read-write, read-only, or read-mostly.

Property	Description
Parameter type	String
Syntax	<code>INSTANCE_MODE = { READ-WRITE READ-ONLY READ-MOSTLY }</code>
Default value	READ-WRITE
Modifiable	No
Basic	No
Oracle RAC	See the Oracle RAC restrictions in the initialization parameter description below.

A **READ-WRITE** instance is a regular Oracle instance.

A **READ-ONLY** instance is an Oracle instance that can only be opened in read-only mode.

A **READ-MOSTLY** instance is an Oracle instance that performs very few database writes.

These restrictions apply when setting the parameter on different Oracle Real Application Clusters (Oracle RAC) instances:

1. There must be at least one instance alive with `INSTANCE_MODE` set to `READ-WRITE` at any given time. If the only instance with `INSTANCE_MODE` set to `READ-WRITE` goes down, all other instances will be brought down by Oracle automatically.
2. An instance with `INSTANCE_MODE` set to `READ-ONLY` cannot be the first instance to open a database or any pluggable database (PDB) among all instances in an Oracle RAC cluster.
3. Oracle does not support co-existence of an instance with `INSTANCE_MODE` set to `READ-ONLY` and an instance with `INSTANCE_MODE` set to `READ-MOSTLY` in the same Oracle RAC cluster.

1.160 INSTANCE_NAME

In an Oracle Real Application Clusters environment, multiple instances can be associated with a single database service. Clients can override Oracle's connection load balancing by specifying a particular instance by which to connect to the database. `INSTANCE_NAME` specifies the unique name of this instance.

Property	Description
Parameter type	String
Syntax	<code>INSTANCE_NAME = instance_id</code>
Default value	The instance's SID Note: The SID identifies the instance's shared memory on a host, but may not uniquely distinguish this instance from other instances.
Modifiable	No
Modifiable in a PDB	No
Range of values	Alphanumeric ASCII characters and the underscore (_) character, up to a maximum of 255 characters
Basic	No

In a single-instance database system, the instance name is usually the same as the database name.

 **See Also:**

Oracle Real Application Clusters Administration and Deployment Guide and *Oracle Database Net Services Administrator's Guide* for more information

1.161 INSTANCE_NUMBER

`INSTANCE_NUMBER` specifies a unique number that maps the instance to one free list group for each database object created with storage parameter `FREELIST GROUPS`.

Property	Description
Parameter type	Integer
Default value	0 (zero)
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to maximum number of instances specified when the database was created
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and all instances must have different values.

`INSTANCE_NUMBER` is an Oracle RAC parameter that can be specified in parallel mode or exclusive mode.

The INSTANCE parameter of the ALTER TABLE ... ALLOCATE EXTENT statement assigns an extent to a particular free list group. If you set INSTANCE_NUMBER to the value specified for the INSTANCE parameter, the instance uses that extent for inserts and for updates that expand rows.

The practical maximum value of this parameter is the maximum number of instances specified in the CREATE DATABASE statement. The absolute maximum is operating system-dependent.

 **See Also:**

Oracle Real Application Clusters Administration and Deployment Guide for more information

1.162 INSTANCE_TYPE

INSTANCE_TYPE specifies whether the instance is a database instance, an Oracle Automatic Storage Management (Oracle ASM) instance, or an Oracle ASM Proxy instance.

Property	Description
Parameter type	String
Syntax	INSTANCE_TYPE = { RDBMS ASM ASMPROXY }
Default value	RDBMS
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances must have the same value.

Values

- RDBMS
 - The instance is a database instance.
- ASM
 - The instance is an Oracle ASM instance.
- ASMPROXY
 - The instance is an Oracle ASM proxy instance.

 **See Also:**

Oracle Automatic Storage Management Administrator's Guide for information about managing Oracle Flex ASM

1.163 JAVA_JIT_ENABLED

JAVA_JIT_ENABLED enables or disables the Just-in-Time (JIT) compiler for the Oracle Java Virtual Machine (OracleJVM) environment.

Property	Description
Parameter type	Boolean
Default value	Operating system-dependent
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

For platforms that support the JIT compiler, the default value of this parameter is `true`; otherwise the default value is `false`. Attempting to set this parameter to `true` on unsupported platforms will result in an error.

 **See Also:**

Oracle Database Java Developer's Guide for more information about setting this parameter

1.164 JAVA_MAX_SESSIONSPACE_SIZE

JAVA_MAX_SESSIONSPACE_SIZE specifies (in bytes) the maximum amount of session space made available to a Java program executing in the server.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to 2 GB - 1
Basic	No

Java session space is the memory that holds Java state from one database call to another. When a user's session-duration Java state attempts to exceed the amount specified by JAVA_MAX_SESSIONSPACE_SIZE, the Java virtual machine kills the session with an out-of-memory failure.

 See Also:

- *Oracle Database Java Developer's Guide* for more information about this parameter
- "[JAVA_SOFT_SESSIONSPACE_LIMIT](#)"

1.165 JAVA_POOL_SIZE

`JAVA_POOL_SIZE` specifies (in bytes) the size of the Java pool, from which the Java memory manager allocates most Java state during run-time execution. This memory includes the shared in-memory representation of Java method and class definitions, as well as the Java objects that are migrated to the Java session space at end-of-call.

Property	Description
Parameter type	Big integer
Syntax	<code>JAVA_POOL_SIZE = integer [K M G]</code>
Default value	If SGA_TARGET is set: If the parameter is not specified, then the default is 0 (internally determined by the Oracle Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If SGA_TARGET is not set: 24 MB, rounded up to the nearest granule size
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are rounded up to the nearest granule size) Maximum: operating system-dependent
Basic	No

 See Also:

Oracle Database Java Developer's Guide for more information about this parameter

1.166 JAVA_SOFT_SESSIONSPACE_LIMIT

`JAVA_SOFT_SESSIONSPACE_LIMIT` specifies (in bytes) a **soft limit** on Java memory usage in a session, as a means to warn you if a user's session-duration Java state is using too much memory.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No

Property	Description
Range of values	0 to 2 GB - 1
Basic	No

Java session space is the memory that holds Java state from one database call to another. When a user's session-duration Java state exceeds the size specified by `JAVA_SOFT_SESSIONSPACE_LIMIT`, Oracle generates a warning that goes into the trace files.

See Also:

- *Oracle Database Java Developer's Guide* for more information on this parameter
- "[JAVA_MAX_SESSIONSPACE_SIZE](#)"

1.167 JOB_QUEUE_PROCESSES

`JOB_QUEUE_PROCESSES` specifies the maximum number of job slaves per instance that can be created for the execution of `DBMS_JOB` jobs and Oracle Scheduler (`DBMS_SCHEDULER`) jobs.

Property	Description
Parameter type	Integer
Default value	Derived. The lesser value of: <ul style="list-style-type: none"> • <code>CPU_COUNT * 20</code> • <code>SESSIONS / 4</code> For a CDB, if the result of the above derivation is less than twice the number of open containers in the CDB, then the value of this parameter is adjusted to equal twice the number of open containers in the CDB. Containers include <code>CDB\$ROOT</code> , <code>PDB\$SEED</code> , PDBs, application roots, application seeds, and application PDBs. You can obtain the number of open containers in a CDB with the following query:
	<pre>SELECT COUNT(*) FROM V\$CONTAINERS WHERE open_mode != 'MOUNTED';</pre>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	0 to 4000
Basic	No
Oracle RAC	Multiple instances can have different values.

`DBMS_JOB` and Oracle Scheduler share the same job coordinator and job slaves, and they are both controlled by the `JOB_QUEUE_PROCESSES` parameter. The actual number of job slaves created for Oracle Scheduler jobs is auto-tuned by the Scheduler depending on several factors, including available resources, Resource Manager settings, and currently running jobs. However, the combined total number of job slaves running `DBMS_JOB` jobs and Oracle

Scheduler jobs in a non-CDB, CDB, or PDB can never exceed the value of `JOB_QUEUE_PROCESSES` for that non-CDB, CDB, or PDB.

The default value for `JOB_QUEUE_PROCESSES` provides a compromise between quality of service for applications and reasonable use of system resources. However, it is possible that the default value does not suit every environment. In such cases, you can use the following guidelines to fine tune this parameter:

- In a non-CDB:
Set `JOB_QUEUE_PROCESSES` to the maximum number of job slaves that can be used simultaneously in the entire database instance. If `JOB_QUEUE_PROCESSES` is 0, then `DBMS_JOB` jobs and Oracle Scheduler jobs will not run in the database instance.
- In a CDB root:
Set `JOB_QUEUE_PROCESSES` to the maximum number of job slaves that can be used simultaneously in the entire CDB. Oracle recommends that you set the value of this parameter to at least twice the number of open containers in the CDB, otherwise, there might be severe starvation between PDBs trying to run multiple jobs. If `JOB_QUEUE_PROCESSES` is set to 0 in a CDB root, then `DBMS_JOB` and Oracle Scheduler jobs cannot run in the CDB root or in any PDB, regardless of the `JOB_QUEUE_PROCESSES` setting at the PDB level.
- In a PDB:
Set `JOB_QUEUE_PROCESSES` to the maximum number of job slaves that can be used simultaneously in the PDB. The actual number depends on the resources assigned by Resource Manager and the demand in other containers. When multiple PDBs request jobs, Oracle Scheduler attempts to give all PDBs a fair share of the processes. Oracle recommends that you set the value of this parameter to at least 2 in a PDB. However, if you do not want to run `DBMS_JOB` and Oracle Scheduler jobs in a PDB, then set `JOB_QUEUE_PROCESSES` to 0 in the PDB.

Materialized views and AutoTask use Oracle Scheduler for automatic refreshes. Setting `JOB_QUEUE_PROCESS` to 0 will disable these features and any other features that use Oracle Scheduler or `DBMS_JOB`.

 **Note:**

`DBMS_JOB` is deprecated in Oracle Database 12c Release 2 (12.2.0.1) and may be removed in a future release. Oracle recommends that you use `DBMS_SCHEDULER` instead.

 **See Also:**

- *Oracle Database PL/SQL Packages and Types Reference* for more information on the DBMS_SCHEDULER package
- *Oracle Database Data Warehousing Guide* for more information on managing materialized views
- *Oracle Database Advanced Queuing User's Guide* for more information about job queue processes
- *Oracle Database Administrator's Guide* for more information about the maximum number of scheduler job processes

1.168 LARGE_POOL_SIZE

LARGE_POOL_SIZE specifies (in bytes) the size of the large pool allocation heap.

Property	Description
Parameter type	Big integer
Syntax	LARGE_POOL_SIZE = <i>integer</i> [K M G]
Default value	If SGA_TARGET is set, but a value is not specified for LARGE_POOL_SIZE, then the default is 0 (internally determined by the Oracle database). If LARGE_POOL_SIZE is specified, then the user-specified value indicates a minimum value for the memory pool. If SGA_TARGET is not set, then the default is 0.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: the granule size Maximum: operating system-dependent
Basic	No

The large pool allocation heap is used in shared server systems for session memory, by parallel execution for message buffers, and by backup processes for disk I/O buffers. Parallel execution allocates buffers out of the large pool only when SGA_TARGET is set.

You can specify the value of this parameter using a number, optionally followed by K or M to specify kilobytes or megabytes, respectively. If you do not specify K or M, then the number is taken as bytes.

 **See Also:**

- *Oracle Database Performance Tuning Guide* for more information on setting this parameter

1.169 LDAP_DIRECTORY_ACCESS

LDAP_DIRECTORY_ACCESS specifies whether Oracle refers to Oracle Internet Directory for user authentication information.

Property	Description
Parameter type	String
Syntax	LDAP_DIRECTORY_ACCESS = { NONE PASSWORD SSL }
Default value	NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

If directory access is turned on, then this parameter also specifies how users are authenticated.

Values

- **NONE**
Oracle does not refer to Oracle Internet Directory for Enterprise User Security information.
- **PASSWORD**
Oracle tries to connect to the enterprise directory service using the database password stored in the database wallet. If that fails, then the Oracle Internet Directory connection fails and the database will not be able to retrieve enterprise roles and schema mappings upon enterprise user login.
- **SSL**
Oracle tries to connect to Oracle Internet Directory using SSL.

See Also:

Oracle Database Enterprise User Security Administrator's Guide for more information on Enterprise User Security

Using LDAP_DIRECTORY_ACCESS with PDBs

PDBs can use password and SSL authentication with Oracle Internet Directory when the default database wallet location is used.

The `LDAP_DIRECTORY_ACCESS` initialization parameter is PDB-specific and can be set as follows:

- Prior to Oracle Database 19c, Release Update 19.10, if you set this parameter in a CDB root container, then all PDBs in the CDB will use that setting of the parameter. If you set this parameter in a PDB, then the parameter setting affects only that PDB. You can use `ALTER SYSTEM` to set this parameter in a PDB.
- Starting with Oracle Database 19c, Release Update 19.10:

- When you use the ALTER SYSTEM command to set the value of `LDAP_DIRECTORY_ACCESS` while connected to the CDB root:
 - * If you specify the `CONTAINER=ALL` clause, then the setting applies to the CDB root and all PDBs.
 - * If you omit the `CONTAINER=ALL` clause, or specify the `CONTAINER=CURRENT` clause, then the setting applies only to the CDB root.
- When you use the ALTER SYSTEM command to set the value of `LDAP_DIRECTORY_ACCESS` while connected to a PDB, the setting applies only to that PDB.
- When you set the value of `LDAP_DIRECTORY_ACCESS` in an initialization parameter file, the setting applies only to the CDB root; it does not apply to the PDBs.

For a CDB, if the wallet location is not specified in `sqlnet.ora`, then the default database wallet path is:

`ORACLE_BASE/admin/db-unique-name/pdb-GUID/wallet` (if `ORACLE_BASE` is set)

or:

`ORACLE_HOME/admin/db-unique-name/pdb-GUID/wallet` (if `ORACLE_BASE` is not set)

The exception is for the root database, which has a default wallet path of:

`ORACLE_BASE/admin/db-unique-name/wallet` (if `ORACLE_BASE` is set)

or:

`ORACLE_HOME/admin/db-unique-name/wallet` (if `ORACLE_BASE` is not set)

All PDBs in a CDB have the same database unique name. By placing wallets in the default location, each PDB can have its own identity.

Note that because there is only one `sqlnet.ora` file for a CDB, the wallet location in `sqlnet.ora` is only used by the CDB root container. Because each PDB must have its own wallet, a PDB wallet will be specified by the `pdb-GUID` under the wallet location in `sqlnet.ora`.

For the root container of a CDB, the wallet location is:

`WALLET_LOCATION_specified_in_sqlnet.ora`

For each PDB of the CDB, the wallet location is:

`WALLET_LOCATION_specified_in_sqlnet.ora/pdb-GUID/`

Note:

Oracle databases are registered with Oracle Internet Directory using Database Configuration Assistant (DBCA). For registration with Oracle Internet Directory to work, all the PDBs for a CDB must be registered using DBCA.

Using `LDAP_DIRECTORY_ACCESS` with Non-CDBs

For non-CDBs, if the wallet location is not specified in `sqlnet.ora`, then the default database wallet path is:

`ORACLE_BASE/admin/db-unique-name/wallet` (if `ORACLE_BASE` is set)

or:

`ORACLE_HOME/admin/db-unique-name/wallet` (if `ORACLE_BASE` is not set)

See Also:

Oracle Database Enterprise User Security Administrator's Guide for an example of setting the value of this parameter to `SSL` in the server parameter file using `ALTER SYSTEM`

1.170 LDAP_DIRECTORY_SYSAUTH

`LDAP_DIRECTORY_SYSAUTH` allows or disallows directory-based authorization for users granted administrative privileges, such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

Property	Description
Parameter type	String
Syntax	<code>LDAP_DIRECTORY_SYSAUTH = { yes no }</code>
Default value	<code>no</code>
Modifiable	No
Modifiable in a PDB	Yes
Basic	Yes

When `LDAP_DIRECTORY_SYSAUTH` is set to `yes`, directory users are allowed to connect to the database as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, or `SYSKM`, if they have mapped database global users that are granted corresponding administrative privileges such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

When `LDAP_DIRECTORY_SYSAUTH` is set to `no`, directory users are not allowed to connect to the database as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, or `SYSKM`, even if they have mapped database global users that are granted corresponding administrative privileges such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

When modifying this parameter in a PDB, use the `ALTER SYSTEM` command with `SCOPE=SPFILE`.

1.171 LICENSE_MAX_SESSIONS

`LICENSE_MAX_SESSIONS` specifies the maximum number of concurrent user sessions allowed.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	0 to number of session licenses

Property	Description
Basic	No
Oracle RAC	Multiple instances can have different values, but the total for all instances mounting a database should be less than or equal to the total number of sessions licensed for that database.

 **Note:**

Oracle no longer offers licensing by the number of concurrent sessions. Therefore the `LICENSE_MAX_SESSIONS` and `LICENSE_SESSIONS_WARNING` initialization parameters have been deprecated.

When the limit specified by `LICENSE_MAX_SESSIONS` is reached, only users with the `RESTRICTED SESSION` privilege can connect to the database. Users who are not able to connect receive a warning message indicating that the system has reached maximum capacity.

A zero value indicates that concurrent usage (session) licensing is not enforced. If you set this parameter to a nonzero number, you might also want to set `LICENSE_SESSIONS_WARNING` (see "["LICENSE_SESSIONS_WARNING"](#)").

Do not enable both concurrent usage licensing and user licensing. Set either `LICENSE_MAX_SESSIONS` or `LICENSE_MAX_USERS` to zero.

 **See Also:**

Oracle Database Administrator's Guide for more information about this parameter

1.172 LICENSE_MAX_USERS

`LICENSE_MAX_USERS` specifies the maximum number of users you can create in the database.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	0 to number of user licenses
Basic	No
Oracle RAC	Oracle recommends that multiple instances have the same value.

When you reach the limit specified by `LICENSE_MAX_USERS`, you cannot create more users. You can, however, increase the limit.

 **Note:**

Oracle no longer offers licensing by the number of concurrent sessions. Therefore the `LICENSE_MAX_SESSIONS` and `LICENSE_SESSIONS_WARNING` initialization parameters have been deprecated.

 **See Also:**

Oracle Database Administrator's Guide for more information about this parameter

1.173 LICENSE_SESSIONS_WARNING

`LICENSE_SESSIONS_WARNING` specifies a warning limit on the number of concurrent user sessions.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to value of <code>LICENSE_MAX_SESSIONS</code> parameter
Basic	No
Oracle RAC	Multiple instances can have different values.

 **Note:**

Oracle no longer offers licensing by the number of concurrent sessions. Therefore the `LICENSE_MAX_SESSIONS` and `LICENSE_SESSIONS_WARNING` initialization parameters have been deprecated.

When this limit specified by `LICENSE_SESSIONS_WARNING` is reached, additional users can connect, but Oracle writes a message in the alert log for each new connection. Users with `RESTRICTED SESSION` privilege who connect after the limit is reached receive a warning message stating that the system is nearing its maximum capacity.

If this parameter is set to zero, no warning is given as you approach the concurrent usage (session) limit. If you set this parameter to a nonzero number, you should also set `LICENSE_MAX_SESSIONS` (see "["LICENSE_MAX_SESSIONS"](#)").

 See Also:

- *Oracle Database Administrator's Guide* for more information on setting this parameter

1.174 LISTENER_NETWORKS

`LISTENER_NETWORKS` specifies one or more sets of local, forward, and remote listeners for cross-registration. All listeners within the same *network_name* will cross-register.

Property	Description
Parameter type	String
Syntax	<pre>LISTENER_NETWORKS = ' ((NAME=<i>network_name</i>) (LOCAL_LISTENER=["]<i>listener_address</i>[,...]["]) (FORWARD_LISTENER=["]<i>listener_address</i>[,...]["]) [(REMOTE_LISTENER=["]<i>listener_address</i>[,...][")]) [,...]</pre>
Default value	There is no default value.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No

If a *network_name* is specified multiple times, then the resulting listener set is the union of each specification. This can be used to specify sets that require more than 255 characters, which is the per element limit.

The *listener_address* specifies a string that is an address, address list, or an alias that resolves to an address or address list of Oracle Net listeners. If an alias, the address or address list is specified in the TNSNAMES.ORA file or another address repository as configured for your system.

If a comma is used to specify a *listener_address* list, then the set of addresses must be surrounded by double quotes.

 See Also:

- "`LOCAL_LISTENER`"
- "`FORWARD_LISTENER`"
- "`REMOTE_LISTENER`"
- *Oracle Database Net Services Administrator's Guide* for more information on setting this parameter

1.175 LOB_SIGNATURE_ENABLE

`LOB_SIGNATURE_ENABLE` is used to enable or disable the LOB locator signature feature.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances must have the same value.

You can secure your LOBs by enabling the LOB locator signature feature. A LOB locator is a pointer to the location of a large object (LOB) value. If the `LOB_SIGNATURE_ENABLED` initialization parameter is set to `true`, then when you create a LOB, Oracle Database automatically assigns a signature to the LOB locator. When Oracle Database receives a request from a client, it uses the signature to determine if any tampering with the LOB locator has occurred.

When this parameter is set to `true`, you also have the option of further securing your LOBs by encrypting your LOB locator signature keys.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.1.

 **See Also:**

Oracle Database Security Guide for more information on LOB locator signatures and encrypting LOB locator signature keys

1.176 LOCAL_LISTENER

`LOCAL_LISTENER` specifies a network name that resolves to an address or address list of Oracle Net local listeners (that is, listeners that run on the same system as this instance). The address or address list is specified in the `TNSNAMES.ORA` file or other address repository as configured for your system.

Property	Description
Parameter type	String
Syntax	<code>LOCAL_LISTENER = network_name</code>
Default value	(ADDRESS = (PROTOCOL=TCP) (HOST= <i>hostname</i>) (PORT=1521)) where <i>hostname</i> is the network name of the local host.

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

 **See Also:**

- *Oracle Database Concepts* for more information about listener processes and dispatcher processes
- *Oracle Database Net Services Administrator's Guide* and your operating system-specific Oracle documentation for more information about specifying network addresses for the protocols on your system

1.177 LOCK_NAME_SPACE

LOCK_NAME_SPACE specifies the namespace that the distributed lock manager (DLM) uses to generate lock names.

Property	Description
Parameter type	String
Syntax	LOCK_NAME_SPACE = <i>namespace</i>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	Up to 8 alphanumeric characters. No special characters allowed.
Basic	No

 **Note:**

The `LOCK_NAME_SPACE` parameter is deprecated. It is retained for backward compatibility only.

Consider setting this parameter if a standby or clone database has the same database name on the same cluster as the primary database.

If the standby database resides on the same file system as the primary database, then set `LOCK_NAME_SPACE` in the standby parameter file to a distinct value such as the following:

```
LOCK_NAME_SPACE = standby
```

1.178 LOCK_SGA

`LOCK_SGA` locks the entire SGA into physical memory.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

It is usually advisable to lock the SGA into real (physical) memory, especially if the use of virtual memory would include storing some of the SGA using disk space. This parameter is ignored on platforms that do not support it.

See Also:

Oracle Database Performance Tuning Guide for more information about using this parameter

1.179 LOG_ARCHIVE_CONFIG

`LOG_ARCHIVE_CONFIG` enables or disables the sending of redo logs to remote destinations and the receipt of remote redo logs, and specifies the unique database names (`DB_UNIQUE_NAME`) for each database in the Data Guard configuration.

Property	Description
Parameter type	String
Syntax	<pre>LOG_ARCHIVE_CONFIG = { [SEND NOSEND] [RECEIVE NORCEIVE] [DG_CONFIG=(remote_db_unique_name1 [, ... remote_db_unique_name30) NODG_CONFIG] }</pre>
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- `SEND`
Enables the sending of redo logs to remote destinations
- `NOSEND`
Disables the sending of redo logs to remote destinations

- RECEIVE
Enables the receipt of remotely archived redo logs
- NORECEIVE
Disables the receipt of remotely archived redo logs
- DG_CONFIG
Specifies a list of up to 30 unique database names (defined with the DB_UNIQUE_NAME initialization parameter) for all of the databases in the Data Guard configuration.
- NODG_CONFIG
Eliminates the list of service provider names previously specified with the DG_CONFIG option.

When this parameter has not been set, its default value is NULL. However, the NULL value is treated as if the parameter has been set to 'SEND, RECEIVE, NODG_CONFIG'.

1.180 LOG_ARCHIVE_DEST

Use LOG_ARCHIVE_DEST to specify the destination to which redo log files will be archived.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_DEST = <i>filespec</i>
Default value	Null
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any valid path or device name, except raw partitions
Basic	No
Oracle RAC	Multiple instances can have different values.

 **Note:**

For Enterprise Edition users, this parameter has been deprecated in favor of the LOG_ARCHIVE_DEST_n parameters. If Oracle Enterprise Edition is not installed or it is installed, but you have not specified any LOG_ARCHIVE_DEST_n parameters, this parameter is valid.

LOG_ARCHIVE_DEST is applicable only if you are running the database in ARCHIVELOG mode or are recovering a database from archived redo logs. LOG_ARCHIVE_DEST is incompatible with the LOG_ARCHIVE_DEST_n parameters, and must be defined as the null string ("") or (' ') when any LOG_ARCHIVE_DEST_n parameter has a value other than a null string. Use a text string to specify the default location and root of the disk file or tape device when archiving redo log files. (Archiving to tape is not supported on all operating systems.) The value cannot be a raw partition.

If `LOG_ARCHIVE_DEST` is not explicitly defined and all the `LOG_ARCHIVE_DEST_n` parameters have null string values, `LOG_ARCHIVE_DEST` is set to an operating system-specific default value on instance startup.

To override the destination that this parameter specifies, either specify a different destination for manual archiving or use the SQL*Plus statement `ARCHIVE LOG START filespec` for automatic archiving, where `filespec` is the new archive destination. To permanently change the destination, use the statement `ALTER SYSTEM SET LOG_ARCHIVE_DEST = filespec`, where `filespec` is the new archive destination.

Neither `LOG_ARCHIVE_DEST` nor `LOG_ARCHIVE_FORMAT` have to be complete file or directory specifiers themselves; they only need to form a valid file path after the variables are substituted into `LOG_ARCHIVE_FORMAT` and the two parameters are concatenated together.

See Also:

- *Oracle Database Backup and Recovery User's Guide*
- "[LOG_ARCHIVE DUPLEX_DEST](#)", "[LOG_ARCHIVE_MIN_SUCCEED_DEST](#)", and "[V\\$ARCHIVE_DEST](#)" for more information on setting this parameter
- Your Oracle operating system-specific documentation for the default value and for an example of how to specify the destination path or file name using `LOG_ARCHIVE_DEST`

1.181 LOG_ARCHIVE_DEST_n

The `LOG_ARCHIVE_DEST_n` initialization parameter defines up to 31 (where $n = 1, 2, 3, \dots, 31$) destinations, each of which *must* specify either the `LOCATION` or the `SERVICE` attribute to specify where to archive the redo data.

Property	Description
Parameter type	String

Property	Description
Syntax	<pre>LOG_ARCHIVE_DEST_[1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31] = { null_string { LOCATION=path_name SERVICE=service_name } [MANDATORY] [REOPEN[=seconds]] [DELAY[=minutes]] [ENCRYPTION=ENABLED DISABLED] [GROUP=group] [NOREGISTER] [PRIORITY=priority] [TEMPLATE=template] [ALTERNATE=destination] [MAX_FAILURE=count] [SYNC ASYNC] [AFFIRM NOAFFIRM] [NET_TIMEOUT=seconds] [VALID_FOR=(redo_log_type,database_role)] [DB_UNIQUE_NAME] [COMPRESSION={ENABLE DISABLE ZLIB LZO}] }</pre>
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Basic	Yes

All other attributes except the `LOCATION` or `SERVICE` attributes are optional. Note that whether you are specifying the `LOCATION` attribute or the `SERVICE` attribute, it must be the first attribute supplied in the list of attributes.

If you choose not to enter any attributes, then you can specify a NULL string by entering the following:

```
LOG_ARCHIVE_DEST_n=' ';
```

You set the attributes for the `LOG_ARCHIVE_DEST_n` initialization parameter to control different aspects of how redo transport services transfer redo data from a production or primary database destination to another (standby) database destination. You can query the `V$ARCHIVE_DEST` view to see the current attribute settings for each destination (n).

Note:

Some of the attributes for this parameter are deprecated, but are being retained for backward compatibility. See "[Deprecated Attributes for LOG_ARCHIVE_DEST_n](#)".

For every `LOG_ARCHIVE_DEST_n` initialization parameter that you define, you must specify a corresponding `LOG_ARCHIVE_DEST_STATE_n` parameter. The `LOG_ARCHIVE_DEST_STATE_n` (where n is an integer from 1 to 31) initialization parameter specifies whether the corresponding destination is currently enabled or disabled.

 See Also:

"LOG_ARCHIVE_DEST_STATE_n"

Destinations LOG_ARCHIVE_DEST_11 through LOG_ARCHIVE_DEST_31 do not support the SYNC, ARCH, LOCATION, MANDATORY, or ALTERNATE attributes, and cannot be specified as the target of the ALTERNATE attribute.

LOG_ARCHIVE_DEST_11 through LOG_ARCHIVE_DEST_31 can only be used when the COMPATIBLE initialization parameter is set to 11.2.0 or higher.

Values

 See Also:

Oracle Data Guard Concepts and Administration for detailed descriptions of all the values listed in this section

- AFFIRM and NOAFFIRM
 - Control whether a redo transport destination acknowledges received redo data before or after writing it to the standby redo log. The default is NOAFFIRM.
 - ALTERNATE=LOG_ARCHIVE_DEST_n
 - Specifies an alternate archiving destination to be used when the original destination fails. There is no default value; if an alternate destination is not specified, then archiving does not automatically change to another destination if the original destination fails.
 - ASYNC
 - The redo data generated by a transaction need not have been received at a destination which has this attribute before that transaction can commit. This is the default behavior if neither SYNC nor ASYNC is specified.
 - COMPRESSION
 - Indicates whether network compression is enabled or disabled, or disabled, or whether the ZLIB or LZO algorithm is used. The possible values include:
 - DISABLE: Compression is disabled.
 - ENABLE: Compression is enabled. The ZLIB compression algorithm is used.
 - ZLIB: ZLIB compression is used.
 - LZO: LZO compression is used.
- The Advanced Compression option is required in order to use the COMPRESSION attribute.
- DB_UNIQUE_NAME=*name*
 - Specifies a unique name for the database at this destination. You must specify a name; there is no default value.
 - DELAY[=*minutes*]

Specifies a minimum time lag between when redo data is archived on a standby site retrieving redo from a primary and when the archived redo log file is applied to the standby database or any standbys cascading from it. If you specify the `DELAY` attribute without a time interval, the default is 30 minutes.

- `ENCRYPTION=DISABLE|ENABLE`

Controls whether encryption of the redo stream sent to Zero Data Loss Recovery Appliance (Recovery Appliance) is enabled or disabled. The default value for the attribute is `DISABLE`.

This attribute cannot be used with the `COMPRESSION`, `LOCATION`, or `SYNC` attributes.

To use the `ENCRYPTION` attribute, you must set the `COMPATIBLE` initialization parameter to `11.2.0.4` or higher on the protected database.

See Also:

Zero Data Loss Recovery Appliance Administrator's Guide for introductory information about Recovery Appliance

- `GROUP=group`

The `GROUP` attribute is used to specify membership in a specific collection of log archive destinations. Groups are numbered 1 through 8. The default group (`GROUP=0`) is special in that it cannot be assigned. The default group is populated with all destinations that are not explicitly assigned to a group. All groups other than the default group must consist of a set of remote destinations. No group (other than the default group) can contain local destinations.

- `LOCATION=local_disk_directory` or `USE_DB_RECOVERY_FILE_DEST`

Specifies either a local file system destination or the directory, file system, or Automatic Storage Management disk group that will serve as the fast recovery area. You must specify this attribute for at least one destination. You can specify either a local disk directory or fast recovery area with the `LOCATION` attribute. You *must* include either the `LOCATION` or the `SERVICE` attribute for each destination to specify where to archive the redo data.

- `MANDATORY`

Specifies that the transmission of redo data to the destination must succeed before the local online redo log file can be made available for reuse. If the `MANDATORY` attribute is not specified, then the destination is optional.

- `MAX_FAILURE`

Controls the consecutive number of times redo transport services attempt to reestablish communication and transmit redo data to a failed destination before the primary database gives up on the destination. See the `MAX_FAILURE` description in *Oracle Data Guard Concepts and Administration* for usage notes about how this attribute is handled differently in Oracle Database 12c Release 2 (12.2.0.1) and in Oracle Database 12c Release 1 (12.1.0.2).

- `NET_TIMEOUT=seconds`

Specifies the number of seconds the log writer process on the primary system waits for status from the `SYNC` (`NSSn`) process before terminating the network connection. The default is 30 seconds.

- `NOREGISTER`

Indicates that the location of the archived redo log file is not to be recorded at the corresponding destination.

- **PRIORITY=***priority*

The PRIORITY attribute is used to specify preference within a group of log archive destinations. Priorities are numbered 1 through 8. A lower value represents a higher priority. The lowest priority (PRIORITY=8) is special in the sense that if that priority is active then all destinations at that priority will be made active. If any higher priority destination returns to service then that destination will be made active and all low priority destinations will be made inactive because they will be receiving redo from one of the other redo destinations, either through cascading or a Far Sync.

- **REOPEN[=***seconds***]**

Specifies the minimum number of seconds before the archiver processes (ARCn) or the log writer process (LGWR) should try again to access a previously failed destination. The default is 300 seconds.

- **SERVICE=***net_service_name*

Specifies a valid Oracle Net service name (**SERVICE=***net_service_name*) that identifies the remote Oracle database instance to which redo data will be sent. Each destination *must* specify either the **LOCATION** or the **SERVICE** attribute. There is no default net service name.

- **SYNC**

The redo data generated by a transaction must have been received by every enabled destination which has this attribute before that transaction can commit.

- **TEMPLATE=***filename_template_%t_%s_%r*

Specifies a path name and a file name template for archived redo log files created at a redo transport destination that contain redo data from the database where this attribute is specified. This attribute overrides the value of the **LOG_ARCHIVE_FORMAT** initialization parameter at a redo transport destination. This attribute does not have a default value.

- **VALID_FOR=(***redo_log_type, database_role***)**

Identifies when redo transport services can transmit redo data to destinations based on the following factors:

- *redo_log_type*—whether online redo log files, standby redo log files, or both are *currently* being archived on the database at this destination
- *database_role*—whether the database is *currently* running in the primary or the standby role

Deprecated Attributes for LOG_ARCHIVE_DEST_n

The following attributes are deprecated for the **LOG_ARCHIVE_DEST_n** parameter. They are retained for backward compatibility only.

Table 1-3 Deprecated Attributes on the LOG_ARCHIVE_DEST_n Initialization Parameter

Deprecated Attribute	Alternative
ARCH	Specify SYNC or ASYNC. ASYNC is the default if neither attribute is specified.
LGWR	Specify SYNC or ASYNC. ASYNC is the default if neither attribute is specified.

Table 1-3 (Cont.) Deprecated Attributes on the LOG_ARCHIVE_DEST_n Initialization Parameter

Deprecated Attribute	Alternative
OPTIONAL	Destinations are optional by default.
VERIFY	None. This attribute is only used with the deprecated ARCH attribute.

In addition, note the following changes to the ASYNC and SYNC attributes:

- The BLOCKS keyword on the ASYNC attribute is no longer needed. It is no longer necessary to set this keyword because Data Guard dynamically adjusts the block count up or down to an appropriate number of blocks, as necessary.
- The PARALLEL and NOPARALLEL keywords on the SYNC attribute are no longer needed.

1.182 LOG_ARCHIVE_DEST_STATE_n

The LOG_ARCHIVE_DEST_STATE_n parameters (where n = 1, 2, 3, ... 31) specify the availability state of the corresponding destination.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_DEST_STATE_[1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31] = { enable defer alternate reset }
Default value	enable
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Basic	Yes

The parameter suffix (1 through 31) specifies one of the corresponding LOG_ARCHIVE_DEST_n destination parameters.

Values

- enable
Specifies that a valid log archive destination can be used for a subsequent archiving operation (automatic or manual). This is the default.
- defer
Specifies that valid destination information and attributes are preserved, but the destination is excluded from archiving operations until reenabled.
- alternate
Specifies that a log archive destination is not enabled but will become enabled if communications to another destination fail.
- reset

Functions the same as `defer`, but clears any error messages for the destination if it had previously failed.

The `LOG_ARCHIVE_DEST_STATE_n` parameters have no effect on the `ENABLE` state for the `LOG_ARCHIVE_DEST` or `LOG_ARCHIVE_DUPLEX_DEST` parameters.

The `V$ARCHIVE_DEST` dynamic performance view shows values in use for the current session. The `DEST_ID` column of that view corresponds to the archive destination suffix `n`.

See Also:

- *Oracle Data Guard Concepts and Administration* for more information about this parameter
- "[V\\$ARCHIVE_DEST](#)"

1.183 LOG_ARCHIVE_DUPLEX_DEST

`LOG_ARCHIVE_DUPLEX_DEST` is similar to the initialization parameter `LOG_ARCHIVE_DEST`. This parameter specifies a second archive destination: the **duplex** archive destination. This duplex archive destination can be either a must-succeed or a best-effort archive destination, depending on how many archive destinations must succeed (as specified in the `LOG_ARCHIVE_MIN_SUCCEED_DEST` parameter).

Property	Description
Parameter type	String
Syntax	<code>LOG_ARCHIVE_DUPLEX_DEST = filespec</code>
Default value	There is no default value.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	Either a null string or any valid path or device name, except raw partitions
Basic	No

Note:

If you are using Oracle Enterprise Edition, this parameter is deprecated in favor of the `LOG_ARCHIVE_DEST_n` parameters. If Oracle Enterprise Edition is not installed or it is installed but you have not specified any `LOG_ARCHIVE_DEST_n` parameters, this parameter is valid.

The default setting of a null string ("") or (' ') indicates that a duplex archive destination does not exist.

 **See Also:**

- "[LOG_ARCHIVE_DEST_n](#)"
- "[LOG_ARCHIVE_MIN_SUCCED_DEST](#)"
- "[V\\$ARCHIVE_DEST](#)"
- *Oracle Database Administrator's Guide* for an example of using this parameter to specify an optional secondary archive destination

1.184 LOG_ARCHIVE_FORMAT

Use `LOG_ARCHIVE_FORMAT` to specify the default filename format when archiving redo log files.

Property	Description
Parameter type	String
Syntax	<code>LOG_ARCHIVE_FORMAT = filename</code>
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	Any string that resolves to a valid filename
Basic	No
Oracle RAC	Multiple instances can have different values, but identical values are recommended.

`LOG_ARCHIVE_FORMAT` is applicable only if you are using the redo log in `ARCHIVELOG` mode. Use a text string and variables to specify the default filename format when archiving redo log files. The string generated from this format is appended to the string specified in the `LOG_ARCHIVE_DEST` parameter.

The following variables can be used in the format:

`%s` log sequence number

`%s` log sequence number, zero filled

`%t` thread number

`%T` thread number, zero filled

`%a` activation ID

`%d` database ID

`%r` resetlogs ID that ensures unique names are constructed for the archived log files across multiple incarnations of the database

Using uppercase letters for the variables (for example, `%s`) causes the value to be fixed length and padded to the left with zeros. An example of specifying the archive redo log filename format follows:

```
LOG_ARCHIVE_FORMAT = 'log%t_%s_%r.arc'
```

Archive log file names must contain each of the elements %s (sequence), %t (thread), and %r (resetlogs ID) to ensure that all archive log file names are unique. If the LOG_ARCHIVE_FORMAT initialization parameter is set in the parameter file, then make sure the parameter value contains the %s, %t, and %r elements. Otherwise, the following error is displayed at the time of instance startup:

ORA-19905: log_archive_format must contain %s, %t and %r

Neither LOG_ARCHIVE_DEST nor LOG_ARCHIVE_FORMAT have to be complete file or directory specifiers themselves; they only need to form a valid file path after the variables are substituted into LOG_ARCHIVE_FORMAT and the two parameters are concatenated together.

LOG_ARCHIVE_FORMAT is ignored in these cases:

- For archived log files that go to the fast recovery area
- When LOG_ARCHIVE_DEST[_n] points to the root of an Oracle ASM disk group (for example, +DATA). The directory of a disk group (for example, +DATA/logs) must be specified for the parameter to be honored.

In these cases where LOG_ARCHIVE_FORMAT is ignored, an Oracle ASM file name is used. See *Oracle Automatic Storage Management Administrator's Guide* for more information on Oracle ASM file names.

See Also:

- *Oracle Database Backup and Recovery User's Guide*, *Oracle Data Guard Concepts and Administration*, and *Oracle Real Application Clusters Administration and Deployment Guide* for more information about this parameter
- Your operating system- specific Oracle documentation for the default value and range of values for LOG_ARCHIVE_FORMAT

1.185 LOG_ARCHIVE_MAX_PROCESSES

LOG_ARCHIVE_MAX_PROCESSES specifies the maximum number of ARCn processes that can be created.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 to 30
Basic	No

 See Also:

- "[Background Processes](#)" for more information about ARCh processes
- *Oracle Database Administrator's Guide* for more information about LOG_ARCHIVE_MAX_PROCESSES

1.186 LOG_ARCHIVE_MIN_SUCCEED_DEST

`LOG_ARCHIVE_MIN_SUCCEED_DEST` defines the minimum number of destinations that must succeed in order for the online logfile to be available for reuse.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	1 to 10 if you are using <code>LOG_ARCHIVE_DEST_n</code> 1 or 2 if you are using <code>LOG_ARCHIVE_DEST</code> and <code>LOG_ARCHIVE_DUPLEX_DEST</code>
Basic	No

If you are using the `LOG_ARCHIVE_DEST_n` parameters and automatic archiving is enabled, then the value of this parameter cannot exceed the number of enabled, valid destinations specified as `MANDATORY` plus the number of enabled, valid destinations that are configured with the `OPTIONAL` and `LOCATION` attributes.

If you are using `LOG_ARCHIVE_DEST` and `LOG_ARCHIVE_DUPLEX_DEST` and automatic archiving is enabled, a value of 1 specifies that the destination specified in `LOG_ARCHIVE_DEST` must succeed. A value of 2 specifies that the destinations specified in both parameters must succeed.

If the value of this parameter is less than the number of enabled, valid `MANDATORY` destinations, this parameter is ignored in favor of the `MANDATORY` destination count. If the value is more than the number of enabled, valid `MANDATORY` destinations, then some of the enabled, valid destinations configured with the `OPTIONAL` and `LOCATION` attributes are treated as `MANDATORY`.

You can switch dynamically from using the older parameters to the `LOG_ARCHIVE_DEST_n` parameter using `ALTER SYSTEM`, as follows:

1. Set `LOG_ARCHIVE_MIN_SUCCEED_DEST` to 1.
2. Set the value of `LOG_ARCHIVE_DEST` and `LOG_ARCHIVE_DUPLEX_DEST` to the null string.
3. Set the desired number of destinations for the `LOG_ARCHIVE_DEST_n` parameters.
4. Reset `LOG_ARCHIVE_MIN_SUCCEED_DEST` to the desired value.

 **See Also:**

- *Oracle Database Administrator's Guide* for more information on setting this parameter
- "[LOG_ARCHIVE_DEST_n](#)", "[LOG_ARCHIVE DUPLEX_DEST](#)", and "[V\\$ARCHIVE_DEST](#)" for information on related parameters

1.187 LOG_ARCHIVE_TRACE

`LOG_ARCHIVE_TRACE` enables and controls the generation of comprehensive trace information for log archiving and redo transport activity.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096, 8192, 16384, 32768
Basic	No
Oracle RAC	Multiple instances can have different values.

The additional tracing that is output when setting `LOG_ARCHIVE_TRACE` to a non-zero value can appear in trace files for an archive process, RFS process, LGWR process, SYNC process, ASYNC process, foreground process, MRP process, recovery process, log apply process, startup process, shutdown process, and other processes that use redo transport services.

Table 1-4 describes the valid `LOG_ARCHIVE_TRACE` values.

Table 1-4 LOG_ARCHIVE_TRACE Values

Value	Description	More Information
0	Disables archivelog tracing (this is the default)	
1	High-level tracing	High-level tracing provides a small amount of tracing from most redo transport processes. When a value is specified that is not high-level (not 1), the high-level tracing for that value will be output to the trace file even if the high-level tracing has not been specifically requested. For example, if you set <code>LOG_ARCHIVE_TRACE</code> to 128, you will get all the trace messages pertaining to the FAL engine, <i>including</i> the high-level tracing from the FAL engine.

Table 1-4 (Cont.) LOG_ARCHIVE_TRACE Values

Value	Description	More Information
2	Tracks Data Guard interfaces	This tracing level is for the various Data Guard configuration parameters, the various Data Guard related SQL commands, the various Data Guard table accesses, and some Data Guard internal interfaces.
4	Tracks common redo transport services	This tracing level is for a number of common services provided by redo transport to various internal users (such as the RFS process, the LGWR process, and the ASYNC process). These include locking primitives, use of common VOS (Virtual Operating System) interfaces, task scheduling, process monitoring, control file access, and other miscellaneous common services.
8	Tracks database protection mode	
16	Tracks disk and network I/O requests	
32	Tracks redo transport destinations	
64	Tracks redo transport archive engine	
128	Tracks redo transport FAL (fetch archive log) engine	
256	Tracks Physical, Logical, and Availability Machine clients of RFS process	
512	Tracks redo transport of LGWR, SYNC, and ASYNC processes	
1024	Tracks redo transport RFS process	
2048	Tracks redo transport gap resolution	
4096	Tracks real-time apply	
8192	Tracks recovery process	
16384	Tracks redo transport buffer management	
32768	Tracks LogMiner dictionary	

You can combine tracing levels by adding together the values of the desired tracing levels. For example, a setting of 3 will generate level 1 and level 2 trace output. You can set different values for the primary and standby database.

When this parameter is set to the default value of 0, Oracle will still generate appropriate alert and trace entries in response to error conditions. If you change the value of this parameter dynamically in an `ALTER SYSTEM` statement, the change takes effect immediately.

Many of the trace messages from redo transport processes include a routine name at the beginning of the trace message. The first part of the routine name specifies the module for that routine. [Table 1-5](#) shows the tracing value used for each redo transport module. Note that the tracing value for transport modules can change from release to release.

Table 1-5 Tracing Values Used for Redo Transport Modules

Module Name	Purpose	Tracing Value
krsa	Locking primitives	4
krsb	Buffer management	16384
krsc	Crash recovery	64
krsd	Destination	32
krse	Archive engine	64
krsf	FAL engine	128
krsg	Gap resolution	2048
krsh	Helper	4
krsi	Input/output	16
krsj	Protection mode	8
krsk	Control file access	4
krls	Log writer	512
krsm	MRP process	8192
krsn	Configuration	2
krso	Process monitor	4
krsp	Physical standby and Availability Machine RFS client	256
krsq	SQL commands	2
krsr	RFS process	1024
krst	Tables	2
krsu	Network I/O	16
krsv	VOS front end	4
krsw	ASYNC process	512
krsx	Internal interfaces	2

 **See Also:**

Oracle Database Administrator's Guide

1.188 LOG_BUFFER

LOG_BUFFER specifies the amount of memory (in bytes) that Oracle uses when buffering redo entries to a redo log file.

Property	Description
Parameter type	Big integer
Default value	2 MB to 32 MB, depending on the SGA size and CPU count
Modifiable	No

Property	Description
Modifiable in a PDB	No
Range of values	2 MB to operating system-dependent
Basic	No

Redo log entries contain a record of the changes that have been made to the database block buffers. The LGWR process writes redo log entries from the log buffer to a redo log file.

The log buffer size depends on the number of redo strands in the system. One redo strand is allocated for every 16 CPUs and has a default size of 2 MB. Oracle allocates a minimum of 2 redo strands per instance. When the log buffer size is not specified, any remaining memory in the redo granules is given to the log buffer.

See Also:

- Your operating system-specific Oracle documentation for the default value and range of values
- *Oracle Database Performance Tuning Guide* for information on resizing the redo log buffer using this parameter

1.189 LOG_CHECKPOINT_INTERVAL

LOG_CHECKPOINT_INTERVAL specifies the frequency of checkpoints in terms of the number of redo log file blocks that can exist between an incremental checkpoint and the last block written to the redo log. This number refers to physical operating system blocks, not database blocks.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to $2^{31} - 1$
Basic	No
Oracle RAC	Multiple instances can have different values.

Regardless of this value, a checkpoint always occurs when switching from one online redo log file to another. Therefore, if the value exceeds the actual redo log file size, checkpoints occur only when switching logs. Checkpoint frequency is one of the factors that influence the time required for the database to recover from an unexpected failure.

 **Note:**

- Specifying a value of 0 (zero) for `LOG_CHECKPOINT_INTERVAL` has the same effect as setting the parameter to infinity and causes the parameter to be ignored. Only nonzero values of this parameter are considered meaningful.
- Recovery I/O can also be limited by setting the `LOG_CHECKPOINT_TIMEOUT` parameter or by the size specified for the smallest redo log. For information on which mechanism is controlling checkpointing behavior, query the `V$INSTANCE_RECOVERY` view.

 **See Also:**

- "[LOG_CHECKPOINT_TIMEOUT](#)"
- "[V\\$INSTANCE_RECOVERY](#)"
- *Oracle Database Performance Tuning Guide* for information on disabling or removing this parameter when the `FAST_START_MTTR_TARGET` parameter is set

1.190 LOG_CHECKPOINT_TIMEOUT

`LOG_CHECKPOINT_TIMEOUT` specifies (in seconds) the amount of time that has passed since the incremental checkpoint at the position where the last write to the redo log (sometimes called the **tail of the log**) occurred. This parameter also signifies that no buffer will remain dirty (in the cache) for more than *integer* seconds.

Property	Description
Parameter type	Integer
Default value	1800
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to $2^{31} - 1$
Basic	No
Oracle RAC	Multiple instances can have different values.

Specifying a value of 0 for the timeout disables time-based checkpoints. Hence, setting the value to 0 is not recommended unless `FAST_START_MTTR_TARGET` is set.

 **Note:**

- A checkpoint scheduled to occur because of this parameter is delayed until the completion of the previous checkpoint if the previous checkpoint has not yet completed.
- Recovery I/O can also be limited by setting the `LOG_CHECKPOINT_INTERVAL` parameter or by the size specified for the smallest redo log. For information on which mechanism is controlling checkpointing behavior, query the `V$INSTANCE_RECOVERY` view.

 **See Also:**

- "[LOG_CHECKPOINT_TIMEOUT](#)"
- "[V\\$INSTANCE_RECOVERY](#)"
- *Oracle Database Performance Tuning Guide* for information on disabling or removing this parameter when the `FAST_START_MTTR_TARGET` parameter is set

1.191 LOG_CHECKPOINTS_TO_ALERT

`LOG_CHECKPOINTS_TO_ALERT` lets you log your checkpoints to the alert log. Doing so is useful for determining whether checkpoints are occurring at the desired frequency.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

1.192 LOG_FILE_NAME_CONVERT

`LOG_FILE_NAME_CONVERT` converts the filename of a new log file on the primary database to the filename of a log file on the standby database.

Property	Description
Parameter type	String

Property	Description
Syntax	<pre>LOG_FILE_NAME_CONVERT = 'string1' , 'string2' , 'string3' , 'string4' , ...</pre> <p>Where:</p> <ul style="list-style-type: none"> • <i>string1</i> is the pattern of the primary database filename • <i>string2</i> is the pattern of the standby database filename • <i>string3</i> is the pattern of the primary database filename • <i>string4</i> is the pattern of the standby database filename <p>You can enclose each string in single or double quotation marks.</p> <p>You can specify as many pairs of primary and standby replacement strings as required.</p>
	Example: <pre>LOG_FILE_NAME_CONVERT = '/dbs/t1/','/dbs/t1/ s','/dbs/t2/','/dbs/t2/s'</pre>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No

If you add a log file to the primary database, you must add a corresponding file to the standby database.

Set the value of this parameter to one or more pairs of strings. The first string is the pattern found in the log file names on the primary database. The second string is the pattern found in the log file names on the standby database.

When the standby database is updated, this parameter converts the log file name on the primary database to the log file name on the standby database. The file must exist on the standby database and must be writable or the recovery process will halt with an error.

If you specify an odd number of strings (the last string has no corresponding replacement string), an error is signalled during startup. If the filename being converted matches more than one pattern in the pattern/replace string list, the first matched pattern takes effect. There is no limit on the number of pairs that you can specify in this parameter (other than the hard limit of the maximum length of multivalue parameters).

You should also use `LOG_FILE_NAME_CONVERT` to rename the logfiles in the clone control file when setting up the clone database during tablespace point-in-time recovery.

Note:

The `LOG_FILE_NAME_CONVERT` parameter applies only to online logs (not to archived logs).

Oracle Data Guard Concepts and Administration

1.193 LONG_MODULE_ACTION

LONG_MODULE_ACTION enables the use of longer lengths for modules and actions.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	The same value must be used on all instances.

Module length was 48 bytes and action length was 32 bytes in Oracle Database releases prior to Oracle Database 12c Release 2 (12.2.0.1).

Starting with Oracle Database 12c Release 2 (12.2.0.1):

- If LONG_MODULE_ACTION is set to TRUE (the default value), then the length of modules and actions will be 64 bytes each.
- If LONG_MODULE_ACTION is set to FALSE, then the length of modules will be 48 bytes, and the length of actions will be 32 bytes.

1.194 MAIN_WORKLOAD_TYPE

MAIN_WORKLOAD_TYPE specifies the main workload type for a database or PDB.

Property	Description
Parameter type	String
Syntax	MAIN_WORKLOAD_TYPE = { OLTP ANALYTICS }
Default value	OLTP
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

This parameter is supported only for Oracle Exadata. See *Oracle Exadata System Software User's Guide* for more information about setting this parameter

1.195 MAX_AUTH_SERVERS

MAX_AUTH_SERVERS specifies the maximum number of authentication servers in the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

Property	Description
Parameter type	Integer
Default value	25
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: MIN_AUTH_SERVERS or 1, whichever is the greater value Maximum: operating system-dependent
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter must be greater than or equal to the value of the MIN_AUTH_SERVERS initialization parameter, which specifies the minimum number of authentication servers in the authentication pool. The exception is when MIN_AUTH_SERVERS = 0. In this case, the value of MAX_AUTH_SERVERS must be greater than or equal to 1.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.10.

 **See Also:**

- *Oracle Database Administrator's Guide* for more information about setting this parameter
- "[MIN_AUTH_SERVERS](#)"

1.196 MAX_DATAPUMP_JOBS_PER_PDB

MAX_DATAPUMP_JOBS_PER_PDB determines the maximum number of concurrent Oracle Data Pump jobs per PDB.

Property	Description
Parameter type	String
Syntax	MAX_DATAPUMP_JOBS_PER_PDB = { AUTO integer }
Default value	100
Modifiable	ALTER SYSTEM

Property	Description
Modifiable in a PDB	Yes
Range of values	0 to 250 or AUTO
Basic	No
Oracle RAC	The same value must be used on all instances.

The default value will not work for all databases. Database administrators will have to determine if the default value works well for their database.

When this parameter has a value of AUTO, Oracle Data Pump will derive its actual value to be 50% of the SESSIONS initialization parameter.

A value that is too large could cause Oracle Data Pump to consume too many system resources, while a value that is too small could prevent users from performing their Oracle Data Pump tasks.

The main resource Oracle Data Pump uses is shared pool in the System Global Area (SGA) for the database. Parallel jobs increase the number of sessions and, depending on the job, the number of PQ slaves used.

See Also:

- *Oracle Database Utilities* for more information about using Oracle Data Pump with CDBs
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_DATAPUMP PL/SQL package

1.197 MAX_DATAPUMP_PARALLEL_PER_JOB

MAX_DATAPUMP_PARALLEL_PER_JOB specifies the maximum number of parallel processes allowed per Oracle Data Pump job.

Property	Description
Parameter type	String
Syntax	MAX_DATAPUMP_PARALLEL_PER_JOB = { integer AUTO }
Default value	50
Range of values	1 to 1024, or AUTO
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

When this parameter has a value of AUTO, Oracle Data Pump derives its value to be 50 percent of the value of the SESSIONS initialization parameter.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.1.

1.198 MAX_DISPATCHERS

`MAX_DISPATCHERS` specifies the maximum number of dispatcher processes allowed to be running simultaneously.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	If <code>MAX_DISPATCHERS</code> is specified, then it should be greater than or equal to the number of dispatchers specified by the <code>DISPATCHERS</code> parameter and less than the number of processes specified by the <code>PROCESSES</code> parameter.
Basic	No

This parameter can be overridden by the `DISPATCHERS` parameter and is maintained for backward compatibility with older releases.

 **See Also:**

- *Oracle Database Administrator's Guide* for more information about this parameter
- Your operating system-specific Oracle documentation for the default value and range of values

1.199 MAX_DUMP_FILE_SIZE

`MAX_DUMP_FILE_SIZE` specifies the maximum size of trace files (excluding the alert log).

Property	Description
Parameter type	String
Syntax	<code>MAX_DUMP_FILE_SIZE = { integer [K M G] UNLIMITED }</code>
Default value	<code>UNLIMITED</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	0 to unlimited, or <code>UNLIMITED</code>
Basic	No

You can change this limit if you are concerned that trace files may use too much space.

- A numeric value for `MAX_DUMP_FILE_SIZE` specifies the maximum size in operating system blocks.
- A numeric value followed by a `K` or `M` or `G` suffix specifies the file size in kilobytes, megabytes, or gigabytes.
- The special value string `UNLIMITED` means that there is no upper limit on trace file size. Thus, dump files can be as large as the operating system permits.

When the trace file is limited in size, it may be automatically split into multiple files, called segments, if needed. This process is called trace file segmentation. The segments will have the same file name as the active trace file, but with an extra segment number appended.

The trace file can be split into a maximum of 5 segments, and the size of each segment will typically be 1/5th of the trace file limit.

When the combined size of all the trace file segments exceeds the specified limit, the oldest segment is deleted, and a new, empty segment is created. Thus, the trace file always contains the most recent trace information. The first segment is never deleted, because it may contain relevant information about the initial state of the process.

Note that trace file segmentation will not occur when this parameter is set to a value less than 25 MB.

 **See Also:**

Oracle Database Administrator's Guide and *Oracle Database SQL Tuning Guide* for more information on setting this parameter

1.200 MAX_IDLE_BLOCKER_TIME

`MAX_IDLE_BLOCKER_TIME` specifies the maximum number of minutes that a blocking session can be idle. After that point, the session is automatically terminated.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum integer. The value of 0 indicates that there is no limit.
Basic	No
Oracle RAC	Different instances can use different values.

A session is considered to be a blocking session when it is holding resources required by other sessions. For example:

- The session is holding a lock required by another session.
- The session is a parallel operation and its consumer group, PDB, or database has either reached its maximum parallel server limit or has queued parallel operations.

- The session's PDB or database instance is about to reach its SESSIONS or PROCESSES limit.

This parameter differs from the MAX_IDLE_TIME parameter in that MAX_IDLE_TIME applies to all sessions (blocking and non-blocking), whereas MAX_IDLE_BLOCKING_TIME applies only to blocking sessions. Therefore, in order for MAX_IDLE_BLOCKING_TIME to be effective, its limit must be less than the MAX_IDLE_TIME limit.

 **Note:**

This parameter does not have an effect on parallel query processes, nor on SYS user sessions.

 **Note:**

This parameter is available starting with Oracle Database 19c.

 **See Also:**

["MAX_IDLE_TIME"](#)

1.201 MAX_IDLE_TIME

MAX_IDLE_TIME specifies the maximum number of minutes that a session can be idle. After that point, the session is automatically terminated.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum integer. The value of 0 indicates that there is no limit.
Basic	No
Oracle RAC	Different instances can use different values.

 **See Also:**

["MAX_IDLE_BLOCKER_TIME"](#) to learn how to set a lower idle time limit for sessions that are holding resources required by other sessions

1.202 MAX_IOPS

MAX_IOPS enables you to set the maximum number of I/Os that can be issued per second on a per pluggable database (PDB) basis. This parameter is used to throttle PDB I/Os.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum Integer value. A very low value (for example, under 100 I/Os per second) is not recommended.
Basic	No
Oracle RAC	Different values can be set on different instances.

DBWR I/Os, control file I/Os, password file I/Os and other critical I/Os are exempted from the rate limit set by this parameter, but their I/Os are accounted for while throttling. Because of these exemptions, the PDB's actual I/O rate may sometimes exceed the limit.

This feature is enabled for multitenant container database (CDB) only. The feature is not supported on Oracle Exadata.

This parameter can be set from inside a PDB. If the parameter is set in CDB\$ROOT, all the PDBs in that CDB will inherit the parameter value from CDB\$ROOT. This parameter cannot be set in a non-CDB environment.

The default value of 0 means that no limits are set on the maximum number of I/Os that can be issued per second in a PDB.

If Oracle processes need to wait because of this IO rate limit, the wait event is resmgr: I/O rate limit.

See Also:

- "[MAX_MBPS](#)"
- "[resmgr: I/O rate limit](#)"

Examples

This example shows how to use SQL statements to set a maximum of 3000 I/Os per second on a PDB named CDB1_PDB1:

```
alter session set container = cdb1_pdb1;
alter system set max_iops = 3000;
```

1.203 MAX_MBPS

MAX_MBPS enables you to set the maximum number of megabytes (MB) of I/Os issued per second on a per pluggable database (PDB) basis. This parameter is used to throttle PDB I/Os.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum Integer value. A very low value (for example, under 25 MB per second) is not recommended.
Basic	No
Oracle RAC	Different values can be set on different instances.

DBWR I/Os, control file I/Os, password file I/Os and other critical I/Os are exempted from the throughput limit set by this parameter, but their I/Os are accounted for while throttling. Because of these exemptions, the PDB's actual I/O rate may sometimes exceed the limit.

This feature is enabled for multitenant container database (CDB) only. The feature is not supported on Oracle Exadata.

This parameter can be set from inside a PDB. If the parameter is set in CDB\$ROOT, all the PDBs in that CDB will inherit the parameter value from CDB\$ROOT. This parameter cannot be set in a non-CDB environment.

The default value of 0 means that no limits are set on the maximum number of megabytes (MB) of I/Os that can be issued per second in a PDB.

If Oracle processes need to wait because of this IO rate limit, the wait event is resmgr: I/O rate limit.

See Also:

- "[MAX_IOPS](#)"
- "[resmgr: I/O rate limit](#)"

Examples

This example shows how to use SQL statements to set a maximum of 200 megabytes per second on a PDB named CDB1_PDB1:

```
alter session set container = cdb1_pdb1;
alter system set max_mbps = 200;
```

1.204 MAX_PDBS

MAX_PDBS allows you to limit the number of pluggable databases (PDBs) that can be created in a CDB or an application container.

Property	Description
Parameter type	Integer
Default value	Depends on the Oracle Database edition Possible values: 5, 254, or 4098
Modifiable	ALTER SYSTEM ... SID='*''
Modifiable in a PDB	No. However, this parameter can be modified in the application root of an application container.
Range of values	Minimum: 0 Maximum: The default value for the Oracle Database edition (5, 254, or 4098)
Basic	No
Oracle RAC	The same value must be used on all instances.

This parameter can only be set while connected to the CDB root or an application root.

This parameter applies to PDBs, application containers, and application PDBs. An application PDB is a PDB that resides in an application container.

This parameter does not apply to the PDB seed (PDB\$SEED), application seeds, or application root clones.

 **Note:**

The maximum number of PDBs that you are allowed to create in a CDB depends on the licensing policy for your Oracle Database edition. To learn more, refer to the Oracle Multitenant information in the "Consolidation" table in *Oracle Database Licensing Information User Manual*.

1.205 MAX_SHARED_SERVERS

MAX_SHARED_SERVERS specifies the maximum number of shared server processes allowed to be running simultaneously. Setting this parameter enables you to reserve process slots for other processes, such as dedicated servers.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	If MAX_SHARED_SERVERS is specified, then it should be greater than or equal to SHARED_SERVERS and less than PROCESSES.

Property	Description
Basic	No

When you want to reduce the range of shared servers, you can reduce MAX_SHARED_SERVERS before reducing SHARED_SERVERS. If MAX_SHARED_SERVERS is lower than SHARED_SERVERS, then the number of shared servers will not vary but will remain at the constant level specified by SHARED_SERVERS. If MAX_SHARED_SERVERS is not specified, then a shared server process may be spawned as long as the number of free process slots is greater than 1 / 8 the maximum number of processes, or 2 if PROCESSES is less than 24.

See Also:

- "[SHARED_SERVERS](#)"
- "[PROCESSES](#)"
- *Oracle Database Administrator's Guide* for more information on setting this parameter
- *Oracle Database Concepts* for information on processes
- Your operating system-specific Oracle documentation for the default value and range of values

1.206 MAX_STRING_SIZE

MAX_STRING_SIZE controls the maximum size of VARCHAR2, NVARCHAR2, and RAW data types in SQL.

Property	Description
Parameter type	String
Syntax	MAX_STRING_SIZE = { STANDARD EXTENDED }
Default value	STANDARD
Modifiable	ALTER SYSTEM ... SID=** ¹
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

¹ Use ALTER SYSTEM only when the database is in UPGRADE mode, and run the utl32k.sql script afterward, as explained in this section.

STANDARD means that the length limits for Oracle Database releases prior to Oracle Database 12c apply (for example, 4000 bytes for VARCHAR2 and NVARCHAR2, and 2000 bytes for RAW).

EXTENDED means that the 32767 byte limit introduced in Oracle Database 12c applies.

The COMPATIBLE initialization parameter must be set to 12.0.0.0 or higher to set MAX_STRING_SIZE = EXTENDED.

You can change the value of MAX_STRING_SIZE from STANDARD to EXTENDED. However, you cannot change the value of MAX_STRING_SIZE from EXTENDED to STANDARD.

By setting MAX_STRING_SIZE = EXTENDED, users are taking an explicit action that could introduce application incompatibility in their database. Applications that do not want to use the expanded data types can be rewritten for compatibility with either setting; for example, these applications could use explicit CASTs to fix the length of VARCHAR2 expressions during CREATE TABLE AS SELECT.

Altering MAX_STRING_SIZE will update database objects and possibly invalidate them, as follows:

- Tables with virtual columns will be updated with new data type metadata for virtual columns of VARCHAR2(4000), 4000-byte NVARCHAR2, or RAW(2000) type.
 - Functional indexes will become unusable if a change to their associated virtual columns causes the index key to exceed index key length limits. Attempts to rebuild such indexes will fail with ORA-01450: maximum key length exceeded.
- Views will be invalidated if they contain VARCHAR2(4000), 4000-byte NVARCHAR2, or RAW(2000) typed expression columns.
- Materialized views will be updated with new metadata VARCHAR2(4000), 4000-byte NVARCHAR2, and RAW(2000) typed expression columns

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in a Non-CDB

To increase the maximum size of VARCHAR2, NVARCHAR2, and RAW columns in a non-CDB:

1. Shut down the database.
2. Restart the database in UPGRADE mode.
3. Change the setting of MAX_STRING_SIZE to EXTENDED.
4. Run the `rdbms/admin/utl32k.sql` script. You must be connected AS SYSDBA to run the script.
5. Restart the database in NORMAL mode.

Note:

The `utl32k.sql` script increases the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns for the views where this is required. The script does not increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utlrp.sql` script to recompile invalid objects. You must be connected AS SYSDBA to run the script.

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in a CDB

To increase the maximum size of VARCHAR2, NVARCHAR2, and RAW columns in a CDB and in all the PDBs in the CDB:

1. Connect to the CDB AS SYSDBA.

2. In the root, change the setting of MAX_STRING_SIZE to EXTENDED:

```
ALTER SESSION SET CONTAINER=CDB$ROOT;
ALTER SYSTEM SET max_string_size=extended SCOPE=SPFILE;
```

 **Note:**

The root continues to use STANDARD semantics even after MAX_STRING_SIZE is set to EXTENDED. The reason for setting MAX_STRING_SIZE to EXTENDED in the root is so all the PDBs in the CDB can inherit the EXTENDED setting from the root.

3. Shut down the CDB.
4. Restart the CDB in UPGRADE mode.

```
startup upgrade;
```

5. Use the catcon.pl script to run the rdbms/admin/utl32k.sql script in the root and in all the PDBs in the CDB to increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns. The --force_pdb_mode 'UPGRADE' option is used to ensure that all PDBs, including application root clones, are opened in migrate mode. Enter the SYS password when prompted:

```
$ cd $ORACLE_HOME/rdbms/admin
$ mkdir /scratch/mydir/utl32k_cdb_pdbs_output
$ $ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u SYS --
force_pdb_mode 'UPGRADE' -d $ORACLE_HOME/rdbms/admin -l '/scratch/mydir/
utl32k_cdb_pdbs_output' -b
utl32k_cdb_pdbs_output utl32k.sql
catcon: ALL catcon-related output will be written to [/scratch/mydir/
utl32k_cdb_pdbs_output/utl32k_cdb_pdbs_output_catcon_23172.lst]
catcon: See [/scratch/mydir/utl32k_cdb_pdbs_output/
utl32k_cdb_pdbs_output*.log] files for output generated by scripts
catcon: See [/scratch/mydir/utl32k_cdb_pdbs_output/
utl32k_cdb_pdbs_output_*.lst] files for spool files, if any
Enter Password:
catcon.pl: completed successfully
$
```

 **Note:**

The utl32k.sql script increases the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns for the views where this is required. The script does not increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns in some views because of the way the SQL for those views is written.

6. Connect to the CDB AS SYSDBA and shut down the database.
7. Restart the CDB in NORMAL mode.

```
startup;
```

8. Use the `catcon.pl` script to run the `rdbms/admin/utlrp.sql` script to recompile invalid objects in the root and in all the PDBs in the CDB. The `--force_pdb_mode 'READ WRITE'` option is used to ensure that all the PDBs (including application root clones) are opened in read write mode. Enter the SYS password when prompted:

```
$ cd $ORACLE_HOME/rdbms/admin
$ mkdir /scratch/mydir/utlrp_cdb_pdbs_output
$ $ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u SYS --
  force_pdb_mode 'READ WRITE' -d $ORACLE_HOME/rdbms/admin -l '/scratch/mydir/
  utlrp_cdb_pdbs_output' -b utlrp_cdb_pdbs_output utlrp.sql
catcon: ALL catcon-related output will be written to [/scratch/mydir/
  utlrp_cdb_pdbs_output/utlrp_cdb_pdbs_output_catcon_24271.lst]
catcon: See [/scratch/mydir/utlrp_cdb_pdbs_output/
  utlrp_cdb_pdbs_output*.log] files for output generated by scripts
catcon: See [/scratch/mydir/utlrp_cdb_pdbs_output/
  utlrp_cdb_pdbs_output_*.lst] files for spool files, if any
Enter Password:
catcon.pl: completed successfully
$
```

 **See Also:**

Oracle Multitenant Administrator's Guide for information about using the `catcon.pl` script to run Oracle-supplied scripts in a CDB and PDBs.

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in a PDB

To increase the maximum size of `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in a PDB:

1. Shut down the PDB.
2. Reopen the PDB in migrate mode.

 **Note:**

The following SQL statement can be used to reopen a PDB in migrate mode when the current container is the PDB:

```
ALTER PLUGGABLE DATABASE pdb-name OPEN UPGRADE;
```

3. Change the setting of `MAX_STRING_SIZE` in the PDB to `EXTENDED`.
4. Run the `rdbms/admin/utl32k.sql` script in the PDB. You must be connected AS `SYSDBA` to run the `utl32k.sql` script.
5. Reopen the PDB in `NORMAL` mode.

 **Note:**

The `utl32k.sql` script increases the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns for the views where this is required. The script does not increase the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utlrp.sql` script in the PDB to recompile invalid objects. You must be connected AS `SYSDBA` to run the script.

 **See Also:**

Oracle Multitenant Administrator's Guide for more information about modifying the open mode of PDBs.

Increasing the Maximum Size of `VARCHAR2`, `NVARCHAR2`, and `RAW` Columns in an Oracle RAC Database

To increase the maximum size of `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in an Oracle RAC database:

1. Shut down all of the Oracle RAC database instances, except one.
2. Restart the Oracle RAC database instance in `UPGRADE` mode.
3. Change the setting of `MAX_STRING_SIZE` to `EXTENDED`.
4. Run the `rdbms/admin/utl32k.sql` script in the Oracle RAC database instance. You must be connected AS `SYSDBA` to run the script.
5. Restart all Oracle RAC database instances in `NORMAL` mode.

 **Note:**

The `utl32k.sql` script increases the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns for the views where this is required. The script does not increase the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utlrp.sql` script to recompile invalid objects. You must be connected AS `SYSDBA` to run the script.

Increasing the Maximum Size of `VARCHAR2`, `NVARCHAR2`, and `RAW` Columns in an Oracle Data Guard Logical Standby Database

To increase the maximum size of `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in an Oracle Data Guard logical standby database:

1. Shut down the Oracle Data Guard primary database and logical standby database.
2. Restart the primary database and logical standby database in `UPGRADE` mode.

3. Change the setting of `MAX_STRING_SIZE` to `EXTENDED` on the primary database and logical standby database.
4. Run the `rdbms/admin/utl32k.sql` script on both the primary database and the logical standby database. You must be connected AS `SYSDBA` to run the script.
5. Restart the primary database and logical standby database in `NORMAL` mode.

Note:

The `utl32k.sql` script increases the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns for the views where this is required. The script does not increase the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utlrp.sql` script on the primary database and logical standby database to recompile invalid objects. You must be connected AS `SYSDBA` to run the script.
7. Restart SQL Apply.

See Also:

Oracle Database Globalization Support Guide for more information about the `MAX_STRING_SIZE` parameter

1.207 MEMOPTIMIZE_POOL_SIZE

`MEMOPTIMIZE_POOL_SIZE` sets the size of the memoptimize pool, a memory area in the system global area (SGA) used by the Memoptimized Rowstore.

Property	Description
Parameter type	Big integer
Syntax	<code>MEMOPTIMIZE_POOL_SIZE = integer [K M G]</code>
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to no maximum
Basic	No
Oracle RAC	Different values can be used on different instances.

The Memoptimized Rowstore improves the data query performance of applications, such as Internet of Things (IoT), that frequently query tables based on primary key values.

The Memoptimized Rowstore provides the capability of fast lookup of data for the tables that are mainly queried based on primary key columns.

This parameter specifies an integer value to indicate the amount of SGA to use for allocating the following structures for the memoptimize pool:

- The size of the buffer cache region: This is the total number of blocks for all MEMOPTIMIZE FOR READ tables.
- The size of the hash index segmented data structure pointing to the special blocks of MEMOPTIMIZE FOR READ tables.

Calculate the buffer cache requirement for the table being considered for MEMOPTIMIZE FOR READ, and include an additional 25% memory requirement for the hash index segmented data structure.

These structures are allocated from SGA at instance startup.

The value specified for this parameter counts toward SGA_TARGET. For example, if you set SGA_TARGET to 10 GB and you set MEMOPTIMIZE_POOL_SIZE to 2 GB, then 20% of the SGA_TARGET setting is allocated to the memoptimize pool.

Unlike other SGA components such as the buffer cache and shared pool, the memoptimize pool size is not controlled by automatic memory management. The database does not automatically shrink the memoptimize pool when the buffer cache or shared pool requires more memory, or increase the memoptimize pool when it runs out of space. You can only increase the size of the memoptimize pool by manually adjusting the MEMOPTIMIZE_POOL_SIZE initialization parameter.

 **See Also:**

Oracle Database Performance Tuning Guide for more information about the Memoptimized Rowstore and the memoptimize pool.

1.208 MEMORY_MAX_TARGET

MEMORY_MAX_TARGET specifies the maximum value to which a DBA can set the MEMORY_TARGET initialization parameter.

Property	Description
Parameter type	Big integer
Syntax	MEMORY_MAX_TARGET = <i>integer</i> [K M G]
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to the physical memory size available to the Oracle Database
Basic	No

See the description of MEMORY_TARGET for more information about how the settings of MEMORY_MAX_TARGET and MEMORY_TARGET affect each other.

 **See Also:**

Oracle Database Administrator's Guide for more information about managing memory

1.209 MEMORY_TARGET

`MEMORY_TARGET` specifies the Oracle system-wide usable memory.

The database tunes memory to the `MEMORY_TARGET` value, reducing or enlarging the SGA and PGA as needed.

Property	Description
Parameter type	Big integer
Syntax	<code>MEMORY_TARGET = integer [K M G]</code>
Default value	0 (SGA autotuning is disabled for DEFERRED mode autotuning requests, but allowed for IMMEDIATE mode autotuning requests)
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	152 MB to <code>MEMORY_MAX_TARGET</code>
Basic	No

`MEMORY_TARGET` should be set higher than or equal to the sum of the current sizes of the SGA and PGA.

In a text-based initialization parameter file, if you omit `MEMORY_MAX_TARGET` and include a value for `MEMORY_TARGET`, then the database automatically sets `MEMORY_MAX_TARGET` to the value of `MEMORY_TARGET`. If you omit the line for `MEMORY_TARGET` and include a value for `MEMORY_MAX_TARGET`, the `MEMORY_TARGET` parameter defaults to zero. After startup, you can then dynamically change `MEMORY_TARGET` to a nonzero value, provided that it does not exceed the value of `MEMORY_MAX_TARGET`.

Total memory usage can grow beyond the value of `MEMORY_TARGET`. For example, memory is allocated to PL/SQL tables and varrays regardless of the value of `MEMORY_TARGET` as long as memory is available at the operating system level.

In the **Default value** field, IMMEDIATE mode autotuning requests are necessary to avoid ORA-04031 errors. The DEFERRED and IMMEDIATE modes are reflected in the `OPER_MODE` column of the `V$MEMORY_RESIZE_OPS` view.

 **Note:**

The default value of `SGA_MAX_SIZE` depends on the values of `MEMORY_TARGET` and `MEMORY_MAX_TARGET`.

 **See Also:**

- *Oracle Database Administrator's Guide* for more information about managing memory
- *Oracle Multitenant Administrator's Guide* for information about the initialization parameters that control the memory usage of PDBs

1.210 MIN_AUTH_SERVERS

MIN_AUTH_SERVERS specifies the minimum number of authentication servers in the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: 0 Maximum: MAX_AUTH_SERVERS or PROCESSES, whichever is the lesser value
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter must be less than or equal to the values of both the MAX_AUTH_SERVERS initialization parameter and the PROCESSES initialization parameter. MAX_AUTH_SERVERS specifies the maximum number of authentication servers in the authentication pool. PROCESSES specifies the maximum number of operating system user processes that can simultaneously connect to Oracle.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.10.

 **See Also:**

- *Oracle Database Administrator's Guide* for more information about setting this parameter
- "[MAX_AUTH_SERVERS](#)"
- "[PROCESSES](#)"

1.211 MULTISHARD_QUERY_DATA_CONSISTENCY

MULTISHARD_QUERY_DATA_CONSISTENCY enables you to specify a data consistency setting for multi-shard queries.

Property	Description
Parameter type	String
Syntax	MULTISHARD_QUERY_DATA_CONSISTENCY = { STRONG SHARD_LOCAL DELAYED_STANDBY_ALLOWED }
Default value	STRONG
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The value of this parameter can be different on different Oracle RAC instances.

You can use MULTISHARD_QUERY_DATA_CONSISTENCY to avoid the cost of SCN synchronization when executing multi-shard queries across shards, which can be globally distributed.

MULTISHARD_QUERY_DATA_CONSISTENCY can be set at the system level or the session level.

The values that can be set for MULTISHARD_QUERY_DATA_CONSISTENCY are:

- **STRONG:** With this setting, SCN synchronization is performed across all shards, and data is consistent across all shards. This setting provides global consistent read capability. This is the default value.
- **SHARD_LOCAL:** With this setting, SCN synchronization is not performed across all shards. Data is consistent within each shard. This setting provides the most current data.
- **DELAYED_STANDBY_ALLOWED:** With this setting, SCN synchronization is not performed across all shards. Data is consistent within each shard. This setting allows data to be fetched from Data Guard standby databases when possible (for example, depending on load balancing), and may return stale data from standby databases.

See Also:

Using Oracle Sharding for more information about specifying consistency levels in a multi-shard query

1.212 NLS_CALENDAR

NLS_CALENDAR specifies which calendar system Oracle uses.

Property	Description
Parameter type	String
Syntax	NLS_CALENDAR = "calendar_system"

Property	Description
Default value	None, implies GREGORIAN
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid calendar format name
Basic	No

NLS_CALENDAR can have one of the following values:

- Arabic Hijrah
- English Hijrah
- Ethiopian
- Gregorian
- Japanese Imperial
- Persian
- ROC Official (Republic of China)
- Thai Buddha

For example, suppose NLS_CALENDAR is set to "Japanese Imperial", the date format is "E YY-MM-DD". ("E" is the date format element for the abbreviated era name.) If the date is May 15, 1997, then the SYSDATE is displayed as follows:

```
SELECT SYSDATE FROM DUAL;
SYSDATE
-----
H 09-05-15
```

 **Note:**

The value of the initialization parameter NLS_CALENDAR is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. If the initialization parameter is not specified, the initial session value becomes GREGORIAN. This initial value is overridden by a client-side value if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined.

 **See Also:**

Oracle Database Globalization Support Guide for a listing of available calendar systems

1.213 NLS_COMP

NLS_COMP specifies the collation behavior of the database session.

Property	Description
Parameter type	String
Syntax	NLS_COMP = { BINARY LINGUISTIC ANSI }
Default value	BINARY
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Basic	No

Values

- BINARY
- LINGUISTIC

Comparisons for all SQL operations in the WHERE clause and in PL/SQL blocks should use the linguistic sort specified in the NLS_SORT parameter. To improve the performance, you can also define a linguistic index on the column for which you want linguistic comparisons.

- ANSI

A setting of ANSI is for backward compatibility; in general, you should set NLS_COMP to LINGUISTIC.

 **Note:**

Unless you explicitly set the value for NLS_COMP in your initialization parameter file, a default value of NULL is shown in the following views: V\$PARAMETER, V\$SYSTEM_PARAMETER, V\$PARAMETER2, V\$SYSTEM_PARAMETER2, and NLS_INSTANCE_PARAMETERS. However, the actual default value, and behavior, is BINARY. Note that you cannot change the default to NULL, because NULL is not among the valid values.

Examples

See *Oracle Database Globalization Support Guide* for examples of using this parameter.

 **Note:**

The value of this initialization parameter NLS_COMP is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

1.214 NLS_CURRENCY

`NLS_CURRENCY` specifies the string to use as the local currency symbol for the L number format element. The default value of this parameter is determined by `NLS_TERRITORY`.

Property	Description
Parameter type	String
Syntax	<code>NLS_CURRENCY = currency_symbol</code>
Default value	Derived from <code>NLS_TERRITORY</code>
Modifiable	<code>ALTER SESSION</code>
Modifiable in a PDB	Yes
Range of values	Any valid character string, with a maximum of 10 bytes (not including null)
Basic	No

 **Note:**

The value of this initialization parameter `NLS_CURRENCY` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

 **See Also:**

- *Oracle Database Globalization Support Guide* for more information about this parameter
- *Oracle Database SQL Language Reference* for information on number format elements

1.215 NLS_DATE_FORMAT

`NLS_DATE_FORMAT` specifies the default date format to use with the `TO_CHAR` and `TO_DATE` functions. The default value of this parameter is determined by `NLS_TERRITORY`.

Property	Description
Parameter type	String
Syntax	<code>NLS_DATE_FORMAT = "format"</code>
Default value	Derived from <code>NLS_TERRITORY</code>
Modifiable	<code>ALTER SESSION</code>
Modifiable in a PDB	Yes

Property	Description
Range of values	Any valid date format mask but not exceeding a fixed length
Basic	No

The value of this parameter can be any valid date format mask, and the value must be surrounded by double quotation marks. For example:

```
NLS_DATE_FORMAT = "MM/DD/YYYY"
```

 **Note:**

The value of this initialization parameter `NLS_DATE_FORMAT` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

 **See Also:**

Oracle Database Globalization Support Guide for more information about this parameter

1.216 NLS_DATE_LANGUAGE

`NLS_DATE_LANGUAGE` specifies the language to use for the spelling of day and month names and date abbreviations (a.m., p.m., AD, BC) returned by the `TO_DATE` and `TO_CHAR` functions.

Property	Description
Parameter type	String
Syntax	<code>NLS_DATE_LANGUAGE = language</code>
Default value	Derived from <code>NLS_LANGUAGE</code>
Modifiable	<code>ALTER SESSION</code>
Modifiable in a PDB	Yes
Range of values	Any valid <code>NLS_LANGUAGE</code> value
Basic	No

 **Note:**

The value of this initialization parameter `NLS_DATE_LANGUAGE` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

 **See Also:**

- *Oracle Database Globalization Support Guide* for more information about this parameter
- *Oracle Database SQL Language Reference* for information on the `TO_DATE` function.
- *Oracle Database SQL Language Reference* for information on the `TO_CHAR` function.

1.217 NLS_DUAL_CURRENCY

`NLS_DUAL_CURRENCY` specifies the dual currency symbol (such as "Euro") for the territory. The default is the dual currency symbol defined in the territory of your current language environment.

Property	Description
Parameter type	String
Syntax	<code>NLS_DUAL_CURRENCY = currency_symbol</code>
Default value	Derived from <code>NLS_TERRITORY</code>
Modifiable	<code>ALTER SESSION</code>
Modifiable in a PDB	Yes
Range of values	Any valid format name up to 10 characters
Basic	No

 **Note:**

The value of this initialization parameter `NLS_DUAL_CURRENCY` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

 **See Also:**

Oracle Database Globalization Support Guide for more information about this parameter

1.218 NLS_ISO_CURRENCY

`NLS_ISO_CURRENCY` determines the string to use as the international currency symbol corresponding to the C number format element in a call to the `TO_CHAR` function.

Property	Description
Parameter type	String
Syntax	<code>NLS_ISO_CURRENCY = territory</code>
Default value	Derived from <code>NLS_TERRITORY</code>
Modifiable	<code>ALTER SESSION</code>
Modifiable in a PDB	Yes
Range of values	Any valid <code>NLS_TERRITORY</code> value
Basic	No

Local currency symbols can be ambiguous. For example, a dollar sign (\$) can refer to U.S. dollars or Australian dollars. ISO Specification 4217 defines unique "international" currency symbols for the currencies of specific territories or countries. The value of the `NLS_ISO_CURRENCY` parameter is the Oracle name of the territory whose ISO currency symbol is returned in place of the C number format element. For example, if `NLS_ISO_CURRENCY` is set to AMERICA, the string 'USD' is returned by `TO_CHAR` where the C element is specified in the format.

 **Note:**

The value of this initialization parameter `NLS_ISO_CURRENCY` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

 **See Also:**

- *Oracle Database Globalization Support Guide* for more information about this parameter
- *Oracle Database SQL Language Reference* for information on number format elements

1.219 NLS_LANGUAGE

NLS_LANGUAGE specifies the default language of the database.

Property	Description
Parameter type	String
Syntax	NLS_LANGUAGE = <i>language</i>
Default value	Operating system-dependent, derived from the NLS_LANG environment variable
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid language name
Basic	Yes

This language specified by NLS_LANGUAGE is used for messages, day and month names, symbols for AD, BC, a.m., and p.m., and the default sorting mechanism. This parameter also determines the default values of the parameters NLS_DATE_LANGUAGE and NLS_SORT.

Note:

The value of this initialization parameter NLS_LANGUAGE is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

Examples

See these examples of using the NLS_LANGUAGE parameter:

- For an example of setting NLS_LANGUAGE to Italian, see *Oracle Database Globalization Support Guide*.
- For an example of overriding default values for NLS_LANGUAGE and NLS_TERRITORY during a session, see *Oracle Database Globalization Support Guide*.

 **See Also:**

- *Oracle Database Globalization Support Guide* for more information about this parameter.
- *Oracle Database Globalization Support Guide* for a complete list of languages that can be specified using this parameter
- *Oracle Database Globalization Support Guide* for information on overriding the default values for this parameter
- Your operating system-specific Oracle documentation and the release notes for your country

1.220 NLS_LENGTH_SEMANTICS

`NLS_LENGTH_SEMANTICS` is used to specify length semantics.

Property	Description
Parameter type	String
Syntax	<code>NLS_LENGTH_SEMANTICS = string</code> Example: <code>NLS_LENGTH_SEMANTICS = 'CHAR'</code>
Default value	BYTE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	BYTE CHAR
Basic	No

The session-level value of `NLS_LENGTH_SEMANTICS` specifies the default length semantics to use for `VARCHAR2` and `CHAR` table columns, user-defined object attributes, and PL/SQL variables in database objects created in the session. This default may be overridden by the explicit length semantics qualifiers `BYTE` and `CHAR` in column, attribute, and variable definitions.

The instance-level value of `NLS_LENGTH_SEMANTICS` provides a default for the session-level value if `NLS_LENGTH_SEMANTICS` is not set explicitly by the database client through the `NLS_LENGTH_SEMANTICS` client environment variable (does not apply to JDBC Thin clients), or the `ALTER SESSION SET NLS_LENGTH_SEMANTICS` statement.

`NCHAR`, `NVARCHAR2`, `CLOB`, and `NCLOB` columns are always character-based.

Sessions logged in as `SYS` do not use the `NLS_LENGTH_SEMANTICS` parameter. They use `BYTE` length semantics for all created objects unless overridden by the explicit `BYTE` and `CHAR` qualifiers in object definitions (SQL DDL statements).

 **Note:**

Oracle strongly recommends that you do NOT set the `NLS_LENGTH_SEMANTICS` parameter to `CHAR` in the instance or server parameter file. This may cause many existing installation scripts to unexpectedly create columns with character length semantics, resulting in run-time errors, including buffer overflows.

 **See Also:**

Oracle Database Globalization Support Guide for more information about this parameter

1.221 NLS_NCHAR_CONV_EXCP

`NLS_NCHAR_CONV_EXCP` determines whether an error is reported when there is data loss during an implicit or explicit character type conversion between `NCHAR/NVARCHAR2` and `CHAR/VARCHAR2`.

Property	Description
Parameter type	String
Syntax	<code>NLS_NCHAR_CONV_EXCP = { TRUE FALSE }</code>
Default value	<code>FALSE</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No

The default value results in no error being reported.

 **See Also:**

Oracle Database Globalization Support Guide for more information about this parameter

1.222 NLS_NUMERIC_CHARACTERS

`NLS_NUMERIC_CHARACTERS` specifies the characters to use as the group separator and decimal character.

Property	Description
Parameter type	String

Property	Description
Syntax	NLS_NUMERIC_CHARACTERS = "decimal_character group_separator"
Default value	Derived from NLS_TERRITORY
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Basic	No

NLS_NUMERIC_CHARACTERS overrides those characters defined implicitly by NLS_TERRITORY. The group separator separates integer groups (that is, thousands, millions, billions, and so on). The decimal separates the integer portion of a number from the decimal portion.

You can specify any character as the decimal or group separator. The two characters specified must be single-byte and must be different from each other. The characters cannot be any numeric character or any of the following characters: plus (+), minus sign (-), less than sign (<), greater than sign (>). Either character can be a space.

For example, if you want to specify a comma as the decimal character and a space as the group separator, you would set this parameter as follows:

```
NLS_NUMERIC_CHARACTERS = ", "
```

Note:

The value of this initialization parameter NLS_NUMERIC_CHARACTERS is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also:

Oracle Database Globalization Support Guide for more information about this parameter

1.223 NLS_SORT

NLS_SORT specifies the collating sequence for character value comparison in various SQL operators and clauses.

Property	Description
Parameter type	String
Syntax	NLS_SORT = { BINARY linguistic_definition }
Default value	Derived from NLS_LANGUAGE

Property	Description
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	BINARY or any valid linguistic definition name
Basic	No

For example, `NLS_SORT` specifies the collating sequence for character value comparison in these SQL operators and clauses: `ORDER BY`, `GROUP BY`, comparison conditions (`=`, `<>`, `<=`, `>=`), `IN`, `BETWEEN`, `LIKE`, `MIN/MAX`, `GREATEST/LEAST`, and `INSTR`.

- If the value is `BINARY`, then comparison is based directly on byte values in the binary encoding of the character values being compared. The ordering depends on the character set of the compared values, which is either the database character set (for `VARCHAR2`, `CHAR`, `LONG`, and `CLOB`) or the national character set (for `NVARCHAR2`, `NCHAR`, and `NCLOB`).
- If the value is a named linguistic sort, then comparison is defined by this sort. A linguistic sort uses various rules to achieve ordering expected by speakers of one or more natural languages. This is usually the same ordering that is used in dictionaries and telephone directories in those languages.

The exact operators and query clauses that obey the `NLS_SORT` parameter depend on the value of the `NLS_COMP` parameter. If an operator or clause does not obey the `NLS_SORT` value, as determined by `NLS_COMP`, the collation used is `BINARY`.

The `BINARY` comparison is faster and uses less resources than any linguistic comparison but for text in a natural language, it does not provide ordering expected by users.

The value of `NLS_SORT` affects execution plans of queries. Because a standard index cannot be used as a source of values sorted in a linguistic order, an explicit sort operation must usually be performed instead of an index range scan. A functional index on the `NLS_SORT` function may be defined to provide values sorted in a linguistic order and reintroduce the index range scan to the execution plan.

Note:

The value of the initialization parameter `NLS_SORT` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also:

- *Oracle Database Globalization Support Guide* for more information about this parameter and a current listing of values you can specify

1.224 NLS_TERRITORY

NLS_TERRITORY specifies the name of the territory whose conventions are to be followed for day and week numbering.

Property	Description
Parameter type	String
Syntax	NLS_TERRITORY = <i>territory</i>
Default value	Operating system-dependent
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid territory name
Basic	Yes

This parameter also establishes the default date format, the default decimal character and group separator, and the default ISO and local currency symbols.

For information on these settings, see "[NLS_DATE_FORMAT](#)", "[NLS_NUMERIC_CHARACTERS](#)", "[NLS_CURRENCY](#)", and "[NLS_ISO_CURRENCY](#)".

 **Note:**

The value of this initialization parameter NLS_TERRITORY is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

Examples

For an example of overriding the default value for the NLS_TERRITORY parameter, see *Oracle Database Globalization Support Guide*.

 **See Also:**

- *Oracle Database Globalization Support Guide* for a complete list of territories
- Your operating system-specific Oracle documentation for the territory-dependent default values for these parameters

1.225 NLS_TIMESTAMP_FORMAT

NLS_TIMESTAMP_FORMAT defines the default timestamp format to use with the TO_CHAR and TO_TIMESTAMP functions.

Property	Description
Parameter type	String
Syntax	<code>NLS_TIMESTAMP_FORMAT = "format"</code>
Default value	Derived from NLS_TERRITORY
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid datetime format mask
Basic	No

The value must be surrounded by quotation marks as follows:

```
NLS_TIMESTAMP_FORMAT = 'YYYY-MM-DD HH:MI:SS.FF'
```

You can specify the value of `NLS_TIMESTAMP_FORMAT` by setting it in the initialization parameter file. You can specify its value for a client as a client environment variable.

You can also alter the value of `NLS_TIMESTAMP_FORMAT` by changing its value in the initialization parameter and then restarting the instance. To alter the value during a session use the `ALTER SESSION SET` statement.

Note:

The value of this initialization parameter `NLS_TIMESTAMP_FORMAT` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also:

Oracle Database Globalization Support Guide for more information about this parameter

1.226 NLS_TIMESTAMP_TZ_FORMAT

`NLS_TIMESTAMP_TZ_FORMAT` defines the default timestamp with time zone format to use with the `TO_CHAR` and `TO_TIMESTAMP_TZ` functions.

Property	Description
Parameter type	String
Syntax	<code>NLS_TIMESTAMP_TZ_FORMAT = "format"</code>
Default value	Derived from NLS_TERRITORY
Modifiable	ALTER SESSION

Property	Description
Modifiable in a PDB	Yes
Range of values	Any valid datetime format mask
Basic	No

The value must be surrounded by quotation marks as follows:

```
NLS_TIMESTAMP_TZ_FORMAT = 'YYYY-MM-DD HH:MI:SS.FF TZH:TZM'
```

You can specify the value of `NLS_TIMESTAMP_TZ_FORMAT` by setting it in the initialization parameter file. You can specify its value for a client as a client environment variable.

You can also alter the value of `NLS_TIMESTAMP_TZ_FORMAT` by changing its value in the initialization parameter and then restarting the instance. To alter the value during a session use the `ALTER SESSION SET` statement.

Note:

The value of this initialization parameter `NLS_TIMESTAMP_TZ_FORMAT` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also:

Oracle Database Globalization Support Guide for more information about this parameter

1.227 NONCDB_COMPATIBLE

`NONCDB_COMPATIBLE` enables you to get behavior similar to a non-CDB when issuing SQL commands inside a PDB in a CDB.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

Set this parameter if you are using a single PDB in your CDB configuration and you have legacy code that causes ORA-65040 when you run it in the PDB.

Values

- TRUE

Indicates the behavior for SQL statements will be like a non-CDB although the statements are issued in a PDB in a CDB.

- FALSE

Indicates the behavior will for SQL statements will be like a CDB. This is the default value of the parameter.

There are some statements (such as ALTER DB BACKUP CONTROLFILE) which can be issued in a non-CDB, but in a CDB they must be issued in the root (because they affect the whole CDB) and would result in an error if issued in a PDB.

Some ALTER DATABASE or ALTER SYSTEM statements are not permitted inside a PDB, and they will fail if NONCDB_COMPATIBLE=FALSE is set in `init.ora`. However, these statements will succeed if NONCDB_COMPATIBLE=TRUE is set.

See Also:

- *Oracle Multitenant Administrator's Guide* for an introduction to PDBs and CDBs
- *Oracle Multitenant Administrator's Guide* for information about the initialization parameters that control the memory usage of PDBs
- *Oracle Multitenant Administrator's Guide* for information about the ALTER SYSTEM statements that can be run in a PDB.

1.228 OBJECT_CACHE_MAX_SIZE_PERCENT

The **object cache** is a memory block on the client that allows applications to store entire objects and to navigate among them without round trips to the server.

`OBJECT_CACHE_MAX_SIZE_PERCENT` specifies the percentage of the optimal cache size that the session object cache can grow past the optimal size.

Property	Description
Parameter type	Integer
Default value	10
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent maximum
Basic	No

The maximum size is equal to the optimal size plus the product of this percentage and the optimal size. When the cache size exceeds this maximum size, the system will attempt to shrink the cache to the optimal size.

 See Also:

- "[OBJECT_CACHE_OPTIMAL_SIZE](#)" for a description of the object cache
- *Pro*C/C++ Programmer's Guide* and *Oracle Call Interface Programmer's Guide* for information on precompiler use of the object cache

1.229 OBJECT_CACHE_OPTIMAL_SIZE

`OBJECT_CACHE_OPTIMAL_SIZE` specifies (in bytes) the size to which the session object cache is reduced when the size of the cache exceeds the maximum size.

Property	Description
Parameter type	Integer
Default value	10240000 (10M)
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Range of values	10 KB to operating system-dependent maximum
Basic	No

The **object cache** is a memory block on the client that allows applications to store entire objects and to navigate among them without round trips to the server. On the server, it is used to cache frequently used objects requested as a result of client requests to help in performance.

 See Also:

- Pro*C/C++ Programmer's Guide* and *Oracle Call Interface Programmer's Guide* for information on precompiler use of the object cache

1.230 OFS_THREADS

`OFS_THREADS` sets the maximum number of Oracle file system (OFS) threads that can be started to service Oracle file system requests.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	2 to 128
Basic	No
Oracle RAC	The same value should be specified on all instances.

 **Note:**

This initialization parameter is supported only on the Linux operating system.

 **See Also:**

Oracle Database Administrator's Guide for more information about the Oracle Database NFS server feature

1.231 OGG_ONLINE_DDL

Use `OGG_ONLINE_DDL` to enable or disable GoldenGate replication of online DDLs.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SYSTEM ... SID='*' </code>
Modifiable in a PDB	Yes
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	The same value must be used on all instances.

To enable GoldenGate replication of online DDLs, set this parameter to `true`; to disable GoldenGate replication of online DDLs, set this parameter to `false`.

Prior to the introduction of the `OGG_ONLINE_DDL` parameter, online DDLs were not allowed while using GoldenGate replication.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.22.

1.232 OLAP_PAGE_POOL_SIZE

`OLAP_PAGE_POOL_SIZE` specifies (in bytes) the size of the OLAP page pool.

Property	Description
Parameter type	Big integer
Syntax	<code>OLAP_PAGE_POOL_SIZE = integer [K M G]</code>
Default value	0

Property	Description
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Range of values	0, 2097152 (2 MB) to $2^{31} - 1$
Basic	No

 **Caution:**

Oracle strongly recommends that you leave this parameter set to its default value of 0. This instructs the database to autonomously adjust the OLAP page pool size to serve the requirements of the analytic workspaces. Setting this parameter to a value other than 0 can lead to errors in OLAP processing or wasted memory.

 **See Also:**

Oracle OLAP User's Guide for more information about the OLAP option for Oracle Database

1.233 ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE

If a pluggable database (PDB) has Transparent Data Encryption-encrypted (TDE-encrypted) tables or tablespaces, you can enable `ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE` on the target CDB to simplify the move of TDE keys in a single step PDB move operation.

`ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE` eliminates the need of having to manually provide a keystore password when you import the TDE keys into the PDB after it has moved to the target CDB.

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	A different value can be set for this parameter on different Oracle RAC instances.

The default for `ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE` is FALSE.

When `ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE` is set to TRUE on the target CDB, the plug in of the PDB does not require a keystore password.

1.234 OPEN_CURSORS

OPEN_CURSORS specifies the maximum number of open cursors (handles to private SQL areas) a session can have at once. You can use this parameter to prevent a session from opening an excessive number of cursors.

Property	Description
Parameter type	Integer
Default value	50
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 65535
Basic	Yes

It is important to set the value of OPEN_CURSORS high enough to prevent your application from running out of open cursors. The number will vary from one application to another. Assuming that a session does not open the number of cursors specified by OPEN_CURSORS, there is no added overhead to setting this value higher than actually needed.

 **See Also:**

- *Oracle Database Performance Tuning Guide* for more information on setting this parameter
- Your operating system-specific Oracle documentation for the range of values

1.235 OPEN_LINKS

OPEN_LINKS specifies the maximum number of concurrent open connections to remote databases in one session. These connections include database links, as well as external procedures and cartridges, each of which uses a separate process.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to 32768
Basic	No

Oracle counts one open link for the following:

- For each user that references a public or private database link
- For each external procedure or cartridge connection when it is executed for the first time

Both types of connections close when the session ends. You can also close a database link connection explicitly by issuing an `ALTER SESSION CLOSE DATABASE LINK` statement.

You should set this parameter to allow for the external procedure and cartridge connections expected during the session plus the number of databases referred to in typical distributed transactions (that is, a single SQL statement that references multiple databases), so that all the databases can be open to execute the statement. For example, if queries alternately access databases A, B, and C, and `OPEN_LINKS` is set to 2, time will be lost waiting while one connection is broken and another made. Increase the value if many different databases are accessed over time.

This parameter refers only to connections used for distributed transactions. Direct connections to a remote database specified as an application connects are not counted.

If you set `OPEN_LINKS` to 0, then no distributed transactions are allowed.

In a multitenant container database (CDB), the `OPEN_LINKS` parameter can be set at both the root and at the PDB level using either an initialization parameter file (PFILE) or server parameter file (SPFILE). You need to restart the instance or reopen the PDB for a new `OPEN_LINKS` value to become effective.

See Also:

["OPEN_LINKS_PER_INSTANCE"](#) for information on setting open connections globally for a database instance

1.236 OPEN_LINKS_PER_INSTANCE

`OPEN_LINKS_PER_INSTANCE` specifies the maximum number of migratable open connections globally for each database instance.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to $2^{31} - 1$
Basic	No
Oracle RAC	Multiple instances can have different values.

XA transactions use migratable open connections so that the connections are cached after a transaction is committed. Another transaction can use the connection, provided the user who created the connection is the same as the user who owns the transaction.

`OPEN_LINKS_PER_INSTANCE` is different from `OPEN_LINKS`, which indicates the number of connections from a session. The `OPEN_LINKS` parameter is not applicable to XA applications.

 **See Also:**

- "[OPEN_LINKS](#)"
- *Oracle Database Development Guide* for more information about using this parameter in Oracle XA applications

1.237 OPTIMIZER_ADAPTIVE_PLANS

`OPTIMIZER_ADAPTIVE_PLANS` controls adaptive plans. Adaptive plans are execution plans built with alternative choices that are decided at run time based on statistics collected as the query executes.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	The same value must be set on all instances

Setting this parameter to `false` disables the following adaptive features:

- Nested loop join/hash join selection
- Star transformation bitmap pruning
- Adaptive parallel distribution method

 **See Also:**

Oracle Database SQL Tuning Guide for information about adaptive plans

1.238 OPTIMIZER_ADAPTIVE_REPORTING_ONLY

`OPTIMIZER_ADAPTIVE_REPORTING_ONLY` controls reporting-only mode for adaptive optimizations.

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	TRUE FALSE

Property	Description
Basic	No

When `OPTIMIZER_ADAPTIVE_REPORTING_ONLY` is set to `FALSE`, reporting-only mode is off, and the adaptive optimizations are enabled as usual.

When `OPTIMIZER_ADAPTIVE_REPORTING_ONLY` is set to `TRUE`, adaptive optimizations run in reporting-only mode. With this setting, the information required for an adaptive optimization is gathered, but no action is taken to change the plan. For instance, an adaptive plan will always choose the default (optimizer-chosen) plan, but information is collected on what plan to adapt to in non-reporting mode. This information can be viewed in the adaptive plan report.

This parameter affects only adaptive optimizations that are enabled.

See Also:

- *Oracle Database SQL Tuning Guide* for more information about adaptive plans and automatic reoptimization
- *Oracle Database SQL Tuning Guide* for information on controlling adaptive optimization

1.239 OPTIMIZER_ADAPTIVE_STATISTICS

`OPTIMIZER_ADAPTIVE_STATISTICS` controls adaptive statistics. Some query shapes are too complex to rely on base table statistics alone, so the optimizer augments these statistics with adaptive statistics.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SESSION</code> , <code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	The same value must be set on all instances

Setting this parameter to `false` disables the following adaptive features:

- SQL plan directives
- Statistics feedback for joins
- Adaptive dynamic sampling for parallel execution

Note:

Setting `OPTIMIZER_ADAPTIVE_STATISTICS` to `false` preserves the statistics feedback functionality that was introduced in Oracle Database 11g.

`OPTIMIZER_ADAPTIVE_STATISTICS` does not control the creation of SQL plan directives. SQL plan directives will be created even if this parameter is `false`, but they will not be used to refine SQL execution plans with dynamic sampling.

See Also:

Oracle Database SQL Tuning Guide for information about adaptive plans

1.240 OPTIMIZER_CAPTURE_SQL_PLAN_BASELINES

`OPTIMIZER_CAPTURE_SQL_PLAN_BASELINES` enables or disables the automatic recognition of repeatable SQL statements, as well as the generation of SQL plan baselines for such statements.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SESSION</code> , <code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	<code>true</code> <code>false</code>
Basic	No

See Also:

Oracle Database SQL Tuning Guide for more information about the optimizer

1.241 OPTIMIZER_DYNAMIC_SAMPLING

`OPTIMIZER_DYNAMIC_SAMPLING` controls both when the database gathers dynamic statistics, and the size of the sample that the optimizer uses to gather the statistics.

Property	Description
Parameter type	Integer
Default value	If <code>OPTIMIZER_FEATURES_ENABLE</code> is set to 10.0.0 or higher, then 2 If <code>OPTIMIZER_FEATURES_ENABLE</code> is set to 9.2.0, then 1 If <code>OPTIMIZER_FEATURES_ENABLE</code> is set to 9.0.1 or lower, then 0

Property	Description
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 11
Basic	No

 **Note:**

Dynamic statistics were called dynamic sampling in releases earlier than Oracle Database 12c Release 1 (12.1).

If the value of `OPTIMIZER_DYNAMIC_SAMPLING` is set to 11, the `OPTIMIZER_FEATURES_ENABLE` setting has no effect on the `OPTIMIZER_DYNAMIC_SAMPLING` setting.

 **See Also:**

Oracle Database SQL Tuning Guide for detailed information about the values (0 – 11) that can be set for the `OPTIMIZER_DYNAMIC_SAMPLING` parameter.

1.242 OPTIMIZER_FEATURES_ENABLE

`OPTIMIZER_FEATURES_ENABLE` acts as an umbrella parameter for enabling a series of optimizer features based on an Oracle release number.

Property	Description
Parameter type	String
Syntax	<code>OPTIMIZER_FEATURES_ENABLE = { 8.0.0 8.0.3 8.0.4 8.0.5 8.0.6 8.0.7 8.1.0 8.1.3 8.1.4 8.1.5 8.1.6 8.1.7 9.0.0 9.0.1 9.2.0 9.2.0.8 10.1.0 10.1.0.3 10.1.0.4 10.1.0.5 10.2.0.1 10.2.0.2 10.2.0.3 10.2.0.4 10.2.0.5 11.1.0.6 11.1.0.7 11.2.0.1 11.2.0.2 11.2.0.3 11.2.0.4 12.1.0.1 12.1.0.2 12.2.0.1 18.1.0 19.1.0 }</code>
Default value	19.1.0
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

For example, if you upgrade your database from release 11.1 to release 12.1, but you want to keep the release 11.1 optimizer behavior, you can do so by setting this parameter to 11.1.0.6. At a later time, you can try the enhancements introduced in releases up to and including release 12.1 by setting the parameter to 12.1.0.2.

 **Note:**

When setting this parameter to a value representing Oracle Database 18c or later, you must specify three numeric values separated by periods, such as 18.1.0 or 19.1.0.

[Table 1-6](#) describes some of the optimizer features that are enabled when you set the OPTIMIZER_FEATURES_ENABLE parameter to an 11.1 or 11.2 release.

[Table 1-7](#) describes some of the optimizer features that are enabled when you set the OPTIMIZER_FEATURES_ENABLE parameter to a 12.1 or later release.

 **See Also:**

Oracle Database SQL Tuning Guide for more information about the optimizer and for information about the features listed in the following tables

Table 1-6 Optimizer Features for Oracle Database 11g Releases

Features	11.1.0.6	11.1.0.7	11.2.0.1	11.2.0.2	11.2.0.3	11.2.0.4

Support for sharding			X	X	X
Cost-based OR expansion			X	X	X
Sub-query elimination			X	X	X
Multi-column key join elimination			X	X	X
SQL Quarantine					X
Gathering and use of real-time statistics					X
Use of automatic indexes					X

1.243 OPTIMIZER_IGNORE_HINTS

`OPTIMIZER_IGNORE_HINTS` enables embedded hints to be ignored.

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Different values can be set on different instances.

When this parameter is set to TRUE, the optimizer ignores embedded hints.

The default value is FALSE. When this parameter's value is FALSE, the optimizer does not ignore embedded hints.

1.244 OPTIMIZER_IGNORE_PARALLEL_HINTS

OPTIMIZER_IGNORE_PARALLEL_HINTS enables embedded parallel hints to be ignored.

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Different values can be set on different instances.

When this parameter is set to TRUE, the optimizer ignores embedded parallel hints.

The default value is FALSE. When this parameter's value is FALSE, the optimizer does not ignore parallel embedded hints.

1.245 OPTIMIZER_INDEX_CACHING

OPTIMIZER_INDEX_CACHING lets you adjust the behavior of cost-based optimization to favor nested loops joins and IN-list iterators.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 100
Basic	No

The cost of executing an index using an IN-list iterator or of executing a nested loops join when an index is used to access the inner table depends on the caching of that index in the buffer cache. The amount of caching depends on factors that the optimizer cannot predict, such as the load on the system and the block access patterns of different users.

You can modify the optimizer's assumptions about index caching for nested loops joins and IN-list iterators by setting this parameter to a value between 0 and 100 to indicate the percentage of the index blocks the optimizer should assume are in the cache. Setting this parameter to a higher value makes nested loops joins and IN-list iterators look less expensive to the optimizer. As a result, it will be more likely to pick nested loops joins over hash or sort-merge joins and to pick indexes using IN-list iterators over other indexes or full table scans. The default for this parameter is 0, which results in default optimizer behavior.

 **See Also:**

Oracle Database SQL Language Reference for additional information about this initialization parameter

1.246 OPTIMIZER_INDEX_COST_ADJ

`OPTIMIZER_INDEX_COST_ADJ` lets you tune optimizer behavior for access path selection to be more or less index friendly—that is, to make the optimizer more or less prone to selecting an index access path over a full table scan.

Property	Description
Parameter type	Integer
Default value	100
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	1 to 10000
Basic	No

The default for this parameter is 100 percent, at which the optimizer evaluates index access paths at the regular cost. Any other value makes the optimizer evaluate the access path at that percentage of the regular cost. For example, a setting of 50 makes the index access path look half as expensive as normal.

 **Note:**

The adjustment does not apply to user-defined cost functions for domain indexes.

 **See Also:**

Oracle Database SQL Language Reference for additional information about this initialization parameter

1.247 OPTIMIZER_INMEMORY_AWARE

`OPTIMIZER_INMEMORY_AWARE` enables or disables all of the optimizer cost model enhancements for in-memory.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM

Property	Description
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	All instances should use the same value

Setting the parameter to `false` causes the optimizer to ignore the in-memory property of tables during the optimization of SQL statements. This behavior can also be achieved by setting the `OPTIMIZER_FEATURES_ENABLE` initialization parameter to values lower than 12.1.0.2.

See Also:

- "[OPTIMIZER_FEATURES_ENABLE](#)"
- *Oracle Database Concepts* and *Oracle Database SQL Tuning Guide* for more information about the optimizer

1.248 OPTIMIZER_MODE

`OPTIMIZER_MODE` establishes the default behavior for choosing an optimization approach for the instance.

Property	Description
Parameter type	String
Syntax	<code>OPTIMIZER_MODE = { FIRST_ROWS_[1 10 100 1000] FIRST_ROWS ALL_ROWS }</code>
Default value	<code>ALL_ROWS</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No

Values

- `FIRST_ROWS_n`
The optimizer uses a cost-based approach and optimizes with a goal of best response time to return the first n rows (where $n = 1, 10, 100, 1000$).
- `FIRST_ROWS`
The optimizer uses a mix of costs and heuristics to find a best plan for fast delivery of the first few rows.

`FIRST_ROWS` is available for backward compatibility and plan stability; use `FIRST_ROWS_n` instead.
- `ALL_ROWS`

The optimizer uses a cost-based approach for all SQL statements in the session and optimizes with a goal of best throughput (minimum resource use to complete the entire statement).

 **See Also:**

- *Oracle Database SQL Tuning Guide* for more information on setting this parameter
- *Oracle Database Concepts* and *Oracle Database SQL Tuning Guide* for more information about the optimizer

1.249 OPTIMIZER_REAL_TIME_STATISTICS

OPTIMIZER_REAL_TIME_STATISTICS controls whether the database automatically gathers real-time statistics during conventional DML operations.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Different values can be set on different instances.

When this parameter is set to true, the database automatically gathers real-time statistics during conventional DML operations. The default setting is false, which means real-time statistics are disabled.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.10.

1.250 OPTIMIZER_SECURE_VIEW_MERGING

OPTIMIZER_SECURE_VIEW_MERGING enables the optimizer to use view merging to improve query performance without performing the checks that would otherwise be performed to ensure that view merging does not violate any security intentions of the view creator.

Property	Description
Parameter type	Boolean
Default value	true

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances can have different values

Values

- false

Oracle Database does not perform security checks that may prevent view merging and predicate move-around.

- true

Oracle Database performs checks to ensure that view merging and predicate move-around do not violate any security intentions of the view creator.

To enable the optimizer to use view merging for any query issued by a user, you must grant the MERGE ANY VIEW privilege to the user. Grant the MERGE VIEW privilege to a user on specific views to enable the optimizer to use view merging for queries on these views. These privileges are required only under specific conditions, such as when a view is not merged because the security checks fail.

**See Also:**

Oracle Database SQL Tuning Guide for more information about view merging

1.251 OPTIMIZER_SESSION_TYPE

OPTIMIZER_SESSION_TYPE controls how the database performs automatic indexing for SQL statements in the session.

Property	Description
Parameter type	String
Syntax	OPTIMIZER_SESSION_TYPE = { NORMAL CRITICAL ADHOC }
Default value	NORMAL
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Basic	No

Values:

- NORMAL

Automatic indexing is performed normally for SQL statements in the session. The automatic indexing process identifies auto index candidates, creates auto indexes, and verifies them against SQL statements.

- CRITICAL

Automatic indexing is performed for SQL statements in the session, with a higher priority given to long-running statements. The automatic indexing process identifies auto index candidates and creates auto indexes. However, auto indexes are verified against SQL statements in descending order of elapsed execution time for each statement.

- ADHOC

Automatic indexing is suspended for SQL statements in the session. The automatic indexing process does not identify auto index candidates, create auto indexes, or verify auto indexes against SQL statements. This setting is useful when running ad hoc queries or testing new functionality.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.6.

 **See Also:**

Oracle Database Administrator's Guide for more information about how automatic indexing works

1.252 OPTIMIZER_USE_INVISIBLE_INDEXES

OPTIMIZER_USE_INVISIBLE_INDEXES enables or disables the use of invisible indexes.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Values

- true

Invisible indexes are treated as visible (normal) indexes.

- false

Invisible indexes will not be considered by the optimizer but will still be maintained by DML operations.

1.253 OPTIMIZER_USE_PENDING_STATISTICS

OPTIMIZER_USE_PENDING_STATISTICS specifies whether the optimizer uses pending statistics when compiling SQL statements.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

See Also:

Oracle Database SQL Tuning Guide for more information on setting this parameter

1.254 OPTIMIZER_USE_SQL_PLAN_BASELINES

OPTIMIZER_USE_SQL_PLAN_BASELINES enables or disables the use of SQL plan baselines stored in SQL Management Base.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

When enabled, the optimizer looks for a SQL plan baseline for the SQL statement being compiled. If one is found in SQL Management Base, then the optimizer will cost each of the baseline plans and pick one with the lowest cost.

See Also:

- *Oracle Database SQL Tuning Guide* for information on enabling automatic initial plan capture
- *Oracle Database SQL Tuning Guide* for information about configuring the capture and use of SQL plan baselines

1.255 OS_AUTHENT_PREFIX

OS_AUTHENT_PREFIX specifies a prefix that Oracle Database uses to authenticate users attempting to connect to the server.

Property	Description
Parameter type	String
Syntax	OS_AUTHENT_PREFIX = <i>authentication_prefix</i>
Default value	OPS\$
Modifiable	No
Modifiable in a PDB	No
Basic	No

Oracle Database concatenates the value of this parameter to the beginning of the user's operating system account name. When a connection request is attempted, Oracle Database compares the prefixed username with Oracle user names in the database.

The default value of this parameter is OPS\$ for backward compatibility with previous versions. However, you might prefer to set the prefix value to "" (a null string), thereby eliminating the addition of any prefix to operating system account names.

 **Note:**

The text of the OS_AUTHENT_PREFIX parameter is case sensitive on some operating systems.

 **See Also:**

- *Oracle Database Security Guide* for more information on setting this parameter
- Your operating system-specific Oracle documentation for the default value

1.256 OS_ROLES

OS_ROLES determines whether Oracle or the operating system identifies and manages the roles of each username.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false

Property	Description
Basic	No

Values

- TRUE

The operating system completely manages the role grants for all database usernames. When a user attempts to create a session, the username's security domain is initialized using the roles identified by the operating system.

Revocation by Oracle of roles granted by the operating system is ignored, as are any roles previously granted by Oracle.

- FALSE

Oracle identifies and manages the roles.

 **See Also:**

- *Oracle Database Administrator's Guide* and *Oracle Database Enterprise User Security Administrator's Guide* for more information on roles and on setting this parameter
- "[REMOTE_OS_ROLES](#)"

1.257 OUTBOUND_DBLINK_PROTOCOLS

`OUTBOUND_DBLINK_PROTOCOLS` specifies the network protocols allowed for communicating for outbound database links in the database.

Property	Description
Parameter type	String
Syntax	<code>OUTBOUND_DBLINK_PROTOCOLS = { ALL NONE [TCP [,] TCPS [,] IPC] }</code>
Default value	ALL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

Specify a value of `ALL` to allow all network protocols, and a value of `NONE` to disallow all network communication protocols for database link communication. Specify a single value or a list of comma separated network communication protocols to allow only certain network protocols for outbound database link communication.

1.258 PARALLEL_ADAPTIVE_MULTI_USER

PARALLEL_ADAPTIVE_MULTI_USER, when set to true, enables an adaptive algorithm designed to improve performance in multiuser environments that use parallel execution.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

The algorithm automatically reduces the requested degree of parallelism based on the system load at query startup time. The effective degree of parallelism is based on the default degree of parallelism, or the degree from the table or hints, divided by a reduction factor.

The algorithm assumes that the system has been tuned for optimal performance in a single-user environment.

Tables and hints use the default degree of parallelism.

Note:

The PARALLEL_ADAPTIVE_MULTI_USER initialization parameter is deprecated in Oracle Database 12c Release 2 (12.2.0.1) and may be removed in a future release. Oracle recommends that you use the parallel statement queuing feature instead.

1.259 PARALLEL_DEGREE_LIMIT

PARALLEL_DEGREE_LIMIT limits the degree of parallelism used by the optimizer to ensure that parallel server processes do not flood the system.

Property	Description
Parameter type	String
Syntax	PARALLEL_DEGREE_LIMIT = { CPU AUTO IO integer }

Property	Description
Default value	CPU
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

With automatic degree of parallelism, Oracle automatically decides whether a statement should execute in parallel and what degree of parallelism the statement should use. The optimizer automatically determines the degree of parallelism for a statement based on the resource requirements of the statement. However, `PARALLEL_DEGREE_LIMIT` enforces the limit for the degree of parallelism used by the optimizer.

Values

- CPU

The maximum degree of parallelism is limited by the number of CPUs in the system. The formula used to calculate the limit is `PARALLEL_THREADS_PER_CPU * CPU_COUNT * the number of instances available` (by default, all the opened instances on the cluster but can be constrained using `PARALLEL_INSTANCE_GROUP` or service specification). This is the default.

- AUTO

This value is equivalent to the `CPU` value.

- IO

The maximum degree of parallelism the optimizer can use is limited by the I/O capacity of the system. The value is calculated by dividing the total system throughput by the maximum I/O bandwidth per process. You must run the `DBMS_RESOURCE_MANAGER.CALIBRATE_IO` procedure on the system to use the `IO` setting. This procedure will calculate the total system throughput and the maximum I/O bandwidth per process.

- *integer*

A numeric value for this parameter specifies the maximum degree of parallelism the optimizer can choose for a SQL statement when automatic degree of parallelism is active. Automatic degree of parallelism is only enabled if `PARALLEL_DEGREE_POLICY` is set to ADAPTIVE, AUTO, or LIMITED.

See Also:

- *Oracle Database VLDB and Partitioning Guide* for information about automatic degree of parallelism
- *Oracle Database PL/SQL Packages and Types Reference* for information on the `DBMS_RESOURCE_MANAGER.CALIBRATE_IO` procedure

1.260 PARALLEL_DEGREE_POLICY

PARALLEL_DEGREE_POLICY specifies whether automatic degree of parallelism, statement queuing, and in-memory parallel execution will be enabled.

Property	Description
Parameter type	String
Syntax	PARALLEL_DEGREE_POLICY = { MANUAL LIMITED AUTO ADAPTIVE }
Default value	MANUAL
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

Note:

Automatic degree of parallelism will be enabled regardless of the value of PARALLEL_DEGREE_POLICY if a PARALLEL hint is used at the SQL statement level.

- MANUAL
Disables automatic degree of parallelism, statement queuing, and in-memory parallel execution. This reverts the behavior of parallel execution to what it was prior to Oracle Database 11g Release 2 (11.2). This is the default.
- LIMITED
Enables automatic degree of parallelism for some statements but statement queuing and in-memory Parallel Execution are disabled. Automatic degree of parallelism is only applied to those statements that access tables or indexes decorated explicitly with the DEFAULT degree of parallelism using the PARALLEL clause. Statements that do not access any tables or indexes decorated with the DEFAULT degree of parallelism will retain the MANUAL behavior.
- AUTO
Enables automatic degree of parallelism, statement queuing, and in-memory parallel execution.
- ADAPTIVE
This value enables automatic degree of parallelism, statement queuing and in-memory parallel execution, similar to the AUTO value. In addition, performance feedback is enabled. Performance feedback helps to improve the degree of parallelism automatically chosen for repeated SQL statements. After the initial execution of a statement, the degree of parallelism chosen by the optimizer is compared to the degree of parallelism computed based on the actual execution performance. If they vary significantly, then the statement is marked for re-parse and the initial execution performance statistics (for example, CPU-time) are provided as feedback for subsequent executions. The optimizer uses the initial

execution performance statistics to better determine a degree of parallelism for subsequent executions.

 **See Also:**

- *Oracle Database SQL Language Reference* for information about PARALLEL hints
- *Oracle Database VLDB and Partitioning Guide* for information about automatic degree of parallelism

1.261 PARALLEL_EXECUTION_MESSAGE_SIZE

PARALLEL_EXECUTION_MESSAGE_SIZE specifies the size of messages used for parallel execution (formerly referred to as parallel query, PDML, Parallel Recovery, replication).

Property	Description
Parameter type	Integer
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	Minimum: 2148 Maximum: 65536, but some operating systems may have a smaller value
Basic	No
Oracle RAC	Multiple instances must have the same value.

On most platforms, the default value is as follows:

- 16384 bytes if COMPATIBLE is set to 11.2.0 or higher
- 2148 bytes if COMPATIBLE is less than 11.2.0

The default value is adequate for most applications. Larger values require a larger shared pool. Larger values result in better performance at the cost of higher memory use. For this reason, replication gets no benefit from increasing the size.

 **See Also:**

Oracle Database VLDB and Partitioning Guide to learn how this parameter affects memory consumption for parallel operations, including parallel execution

1.262 PARALLEL_FORCE_LOCAL

PARALLEL_FORCE_LOCAL controls parallel execution in an Oracle RAC environment.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

By default, the parallel server processes selected to execute a SQL statement can operate on any or all Oracle RAC nodes in the cluster. By setting `PARALLEL_FORCE_LOCAL` to true, the parallel server processes are restricted so that they can only operate on the same Oracle RAC node where the query coordinator resides (the node on which the SQL statement was executed).

See Also:

Oracle Database VLDB and Partitioning Guide for more information about this parameter

1.263 PARALLEL_INSTANCE_GROUP

Used in conjunction with services or with the `INSTANCE_GROUPS` parameter, `PARALLEL_INSTANCE_GROUP` lets you restrict parallel query operations to a limited number of instances.

Property	Description
Parameter type	String
Syntax	<code>PARALLEL_INSTANCE_GROUP = service_name group_name</code>
Default value	There is no default value; parallel execution is enabled across all currently active instances.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Any service name or any group name specified in the <code>INSTANCE_GROUPS</code> parameter of any active instance
Basic	No
Oracle RAC	Multiple instances can have different values.

`PARALLEL_INSTANCE_GROUP` is an Oracle RAC parameter that you can specify in parallel mode only. Note that the `INSTANCE_GROUPS` parameter has been deprecated.

This parameter identifies the parallel instance group Oracle will use for spawning parallel execution processes. If used in conjunction with services, then parallel operations will spawn parallel execution processes only on instances defined in the service. If used in conjunction with `INSTANCE_GROUPS`, then parallel operations will spawn parallel execution processes only on instances that specify a matching group in their `INSTANCE_GROUPS` parameter.

If the value assigned to `PARALLEL_INSTANCE_GROUP` is the name of a service or group that does not exist, then the operation runs serially. No parallelism is used.

1.264 PARALLEL_MAX_SERVERS

`PARALLEL_MAX_SERVERS` specifies the maximum number of parallel execution processes and parallel recovery processes for an instance. As demand increases, Oracle Database increases the number of processes from the number created at instance startup up to this value.

Property	Description
Parameter type	Integer
Default value	<code>PARALLEL_THREADS_PER_CPU * CPU_COUNT * concurrent_parallel_users * 5</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	0 to 32767
Basic	No
Oracle RAC	Multiple instances can have different values.

 **Note:**

This parameter applies to parallel execution in exclusive mode as well as in a Real Application Clusters environment.

The number of concurrent parallel users running at default degree of parallelism on an instance depends on the memory initialization parameter settings for the instance. For example, if the `MEMORY_TARGET` or `SGA_TARGET` initialization parameter is set, then the number of `concurrent_parallel_users = 4`. If neither `MEMORY_TARGET` or `SGA_TARGET` is set, then `PGA_AGGREGATE_TARGET` is examined. If a value is set for `PGA_AGGREGATE_TARGET`, then `concurrent_parallel_users = 2`. If a value is not set for `PGA_AGGREGATE_TARGET`, then `concurrent_parallel_users = 1`.

The database system always reserves a certain number of reserved processes. Therefore, the following two values are taken into account when setting the `PARALLEL_MAX_SERVERS` initialization parameter:

- The default value of `PARALLEL_MAX_SERVERS` determined using the calculation in the table above
- The value of the `PROCESSES` initialization parameter minus the number of reserved processes

The lower of the two values is used as the default value of `PARALLEL_MAX_SERVERS`, and if you attempt to explicitly set `PARALLEL_MAX_SERVERS` to a value that is higher than either of the values, then the setting is adjusted to the lower of the two values.

When the `PARALLEL_MAX_SERVERS` parameter is set to a value lower than the value in the table above, the lower default value enables the database to start service processes and allows user processes to connect to the database.

The default value for `PARALLEL_MAX_SERVERS` for a PDB is determined using the calculation in the table above with the PDB's `CPU_COUNT` value.

 **Note:**

If you set this parameter too low, then some queries may not have a parallel execution process available to them during query processing. If you set it too high, then memory resource shortages may occur during peak periods, which can degrade performance.

 **See Also:**

Oracle Database SQL Tuning Guide for more information about parallel execution

1.265 PARALLEL_MIN_DEGREE

`PARALLEL_MIN_DEGREE` controls the minimum degree of parallelism computed by automatic degree of parallelism.

Property	Description
Parameter type	String
Syntax	<code>PARALLEL_MIN_DEGREE = [n CPU]</code>
Default value	1
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	A different value can be set on different instances.

The value of `PARALLEL_MIN_DEGREE` is either a number that corresponds to the lower bound on the degree of parallelism computed by automatic degree of parallelism, or the string value `CPU`, which is computed by the function `CPU_COUNT * PARALLEL_THREADS_PER_CPU`.

The default value of `PARALLEL_MIN_DEGREE` is 1.

 **Note:**

`PARALLEL_MIN_DEGREE` has no impact in either of these cases:

- When the value of `PARALLEL_MIN_DEGREE` is greater than the value of `CPU_COUNT`
- When the object is Oracle-owned, such as a dictionary table or view created on a dictionary table

 See Also:

- "[PARALLEL_DEGREE_LIMIT](#)"
- *Oracle Database VLDB and Partitioning Guide* for information about how the optimizer automatically determines the degree of parallelism for a statement

1.266 PARALLEL_MIN_PERCENT

`PARALLEL_MIN_PERCENT` lets you specify the minimum percentage of the requested number of parallel execution processes required for parallel execution.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Range of values	0 to 100
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter controls the behavior for parallel operations when parallel statement queuing is not enabled (when `PARALLEL_DEGREE_POLICY` is set to `manual` or `limited`). It ensures that an operation always gets a minimum percentage of parallel execution servers or errors out. Setting this parameter ensures that parallel operations will not execute unless adequate resources are available. The default value of 0 means that no minimum percentage of processes has been set.

Consider the following settings:

```
PARALLEL_MIN_PERCENT = 50
PARALLEL_MIN_SERVERS = 5
PARALLEL_MAX_SERVERS = 10
```

If 8 of the 10 parallel execution processes are busy, only 2 processes are available. If you then request a query with a degree of parallelism of 8, the minimum 50% will not be met.

You can use this parameter with `PARALLEL_ADAPTIVE_MULTI_USER`. In a multi-user environment, an individual user or application can set `PARALLEL_MIN_PERCENT` to a minimum value until sufficient resources are available on the system and an acceptable degree of parallelism is returned.

 **See Also:**

- *Oracle Database SQL Tuning Guide* for more information about parallel execution
- "[PARALLEL_DEGREE_POLICY](#)", "[PARALLEL_MAX_SERVERS](#)", "[PARALLEL_MIN_SERVERS](#)", and "[PARALLEL_ADAPTIVE_MULTI_USER](#)"

1.267 PARALLEL_MIN_SERVERS

`PARALLEL_MIN_SERVERS` is the number of parallel execution processes Oracle creates when the instance is started. These processes will be kept alive to service parallel statements.

Property	Description
Parameter type	Integer
Default value	<code>CPU_COUNT * PARALLEL_THREADS_PER_CPU * 2</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	Default value to the value of <code>PARALLEL_MAX_SERVERS</code>
Basic	No
Oracle RAC	Multiple instances can have different values.

 **Note:**

This parameter applies to parallel execution in exclusive mode as well as in an Oracle Real Application Clusters environment.

 **Note:**

When the `PROCESSES` initialization parameter is set to a value that is lower than the documented default value for the `PARALLEL_MIN_SERVERS` parameter in the table above, the database sets the default value of `PARALLEL_MIN_SERVERS` to a value that is lower than the documented default value. The lower default value enables the database to start service processes and allows user processes to connect to the database.

 **See Also:**

Oracle Database Administrator's Guide for more information about parallel execution servers

1.268 PARALLEL_MIN_TIME_THRESHOLD

`PARALLEL_MIN_TIME_THRESHOLD` specifies the minimum execution time a statement should have before the statement is considered for automatic degree of parallelism.

Property	Description
Parameter type	String
Syntax	<code>PARALLEL_MIN_TIME_THRESHOLD = { AUTO integer }</code>
Default value	AUTO
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

By default, this parameter is set to 10 seconds. Automatic degree of parallelism is only enabled if `PARALLEL_DEGREE_POLICY` is set to ADAPTIVE, AUTO, or LIMITED.

If all tables referenced by a SQL statement use In-Memory Column Store (IM column store), then `PARALLEL_MIN_TIME_THRESHOLD` defaults to 1.

 **See Also:**

Oracle Database VLDB and Partitioning Guide for information about automatic degree of parallelism

1.269 PARALLEL_SERVERS_TARGET

`PARALLEL_SERVERS_TARGET` specifies the number of parallel server processes allowed to run parallel statements before statement queuing will be used.

Property	Description
Parameter type	Integer
Default value	For a CDB: Equal to the <code>PARALLEL_MAX_SERVERS</code> value for the CDB. For a PDB or non-CDB: <code>PARALLEL_THREADS_PER_CPU * CPU_COUNT * concurrent_parallel_users * 2</code>
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to <code>PARALLEL_MAX_SERVERS</code>
Basic	No

When the parameter `PARALLEL_DEGREE_POLICY` is set to ADAPTIVE or AUTO, Oracle will queue SQL statements that require parallel execution, if the necessary parallel server processes are not available. In a single instance database, statement queuing will begin once the number of parallel server processes active on the system is equal to or greater than

PARALLEL_SERVERS_TARGET. In an Oracle RAC database, a statement running on one instance can allocate parallel server processes on another instance when necessary. For example, if a statement running on one instance requires parallel execution, but the number of parallel server processes active on that instance is equal to or greater than the value of PARALLEL_SERVERS_TARGET for that instance, then the statement can allocate parallel server processes on a different instance. Therefore, statement queuing in an Oracle RAC database will begin only when every instance has reached its PARALLEL_SERVER_TARGET threshold.

 **Note:**

Consumer groups that have been marked with the PARALLEL_STMT_CRITICAL directive set to BYPASS_QUEUE are allowed to bypass the parallel statement queue, and therefore may drive the total number of active parallel server processes beyond PARALLEL_SERVERS_TARGET. Parallel statements issued with PARALLEL_DEGREE_POLICY not set to ADAPTIVE and AUTO can also drive the total number of active parallel server processes beyond PARALLEL_SERVERS_TARGET.

By default, PARALLEL_SERVERS_TARGET is set lower than the maximum number of parallel server processes allowed on the system (PARALLEL_MAX_SERVERS) to ensure each parallel statement will get all of the parallel server resources required and to prevent overloading the system with parallel server processes.

The number of concurrent parallel users running at default degree of parallelism on an instance depends on the memory initialization parameter settings for the instance. For example, if the MEMORY_TARGET or SGA_TARGET initialization parameter is set, then the number of concurrent_parallel_users = 4. If neither MEMORY_TARGET or SGA_TARGET is set, then PGA_AGGREGATE_TARGET is examined. If a value is set for PGA_AGGREGATE_TARGET, then concurrent_parallel_users = 2. If a value is not set for PGA_AGGREGATE_TARGET, then concurrent_parallel_users = 1.

Note that all serial (non-parallel) statements will execute immediately even if statement queuing has been activated.

By default, all PDB queries are subjected to queuing at the PDB level first by the PDB's PARALLEL_SERVERS_TARGET value, and then at the CDB level by the CDB's PARALLEL_SERVERS_TARGET value. This default behavior prevents any SQL statement inside a PDB from getting downgraded if parallel servers are exhausted in the CDB.

Parallel statement queuing is enabled by default at the CDB level because the CDB has a default value for PARALLEL_SERVERS_TARGET. You can disable parallel statement queuing at the CDB level by using ALTER SYSTEM to set PARALLEL_SERVERS_TARGET to 0 for the CDB.

The default value for PARALLEL_SERVERS_TARGET for a PDB is determined using the calculation in the table above with the PDB's CPU_COUNT value.

 **Note:**

A PDB can set a lower limit for parallel execution servers than the limit specified in the CDB resource plan. When the `PARALLEL_SERVERS_TARGET` initialization parameter is set in a PDB, and parallel execution server limit is specified for a PDB in the CDB resource plan, then the lower of the two limits is enforced. For example, assume that the `PARALLEL_SERVERS_TARGET` initialization parameter is set to 100 in the CDB root. Also assume that hrpdb has its `PARALLEL_SERVERS_TARGET` initialization parameter set to 50 and the CDB plan has a directive for hrpdb with `parallel_server_limit` set to 70%. In this case, the limit for parallel execution servers for hrpdb is 50, because 50 is lower than the CDB resource plan limit of 70 for hrpdb.

- "[PARALLEL_MAX_SERVERS](#)"
- "[MEMORY_TARGET](#)"
- "[SGA_TARGET](#)"
- "[PGA_AGGREGATE_TARGET](#)"
- *Oracle Database VLDB and Partitioning Guide* for more information about this parameter

1.270 PARALLEL_THREADS_PER_CPU

`PARALLEL_THREADS_PER_CPU` describes the number of parallel execution processes or threads that a CPU can handle during parallel execution.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any nonzero number
Basic	No

 **Note:**

This parameter applies to parallel execution in exclusive mode as well as in an Oracle Real Application Clusters environment.

This parameter is used in determining the default values of other parallel execution related parameters, for example, PARALLEL_MAX_SERVERS. It is also used in determining the default degree of parallelism for SQL statements, and determining the upper bound for the degree of parallelism in automatic degree of parallelism. The default value is adequate in most cases.

See Also:

- *Oracle Database SQL Tuning Guide* for more information about parallel execution
- *Oracle Database VLDB and Partitioning Guide* for information about how the optimizer automatically determines the degree of parallelism for a statement

1.271 PDB_FILE_NAME_CONVERT

PDB_FILE_NAME_CONVERT maps names of existing files to new file names when processing a CREATE PLUGGABLE DATABASE statement, as well as when processing the ENABLE PLUGGABLE DATABASE clause of the CREATE DATABASE statement, if the `file_name_convert_clause` is not specified and Oracle Managed Files is not enabled.

Property	Description
Parameter type	String
Syntax	<pre>PDB_FILE_NAME_CONVERT = 'string1' , 'string2' , 'string3' , 'string4' , ...</pre> <p>Where:</p> <ul style="list-style-type: none"> • <code>string1</code> is the pattern of the existing filename • <code>string2</code> is the pattern of the new filename • <code>string3</code> is the pattern of the existing filename • <code>string4</code> is the pattern of the new filename <p>You can enclose each string in single or double quotation marks.</p> <p>You can specify as many pairs of existing and new replacement strings as required.</p> <p>Example:</p> <pre>PDB_FILE_NAME_CONVERT = '/dbs/t1/','/dbs/t1/ s','/dbs/t2/','/dbs/t2/s'</pre>
Default value	There is no default value
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

File name patterns specified in this initialization parameter cannot match files or directories managed by Oracle Managed Files.

 **See Also:**

Oracle Multitenant Administrator's Guide for more information about this parameter

1.272 PDB_LOCKDOWN

`PDB_LOCKDOWN` determines the PDB lockdown profile that applies to a PDB.

Property	Description
Parameter type	String
Syntax	<code>PDB_LOCKDOWN = pdb-lockdown-profile-name</code>
Default value	NULL
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should have the same value

A PDB lockdown profile is a mechanism to restrict operations (such as setting values of certain parameters and using certain options) that can be performed by users connected to a given PDB. You can also restrict execution of any packages that allow network access, for example, `UTL_SMTP`.

You create lockdown profiles using the `SQL CREATE LOCKDOWN PROFILE` statement. Then you can set a profile using the `SQL ALTER SESSION` or `ALTER SYSTEM` statement. See the Examples section.

This parameter can be set using the `ALTER SYSTEM` statement with scope set to `MEMORY`, `SPFILE`, or `BOTH`.

The lockdown profile for PDBs can be specified by a common user with common `ALTER SYSTEM` or common `SYSDBA` privilege.

If a PDB lockdown profile is dropped, any PDB to which the dropped profile was assigned (by means of storing the dropped profile name in the `PDB_LOCKDOWN` parameter) will continue to have its `PDB_LOCKDOWN` parameter set to the dropped lockdown profile name. However, the PDB will not have any restrictions imposed by the dropped lockdown profile.

Lockdown profiles can now be created in an application root and are referred to as application lockdown profiles.

A CDB common user with common `SYSDBA` or common `ALTER SYSTEM` privilege can only set `PDB_LOCKDOWN` to a CDB lockdown profile. Similarly, an application common user with application common `SYSDBA` or application common `ALTER SYSTEM` privilege can only set `PDB_LOCKDOWN` to an application lockdown profile.

An application common user cannot overwrite `PDB_LOCKDOWN` if `PDB_LOCKDOWN` is already set to a CDB lockdown profile in an application root or application PDB.

If the `PDB_LOCKDOWN` parameter in a PDB is set to the name of a lockdown profile different from that in its ancestor (for a CDB, the CDB root or, for application PDBs, the application root), the following will govern the interaction between restrictions imposed by these profiles:

- If the `PDB_LOCKDOWN` parameter in a PDB (including an application PDB) is set to a CDB lockdown profile, lockdown profiles specified by the `PDB_LOCKDOWN` parameter in CDB root (and for application PDBs, the application root) are ignored.
- If the `PDB_LOCKDOWN` parameter in an application PDB is set to an application lockdown profile while the `PDB_LOCKDOWN` parameter in the application root or CDB root is set to a CDB lockdown profile, in addition to the rules stipulated in the application lockdown profile, the `DISABLE` rules from the CDB lockdown profile set in its nearest ancestor (that is, an application root or CDB root) are inherited.
- If there are conflicts between rules comprising the CDB lockdown profile and the application lockdown profile, the rules in the CDB lockdown profile will take precedence (for example, the `OPTION_VALUE` clause of a CDB lockdown profile will take precedence over the `OPTION_VALUE` clause of an application lockdown profile).

Examples

This example shows how the `SYS` user can connect to the database `AS SYSDBA` and use the `CREATE LOCKDOWN PROFILE` statement in the root of a CDB to define a new lockdown profile. After defining the new lockdown profile, the `SYS` user can assign the new lockdown profile to a PDB using the `PDB_LOCKDOWN` parameter:

```
SQL> ALTER SESSION SET CONTAINER=CDB$ROOT;  
  
Session altered.  
  
SQL> CREATE LOCKDOWN PROFILE MYPROFILE;  
  
Lockdown Profile created.  
  
SQL> ALTER SESSION SET CONTAINER=CDB1_PDB1;  
  
Session altered.  
  
SQL> ALTER SYSTEM SET PDB_LOCKDOWN=MYPROFILE;  
  
System altered.  
  
SQL> SHOW PARAMETER PDB_LOCKDOWN
```

NAME	TYPE	VALUE
pdb_lockdown	string	MYPROFILE

See Also:

- "[DBA_LOCKDOWN_PROFILES](#)"

1.273 PDB_OS_CREDENTIAL

PDB_OS_CREDENTIAL determines the identity of the operating system user (OS user) employed when interacting with the operating system from a PDB.

Property	Description
Parameter type	String
Syntax	PDB_OS_CREDENTIAL = <i>credential</i>
Default value	None
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be used for all instances

 **Note:**

The Oracle OS user will continue to be used when interacting with the operating system from the root.

The Oracle OS user is usually a highly privileged user, and using the same user for operating system interactions for every PDB is not recommended. Also, using the same OS user for operating system interactions from different PDBs may compromise data belonging to a given PDB.

In contrast, using an OS user described by a credential whose name is specified as a value of the PDB_OS_CREDENTIAL parameter helps ensure that operating system interactions are performed as a less powerful user and provides the ability to protect data belonging to one PDB from being accessed by users connected to another PDB. A credential is an object that is created using the CREATE_CREDENTIAL procedure for the DBMS_CREDENTIAL package.

The operating system interactions that are done as the OS user name specified in the credential include:

- External jobs that do not already have an operating system credential specified
- External table pre-processors
- PL/SQL library executions

This parameter can be specified for all the PDBs in a CDB but the CDB-wide value can be overridden for a specific PDB and can be modified *only* by a common administrative user with the EXECUTE privilege for the DBMS_CREDENTIAL PL/SQL package and the ALTER SYSTEM system privilege.

If a value is not set for this parameter for a given PDB, the Oracle OS User will continue to be used when interacting with the operating system from that PDB.

 **See Also:**

- *Oracle Database Security Guide* for an example of setting an OS user for a PDB using this parameter
- *Oracle Multitenant Administrator's Guide* for conceptual information about CDBs and PDBs
- *Oracle Multitenant Administrator's Guide* for information about managing CDBs and PDBs
- *Oracle Database PL/SQL Packages and Types Reference* for information about creating a credential using the `DBMS_CREDENTIAL.CREATE_CREDENTIAL` procedure

1.274 PERMIT_92_WRAP_FORMAT

`PERMIT_92_WRAP_FORMAT` allows Oracle Database release 9.2 wrapped versions of PL/SQL source text to be used in Oracle Database releases 10.2 and later when this parameter is set to `true`.

Property	Description
Parameter type	Boolean
Default value	<code>true</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	Multiple instances should use the same value

Oracle recommends that wrapped files be created using the PL/SQL Wrapper utility from Oracle Database release 10 or later.

 **See Also:**

- Oracle Database PL/SQL Language Reference* for more information about PL/SQL source text wrapping

1.275 PGA_AGGREGATE_LIMIT

`PGA_AGGREGATE_LIMIT` specifies a limit on the aggregate PGA memory consumed by the instance.

Property	Description
Parameter type	Big integer

Property	Description
Syntax	PGA_AGGREGATE_LIMIT = <i>integer</i> [K M G]
Default value	If MEMORY_TARGET is set, then PGA_AGGREGATE_LIMIT defaults to the MEMORY_MAX_TARGET value. If MEMORY_TARGET is not set, then PGA_AGGREGATE_LIMIT defaults to 200% of PGA_AGGREGATE_TARGET. If MEMORY_TARGET is not set, and PGA_AGGREGATE_TARGET is explicitly set to 0, then the value of PGA_AGGREGATE_LIMIT is set to 90% of the physical memory size minus the total SGA size. In all cases, the default PGA_AGGREGATE_LIMIT is at least 2GB and at least 3MB times the PROCESSES parameter (and at least 5MB times the PROCESSES parameter for an Oracle RAC instance). For a PDB, the default value is the same as the CDB's default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Do not attempt to set PGA_AGGREGATE_LIMIT below its default value, even in a parameter file (pfile), or instance startup will fail. However, PGA_AGGREGATE_LIMIT can be set to 0 either in a parameter file or dynamically after startup. If a value of 0 is specified, it means there is no limit to the aggregate PGA memory consumed by the instance.
Basic	No

Actions Taken When PGA_AGGREGATE_LIMIT is Exceeded

Parallel queries will be treated as a unit. First, the sessions that are using the most untunable memory will have their calls terminated. Then, if the total PGA memory usage is still over the limit, the sessions that are using the most untunable memory will be terminated.

SYS processes and background processes other than job queue processes will not be subjected to any of the actions described in this section. Instead, if they are using the most untunable memory, they will periodically write a brief summary of their PGA usage to a trace file.

 **Note:**

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the maximum PGA size for the PDB.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- You must set the `PGA_AGGREGATE_LIMIT` initialization parameter in a PDB to a value that meets these requirements:
 - Less than or equal to the `PGA_AGGREGATE_LIMIT` value set at the CDB level
 - Greater than or equal to twice the value of `PGA_AGGREGATE_TARGET` set in the PDB

When you set `PGA_AGGREGATE_LIMIT` in a PDB to a value that does not meet these requirements, you receive an error. If these requirements are violated after the PDB's parameter is set (for example, if the `PGA_AGGREGATE_LIMIT` value is changed at the CDB level), Oracle will adjust the PDB's value to meet these requirements.

 **See Also:**

- "[MEMORY_TARGET](#)"
- "[PGA_AGGREGATE_TARGET](#)"
- *Oracle Multitenant Administrator's Guide* for more information about the initialization parameters that control the memory usage of PDBs
- *Oracle Database Performance Tuning Guide* for more information about this parameter

1.276 PGA_AGGREGATE_TARGET

`PGA_AGGREGATE_TARGET` specifies the target aggregate PGA memory available to all server processes attached to the instance.

Property	Description
Parameter type	Big integer
Syntax	<code>PGA_AGGREGATE_TARGET = integer [K M G]</code>
Default value	10 MB or 20% of the size of the SGA, whichever is greater For a PDB, the default value is the same as the CDB's default value.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes

Property	Description
Range of values	Minimum: 10 MB Maximum: 4096 GB - 1
Basic	Yes

To set a hard limit for aggregate PGA memory, use the `PGA_AGGREGATE_LIMIT` parameter.

Setting `PGA_AGGREGATE_TARGET` to a nonzero value has the effect of automatically setting the `WORKAREA_SIZE_POLICY` parameter to `AUTO`. With this setting, SQL working areas used by memory-intensive SQL operators (such as sort, group-by, hash-join, bitmap merge, and bitmap create) will be automatically sized. A nonzero value for this parameter is the default since, unless you specify otherwise, Oracle sets it to 20% of the SGA or 10 MB, whichever is greater.

Setting `PGA_AGGREGATE_TARGET` to 0 automatically sets the `WORKAREA_SIZE_POLICY` parameter to `MANUAL`. With this setting, SQL working areas are sized using the `*_AREA_SIZE` parameters.

Oracle attempts to keep the amount of private memory below the target specified by this parameter by adapting the size of the working areas to private memory. When increasing the value of this parameter, you indirectly increase the memory allotted to working areas. Consequently, more memory-intensive operations are able to run fully in memory and fewer will work their way over to disk.

If Automatic Memory Management is enabled (`MEMORY_TARGET` is set to a positive value) and `PGA_AGGREGATE_TARGET` is also set to a positive value, the `PGA_AGGREGATE_TARGET` value acts as the minimum value for the size of the instance PGA.

Note:

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the target aggregate PGA size for the PDB.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- You must set the `PGA_AGGREGATE_TARGET` initialization parameter in a PDB to a value that meets these requirements:
 - Less than or equal to the `PGA_AGGREGATE_TARGET` value set at the CDB level
 - Less than or equal to 50% of the `PGA_AGGREGATE_LIMIT` initialization parameter value set at the CDB level
 - Less than or equal to 50% of the `PGA_AGGREGATE_LIMIT` value set in the PDB

When you set `PGA_AGGREGATE_TARGET` in a PDB to a value that does not meet these requirements, you receive an error. If these requirements are violated after the PDB's parameter is set (for example, if the `PGA_AGGREGATE_TARGET` value is changed at the CDB level), Oracle will adjust the PDB's value to meet these requirements.

 See Also:

- "[WORKAREA_SIZE_POLICY](#)"
- *Oracle Database Performance Tuning Guide* for more information about configuring memory
- "[PGA_AGGREGATE_LIMIT](#)"

1.277 PLSCOPE_SETTINGS

`PLSCOPE_SETTINGS` controls the compile time collection, cross-reference, and storage of PL/SQL source code identifier data.

Property	Description
Parameter type	String
Syntax	<code>PLSCOPE_SETTINGS = 'value_clause [, value_clause]'</code> value_clause::= <code>{ IDENTIFIERS STATEMENTS } : { ALL NONE PUBLIC (for IDENTIFIERS only) SQL (for IDENTIFIERS only) PLSQL (for IDENTIFIERS only) }</code>
Default value	'IDENTIFIERS:NONE'
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- `IDENTIFIERS:ALL`
Enables the collection of all source code identifier data.
- `IDENTIFIERS:NONE`
Disables the collection of all source code identifier data.
- `IDENTIFIERS: PUBLIC`
Enables the collection of all PUBLIC user identifier data (except for `DEFINITION`)
- `IDENTIFIERS:SQL`
Enables the collection of all SQL identifier data.
- `IDENTIFIERS:PLSQL`
Enables the collection of all PLSQL identifier data.
- `STATEMENTS:ALL`
Enables the collection of all SQL statements used in PL/SQL.
- `STATEMENTS:NONE`
Disables the collection of all statements.

`PLSCOPE_SETTINGS` can be set on a session, system, or per-library unit (`ALTER COMPILE`) basis. The current setting of `PLSCOPE_SETTINGS` for any library unit can be attained by querying the `*_PLSQL_OBJECT_SETTINGS` views. Any identifier data collected by setting this parameter can be accessed using the `*_IDENTIFIERS` views.

When a `STATEMENTS` setting is not specified, and `IDENTIFIERS` is specified but set to a value other than `NONE`, `STATEMENTS` defaults to a setting of `ALL`, which is equal to:

```
IDENTIFIERS: [ALL|PLSQL|PLSQL|PUBLIC]
```

Examples

The following parameter setting causes PL/SQL and SQL identifiers and statements to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:ALL, STATEMENTS:ALL'
```

The following parameter setting causes only SQL identifiers and statements to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:SQL, STATEMENTS:ALL'
```

The following parameter setting causes only PL/SQL identifiers to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:PLSQL, STATEMENTS:NONE'
```

The following parameter setting causes no identifier data to be collected, and drops any existing identifier data:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS: NONE'
```

See Also:

- "[ALL_PLSQL_OBJECT_SETTINGS](#)," "[DBA_PLSQL_OBJECT_SETTINGS](#)," and "[USER_PLSQL_OBJECT_SETTINGS](#)"
- "[ALL_IDENTIFIERS](#)," "[DBA_IDENTIFIERS](#)," and "[USER_IDENTIFIERS](#)"
- *Oracle Database PL/SQL Language Reference* for more information about this parameter

1.278 PLSQL_CCFLAGS

`PLSQL_CCFLAGS` provides a mechanism that allows PL/SQL programmers to control conditional compilation of each PL/SQL library unit independently.

Property	Description
Parameter type	String
Syntax	<code>PLSQL_CCFLAGS = '<v1>:<c1>,<v2>:<c2>,...,<vn>:<cn>'</code>

Property	Description
Default value	Empty string
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Any string literal that satisfies the internal syntax
Basic	No
Examples	ALTER SESSION SET PLSQL_CCFLAGS = 'DeBug:True'; ALTER SESSION SET PLSQL_CCFLAGS = 'debug:TRUE';

Values

- <vi> has the form of an unquoted PL/SQL identifier. It is unrestricted and can be a reserved word or a keyword. The text is insensitive to case. Each one is known as a flag or flag name. Each <vi> can occur more than once in the string, each occurrence can have a different flag value, and the flag values can be of different kinds.
- <ci> is one of the following: a PL/SQL boolean literal, a PLSQL_INTEGER literal, or the literal NULL. The text is insensitive to case. Each one is known as a flag value and corresponds to a flag name.

You can define any allowable value for PLSQL_CCFLAGS. However, Oracle recommends that this parameter be used for controlling the conditional compilation of debugging or tracing code. It is recommended that the following identifiers not be used as flag name values:

- Names of Oracle parameters (for example, NLS_LENGTH_SEMANTICS)
- Identifiers with any of the following prefixes: PLSQL_, PLSCC_, ORA_, ORACLE_, DBMS_, SYS_

 **See Also:**

Oracle Database PL/SQL Language Reference for more information about this parameter

1.279 PLSQL_CODE_TYPE

PLSQL_CODE_TYPE specifies the compilation mode for PL/SQL library units.

Property	Description
Parameter type	String
Syntax	PLSQL_CODE_TYPE = { INTERPRETED NATIVE }
Default value	INTERPRETED
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- INTERPRETED

PL/SQL library units will be compiled to PL/SQL bytecode format. Such modules are executed by the PL/SQL interpreter engine.

- NATIVE

PL/SQL library units (with the possible exception of top-level anonymous PL/SQL blocks) will be compiled to native (machine) code. Such modules will be executed natively without incurring any interpreter overhead.

When the value of this parameter is changed, it has no effect on PL/SQL library units that have already been compiled. The value of this parameter is stored persistently with each library unit.

If a PL/SQL library unit is compiled native, all subsequent automatic recompilations of that library unit will use native compilation.

 **See Also:**

Oracle Database PL/SQL Language Reference for more information about this parameter

1.280 PLSQL_DEBUG

`PLSQL_DEBUG` specifies whether or not PL/SQL library units will be compiled for debugging.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

 **Note:**

The `PLSQL_DEBUG` parameter is deprecated. It is retained for backward compatibility only.

Values

- true

PL/SQL library units will be compiled for debugging

- false

PL/SQL library units will be compiled for normal execution

When `PLSQL_DEBUG` is set to `true`, PL/SQL library units are always compiled `INTERPRETED` in order to be debuggable.

When the value of this parameter is changed, it has no effect on PL/SQL library units that have already been compiled. The value of this parameter is stored persistently with each library unit.

1.281 PLSQL_OPTIMIZE_LEVEL

`PLSQL_OPTIMIZE_LEVEL` specifies the optimization level that will be used to compile PL/SQL library units. The higher the setting of this parameter, the more effort the compiler makes to optimize PL/SQL library units.

Property	Description
Parameter type	Integer
Default value	2
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 3
Basic	No

Values

- 0
Maintains the evaluation order and hence the pattern of side effects, exceptions, and package initializations of Oracle9i and earlier releases. Also removes the new semantic identity of `BINARY_INTEGER` and `PLS_INTEGER` and restores the earlier rules for the evaluation of integer expressions. Although code will run somewhat faster than it did in Oracle9i, use of level 0 will forfeit most of the performance gains of PL/SQL in Oracle Database 10g.
- 1
Applies a wide range of optimizations to PL/SQL programs including the elimination of unnecessary computations and exceptions, but generally does not move source code out of its original source order.
- 2
Applies a wide range of modern optimization techniques beyond those of level 1 including changes which may move source code relatively far from its original location.
- 3
Applies a wide range of optimization techniques beyond those of level 2, automatically including techniques not specifically requested.

Generally, setting this parameter to 2 pays off in better execution performance. If, however, the compiler runs slowly on a particular source module or if optimization does not make sense for some reason (for example, during rapid turnaround development), then setting this parameter to 1 will result in almost as good a compilation with less use of compile-time resources.

The value of this parameter is stored persistently with the library unit.

 **See Also:**

- *Oracle Database PL/SQL Language Reference* for more information about this parameter
- *Oracle Database Development Guide* for an example of using this parameter

1.282 PLSQL_V2_COMPATIBILITY

`PLSQL_V2_COMPATIBILITY` is used to specify whether nonstandard behavior that PL/SQL Version 2 allows will be allowed in PL/SQL Version 8.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	<code>true false</code>
Basic	No

 **Note:**

The `PLSQL_V2_COMPATIBILITY` parameter is deprecated. It is retained for backward compatibility only.

PL/SQL Version 2 allows some nonstandard behavior that Version 8 disallows. If you want to retain that behavior for backward compatibility, set `PLSQL_V2_COMPATIBILITY` to `true`. If you set it to `false`, then PL/SQL Version 8 behavior is enforced and Version 2 behavior is not allowed.

 **See Also:**

Oracle Database PL/SQL Language Reference for a description of the differences between PL/SQL Version 2 and Version 8, and for more information on setting this parameter

1.283 PLSQL_WARNINGS

`PLSQL_WARNINGS` enables or disables the reporting of warning messages by the PL/SQL compiler, and specifies which warning messages to show as errors.

Property	Description
Parameter type	String

Property	Description
Syntax	PLSQL_WARNINGS = 'value_clause' [, 'value_clause'] ...
Syntax	value_clause ::= { ENABLE DISABLE ERROR }: { ALL SEVERE INFORMATIONAL PERFORMANCE { <i>integer</i> (<i>integer</i> [, <i>integer</i>] ...) } }
Default value	'DISABLE:ALL'
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Examples	<pre>PLSQL_WARNINGS = 'ENABLE:SEVERE', 'DISABLE:INFORMATIONAL'; PLSQL_WARNINGS = 'DISABLE:ALL'; PLSQL_WARNINGS = 'DISABLE:5000', 'ENABLE:5001', 'ERROR:5002'; PLSQL_WARNINGS = 'ENABLE:(5000,5001,5002)', 'DISABLE: (6000,6001)';</pre>

value_clause

Multiple value clauses may be specified, enclosed in quotes and separated by commas. Each value clause is composed of a qualifier, a colon (:), and a modifier.

Qualifier values:

- **ENABLE**
Enable a specific warning or a set of warnings
- **DISABLE**
Disable a specific warning or a set of warnings
- **ERROR**
Treat a specific warning or a set of warnings as errors

Modifier values:

- **ALL**
Apply the qualifier to all warning messages
- **SEVERE**
Apply the qualifier to only those warning messages in the **SEVERE** category
- **INFORMATIONAL**
Apply the qualifier to only those warning messages in the **INFORMATIONAL** category
- **PERFORMANCE**

Apply the qualifier to only those warning messages in the PERFORMANCE category

 **See Also:**

Oracle Database PL/SQL Language Reference for more information about this parameter

1.284 PRE_PAGE_SGA

`PRE_PAGE_SGA` determines whether Oracle accesses the entire SGA at instance startup.

Operating system page table entries are then prebuilt for each page of the SGA.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

When this parameter is set to `true`, the database server touches the entire SGA after the instance startup. These accesses are done by a background process and are initiated after the instance startup. The accesses cause the OS to allocate memory to the SGA and populate the page tables, making the SGA memory resident and increasing database performance.

 **Note:**

This setting does not prevent your operating system from paging or swapping the SGA after it is initially read into memory.

 **Note:**

Starting with Oracle Database 19c, Release Update 19.22, the `PRE_PAGE_SGA` parameter is deprecated because it is obsolete. Setting this parameter typically provides little or no potential performance benefits, and can create problems.

The Oracle Database design for SGA packaging has evolved over time, so that process start-up effects on the SGA are initiated after instance startup, and there is little to no benefit in changing the value for `PRE_PAGE_SGA`. The only use case for this parameter is on Oracle Exadata systems, which should have `PRE_PAGE_SGA` set to `TRUE`. Therefore, starting with Oracle Database 19c, Release Update 19.22, the value of this parameter is always set to `TRUE` on Exadata systems. Any attempt to set this parameter to `FALSE` on an Exadata system will not take effect.

1.285 PRIVATE_TEMP_TABLE_PREFIX

PRIVATE_TEMP_TABLE_PREFIX specifies the prefix that the database uses for private temporary tables.

Property	Description
Parameter type	String
Syntax	PRIVATE_TEMP_TABLE_PREFIX = string
Default value	ORA\$PTT_
Modifiable	ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be specified on each instance.

The default value used for the PRIVATE_TEMP_TABLE_PREFIX parameter is ORA\$PTT_.

If you choose to specify a different prefix value, it must begin with the string ORA\$ and must be unique across the database. Use the following SQL query to determine if the prefix value is unique (in the query, replace prefix-value with your actual prefix value):

```
select count(*) from obj$ where name like '<prefix-value>%';
```

If the above query returns 0, then the prefix you specified is an appropriate value to set.

Note:

After setting the prefix, regular table, view, and object names cannot use the same prefix.

See Also:

- "[DBA_PRIVATE_TEMP_TABLES](#)"
- "[USER_PRIVATE_TEMP_TABLES](#)"
- *Oracle Database Administrator's Guide* for an introduction to private temporary tables

1.286 PROCESSES

PROCESSES specifies the maximum number of operating system user processes that can simultaneously connect to Oracle.

Property	Description
Parameter type	Integer

Property	Description
Default value	The value is derived, and it typically depends on the number of cores reported in the alert log.
Modifiable	No
Modifiable in a PDB	No
Range of values	6 to operating system dependent
Basic	Yes
Oracle RAC	Multiple instances can have different values.

The value for this parameter should allow for all background processes such as locks, job queue processes, and parallel execution processes.

The default values of the SESSIONS and TRANSACTIONS parameters are derived from this parameter. Therefore, if you change the value of PROCESSES, you should evaluate whether to adjust the values of those derived parameters.

See Also:

- Your operating system-specific Oracle documentation for the range of values
- *Oracle Database Concepts* for an introduction to Oracle database instance processes

1.287 PROCESSOR_GROUP_NAME

PROCESSOR_GROUP_NAME specifies the name of the processor group that this instance should run in.

Property	Description
Parameter type	String
Syntax	PROCESSOR_GROUP_NAME = <i>string</i>
Default value	There is no default value
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	For Oracle RAC databases, it is recommended that the operating system processor groups for each database instance are all named the same, so that the same PROCESSOR_GROUP_NAME value can be used. However, you can choose to use different names. In this case, you would set the PROCESSOR_GROUP_NAME explicitly for each database instance.

This initialization parameter is supported on the Linux and Solaris operating systems.

PROCESSOR_GROUP_NAME instructs the database instance to run itself within the specified operating system processor group. All Oracle processes will be bound to the CPUs in this group and will only run on these CPUs.

 **Notes:**

- Oracle recommends that this parameter be set only for databases on which the `USE_DEDICATED_BROKER` initialization parameter is also set to `TRUE`.
- For NUMA systems, all SGA and PGA memory allocated by the database instance will be allocated from NUMA nodes within the group.
- Starting with Oracle Database Appliance (ODA) release 19.9, you can use `PROCESSOR_GROUP_NAME` to specify the set of CPU cores on which the database on ODA will run. For more information, refer to *Oracle Database Appliance X8-2 Deployment and User's Guide*.

 **See Also:**

- "["USE_DEDICATED_BROKER"](#)"
- *Oracle Database Administrator's Reference for Linux and UNIX-Based Operating Systems* for more information about using the `PROCESSOR_GROUP_NAME` initialization parameter

1.288 QUERY_REWRITE_ENABLED

Use `QUERY_REWRITE_ENABLED` to enable or disable query rewriting globally for the database.

Property	Description
Parameter type	String
Syntax	<code>QUERY_REWRITE_ENABLED = { false true force }</code>
Default value	If <code>OPTIMIZER_FEATURES_ENABLE</code> is set to 10.0.0 or higher, then <code>true</code> If <code>OPTIMIZER_FEATURES_ENABLE</code> is set to 9.2.0 or lower, then <code>false</code>
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

Values

- `false`
Oracle does not use rewrite.
- `true`
Oracle costs the query with rewrite and without rewrite and chooses the method with the lower cost.
- `force`

Oracle always uses rewrite and does not evaluate the cost before doing so. Use force when you know that the query will always benefit from rewrite and when reduction in compile time is important.

To take advantage of query rewrite for a particular materialized view, you must enable query rewrite for that materialized view, and you must enable cost-based optimization.

See Also:

- *Oracle Database Data Warehousing Guide* for information on query rewrite of materialized views
- *Oracle Database SQL Tuning Guide* and "[OPTIMIZER_MODE](#)" for information on cost-based optimization

1.289 QUERY_REWRITE_INTEGRITY

QUERY_REWRITE_INTEGRITY determines the degree to which Oracle must enforce query rewriting. At the safest level, Oracle does not use query rewrite transformations that rely on unenforced relationships.

Property	Description
Parameter type	String
Syntax	QUERY_REWRITE_INTEGRITY = { enforced trusted stale_tolerated }
Default value	enforced
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

QUERY_REWRITE_INTEGRITY is relevant for materialized views as well as for foreign key constraints in NOVALIDATE state.

Values

- enforced

Oracle enforces and guarantees consistency and integrity.

- trusted

Oracle allows rewrites using relationships that have been declared, but that are not enforced by Oracle.

- stale_tolerated

Oracle allows rewrites using unenforced relationships. Materialized views are eligible for rewrite even if they are known to be inconsistent with the underlying detail data. You must set the QUERY_REWRITE_INTEGRITY initialization parameter to stale_tolerated before querying an external table in the In-Memory Column Store (IM column store).

If a foreign key constraint is in NOVALIDATE state, join elimination is not done when QUERY_REWRITE_INTEGRITY=enforced. This means that queries with joins over a foreign key constraint that is in RELY NOVALIDATE state can potentially take longer to parse and execute as the optimizer does not trust the RELY.

 **See Also:**

- "[INMEMORY_CLAUSE_DEFAULT](#)"
- *Oracle Database Data Warehousing Guide* for more information about query rewrite for materialized views
- *Oracle Database Data Warehousing Guide* for more information about the QUERY_REWRITE_INTEGRITY parameter

1.290 RDBMS_SERVER_DN

RDBMS_SERVER_DN specifies the Distinguished Name (DN) of the Oracle server. It is used for retrieving Enterprise Roles from an enterprise directory service.

Property	Description
Parameter type	X.500 Distinguished Name
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	All X.500 Distinguished Name format values
Basic	No

 **Note:**

The RDBMS_SERVER_DN parameter is deprecated in Oracle Database 12c Release 1 (12.1.0.2). It is replaced by the LDAP_DIRECTORY_ACCESS initialization parameter.

If you do not want to use a directory for enterprise user and privilege management, but prefer to use SSL authentication alone, do not set this parameter.

 **See Also:**

- *Oracle Database Enterprise User Security Administrator's Guide* for more information on enterprise roles and the enterprise directory service
- "[LDAP_DIRECTORY_ACCESS](#)"

1.291 READ_ONLY_OPEN_DELAYED

`READ_ONLY_OPEN_DELAYED` determines when datafiles in read-only tablespaces are accessed.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No

Values

- `true`

The datafiles are accessed for the first time only when an attempt is made to read data stored within them.

- `false`

The datafiles are accessed at database open time.

You can use this parameter to speed up some operations (primarily opening the database) for very large databases when substantial portions of the database are stored in read-only tablespaces. Consider setting this parameter to `true` for such databases, especially if portions of the read-only data are stored on slow-access devices or hierarchical storage.

See Also:

Oracle Database Administrator's Guide for information on the consequences of delaying access of datafiles in read-only tablespaces

1.292 RECOVERY_PARALLELISM

`RECOVERY_PARALLELISM` specifies the number of processes to participate in instance or crash recovery.

Property	Description
Parameter type	Integer
Default value	System-determined parallel recovery
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	System-determined, but cannot exceed <code>PARALLEL_MAX_SERVERS</code> initialization parameter setting
Basic	No

To force serial crash and instance recovery, set the `RECOVERY_PARALLELISM` parameter to 0 or 1. 0 or 1 disable parallel instance and crash recovery on a system that has multiple CPUs. An alert log displays the degree of parallelism that was chosen when the database instance/recovery starts.

 **See Also:**

- *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment

1.293 RECYCLEBIN

`RECYCLEBIN` is used to control whether the Flashback Drop capability is turned on or off.

Property	Description
Parameter type	String
Syntax	<code>RECYCLEBIN = { on off }</code>
Default value	on
Modifiable	<code>ALTER SESSION, ALTER SYSTEM ... DEFERRED</code>
Modifiable in a PDB	Yes
Basic	No

If the parameter is set to `off`, then dropped tables do not go into the recycle bin. If this parameter is set to `on`, then dropped tables go into the recycle bin and can be recovered.

 **See Also:**

- Oracle Database Administrator's Guide* for more information about using Flashback Drop and managing the recycle bin

1.294 REDO_TRANSPORT_USER

`REDO_TRANSPORT_USER` specifies the name of the user whose password verifier is used when a remote login password file is used for redo transport authentication. This user must have the `SYSOPER` privilege and must have the same password in the database that initiates the redo transport session and in the database that is the target of the redo transport session.

Property	Description
Parameter type	String
Syntax	<code>REDO_TRANSPORT_USER = user_name</code>
Default value	There is no default value.
Range of values	Any character string that matches the name of a user who has been granted the <code>SYSOPER</code> privilege

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	Every instance should use the same value

The value of this parameter is case sensitive and must exactly match the value of the `USERNAME` column of a row in the `V$PFILE_USERS` view. The value of the `SYSOPER` column of the row must also be `TRUE`.

If this parameter is not specified, then the password verifier of the `SYS` user will be used when a remote login password file is used for redo transport authentication.

See Also:

Oracle Data Guard Concepts and Administration for more information about this parameter

1.295 REMOTE_DEPENDENCIES_MODE

`REMOTE_DEPENDENCIES_MODE` specifies how Oracle should handle dependencies upon remote PL/SQL stored procedures.

Property	Description
Parameter type	String
Syntax	<code>REMOTE_DEPENDENCIES_MODE = { TIMESTAMP SIGNATURE }</code>
Default value	<code>TIMESTAMP</code>
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- `TIMESTAMP`

The client running the procedure compares the timestamp recorded on the server-side procedure with the current timestamp of the local procedure and executes the procedure only if the timestamps match.

- `SIGNATURE`

Oracle allows the procedure to execute as long as the signatures are considered safe. This setting allows client PL/SQL applications to be run without recompilation.

 See Also:

Oracle Database Development Guide for suggestions for managing dependencies

1.296 REMOTE_LISTENER

REMOTE_LISTENER specifies a network name that resolves to an address or address list of Oracle Net remote listeners (that is, listeners that are not running on the same system as this instance). The address or address list is specified in the TNSNAMES.ORA file or other address repository as configured for your system.

Property	Description
Parameter type	String
Syntax	REMOTE_LISTENER = <i>network_name</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	Yes

 See Also:

- *Oracle Database Concepts* for more information about listener processes and dispatcher processes
- *Oracle Database Net Services Administrator's Guide* and your operating system-specific Oracle documentation for more information about specifying network addresses for the protocols on your system
- *Oracle Clusterware Administration and Deployment Guide* for information about SCAN addresses

1.297 REMOTE_LOGIN_PASSWORDFILE

REMOTE_LOGIN_PASSWORDFILE specifies whether Oracle checks for a password file.

Property	Description
Parameter type	String
Syntax	REMOTE_LOGIN_PASSWORDFILE = { shared exclusive none }
Default value	exclusive
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Values

- shared

One or more databases can use the password file. The password file can contain SYS and non-SYS users.

When `REMOTE_LOGIN_PASSWORDFILE` is set to `shared`:

- The SYS password cannot be changed. If you try, the password change operation fails with "ORA-28046: Password change for SYS disallowed."
- The password of any user who has `SYS*` admin privileges (`SYSDBA`, `SYSOPER`, `SYSASM`, `SYSBACKUP`, `SYSDG`, `SYSKM`) cannot be changed. If you try, the password change operation fails with "ORA-01999: password file cannot be updated in SHARED mode."
- Grants of `SYS*` admin privileges (`SYSDBA`, `SYSOPER`, `SYSASM`, `SYSBACKUP`, `SYSDG`, `SYSKM`) to individual users are not allowed. For example, `grant sysdba to scott` fails with "ORA-01999: password file cannot be updated in SHARED mode." Similarly, `revoke` of `SYS*` admin privileges fails.
- If the password file does not exist, then the behavior is the same as setting `REMOTE_LOGIN_PASSWORDFILE` to `none`.

- exclusive

The password file can be used by only one database. The password file can contain SYS and non-SYS users.

When `REMOTE_LOGIN_PASSWORDFILE` is set to `exclusive`, if the password file does not exist, then the behavior is the same as setting `REMOTE_LOGIN_PASSWORDFILE` to `none`.

- none

Oracle ignores any password file. Therefore, privileged users must be authenticated by the operating system.

 **Note:**

If you change `REMOTE_LOGIN_PASSWORDFILE` to `exclusive` or `shared` from `none`, then ensure that the password file is synchronized with the dictionary passwords.

1.298 REMOTE_OS_AUTHENT

`REMOTE_OS_AUTHENT` specifies whether remote clients will be authenticated with the value of the `OS_AUTHENT_PREFIX` parameter.

Property	Description
Parameter type	Boolean
Default value	<code>false</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>

Property	Description
Basic	No

Note:

The `REMOTE_OS_AUTHENT` parameter is deprecated. It is retained for backward compatibility only.

See Also:

["OS_AUTHENT_PREFIX"](#)

1.299 REMOTE_OS_ROLES

`REMOTE_OS_ROLES` specifies whether operating system roles are allowed for remote clients.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

The default value, `false`, causes Oracle to identify and manage roles for remote clients.

See Also:

- *Oracle Database Security Guide* for more information on setting this parameter
- ["OS_ROLES"](#)

1.300 REMOTE_RECOVERY_FILE_DEST

`REMOTE_RECOVERY_FILE_DEST` specifies a directory from which to read archive log files during a pluggable database (PDB) refresh operation if the source is not available.

Property	Description
Parameter type	String
Syntax	<code>REMOTE_RECOVERY_FILE_DEST = string</code>

Property	Description
Default value	None
Modifiable	ALTER SYSTEM ... SID='*''
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The directory location where archive redo logs are accessible can be different on different instances, so this parameter can be set to different values on different instances.

For a PDB refresh copy to be in sync with its source, redo is accessed from the source PDB over a database link. Sometimes the source PDB or the CDB to which the source PDB belongs is not accessible when the refresh copy needs to be updated. In those cases, if this parameter is set, an attempt will be made to read archive log files from the directory specified by this parameter.

1.301 REPLICATION_DEPENDENCY_TRACKING

REPLICATION_DEPENDENCY_TRACKING enables or disables dependency tracking for read/write operations to the database.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

Dependency tracking is essential for propagating changes in a replicated environment in parallel.

Values

- TRUE

Enables dependency tracking.
- FALSE

Allows read/write operations to the database to run faster, but does not produce dependency information for Oracle to perform parallel propagation.

Note:

Do not specify this value unless you are sure that your application will not perform any read/write operations to the replicated tables.

1.302 RESOURCE_LIMIT

RESOURCE_LIMIT determines whether resource limits are enforced in database profiles.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Values

- TRUE
Enables the enforcement of resource limits
- FALSE
Disables the enforcement of resource limits

See Also:

Oracle Database Administrator's Guide and *Oracle Database SQL Language Reference* for more information on setting resource limits for profiles

1.303 RESOURCE_MANAGE_GOLDENGATE

RESOURCE_MANAGE_GOLDENGATE determines whether Oracle GoldenGate apply processes in the database are resource managed.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	All instances should use the same value.

To enable Resource Manager, set the RESOURCE_MANAGER_PLAN parameter.

By default, Oracle GoldenGate apply processes in the database are not resource managed. Given that replication to a PDB requires a separate Oracle GoldenGate apply process, it is possible that the apply processes for one PDB could end up consuming most of the CPU on

the machine, even if there is a CPU resource management plan in place to limit CPU usage per PDB.

You can set the following values for the `RESOURCE_MANAGER_GOLDENGATE` parameter:

- `TRUE`: With this setting, Oracle GoldenGate apply processes in the database are resource managed based on the resources allocated to the GoldenGate apply user.
- `FALSE`: With this setting, Oracle GoldenGate apply processes are not resource managed.

1.304 RESOURCE_MANAGER_CPU_ALLOCATION

`RESOURCE_MANAGER_CPU_ALLOCATION` specifies the number of CPUs that the Resource Manager should use. The Resource Manager controls how a system's CPUs are utilized by its database's sessions.

Property	Description
Parameter type	Integer
Default value	The number of logical CPUs reported by the operating system.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	0 to operating system-specific
Basic	No

 **Note:**

The `RESOURCE_MANAGER_CPU_ALLOCATION` parameter is deprecated. It is retained for backward compatibility only. Use the `CPU_COUNT` parameter instead.

The Resource Manager schedules database sessions on the CPUs according to a resource plan that has been configured and enabled by the DBA. Normally, the Resource Manager schedules enough database sessions to keep all CPUs utilized. However, in some scenarios, a DBA may only want to schedule enough database sessions to keep a subset of the CPUs utilized.

 **See Also:**

"`CPU_COUNT`"

1.305 RESOURCE_MANAGER_PLAN

`RESOURCE_MANAGER_PLAN` specifies the resource plan to use for a database (CDB or non-CDB).

Property	Description
Parameter type	String

Property	Description
Syntax	RESOURCE_MANAGER_PLAN = <i>resource_plan_name</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Any valid character string
Basic	No

In a CDB

In the root for a CDB, RESOURCE_MANAGER_PLAN specifies the CDB resource plan. A CDB resource plan allocates resources among PDBs.

A CDB resource plan is created using DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN and CREATE_CDB_PLAN_DIRECTIVE.

See Also:

- *Oracle Multitenant Administrator's Guide* for more information about using DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN and DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN_DIRECTIVE
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the CREATE_CDB_PLAN procedure and CREATE_CDB_PLAN_DIRECTIVE procedure for the DBMS_RESOURCE_MANAGER package

A session must be `root` to change the value of RESOURCE_MANAGER_PLAN for a CDB using the ALTER SYSTEM statement. For example, to enable and disable a CDB resource plan:

```
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = CDB_resource_plan_name;
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = '';
```

In a PDB, RESOURCE_MANAGER_PLAN specifies the PDB resource plan to use for the PDB.

A session must be in the PDB to enable or disable a PDB resource plan for that PDB. For example, to enable and disable a PDB resource plan:

```
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = PDB_resource_plan_name;
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = '';
```

In a PDB, the PDB resource plan has some restrictions compared to the resource plan of a non-CDB. The following restrictions apply to PDB resource plans:

- A PDB resource plan cannot have subplans.
- A PDB resource plan can have a maximum of eight consumer groups.
- A PDB resource plan cannot have a multiple-level scheduling policy.

To enforce certain PDB resource plan policies, policies regarding resource allocation among PDBs should exist in the CDB resource plan. Without a CDB resource plan, certain PDB resource plan policies will not be enforced. If a PDB resource plan contains CPU or parallel statement queuing directives and a CDB resource plan is not specified, then Resource

Manager will automatically enable the `DEFAULT_CDB_PLAN` plan. To prevent this behavior, set the `RESOURCE_MANAGER_PLAN` parameter at the root level to `ORA$INTERNAL_CDB_PLAN`.

 **Note:**

See *Oracle Multitenant Administrator's Guide* for information on CPU, I/O bandwidth, and parallel execution servers requirements in CDB resource plans, and for a description of the results in the PDB resource plans when those requirements are not met.

In a Non-CDB

`RESOURCE_MANAGER_PLAN` specifies the top-level resource plan to use for an instance in a non-CDB. The resource manager will load this top-level resource plan along with all its descendants (subplans, directives, and consumer groups). If you do not specify this parameter, the resource manager is off by default.

You can change the setting of this parameter using the `ALTER SYSTEM` statement to turn on the resource manager (if it was previously off) or to turn off the resource manager or change the current resource plan (if it was previously on). If you specify a resource plan that does not exist in the data dictionary, Oracle returns an error message.

 **See Also:**

- *Oracle Database PL/SQL Packages and Types Reference* for information on the `DBMS_RESOURCE_MANAGER` package
- *Oracle Database PL/SQL Packages and Types Reference* for information on the `DBMS_RESOURCE_MANAGER_PRIVS` package
- "["DBA_RSRC_PLANS"](#)", "["DBA_RSRC_PLAN_DIRECTIVES"](#)", and the various `V$RSRC_*` dynamic performance views in [Dynamic Performance Views](#) for information on existing resource plans

1.306 RESULT_CACHE_MAX_RESULT

`RESULT_CACHE_MAX_RESULT` specifies the percentage of `RESULT_CACHE_MAX_SIZE` that any single result can use.

Property	Description
Parameter type	Integer
Default value	5 percent
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes

Property	Description
Range of values	0 to 100
Basic	No
Oracle RAC	Multiple instances can have different values.

1.307 RESULT_CACHE_MAX_SIZE

RESULT_CACHE_MAX_SIZE specifies the maximum amount of SGA memory (in bytes) that can be used by the Result Cache.

Property	Description
Parameter type	Big integer
Syntax	RESULT_CACHE_MAX_SIZE = <i>integer</i> [K M G]
Default value	Derived from the values of SHARED_POOL_SIZE, SGA_TARGET, and MEMORY_TARGET
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No
Oracle RAC	You must either set this parameter to 0 on all instances to disable the result cache, or use a nonzero value on all instances. Disabling the result cache on some instances may lead to incorrect results.

Values of this parameter greater than 0 are rounded up to the next multiple of 32 KB. If the value of this parameter is 0, then the feature is disabled.

 **See Also:**

Oracle Database Performance Tuning Guide for information about tuning the result cache

1.308 RESULT_CACHE_MODE

RESULT_CACHE_MODE specifies when a ResultCache operator is spliced into a query's execution plan.

Property	Description
Parameter type	String
Syntax	RESULT_CACHE_MODE = { MANUAL FORCE }
Default value	MANUAL
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes

Property	Description
Basic	No
Oracle RAC	Multiple instances can have different values.

Values

- MANUAL

The `ResultCache` operator is added only when the query is annotated (that is, hints).

- FORCE

The `ResultCache` operator is added to the root of all `SELECT` statements (when it is valid to do so).

For the `FORCE` setting, if the statement contains a `NO_RESULT_CACHE` hint, then the hint takes precedence over the parameter setting.

 **Note:**

`FORCE` mode is not generally recommended because queries that call non-deterministic PL/SQL functions are cached, potentially causing material changes to the results. Enabling the result cache in such a broad-based manner can also impact performance in mixed workload environments, where the same tables are continuously updated and retrieved.

 **See Also:**

- *Oracle Database SQL Tuning Guide* for more information on how the result cache handles PL/SQL functions before changing the value of this initialization parameter
- *Oracle Database SQL Language Reference* for more information about the `NO_RESULT_CACHE` hint

1.309 RESULT_CACHE_REMOTE_EXPIRATION

`RESULT_CACHE_REMOTE_EXPIRATION` specifies the number of minutes that a result using a remote object is allowed to remain valid.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No

Setting this parameter to 0 implies that results using remote objects should not be cached. Setting this parameter to a nonzero value can produce stale answers (for example, if the remote table used by a result is modified at the remote database).

 **See Also:**

Oracle Database Performance Tuning Guide for information about tuning the result cache

1.310 RESUMABLE_TIMEOUT

`RESUMABLE_TIMEOUT` enables or disables resumable statements and specifies resumable timeout at the system level.

Property	Description
Parameter type	Integer
Default value	0 (seconds)
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to $2^{31} - 1$ (in seconds)
Basic	No
Oracle RAC	Multiple instances can have different values.

 **See Also:**

Oracle Database Administrator's Guide for more information about enabling resumable space allocation, what conditions are correctable, and what statements can be made resumable

1.311 ROLLBACK_SEGMENTS

`ROLLBACK_SEGMENTS` allocates one or more rollback segments by name to this instance.

Property	Description
Parameter type	String
Syntax	<code>ROLLBACK_SEGMENTS = (segment_name [, segment_name] ...)</code>
Default value	If you do not specify this parameter, the instance uses public rollback segments by default, unless the <code>UNDO_MANAGEMENT</code> initialization parameter is set to <code>AUTO</code> . In that case, the <code>ROLLBACK_SEGMENTS</code> parameter is ignored and automatic undo management is used.
Modifiable	No
Modifiable in a PDB	Yes

Property	Description
Range of values	Any rollback segment names listed in DBA_ROLLBACK_SEGS except SYSTEM
Basic	No
Oracle RAC	Multiple instances must have different values.

If you set this parameter, the instance acquires all of the rollback segments named in this parameter, even if the number of rollback segments exceeds the minimum number required by the instance (calculated as TRANSACTIONS / TRANSACTIONS_PER_ROLLBACK_SEGMENT).

You cannot change the value of this parameter dynamically, but you can change its value and then restart the instance. Although this parameter usually specifies private rollback segments, it can also specify public rollback segments if they are not already in use.

To find the name, segment ID number, and status of each rollback segment in the database, query the data dictionary view DBA_ROLLBACK_SEGS.

When UNDO_MANAGEMENT is set to AUTO, ROLLBACK_SEGMENTS is ignored.

See Also:

- *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment
- "[DBA_ROLLBACK_SEGS](#)"

1.312 SEC_CASE_SENSITIVE_LOGON

SEC_CASE_SENSITIVE_LOGON enables or disables password case sensitivity in the database.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

Note:

The SEC_CASE_SENSITIVE_LOGON parameter is deprecated. It is retained for backward compatibility only. For more information about the deprecation of this parameter, see *Oracle Database Security Guide*.

Values

- true
Database logon passwords are case sensitive.
- false
Database logon passwords are not case sensitive.

 **See Also:**

Oracle Database Security Guide for more details about the SEC_CASE_SENSITIVE_LOGON parameter

1.313 SEC_MAX_FAILED_LOGIN_ATTEMPTS

`SEC_MAX_FAILED_LOGIN_ATTEMPTS` specifies the number of authentication attempts that can be made by a client on a connection to the server process.

Property	Description
Parameter type	Integer
Default value	3
Modifiable	No
Modifiable in a PDB	No
Range of values	An integer greater than or equal to 1.
Basic	No

These login attempts can be for multiple user accounts in the same connection. After the specified number of failure attempts, the connection will be automatically dropped by the server process, and the server process is terminated.

 **See Also:**

Oracle Database Security Guide for more information about this parameter

1.314 SEC_PROTOCOL_ERROR_FURTHER_ACTION

`SEC_PROTOCOL_ERROR_FURTHER_ACTION` specifies the further execution of a server process when receiving bad packets from a possibly malicious client.

Property	Description
Parameter type	String

Property	Description
Syntax	SEC_PROTOCOL_ERROR_FURTHER_ACTION = { CONTINUE (DELAY, <i>integer</i>) (DROP, <i>integer</i>) }
Default value	(DROP, 3)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- CONTINUE
The server process continues execution. The database server may be subject to a Denial of Service (DoS) if bad packets continue to be sent by a malicious client.
- (DELAY, *integer*)
The client experiences a delay of *integer* seconds before the server process accepts the next request from the same client connection. Malicious clients are prevented from excessive consumption of server resources while legitimate clients experience a degradation in performance but can continue to function.
- (DROP, *integer*)
The server forcefully terminates the client connection after *integer* cumulative bad packets. The server protects itself at the expense of the client (for example, a client transaction may be lost). The client may reconnect and attempt the same operation.

 **See Also:**

Oracle Database Security Guide for examples of using this parameter

1.315 SEC_PROTOCOL_ERROR_TRACE_ACTION

SEC_PROTOCOL_ERROR_TRACE_ACTION specifies the kind of logging the database server does when bad packets are received from a possibly malicious client, apart from the client receiving the error.

Property	Description
Parameter type	String
Syntax	SEC_PROTOCOL_ERROR_TRACE_ACTION = { NONE TRACE LOG ALERT }
Default value	TRACE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- **NONE**
The database server does not record it in any of the trace files.
- **TRACE**
A short entry is made in the alert log file and a detailed incident file is generated. The server trace file also will have an entry about the protocol error and incident file.
- **LOG**
The server trace file will have an entry about the protocol violation.
- **ALERT**
A short entry is made in the alert log file and in the server trace file about the protocol violation.

1.316 SEC_RETURN_SERVER_RELEASE_BANNER

SEC_RETURN_SERVER_RELEASE_BANNER specifies whether the server returns complete database software information to unauthenticated clients.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

Values

- **true**
Returns complete database version information to the client.
- **false**
Returns a generic version string to the client.

 **See Also:**

Oracle Call Interface Programmer's Guide and *Oracle Database Security Guide* for more information on controlling the display of the database version banner.

1.317 SERIAL_REUSE

SERIAL_REUSE specifies which types of cursors make use of the serial-reusable memory feature. This feature allocates private cursor memory in the SGA so that it can be reused (serially, not concurrently) by sessions executing the same cursor.

Property	Description
Parameter type	String
Syntax	SERIAL_REUSE = { disable all select dml plsql force }
Default value	disable
Modifiable	No
Modifiable in a PDB	No
Basic	No

 **Note:**

The `SERIAL_REUSE` parameter is deprecated. It is retained for backward compatibility only.

Values

- `disable`

Disables the option for all SQL statement types. This value overrides any other values included in the list.

- `all`

Enables the option for both DML and `SELECT` statements. Equivalent to setting `select`, `dml`, and `plsql`.

- `select`

Enables the option for `SELECT` statements.

- `dml`

Enables the option for DML statements.

- `plsql`

Currently has no effect (although PL/SQL packages do support the serial-reuse memory option using PL/SQL pragmas).

 **Note:**

If `CURSOR_SPACE_FOR_TIME` is set to `true`, then the value of `SERIAL_REUSE` is ignored and treated as if it were set to `disable`.

 **See Also:**

["CURSOR_SPACE_FOR_TIME"](#)

1.318 SERVICE_NAMES

SERVICE_NAMES specifies one or more names by which clients can connect to the instance.

Property	Description
Parameter type	String
Syntax	SERVICE_NAMES = <i>db_service_name</i> [, <i>db_service_name</i> [...]]
Default value	DB_UNIQUE_NAME.DB_DOMAIN if defined
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any ASCII string or comma-separated list of string names
Basic	No
Oracle RAC	Do not set the SERVICE_NAMES parameter for Oracle RAC environments. Instead, define services using Oracle Enterprise Manager and manage those services using Server Control (SRVCTL) utility.

The instance registers its service names with the listener. When a client requests a service, the listener determines which instances offer the requested service and routes the client to the appropriate instance.

You can specify multiple service names to distinguish among different uses of the same database. For example:

```
SERVICE_NAMES = sales.example.com, widgetsales.example.com
```

You can also use service names to identify a single service that is available from two different databases through the use of replication.

If you do not qualify the names in this parameter with a domain, Oracle qualifies them with the value of the DB_DOMAIN parameter. If DB_DOMAIN is not specified, then no domain will be applied to the non-qualified SERVICE_NAMES values.

When you specify additional service names with this parameter, the default service name is not overridden. The default service name plus the additional service names specified with this parameter are the service names that clients can use to connect to the database.

Note:

The SERVICE_NAMES initialization parameter is deprecated in Oracle Database 19c and may be unsupported in a future release.

Use of the SERVICE_NAMES parameter is no longer actively supported. It must not be used for high availability (HA) deployments and it is not supported for HA operations. This restriction includes FAN, load balancing, FAILOVER_TYPE, FAILOVER_RESTORE, SESSION_STATE_CONSISTENCY, and any other uses.

To manage your services, Oracle recommends that you instead use the SRVCTL command-line utility, the GDSCTL command-line utility, or the DBMS_SERVICE PL/SQL package.

 **See Also:**

- *Oracle Database Net Services Administrator's Guide* for more information on this parameter and its settings
- *Oracle Real Application Clusters Administration and Deployment Guide* for information about services administration in an Oracle RAC environment
- "[DB_DOMAIN](#)"

1.319 SESSION_CACHED_CURSORS

`SESSION_CACHED_CURSORS` specifies the number of session cursors to cache.

Property	Description
Parameter type	Integer
Default value	50
Modifiable	<code>ALTER SESSION, ALTER SYSTEM ... DEFERRED</code>
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No
Oracle RAC	Multiple instances can have different values.

Repeated parse calls of the same SQL (including recursive SQL) or PL/SQL statement cause the session cursor for that statement to be moved into the session cursor cache. Oracle uses a least recently used algorithm to remove entries in the session cursor cache to make room for new entries when needed.

 **See Also:**

- *Oracle Database Performance Tuning Guide* for information about enabling the session cursor cache

1.320 SESSION_EXIT_ON_PACKAGE_STATE_ERROR

Use `SESSION_EXIT_ON_PACKAGE_STATE_ERROR` to force a hard session exit when a session's state has been invalidated.

Exiting sessions after state invalidation avoids errors that can occur when applications mishandle an invalid state.

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>

Property	Description
Modifiable in a PDB	Yes
Range of values	TRUE FALSE
Basic	No
Oracle RAC	Different instances can use different values.

When a stateful PL/SQL package undergoes modification, the sessions that have an active instantiation of the package receive an ORA-4068 error when they attempt to run the package. When SESSION_EXIT_ON_PACKAGE_STATE_ERROR is set to TRUE, the session immediately exits instead of raising ORA-04068. This can be advantageous because many applications are better equipped to handle a session being discarded, and failing to catch errors related to session state, such as ORA-04068, can lead to silent data corruption.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.23.

1.321 SESSION_MAX_OPEN_FILES

SESSION_MAX_OPEN_FILES specifies the maximum number of BFILEs that can be opened in any session. Once this number is reached, subsequent attempts to open more files in the session by using DBMS_LOB.FILEOPEN() or OCILobFileOpen() will fail. The maximum value for this parameter depends on the equivalent parameter defined for the underlying operating system.

Property	Description
Parameter type	Integer
Default value	10
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to either 50 or the value of MAX_OPEN_FILES defined at the operating system level, whichever is less
Basic	No

 See Also:

- *Oracle Database SecureFiles and Large Objects Developer's Guide* for information on LOBs in general
- *Oracle Database SecureFiles and Large Objects Developer's Guide* for information on BFILEs
- *Oracle Database PL/SQL Packages and Types Reference* for information on the DBMS_LOB.FILEOPEN() procedure
- *Oracle Call Interface Programmer's Guide* for information on the OCILobFileOpen() procedure

1.322 SESSIONS

SESSIONS specifies the maximum number of sessions that can be created in the system.

Property	Description
Parameter type	Integer
Default value	Derived: (1.5 * PROCESSES) + 22
Modifiable	ALTER SYSTEM can be used in a PDB only to change the value of the SESSIONS parameter for that PDB. ALTER SYSTEM <i>cannot</i> be used to change the value of the SESSIONS parameter in a non-CDB or in a CDB\$ROOT.
Modifiable in a PDB	Yes
Range of values	1 to 2^{16} (which is 1 to 65536)
Basic	Yes

Because every login requires a session, this parameter effectively determines the maximum number of concurrent users in the system. You should always set this parameter explicitly to a value equivalent to your estimate of the maximum number of concurrent users, plus the number of background processes, plus approximately 10% for recursive sessions.

Oracle uses the default value of this parameter as its minimum. Values between 1 and the default do not trigger errors, but Oracle ignores them and uses the default instead.

The default values of the ENQUEUE_RESOURCES and TRANSACTIONS parameters are derived from SESSIONS. Therefore, if you increase the value of SESSIONS, you should consider whether to adjust the values of ENQUEUE_RESOURCES and TRANSACTIONS as well. (Note that ENQUEUE_RESOURCES is obsolete as of Oracle Database 10g release 2 (10.2).)

In a shared server environment, the value of PROCESSES can be quite small. Therefore, Oracle recommends that you adjust the value of SESSIONS to approximately $1.1 * \text{total number of connections}$.

For a CDB, the root container's SESSIONS parameter specifies the total number of sessions for the database.

The SESSIONS parameter for a PDB specifies the total number of sessions that can be used by that PDB. Its value defaults to the root container's SESSIONS value. If the PDB tries to use more

sessions than configured by its `SESSIONS` parameter, an ORA-00018 error message is generated. For PDBs, the `SESSIONS` parameter does not count recursive sessions and hence does not require the 10% adjustment.

The `SESSIONS` parameter for a PDB can only be modified by the PDB. It cannot be set higher than the CDB's `SESSIONS` value.

See Also:

- *Oracle Database Concepts* for more information on memory structures
- *Oracle Database Concepts* for more information on processes
- *Oracle Multitenant Administrator's Guide* for more information about CDBs and PDBs

1.323 SGA_MAX_SIZE

`SGA_MAX_SIZE` specifies the maximum size of the SGA for the lifetime of the instance.

Property	Description
Parameter type	Big integer
Syntax	<code>SGA_MAX_SIZE = integer [K M G]</code>
Default value	Initial size of SGA at startup, dependent on the sizes of different pools in the SGA, such as buffer cache, shared pool, large pool, and so on.
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to operating system-dependent

On 64-bit platforms and non-Windows 32-bit platforms, when either `MEMORY_TARGET` or `MEMORY_MAX_TARGET` is specified, the default value of `SGA_MAX_SIZE` is set to the larger of the two parameters. This causes more address space to be reserved for expansion of the SGA.

On Windows 32-bit platforms, the default value of `SGA_MAX_SIZE` is the largest of the following values:

- 60% of `MEMORY_TARGET`, if specified
- 60% of `MEMORY_MAX_TARGET`, if specified
- 25% of the total available virtual address space

See Also:

Oracle Database Performance Tuning Guide for more information about this parameter

1.324 SGA_MIN_SIZE

`SGA_MIN_SIZE` indicates a possible minimum value for SGA usage of a pluggable database (PDB).

Property	Description
Parameter type	Big integer
Syntax	<code>SGA_MIN_SIZE = integer [K M G]</code>
Default value	0
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	0 to 50% of <code>SGA_TARGET</code>
Basic	No
Oracle RAC	The same value must be used for all instances.

Setting this parameter at the CDB level has no effect.

Note:

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- A value for `SGA_TARGET` must be set at the CDB level.
If `SGA_TARGET` is not set at the CDB level, then setting `SGA_MIN_SIZE` in a PDB has no effect. You will not receive an error message, and the PDB's `SGA_MIN_SIZE` value will not be enforced.
- You must set the `SGA_MIN_SIZE` value to a value that meets these requirements:
 - In a PDB, to a value that is less than or equal to 50% of the value of `SGA_TARGET` in the PDB
 - In a PDB, to a value that is less than or equal to 50% of the value of `SGA_TARGET` at the CDB level
 - In a PDB, to a value that is less than the value of `SGA_MAX_SIZE` at the CDB level
 - Across all the open PDBs in a CDB, the sum of `SGA_MIN_SIZE` values must be less than or equal to 50% of the managed SGA total at the CDB level.
Managed SGA is `DB_CACHE_SIZE` plus `SHARED_POOL_SIZE`.

When you set `SGA_MIN_SIZE` in a PDB to a value that does not meet these requirements, you receive an error.

 See Also:

Oracle Multitenant Administrator's Guide for more information about the initialization parameters that control the memory usage of PDBs

1.325 SGA_TARGET

SGA_TARGET specifies the total size of all SGA components.

Property	Description
Parameter type	Big integer
Syntax	SGA_TARGET = <i>integer</i> [K M G]
Default value	0 (SGA autotuning is disabled for DEFERRED mode autotuning requests, but allowed for IMMEDIATE mode autotuning requests)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	64 MB to SGA_MAX_SIZE Note that if MEMORY_MAX_TARGET > 0, then the value of SGA_TARGET also cannot exceed the value of MEMORY_MAX_TARGET.
Basic	Yes

If SGA_TARGET is specified, then the following memory pools are automatically sized:

- Buffer cache (`DB_CACHE_SIZE`)
- Shared pool (`SHARED_POOL_SIZE`)
- Large pool (`LARGE_POOL_SIZE`)
- Java pool (`JAVA_POOL_SIZE`)
- Streams pool (`STREAMS_POOL_SIZE`)
- Data transfer cache (`DATA_TRANSFER_CACHE_SIZE`)

If these automatically tuned memory pools are set to nonzero values, then those values are used as minimum levels by Automatic Shared Memory Management. You would set minimum values if an application component needs a minimum amount of memory to function properly.

The following pools are manually sized components and are not affected by Automatic Shared Memory Management:

- Log buffer
- Other buffer caches, such as `KEEP`, `RECYCLE`, and other block sizes
- Fixed SGA and other internal allocations

The memory allocated to these pools is deducted from the total available for SGA_TARGET when Automatic Shared Memory Management computes the values of the automatically tuned memory pools.

In the **Default value** field, IMMEDIATE mode autotuning requests are necessary to avoid ORA-04031 errors. The DEFERRED and IMMEDIATE modes are reflected in the OPER_MODE column of the V\$MEMORY_RESIZE_OPS view.

If Automatic Memory Management is enabled (MEMORY_TARGET is set to a positive value) and SGA_TARGET is also set to a positive value, the SGA_TARGET value acts as the minimum value for the size of the SGA.

 **Note:**

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the maximum SGA that the PDB can use at any time. When this parameter is not set at the PDB level, the PDB has no limit for the amount of SGA it can use, other than the CDB's SGA size.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The NONCDB_COMPATIBLE initialization parameter must be set to FALSE at the CDB level (in the root of the CDB).
- The MEMORY_TARGET initialization parameter must not be set at the CDB level.
- You must set the SGA_TARGET initialization parameter at the CDB level.
- You must set SGA_TARGET in a PDB.

If you set a PDB's SGA_TARGET value and SGA_TARGET is not set at the CDB level, you will not receive an error message and the PDB's SGA_TARGET value will not be enforced.

- When setting SGA_TARGET in a PDB, the following requirements must be met:
 - The value of SGA_TARGET in the PDB must be less than or equal to the SGA_TARGET value at the CDB level.
 - The value of SGA_TARGET in the PDB must be less than or equal to the SGA_MAX_SIZE value at the CDB level.
 - The value of SGA_TARGET in the PDB must be twice the PDB's DB_CACHE_SIZE value, if the PDB's DB_CACHE_SIZE value is set.
 - The value of SGA_TARGET in the PDB must be twice the PDB's SHARED_POOL_SIZE value, if the PDB's SHARED_POOL_SIZE value is set.
 - The value of SGA_TARGET in the PDB must be twice the PDB's SGA_MIN_SIZE value, if the PDB's SGA_MIN_SIZE value is set.

When you set SGA_TARGET in a PDB to a value that does not meet these requirements, you receive an error.

1.326 SHADOW_CORE_DUMP

`SHADOW_CORE_DUMP` specifies whether Oracle includes the SGA in the core file for foreground (client) processes.

Property	Description
Parameter type	String
Syntax	<code>SHADOW_CORE_DUMP = { partial full none }</code>
Default value	<code>partial</code> . On Windows, the default value is <code>none</code> .
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No

Values

- `partial`
Oracle does not include the SGA in the core dump.
- `full`
Oracle includes the SGA in the core dump.
- `none`
No core files will be generated for foreground processes.

 See Also:["BACKGROUND_CORE_DUMP"](#)

1.327 SHARED_MEMORY_ADDRESS

`SHARED_MEMORY_ADDRESS` and `HI_SHARED_MEMORY_ADDRESS` specify the starting address at run time of the system global area (SGA). This parameter is ignored on the many platforms that specify the SGA's starting address at linktime.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Basic	No

Use this parameter to specify the entire address on 32-bit platforms and to specify the low-order 32 bits of a 64-bit address on 64-bit platforms. Use `HI_SHARED_MEMORY_ADDRESS` to specify the high-order 32 bits of a 64-bit address on 64-bit platforms. If both parameters are 0 or unspecified, the SGA address defaults to a platform-specific location.

 See Also:["HI_SHARED_MEMORY_ADDRESS"](#)

1.328 SHARED_POOL_RESERVED_SIZE

`SHARED_POOL_RESERVED_SIZE` specifies (in bytes) the shared pool space that is reserved for large contiguous requests for shared pool memory.

Property	Description
Parameter type	Big integer
Syntax	<code>SHARED_POOL_RESERVED_SIZE = integer [K M G]</code>
Default value	5% of the value of <code>SHARED_POOL_SIZE</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	Minimum: 5000 Maximum: half of the value of <code>SHARED_POOL_SIZE</code>
Basic	No

You can use this parameter to avoid performance degradation in the shared pool in situations where pool fragmentation forces Oracle to search for and free chunks of unused pool to satisfy the current request.

 **See Also:**

- "[SHARED_POOL_SIZE](#)"
- *Oracle Database Performance Tuning Guide* for information on sizing the shared pool

1.329 SHARED_POOL_SIZE

`SHARED_POOL_SIZE` specifies (in bytes) the size of the shared pool.

Property	Description
Parameter type	Big integer
Syntax	<code>SHARED_POOL_SIZE = integer [K M G]</code>
Default value	If <code>SGA_TARGET</code> is set: If the parameter is not specified, then the default is 0 (internally determined by the Oracle Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If <code>SGA_TARGET</code> is not set (32-bit platforms): 64 MB, rounded up to the nearest granule size. If <code>SGA_TARGET</code> is not set (64-bit platforms): 128 MB, rounded up to the nearest granule size. For considerations when dealing with database instances using Oracle ASM, see " SHARED_POOL_SIZE and Automatic Storage Management ".
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	Minimum: the granule size Maximum: operating system-dependent
Basic	No

The shared pool contains shared cursors, stored procedures, control structures, and other structures. If `SGA_TARGET` is not set, then Oracle also allocates parallel execution message buffers from the shared pool. Larger values improve performance in multiuser systems. Smaller values use less memory.

You can monitor utilization of the shared pool by querying the view `V$SGASTAT`.

 **Note:**

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it indicates a possible minimum value for the PDB usage of the memory pool.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- If the `SGA_TARGET` initialization parameter is set at the CDB level, then the following requirement must be met:
 - The value of `SHARED_POOL_SIZE` set in a PDB must be less than or equal to 50% of the `SGA_TARGET` value at the CDB level.
- If the `SGA_TARGET` initialization parameter is set at the PDB level, then the following requirement must be met:
 - The value of `SHARED_POOL_SIZE` set in a PDB must be less than or equal to 50% of the `SGA_TARGET` value at the PDB level.
- If the `SGA_TARGET` initialization parameter is not set, but the `SHARED_POOL_SIZE` initialization parameter is set at the CDB level, then the following requirement must be met:
 - The value of `SHARED_POOL_SIZE` set in a PDB must be less than or equal to 50% of the `SHARED_POOL_SIZE` value at the CDB level.

When you set `SHARED_POOL_SIZE` in a PDB to a value that does not meet these requirements, you receive an error.

 **See Also:**

- "[V\\$SGASTAT](#)"
- *Oracle Multitenant Administrator's Guide* for more information about the initialization parameters that control the memory usage of PDBs
- *Oracle Database Performance Tuning Guide* for more information on setting this parameter

SHARED_POOL_SIZE and Automatic Storage Management

On a database instance using Oracle Automatic Storage Management (Oracle ASM), additional memory is required to store extent maps. As a general guideline, you can aggregate the values from the following queries to obtain current database storage size that is either already on Oracle ASM or will be stored in Oracle ASM. Then determine the redundancy type that is used (or will be used), and calculate the value for `SHARED_POOL_SIZE`, using the aggregated value as input.

```

SELECT SUM(BYTES)/(1024*1024*1024) FROM V$DATAFILE;
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$LOGFILE a, V$LOG b
WHERE a.group#=b.group#;
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$TEMPFILE WHERE
status='ONLINE';

```

Additionally, keep the following guidelines in mind:

- For disk groups using external redundancy:
(Every 100G of space needs 1M of extra shared pool) + 2M
- For disk groups using normal redundancy:
(Every 50G of space needs 1M of extra shared pool) + 4M
- For disk groups using high redundancy:
(Every 33G of space needs 1M of extra shared pool) + 6M

1.330 SHARED_SERVER_SESSIONS

`SHARED_SERVER_SESSIONS` specifies the total number of shared server sessions to allow.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	If <code>SHARED_SERVER_SESSIONS</code> is specified, then it should be less than <code>SESSIONS</code> . If <code>SHARED_SERVER_SESSIONS</code> is not specified, then a shared server session may be created as long as there is a free session slot.
Basic	No

Setting this parameter enables you to reserve user sessions for dedicated servers.

See Also:

Oracle Database Concepts for more information on sessions

1.331 SHARED_SERVERS

`SHARED_SERVERS` specifies the number of server processes that you want to create when an instance is started. If system load decreases, then this minimum number of servers is maintained. Therefore, you should take care not to set `SHARED_SERVERS` too high at system startup.

Property	Description
Parameter type	Integer

Property	Description
Default value	0, meaning that shared server is not on. If you are using shared server architecture or if the DISPATCHERS parameter is set such that the total number of dispatchers is more than 0, then the default value is 1.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	The value of this parameter should be less than MAX_SHARED_SERVERS. If it is greater than or equal to MAX_SHARED_SERVERS, then the number of servers will not be self-tuned but will remain constant, as specified by SHARED_SERVERS.
Basic	Yes

Starting with Oracle Database 12c Release 1 (12.1.0.2), the SHARED_SERVERS parameter can be set on PDBs. However, unlike most other parameters that can be set on a PDB, this parameter can only be used within a PDB to enable or disable use of shared servers for that PDB. Therefore, in a PDB, the DBA can either set SHARED_SERVERS to 0 to disable use of shared servers for that PDB or use ALTER SYSTEM RESET SHARED_SERVERS to re-enable shared servers for the PDB. The configuration of shared servers for the CDB can only be done in the root.

See Also:

- "[DISPATCHERS](#)"
- "[MAX_SHARED_SERVERS](#)"
- *Oracle Database Administrator's Guide* for more information on setting this parameter

1.332 SHRD_DUPL_TABLE_REFRESH_RATE

SHRD_DUPL_TABLE_REFRESH_RATE displays the duplicated table refresh rate (in seconds).

Property	Description
Parameter type	Integer
Default value	60
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	20 to $2^{31} - 1$
Basic	No
Oracle RAC	All instances should use the same instance.

You can change the value of this parameter to change the duplicated table refresh rate.

A duplicated table is a table that has the same contents on all shards in a sharded database. Duplicated tables are implemented using materialized views that are refreshed at a certain rate.

 **See Also:**

- *Using Oracle Sharding* for an introduction to sharding
- *Using Oracle Sharding* for more information about duplicated tables

1.333 SKIP_UNUSABLE_INDEXES

SKIP_UNUSABLE_INDEXES enables or disables the use and reporting of tables with unusable indexes or index partitions.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

If a SQL statement uses a hint that forces the usage of an unusable index, then this hint takes precedence over initialization parameter settings, including SKIP_UNUSABLE_INDEXES. If the optimizer chooses an unusable index, then an ORA-01502 error will result. (See *Oracle Database Administrator's Guide* for more information about using hints.)

Values

- true

Disables error reporting of indexes and index partitions marked UNUSABLE. This setting allows all operations (inserts, deletes, updates, and selects) on tables with unusable indexes or index partitions.

 **Note:**

If an index is used to enforce a UNIQUE constraint on a table, then allowing insert and update operations on the table might violate the constraint. Therefore, this setting does not disable error reporting for unusable indexes that are unique.

- false

Enables error reporting of indexes marked UNUSABLE. This setting does not allow inserts, deletes, and updates on tables with unusable indexes or index partitions.

 See Also:

Oracle Database SQL Language Reference for more information about hints

1.334 SMTP_OUT_SERVER

SMTP_OUT_SERVER specifies the SMTP host and port to which UTL_MAIL delivers out-bound E-mail.

Property	Description
Parameter type	String
Syntax	<code>SMTP_OUT_SERVER = server_clause [, server_clause] ...</code>
Syntax	<code>server_clause ::= host_name[:port]</code>
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Multiple servers may be specified, separated by commas.

If the first server in the list is unavailable, then UTL_MAIL tries the second server, and so on.

If SMTP_OUT_SERVER is not specified, then the SMTP server name defaults to the value of DB_DOMAIN, the port number defaults to 25, and the SMTP domain defaults to the suffix of DB_DOMAIN.

 See Also:

Oracle Database PL/SQL Packages and Types Reference for information on the UTL_MAIL package

1.335 SORT_AREA_RETAINED_SIZE

SORT_AREA_RETAINED_SIZE specifies (in bytes) the maximum amount of the user global area (UGA) memory retained after a sort run completes. The retained size controls the size of the read buffer, which Oracle uses to maintain a portion of the sort in memory. This memory is released back to the UGA, not to the operating system, after the last row is fetched from the sort space.

Property	Description
Parameter type	Integer
Default value	Derived from SORT_AREA_SIZE
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED

Property	Description
Modifiable in a PDB	Yes
Range of values	From the value equivalent of two database blocks to the value of SORT_AREA_SIZE
Basic	No

 **Note:**

Oracle does not recommend using the SORT_AREA_RETAINED_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA_AGGREGATE_TARGET instead. SORT_AREA_RETAINED_SIZE is retained for backward compatibility.

Oracle may allocate multiple sort spaces of this size for each query. Usually, only one or two sorts occur simultaneously, even for complex queries. In some cases, however, additional concurrent sorts are required, and each sort keeps its own memory area. If the shared server is used, allocation is to the SGA until the value in SORT_AREA_RETAINED_SIZE is reached. The difference between SORT_AREA_RETAINED_SIZE and SORT_AREA_SIZE is allocated to the PGA.

 **Note:**

The default value as reflected in the V\$PARAMETER dynamic performance view is 0. However, if you do not explicitly set this parameter, Oracle actually uses the value of the SORT_AREA_SIZE parameter.

 **See Also:**

- "[SORT_AREA_SIZE](#)"
- *Oracle Database Performance Tuning Guide* for information on setting the values of this parameter and the SORT_AREA_SIZE parameter to tune sort operations using shared servers

1.336 SORT_AREA_SIZE

SORT_AREA_SIZE specifies (in bytes) the maximum amount of memory Oracle will use for a sort.

Property	Description
Parameter type	Integer
Default value	65536
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes

Property	Description
Range of values	Minimum: the value equivalent of six database blocks Maximum: operating system-dependent
Basic	No

 **Note:**

Oracle does not recommend using the `SORT_AREA_SIZE` parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting `PGA_AGGREGATE_TARGET` instead. `SORT_AREA_SIZE` is retained for backward compatibility.

After the sort is complete, but before the rows are returned, Oracle releases all of the memory allocated for the sort, except the amount specified by the `SORT_AREA_RETAINED_SIZE` parameter. After the last row is returned, Oracle releases the remainder of the memory.

Increasing `SORT_AREA_SIZE` size improves the efficiency of large sorts.

Each sort in a query can consume memory up to the amount specified by `SORT_AREA_SIZE`, and there can be multiple sorts in a query. Also, if a query is executed in parallel, each PQ slave can consume memory up to the amount specified by `SORT_AREA_SIZE` for each sort it does.

`SORT_AREA_SIZE` is also used for inserts and updates to bitmap indexes. Setting this value appropriately results in a bitmap segment being updated only once for each DML operation, even if more than one row in that segment changes.

Larger values of `SORT_AREA_SIZE` permit more sorts to be performed in memory. If more space is required to complete the sort than will fit into the memory provided, then temporary segments on disk are used to hold the intermediate sort runs.

The default is adequate for most OLTP operations. You might want to adjust this parameter for decision support systems, batch jobs, or large `CREATE INDEX` operations.

 **See Also:**

- *Oracle Database Concepts* for information on sort areas
- Your operating system-specific Oracle documentation for the default value on your system
- "["SORT_AREA_RETAINED_SIZE"](#)"

1.337 SPATIAL_VECTOR_ACCELERATION

`SPATIAL_VECTOR_ACCELERATION` enables or disables the spatial vector acceleration.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances should use the same value

Setting this parameter to true improves spatial vector query performance.

 **Note:**

This initialization parameter is only available to the Oracle Spatial and Graph option.

 **See Also:**

Oracle Spatial and Graph Developer's Guide for more information about this parameter

1.338 SPFILE

The value of this parameter is the name of the current server parameter file (SPFILE) in use.

Property	Description
Parameter type	String
Syntax	SPFILE = spfile_name
Default value	ORACLE_HOME/dbs/spfile.ora
Modifiable	No
Modifiable in a PDB	No
Range of values	Any valid SPFILE
Basic	No
Oracle RAC	Multiple instances must have the same value.

This parameter can be defined in a client side PFILE to indicate the name of the server parameter file to use.

When the default server parameter file is used by the server, the value of SPFILE is internally set by the server.

The SPFILE resides in the ORACLE_HOME/dbs directory; however, users can place it anywhere on their system as long as it is specified in an initialization parameter file.

 **See Also:**

Oracle Database Administrator's Guide for more information about creating the server parameter file

1.339 SQL_TRACE

`SQL_TRACE` enables or disables the SQL trace facility.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Setting this parameter to `true` provides information on tuning that you can use to improve performance.

 **Note:**

Using this initialization parameter to enable the SQL trace facility for the entire instance can have a severe performance impact. Enable the facility for specific sessions using the `ALTER SESSION` statement. If you must enable the facility on an entire production environment, then you can minimize performance impact by:

- Maintaining at least 25% idle CPU capacity
- Maintaining adequate disk space for the `USER_DUMP_DEST` location
- Striping disk space over sufficient disks

 **Note:**

The `SQL_TRACE` parameter is deprecated. Oracle recommends that you use the `DBMS_MONITOR` and `DBMS_SESSION` packages instead. `SQL_TRACE` is retained for backward compatibility only.

 See Also:

- "[USER_DUMP_DEST](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_MONITOR` package
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_SESSION` package
- *Oracle Database Performance Tuning Guide* for more information about performance diagnostic tools

1.340 SQL92_SECURITY

`SQL92_SECURITY` specifies whether users must have been granted the `SELECT` privilege on a table to execute an `UPDATE` or `DELETE` statement that references table column values in a `WHERE` or `SET` clause.

Property	Description
Parameter type	Boolean
Default value	<code>true</code>
Modifiable	No
Modifiable in a PDB	Yes
Range of values	<code>true</code> <code>false</code>
Basic	No

The SQL standard specifies that security administrators should be able to require that users have `SELECT` privilege on a table when executing an `UPDATE` or `DELETE` statement that references table column values in a `WHERE` or `SET` clause.

Values

- `true`

The user must have `SELECT` privilege on a column to reference it in the `WHERE` clause of a `DELETE` or `UPDATE` statement, on the right hand side of an assignment in the `SET` clause of an `UPDATE` statement.

- `false`

A user with `DELETE` privilege on the target table of a `DELETE` statement may reference any column of that target table in the `WHERE` clause. A user with `UPDATE` privilege on the target table of an `UPDATE` statement may reference any column of that target in the `WHERE` clause or on the right hand side of any assignment in the `SET` clause of the `UPDATE` statement.

1.341 SQLTUNE_CATEGORY

`SQLTUNE_CATEGORY` specifies the category name for use by sessions to qualify the lookup of SQL profiles during SQL compilation.

Property	Description
Parameter type	String
Syntax	<code>SQLTUNE_CATEGORY = category_name</code>
Default value	DEFAULT
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for information on the `DBMS_SQLTUNE` package

1.342 STANDBY_DB_PRESERVE_STATES

`STANDBY_DB_PRESERVE_STATES` controls whether user sessions, buffers, and other internal states of the instance are retained when a readable physical standby database is converted to a primary database. This parameter is meaningful on a physical standby database that is open in real-time query mode.

Property	Description
Parameter type	String
Syntax	<code>STANDBY_DB_PRESERVE_STATES = { NONE SESSION BUFFER ALL }</code>
Default value	NONE
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

Values

- **NONE**
Nothing is retained. All sessions are disconnected and all buffers are flushed. This is the default value.
- **SESSION**
User sessions are retained. When the database is reopened as the primary, the retained sessions resume their operations as if nothing had happened. If the database (or an individual PDB) is not opened in the primary role, the sessions will be terminated.
- **BUFFER**
All current buffers are retained. Media recovery buffers are converted to current buffers and retained, if possible. When the database is reopened as the primary, the retained buffers are available for use, which may enable queries to run faster during the first few

minutes of operation. If the database (or an individual PDB) is not opened in the primary role, the buffers will be flushed.

- ALL

This value is equivalent to setting both the SESSION and BUFFER values.

 **Note:**

Sessions that have long running queries or are using database links will not be retained regardless of the setting of this parameter.

 **See Also:**

- *Oracle Data Guard Concepts and Administration* for more information about real-time query mode
- *Oracle Data Guard Concepts and Administration* for more information about preserving user sessions and buffers when a standby database is converted to a primary database

1.343 STANDBY_FILE_MANAGEMENT

STANDBY_FILE_MANAGEMENT enables or disables automatic standby file management.

Property	Description
Parameter type	String
Syntax	STANDBY_FILE_MANAGEMENT = { MANUAL AUTO }
Default value	MANUAL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

When automatic standby file management is enabled, operating system file additions and deletions on the primary database are replicated on the standby database.

STANDBY_FILE_MANAGEMENT is only applicable to physical standby databases.

Values

- MANUAL
 - Disables automatic standby file management
- AUTO
 - Enables automatic standby file management

Setting STANDBY_FILE_MANAGEMENT to AUTO causes Oracle to automatically create files on the standby database and, in some cases, overwrite existing files. Care must be taken when

setting STANDBY_FILE_MANAGEMENT and DB_FILE_NAME_CONVERT so that existing standby files will not be accidentally overwritten.

If the standby database is on the same system as the primary database, then ensure that the primary and standby systems do not point to the same files.

 **See Also:**

Oracle Data Guard Concepts and Administration for more information about setting this parameter

1.344 STANDBY_PDB_SOURCE_FILE_DBLINK

STANDBY_PDB_SOURCE_FILE_DBLINK specifies the name of a database link that will be used to try to copy the datafiles from a source PDB to which the database link points.

Property	Description
Parameter type	String
Syntax	STANDBY_PDB_SOURCE_FILE_DBLINK = database-link
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	Different values can be set on different instances.

In Oracle Database releases prior to Oracle Database 18c, if a PDB was created by cloning a PDB from the same CDB (a local clone), on a standby the datafiles were automatically copied from the source PDB. However, when the PDB was created as a remote clone, the user was responsible for copying datafiles to the Oracle Managed Files (OMF) location on the standby.

To address that deficiency, the STANDBY_PDB_SOURCE_FILE_DBLINK parameter specifies the name of a database link that will be used to try to copy the datafiles from a source PDB to which the database link points. The file copy is done only if the database link points to the source PDB and the source PDB is open in read only mode. Otherwise, the user is still responsible for copying datafiles to the OMF location on the standby.

This parameter can also be used to try to copy files in cases where the source PDB's files are not present on the standby. For example, the source PDB could have been created with standbys=NONE. In this case, the STANDBY_PDB_SOURCE_FILE_DBLINK parameter can enable the standby to copy files from the primary if there is a database link set up to the primary.

 **See Also:**

"STANDBY_PDB_SOURCE_FILE_DIRECTORY"

1.345 STANDBY_PDB_SOURCE_FILE_DIRECTORY

`STANDBY_PDB_SOURCE_FILE_DIRECTORY` specifies a directory location on the standby where source datafiles for instantiating the standby PDB may be found.

Property	Description
Parameter type	String
Syntax	<code>STANDBY_PDB_SOURCE_FILE_DIRECTORY = datafiles-directory</code>
Default value	NULL
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Basic	No
Oracle RAC	Different values can be set on different instances.

In Oracle Database releases prior to Oracle Database 18c, if a PDB was plugged into a CDB, on a standby, the datafiles were expected to be in PDB's Oracle Managed Files (OMF) directory location. If they were not found there, the user had to copy the datafiles to the OMF location and then restart redo apply on the standby.

To address that deficiency, the `STANDBY_PDB_SOURCE_FILE_DIRECTORY` specifies a directory location on the standby where source datafiles for instantiating the PDB may be found. If the datafiles are not found there, an attempt will be made to locate them in the OMF location on the standby.

This parameter can also be used to try to copy files in cases where the source PDB's files are not present on the standby. For example, the source PDB could have been created with `standbys=NONE`. In this case, the `STANDBY_PDB_SOURCE_FILE_DIRECTORY` parameter can enable the standby to copy files from a location if they are made available.

 **See Also:**

["STANDBY_PDB_SOURCE_FILE_DBLINK"](#)

1.346 STAR_TRANSFORMATION_ENABLED

`STAR_TRANSFORMATION_ENABLED` determines whether a cost-based query transformation will be applied to star queries.

Property	Description
Parameter type	String
Syntax	<code>STAR_TRANSFORMATION_ENABLED = { FALSE TRUE TEMP_DISABLE }</code>
Default value	FALSE
Modifiable	<code>ALTER SESSION, ALTER SYSTEM</code>
Modifiable in a PDB	Yes

Property	Description
Basic	Yes

Values

- FALSE
The transformation will not be applied.
- TRUE
The optimizer will consider performing a cost-based query transformation on the star query.
- TEMP_DISABLE
The optimizer will consider performing a cost-based query transformation on the star query but will not use temporary tables in the star transformation.

 **See Also:**

- *Oracle Database SQL Tuning Guide* for information on enabling star queries

1.347 STATISTICS_LEVEL

`STATISTICS_LEVEL` specifies the level of collection for database and operating system statistics. The Oracle Database collects these statistics for a variety of purposes, including making self-management decisions.

Property	Description
Parameter type	String
Syntax	<code>STATISTICS_LEVEL = { ALL TYPICAL BASIC }</code>
Default value	TYPICAL
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

The default setting of `TYPICAL` ensures collection of all major statistics required for database self-management functionality and provides best overall performance. The default value should be adequate for most environments.

When the `STATISTICS_LEVEL` parameter is set to `ALL`, additional statistics are added to the set of statistics collected with the `TYPICAL` setting. The additional statistics are timed operating system statistics and plan execution statistics.

Setting the `STATISTICS_LEVEL` parameter to `BASIC` disables the collection of many of the important statistics required by Oracle Database features and functionality, including:

- Automatic Workload Repository (AWR) Snapshots
- Automatic Database Diagnostic Monitor (ADDM)

- All server-generated alerts
- Automatic SGA Memory Management
- Automatic optimizer statistics collection
- Object level statistics
- End to End Application Tracing (V\$CLIENT_STATS)
- Database time distribution statistics (V\$SESS_TIME_MODEL and V\$SYS_TIME_MODEL)
- Service level statistics
- Buffer cache advisory
- MTTR advisory
- Shared pool sizing advisory
- Segment level statistics
- PGA Target advisory
- Timed statistics
- Monitoring of statistics

 **Note:**

Oracle strongly recommends that you do not disable these important features and functionality.

When the STATISTICS_LEVEL parameter is modified by ALTER SYSTEM, all advisories or statistics are dynamically turned on or off, depending on the new value of STATISTICS_LEVEL. When modified by ALTER SESSION, the following advisories or statistics are turned on or off in the local session only. Their systemwide state is not changed:

- Timed statistics
- Timed operating system statistics
- Plan execution statistics

The V\$STATISTICS_LEVEL view displays information about the status of the statistics or advisories controlled by the STATISTICS_LEVEL parameter. See "[V\\$STATISTICS_LEVEL](#)".

 **See Also:**

Oracle Database Performance Tuning Guide for more information about this parameter

1.348 STREAMS_POOL_SIZE

The STREAMS_POOL_SIZE value helps determine the size of the Streams pool.

Property	Description
Parameter type	Big integer
Syntax	<code>STREAMS_POOL_SIZE = integer [K M G]</code>
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are rounded up to the nearest granule size) Maximum: operating system-dependent
Basic	No

Oracle's Automatic Shared Memory Management feature manages the size of the Streams pool when the `SGA_TARGET` initialization parameter is set to a nonzero value. If the `STREAMS_POOL_SIZE` initialization parameter also is set to a nonzero value, then Automatic Shared Memory Management uses this value as a minimum for the Streams pool.

If `SGA_TARGET` is set to a nonzero value and `STREAMS_POOL_SIZE` is not specified or is set to a null value, Automatic Shared Memory Management uses 0 (zero) bytes as a minimum for the Streams pool.

If the `STREAMS_POOL_SIZE` initialization parameter is set to a nonzero value, and the `SGA_TARGET` parameter is set to 0 (zero), then the Streams pool size is the value specified by the `STREAMS_POOL_SIZE` parameter, in bytes.

If both the `STREAMS_POOL_SIZE` and the `SGA_TARGET` initialization parameters are set to 0 (zero), then, by default, on the first request for Streams pool memory in a database, an amount of memory equal to 10% of the shared pool is transferred from the buffer cache to the Streams pool. Products and features that use the Streams pool include Oracle GoldenGate, XStream, Oracle Advanced Queuing, and Oracle Data Pump.

The Streams pool is a shared resource, and the amount of memory a process can use from the Streams pool is determined by the application. The capture or apply parameter `MAX_SGA_SIZE` can be controlled for Oracle GoldenGate or XStream. For Oracle Advanced Queuing, use the procedures in the `dbms_aqadm` package to control the amount of Streams Pool needed.

See Also:

- *Oracle Database XStream Guide* for information on configuring the Streams pool for an XStream Out configuration
- *Oracle Database XStream Guide* for information on configuring the Streams pool for an XStream In configuration
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `dbms_aqadm` package

1.349 TABLESPACE_ENCRYPTION

TABLESPACE_ENCRYPTION specifies the tablespace encryption policy for a database.

Property	Description
Parameter type	String
Syntax	TABLESPACE_ENCRYPTION = { AUTO_ENABLE MANUAL_ENABLE DECRYPT_ONLY }
Default value	Cloud databases: AUTO_ENABLE On-premises databases: MANUAL_ENABLE
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value should be specified for all instances.

This parameter is introduced in Oracle Database 19c, Release Update 19.16, as an alternative to the ENCRYPT_NEW_TABLESPACES parameter. Similar to ENCRYPT_NEW_TABLESPACES, this parameter allows you to specify whether to encrypt newly created user tablespaces. However, the TABLESPACE_ENCRYPTION parameter offers an additional benefit in Data Guard environments. In previous releases, tablespaces in Data Guard environments were required to use the same encryption policy on the primary and standby databases. For example, if all tablespaces were encrypted on the primary database, then all tablespaces were required to be encrypted on the standby database. The TABLESPACE_ENCRYPTION parameter eliminates this requirement and allows you to use different tablespace encryption policies on primary and standby databases. See *Oracle Database Advanced Security Guide* for more information.

If the behavior specified by the ENCRYPT_NEW_TABLESPACES setting conflicts with the behavior specified by the TABLESPACE_ENCRYPTION setting, then the TABLESPACE_ENCRYPTION behavior takes precedence.

Values:

- AUTO_ENABLE

Use this setting if you would like to encrypt all tablespaces in the database.

All newly created tablespaces will be encrypted. In the CREATE TABLESPACE statement, if you specify the DECRYPT clause, it will be ignored and the tablespace will be encrypted. If you specify the ENCRYPTION USING *algorithm* ENCRYPT clause, the specified algorithm will be used to encrypt the tablespace. If you specify the ENCRYPTION ENCRYPT clause and do not specify an algorithm, the tablespace will be encrypted with Advanced Encryption Standard 128 (AES128).

If an existing tablespace is unencrypted, the database writes a warning to the alert log. See *Oracle Database Advanced Security Guide* for information about encrypting existing tablespaces.

If you attempt to decrypt an existing encrypted tablespace, an error will occur.

This is the default setting for Cloud databases. Moreover, because all tablespaces must be encrypted in the Cloud, setting this parameter to MANUAL_ENABLE or DECRYPT_ONLY for a Cloud database will be ignored and the Cloud database will behave as if the setting is AUTO_ENABLE.

- **MANUAL_ENABLE**

Use this setting if you would like to manually control which tablespaces are encrypted.

To encrypt a tablespace, specify the `ENCRYPTION ... ENCRYPT` clause in the `CREATE TABLESPACE` statement. If you specify the `ENCRYPTION USING algorithm ENCRYPT` clause, the specified algorithm will be used to encrypt the tablespace. If you specify the `ENCRYPTION ENCRYPT` clause and do not specify an algorithm, the tablespace will be encrypted with `AES128`.

This is the default setting for on-premises databases. This setting is ignored for Cloud databases.

- **DECRYPT_ONLY**

Use this setting if you do not want any encrypted tablespaces in the database.

All newly created tablespaces must be unencrypted. If you specify the `ENCRYPT` clause in the `CREATE TABLESPACE` statement, an error will occur.

If an existing tablespace is encrypted, the database writes a warning to the alert log. See *Oracle Database Advanced Security Guide* for information about decrypting existing tablespaces.

If you attempt to encrypt an existing unencrypted tablespace, an error will occur.

This setting is valid only for on-premises databases. This setting is ignored for Cloud databases.

 **Note:**

This parameter is available starting with Oracle Database 19c, Release Update 19.16.

 **See Also:**

["ENCRYPT_NEW_TABLESPACES"](#)

1.350 TAPE_ASYNCNCH_IO

`TAPE_ASYNCNCH_IO` controls whether I/O to sequential devices (for example, backup or restore of Oracle data to or from tape) is asynchronous—that is, whether parallel server processes can overlap I/O requests with CPU processing during table scans.

Property	Description
Parameter type	Boolean
Default value	<code>true</code>
Modifiable	No
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No

If your platform supports asynchronous I/O to sequential devices, Oracle recommends that you leave this parameter set to its default. However, if the asynchronous I/O implementation is not stable, you can set `TAPE_ASYNCH_IO` to false to disable asynchronous I/O. If your platform does not support asynchronous I/O to sequential devices, this parameter has no effect.

See Also:

Oracle Database VLDB and Partitioning Guide for more information about this parameter

1.351 TDE_CONFIGURATION

Use `TDE_CONFIGURATION` to set the type of keystore that is used for Transparent Data Encryption (TDE) by the root container; united PDBs inherit the value from the root container, isolated PDBs can be set individually.

Before Oracle Database 18c, each PDB stored its separate encryption keys in the CDB's keystore (united mode). Starting with Oracle Database 18c Cloud environments, a PDB can optionally store its encryption keys in a separate keystore (isolated mode), thus allowing protection by a separate keystore password. Starting with Oracle Database 19c, Release Update 19.14, isolated mode is available for all Oracle database deployments, including on-premises databases, legacy deployments, and engineered systems.

The `WALLET_ROOT` initialization parameter must be set in order for `TDE_CONFIGURATION` to take effect.

Property	Description
Parameter type	String
Syntax	<code>TDE_CONFIGURATION = "{ KEYSTORE_CONFIGURATION = value [; CONTAINER = pdb-name] }"</code>
Syntax	value ::= { FILE OKV HSM FILE OKV FILE HSM OKV FILE HSM FILE }
	Notes:
	<ul style="list-style-type: none"> The <code>KEYSTORE_CONFIGURATION</code> value is case-insensitive. For example, you can specify <code>FILE</code> or <code>file</code>. <code>FILE OKV</code>, <code>FILE HSM</code>, <code>OKV FILE</code>, and <code>HSM FILE</code> are values. The vertical bars they contain are not separators in the syntax shown above.
Default value	None
Modifiable	<code>ALTER SYSTEM¹</code>
Modifiable in a PDB	Yes

Property	Description
Basic	No
Oracle RAC	The same value must be specified on all instances using the ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=value" SCOPE=BOTH SID='*' ; statement.

- ¹ In some cases, when this parameter is set using ALTER SYSTEM SCOPE=SPFILE, the SHOW PARAMETER TDE_CONFIGURATION statement does not show the correct value. However, the value set for TDE_CONFIGURATION can be derived from information shown in the V\$ENCRYPTION_WALLET view.

The following attributes can be specified:

- KEYSTORE_CONFIGURATION attribute. This attribute is required. The value specified with this attribute configures the keystore type for the specified PDB. The following values can be specified for this attribute:
 - FILE: This value configures a wallet keystore.
 - OKV: This value configures the database to use Oracle Key Vault (OKV) for TDE key management.

This value is also used to disable an auto-login OKV configuration and cause any existing `cwallet.sso` files, containing the credentials to the OKV server as the `OKV_PASSWORD` client secret, to be ignored.

- HSM: This value configures a hardware security module (HSM).

Oracle does not support the use of HSMs for TDE key management. For more information, see My Oracle Support note 2310066.1 "Oracle TDE Support With 3rd Party HSM Vendors" at the following URL: <https://support.oracle.com/rs?type=doc&id=2310066.1>

- FILE|OKV: This value configures a reverse migration from OKV to a wallet keystore.
- FILE|HSM: This value configures a reverse migration from a HSM to a wallet keystore.
- OKV|FILE: This value configures a migration from a wallet to OKV.

This value is also used in an auto-login OKV configuration, because in this configuration a `cwallet.sso` file, containing the `OKV_PASSWORD` client secret, must be used by the Oracle server to obtain the credentials to log in to the OKV server.

- HSM|FILE: This value configures a migration from a wallet to a HSM.

Oracle does not support the use of HSMs for TDE key management. For more information, see My Oracle Support note 2310066.1 "Oracle TDE Support With 3rd Party HSM Vendors" at the following URL: <https://support.oracle.com/rs?type=doc&id=2310066.1>

Some of the KEYSTORE_CONFIGURATION attribute values consist of a single word, for example, the FILE, OKV, and HSM values. The other KEYSTORE_CONFIGURATION attribute values consist of two words separated by the ":" character that is a required part of the value's syntax, for example, the FILE|OKV, FILE|HSM, OKV|FILE, and HSM|FILE values.

In Oracle Database releases prior to Oracle Database 18.1, keystore types were configured in `sqlnet.ora` using the `METHOD` attribute of the `SQLNET.ENCRYPTION_WALLET_LOCATION` parameter.

- CONTAINER attribute: This optional attribute can be used only when setting the parameter in the `CDB$ROOT` of a CDB. The `CONTAINER` attribute can be specified only when the `CDB$ROOT`

is in MOUNTED state. With this attribute, you must specify the name of the PDB for which you are setting the parameter. When you specify the CONTAINER attribute, you must use a semicolon ";" as the separation character between the KEYSTORE_CONFIGURATION and CONTAINER attributes.

Examples

The following statement configures a wallet keystore for the open PDB from which the statement is issued:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=FILE" SCOPE=BOTH SID='*';
```

The following statement configures an OKV keystore for the PDB in MOUNTED state from which the statement is issued:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=OKV" SCOPE=SPFILE SID='*';
```

The following statement configures an isolated standby PDB for an auto-open Oracle Key Vault setup; standby PDBs are MOUNTED, so the command must be executed in the standby root CDB:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=OKV|FILE;  
CONTAINER=FINANCIALS" SCOPE=both SID='*';
```

- *Oracle Database Advanced Security Guide* for information about managing keystores and encryption keys in isolated mode

1.352 TEMP_UNDO_ENABLED

`TEMP_UNDO_ENABLED` determines whether transactions within a particular session can have a temporary undo log.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Each session of each instance can have its own value or not set any value at all

The default choice for database transactions has been to have a single undo log per transaction. This parameter, at the session level / system level scope, lets a transaction split its undo log into temporary undo log (for changes on temporary objects) and permanent undo log (for changes on persistent objects).

By splitting the undo stream of a transaction into two streams (temporary and permanent), a database can provide separate storage and retention model for these. This results in overall reduction in the size of undo log and redo log in the database.

If database applications make use of temporary objects (using global temporary tables or temporary table transformations), it is advisable to set this parameter's value to `true`.

When `TEMP_UNDO_ENABLED` is set to `true` and the `COMPATIBLE` initialization parameter is set to `12.0.0`, this feature is enabled. The temporary undo feature is enabled for the session in which it is set. Setting it across the system will affect all existing and upcoming sessions. If the value is set in the `init.ora` file, all upcoming sessions will inherit this value unless overwritten by an explicit `ALTER SESSION` or `ALTER SYSTEM` statement. All undo for operations on temporary objects is deemed temporary.

If `TEMP_UNDO_ENABLED` is not set to `true`, existing applications that make use of temporary objects run as is without any change.

Once the value of the parameter is set, it cannot be changed for the lifetime of the session. If the session has temporary objects using temporary undo, the parameter cannot be disabled for the session. Similarly, if the session already has temporary objects using regular undo, setting this parameter will have no effect.

This parameter is only applicable for the primary database. For a standby database, this parameter is ignored because temporary undo is enabled by default on the standby database.

See Also:

Oracle Database Administrator's Guide for information on managing temporary undo

1.353 THREAD

THREAD has been superseded by the `INSTANCE_NAME` and `INSTANCE_NUMBER` parameters, and will be made obsolete in a future release of the Oracle Database.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to the maximum number of enabled threads
Basic	No
Oracle RAC	If specified, multiple instances must have different values.

 See Also:

"INSTANCE_NAME" and "INSTANCE_NUMBER"

1.354 THREADED_EXECUTION

THREADED_EXECUTION specifies whether to enable the multithreaded Oracle model.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	If specified, all instances must use the same value

Starting in Oracle Database 12c, the multithreaded Oracle model enables Oracle processes on UNIX and Linux to run as operating system threads in separate address spaces.

By default, some background processes on UNIX and Linux always use threaded execution; the remaining Oracle processes run as operating system processes. Thus, an "Oracle process" is not always equivalent to an "operating system process."

 Note:

When this initialization parameter is set to TRUE, which enables the multithreaded Oracle model, operating system authentication is not supported. Attempts to connect to the database using operating system authentication (for example, CONNECT / AS SYSDBA or CONNECT /) when this initialization parameter is set to TRUE receive an ORA-01031 "insufficient privileges" error.

The solution to this error is to always use the password when connecting to the database.

Also, when this initialization parameter is set to TRUE, the DEDICATED_THROUGH_BROKER_listener-name=ON parameter should be added to the listener.ora file, where *listener-name* is the name of the Oracle Net listener and the LOCAL_LISTENER initialization parameter should be set to a TNS name entry corresponding to your instance service. This enables the server to spawn threads when connections to the database are requested through the listener.

 **See Also:**

- *Oracle Database Concepts* for more information about multithreaded Oracle
- [Table F-1](#) for more information about background processes that run as threads instead of as operating system processes when multithreaded Oracle is enabled
- *Oracle Database Net Services Reference* for more information about the `DEDICATED_THROUGH_BROKER_listener-name` parameter in the `listener.ora` file
- *Oracle Database Net Services Administrator's Guide* for an overview of Oracle Net listener

1.355 TIMED_OS_STATISTICS

`TIMED_OS_STATISTICS` specifies (in seconds) the interval at which Oracle collects operating system statistics when a request is made from the client to the server or when a request completes.

Property	Description
Parameter type	Integer
Default value	If <code>STATISTICS_LEVEL</code> is set to <code>ALL</code> , then 60 If <code>STATISTICS_LEVEL</code> is set to <code>BASIC</code> or <code>TYPICAL</code> , then 0
Modifiable	<code>ALTER SESSION</code> , <code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	Unlimited
Basic	No

On dedicated servers, Oracle collects operating system statistics at user logon and after each subsequent client invocation through the OCI into the Oracle server as a remote procedure call message.

On shared servers, Oracle collects statistics when client calls to Oracle are processed.

A value of zero specifies that operating system statistics are not gathered. To collect statistics, set a value meaningful for your application and site needs.

 **Note:**

Gathering operating system statistics is very expensive. Oracle recommends that you set this parameter in an `ALTER SYSTEM` statement rather than in the initialization parameter file, and that you reset the value to zero as soon as the needed statistics have been gathered.

 See Also:

Oracle Database Performance Tuning Guide for more information about this parameter

1.356 TIMED_STATISTICS

`TIMED_STATISTICS` specifies whether statistics related to time are collected.

Property	Description
Parameter type	Boolean
Default value	If <code>STATISTICS_LEVEL</code> is set to TYPICAL or ALL, then true If <code>STATISTICS_LEVEL</code> is set to BASIC, then false
Modifiable	<code>ALTER SESSION</code> , <code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Values

- `true`
The statistics are collected and stored in trace files or displayed in the `V$SESSTATS` and `V$SYSSTATS` dynamic performance views.
- `false`
The value of all time-related statistics is set to zero. This setting lets Oracle avoid the overhead of requesting the time from the operating system.

Starting with release 11.1.0.7.0, the value of the `TIMED_STATISTICS` parameter cannot be set to `false` if the value of `STATISTICS_LEVEL` is set to TYPICAL or ALL.

On some systems with very fast timer access, Oracle might enable timing even if this parameter is set to `false`. On these systems, setting the parameter to `true` can sometimes produce more accurate statistics for long-running operations.

 See Also:

- *Oracle Database SQL Tuning Guide* for more information on setting this parameter
- [Statistics Descriptions](#) indicates which statistics depend on the setting of this parameter.

1.357 TRACE_ENABLED

TRACE_ENABLED controls tracing of the execution history, or code path, of Oracle. Oracle Support Services uses this information for debugging.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	The default value is TRUE. Oracle recommends that multiple instances have the same value.

When TRACE_ENABLED is set to true, Oracle records information in specific files when errors occur.

Oracle records this information for all instances, even if only one instance terminates. This allows Oracle to retain diagnostics for an entire cluster.

Although the overhead incurred from this processing is not excessive, you can improve performance by setting TRACE_ENABLED to false. You might do this, for example, to meet high-end benchmark requirements. However, if you leave this parameter set to false, you may lose valuable diagnostic information. Therefore, always set TRACE_ENABLED to true to trace system problems and to reduce diagnostic efforts when unexplained instance failures occur.

1.358 TRACEFILE_IDENTIFIER

TRACEFILE_IDENTIFIER specifies a custom identifier that becomes part of the Oracle Trace file name. Such a custom identifier is used to identify a trace file simply from its name and without having to open it or view its contents.

Property	Description
Parameter type	String
Syntax	TRACEFILE_IDENTIFIER = "traceid"
Default value	There is no default value.
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Range of values	Any characters that can occur as part of a file name on the customer platform
Basic	No

Each time this parameter is dynamically modified, the next trace dump will be written to a trace file which has the new parameter value embedded in its name. Trace file continuity information is automatically added to both the old and new trace files to indicate that these trace files belong to the same process.

This parameter can only be used to change the name of the foreground process' trace file; the background processes continue to have their trace files named in the regular format. For foreground processes, the `TRACEID` column of the `V$PROCESS` view contains the current value of the `TRACEFILE_IDENTIFIER` parameter. When this parameter value is set, the trace file name has the following format:

`sid_ora_pid_traceid.trc`

In this example, `sid` is the Oracle instance ID, `pid` is the process ID, and `traceid` is the value of the `TRACEFILE_IDENTIFIER` parameter.

See Also:

- *Oracle Database SQL Tuning Guide* for more information about this parameter
- This parameter is not supported on all operating systems. See your operating system-specific Oracle documentation for more information.

1.359 TRANSACTIONS

`TRANSACTIONS` specifies how many rollback segments to online when `UNDO_MANAGEMENT = MANUAL`.

Property	Description
Parameter type	Integer
Default value	Derived: $(1.1 * SESSIONS)$
Modifiable	No
Modifiable in a PDB	No
Range of values	4 to $2^{31} - 1$
Basic	No
Oracle RAC	Multiple instances can have different values.

The maximum number of concurrent transactions is now restricted by undo tablespace size (`UNDO_MANAGEMENT = AUTO`) or the number of online rollback segments (`UNDO_MANAGEMENT = MANUAL`).

1.360 TRANSACTIONS_PER_ROLLBACK_SEGMENT

`TRANSACTIONS_PER_ROLLBACK_SEGMENT` specifies the number of concurrent transactions you expect each rollback segment to have to handle.

Property	Description
Parameter type	Integer
Default value	5
Modifiable	No
Modifiable in a PDB	No

Property	Description
Range of values	1 to operating system-dependent
Basic	No
Oracle RAC	Multiple instances can have different values.

The minimum number of rollback segments acquired at startup is `TRANSACTIONS` divided by the value for this parameter. For example, if `TRANSACTIONS` is 101 and this parameter is 10, then the minimum number of rollback segments acquired would be the ratio 101/10, rounded up to 11.

You can acquire more rollback segments by naming them in the parameter `ROLLBACK_SEGMENTS`.

 **See Also:**

Your operating system-specific Oracle documentation for the range of values for this parameter.

1.361 UNDO MANAGEMENT

`UNDO MANAGEMENT` specifies which undo space management mode the system should use.

Property	Description
Parameter type	String
Syntax	<code>UNDO MANAGEMENT = { MANUAL AUTO }</code>
Default value	<code>AUTO</code>
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must have the same value.

When `UNDO MANAGEMENT` is set to `AUTO`, the instance starts in automatic undo management mode. In manual undo management mode, undo space is allocated externally as rollback segments.

 **Note:**

In a CDB, the `UNDO MANAGEMENT` initialization parameter must be set to `AUTO`, and an undo tablespace is required to be created to manage the undo data.

 See Also:

- *Oracle Database Administrator's Guide* for more information about this parameter
- *Oracle Database Administrator's Guide* for more information about managing undo data

1.362 UNDO_RETENTION

`UNDO_RETENTION` specifies (in seconds) the low threshold value of undo retention.

Property	Description
Parameter type	Integer
Default value	900
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to $2^{31} - 1$
Basic	No
Oracle RAC	Oracle recommends that multiple instances have the same value.

Starting with Oracle Database 19c, Release Update 19.7, for both `AUTOEXTEND` undo tablespaces and fixed-size undo tablespaces, the system retains undo for at least the time specified in this parameter, and automatically tunes the undo retention period to satisfy the undo requirements of the queries.

In earlier versions of Oracle Database 19c, the behavior is different for the two types of undo tablespaces. For `AUTOEXTEND` undo tablespaces, the system retains undo for at least the time specified in this parameter, and automatically tunes the undo retention period to satisfy the undo requirements of the queries. For fixed-size undo tablespaces, the system automatically tunes for the maximum possible undo retention period, based on undo tablespace size and usage history, and ignores `UNDO_RETENTION` unless retention guarantee is enabled for the tablespace.

Automatic tuning of undo retention is not supported for LOBs. The `RETENTION` value for LOB columns is set to the value of the `UNDO_RETENTION` parameter.

The `UNDO_RETENTION` parameter is honored only if the current undo tablespace has enough space. If an active transaction requires undo space and the undo tablespace does not have available space, then the system starts reusing unexpired undo space. This action can potentially cause some queries to fail with a "snapshot too old" message.

The amount of time for which undo is retained for the Oracle Database for the current undo tablespace can be obtained by querying the `TUNED_UNDORETENTION` column of the `V$UNDOSTAT` dynamic performance view.

Recommendations for Modifying UNDO_RETENTION

Oracle generally recommends that you leave `UNDO_RETENTION` set to its default value. Modifying this parameter is recommended only in the following situations:

- You may want to increase the value of `UNDO_RETENTION` when using flashback features, such as Oracle Flashback Query, which require undo to be retained for longer than the longest running query in the system.
- In Oracle Active Data Guard environments, you may want to increase the value of `UNDO_RETENTION` on the primary instance in order to accommodate undo retention requirements on the standby instances. This allows the primary instance to retain undo for a longer period of time to serve queries on the standby instances. For more information, see *Oracle Database Administrator's Guide* and *Oracle Data Guard Concepts and Administration*.

Modifying `UNDO_RETENTION` in a CDB

You can set the value of `UNDO_RETENTION` in the CDB root (`CDB$ROOT`) and in individual PDBs. The CDB root and PDBs can have the same value or different values. Note that you can modify this parameter in a PDB only if the PDB is in local undo mode; you cannot modify this parameter if the PDB is in shared undo mode.

Starting with Oracle Database 19c, Release Update 19.9, the value of `UNDO_RETENTION` is not inherited in a CDB. Therefore, if you change the value for `UNDO_RETENTION` in the CDB root, the PDBs do not inherit the new value. If you want to change the value for `UNDO_RETENTION` at the PDB level, you must explicitly do so. For example, if your CDB contains two PDBs (PDB1 and PDB2), you can set `UNDO_RETENTION` to 2000 in the CDB root and both PDBs as follows:

```
ALTER SESSION SET CONTAINER = CDB$ROOT;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;

ALTER SESSION SET CONTAINER = PDB1;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;

ALTER SESSION SET CONTAINER = PDB2;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;
```

See Also:

- *Oracle Database SQL Language Reference* for information about creating undo tablespaces
- *Oracle Database Administrator's Guide* for information about managing undo data

1.363 UNDO_TABLESPACE

`UNDO_TABLESPACE` specifies the undo tablespace to be used when an instance starts. If this parameter is specified when the instance is in manual undo management mode, then an error will occur and startup will fail.

Property	Description
Parameter type	String
Syntax	<code>UNDO_TABLESPACE = undoname</code>
Default value	The first available undo tablespace in the database.

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Legal name of an existing undo tablespace
Basic	Yes
Oracle RAC	Each instance must have a unique value for this parameter, when it is set.

If the `UNDO_TABLESPACE` parameter is omitted, the first available undo tablespace in the database is chosen. If no undo tablespace is available, the instance will start without an undo tablespace. In such cases, user transactions will be executed using the `SYSTEM` rollback segment. You should avoid running in this mode under normal circumstances.

You can replace an undo tablespace with another undo tablespace while the instance is running.

 **Note:**

When you update this parameter on the primary database in an Oracle Data Guard configuration, you must also update it on all the physical standby databases in the configuration. This ensures that the standby databases can find the undo tablespace when they become the primary database.

 **See Also:**

Oracle Database SQL Language Reference for information about creating undo tablespaces

1.364 UNIFIED_AUDIT_COMMON_SYSTEMLOG

`UNIFIED_AUDIT_COMMON_SYSTEMLOG` specifies whether key fields of unified audit records generated due to common audit policies will be written to the `SYSLOG` utility.

 **Note:**

This initialization parameter is supported only on UNIX platforms.

Property	Description
Parameter type	String

Property	Description
Syntax	<pre>UNIFIED_AUDIT_COMMON_SYSTEMLOG = 'facility_clause.priority_clause' facility_clause::= { USER LOCAL[0 1 2 3 4 5 6 7] } priority_clause::= { NOTICE INFO DEBUG WARNING ERR CRIT ALERT EMERG }</pre>
Default value	None
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

When this parameter is set, key fields of unified audit records generated due to common audit policies are written to SYSLOG. These fields uniquely identify the detailed unified audit records in the `UNIFIED_AUDIT_TRAIL` view. Only a subset of unified audit record fields are written to ensure that the audit record entries do not exceed the maximum allowed size for a SYSLOG entry (typically 1024 bytes).

Do not set this parameter if you do not want key fields of unified audit records generated due to common audit policies written to SYSLOG.

This parameter differs from the `UNIFIED_AUDIT_SYSTEMLOG` parameter in that it is set at the CDB level and enables all unified audit records from common unified audit policies to be consolidated into a single destination, whereas `UNIFIED_AUDIT_SYSTEMLOG` is set at the PDB level and enables the logging of unified audit records on a per-PDB basis.

Note:

This parameter is available starting with Oracle Database 19c.

See Also:

- ["UNIFIED_AUDIT_SYSTEMLOG"](#)
- ["UNIFIED_AUDIT_TRAIL"](#)
- *Oracle Database Security Guide* for a table that maps the names given to the unified audit records fields that are written to SYSLOG to the corresponding column names in the `UNIFIED_AUDIT_TRAIL` view

1.365 UNIFIED_AUDIT_SGA_QUEUE_SIZE

`UNIFIED_AUDIT_SGA_QUEUE_SIZE` specifies the size of SGA queue for unified auditing.

Property	Description
Parameter type	Integer
Default value	1 MB
Modifiable	No
Modifiable in a PDB	No
Range of values	1 MB to 30 MB
Basic	No
Oracle RAC	Multiple instances can have different values

UNIFIED_AUDIT_SGA_QUEUE_SIZE can be useful when queued-write mode is used for unified auditing. In queued-write mode, audit records are first written to the SGA queue. When the SGA queue reaches a particular threshold, the audit records are flushed to the AUDSYS schema table. The SGA queue size should be tuned according to the audit data generation. If large numbers of audit records are generated very frequently, you can increase the size of SGA queue, so that frequent flushes of queue data can be prevented. Similarly, if fewer audit records are generated, a smaller size can be used for the SGA queue.

 **Note:**

The UNIFIED_AUDIT_SGA_QUEUE_SIZE initialization parameter is deprecated in Oracle Database 12c Release 2 (12.2.0.1), and may be desupported in a future release.

 **See Also:**

Oracle Database Security Guide for more information about writing unified audit trail records to the AUDSYS schema.

1.366 UNIFIED_AUDIT_SYSTEMLOG

UNIFIED_AUDIT_SYSTEMLOG specifies whether key fields of unified audit records will be written to the SYSLOG utility (on UNIX platforms) or to the Windows Event Viewer (on Windows). In a CDB, this parameter is a per-PDB static initialization parameter.

Property	Description
Parameter type	String for UNIX platforms, Boolean for Windows

Property	Description
Syntax	<p>On UNIX:</p> <pre>UNIFIED_AUDIT_SYSTEMLOG = 'facility_clause.priority_clause' facility_clause::= { USER LOCAL[0 1 2 3 4 5 6 7] } priority_clause::= { NOTICE INFO DEBUG WARNING ERR CRIT ALERT EMERG }</pre> <p>On Windows:</p> <pre>UNIFIED_AUDIT_SYSTEMLOG = { FALSE TRUE }</pre>
Default value	No default on UNIX platforms FALSE on Windows
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

When this parameter is set on UNIX, key fields of unified audit records are written to SYSLOG. When this parameter is set on Windows, key fields of unified audit records are written to the Windows Event Viewer.

Do not set this parameter (or set it to FALSE on Windows) if you do not want key fields of unified audit records written to SYSLOG or the Windows Event Viewer.

When `UNIFIED_AUDIT_SYSTEMLOG` is enabled, the key fields of the unified audit records that are written to SYSLOG or Windows Event Viewer uniquely identify the detailed unified audit records in the `UNIFIED_AUDIT_TRAIL` view. Only a subset of the unified audit record fields are written to ensure that the audit record entries do not exceed the maximum allowed size for a SYSLOG entry (typically 1024 bytes).

This parameter differs from the `UNIFIED_AUDIT_COMMON_SYSTEMLOG` parameter in that it is set at the PDB level and enables the logging of unified audit records on a per-PDB basis, whereas `UNIFIED_AUDIT_COMMON_SYSTEMLOG` is set at the CDB level and enables all unified audit records from common unified audit policies to be consolidated into a single destination.

See Also:

- "["UNIFIED_AUDIT_COMMON_SYSTEMLOG"](#)"
- "["UNIFIED_AUDIT_TRAIL"](#)"
- *Oracle Database Security Guide* for a table that maps the names given to the unified audit records fields that are written to SYSLOG and the Windows Event Viewer to the corresponding column names in the `UNIFIED_AUDIT_TRAIL` view

1.367 UNIFORM_LOG_TIMESTAMP_FORMAT

`UNIFORM_LOG_TIMESTAMP_FORMAT` specifies that a uniform timestamp format be used in Oracle Database trace (.trc) files and log files (such as the alert log).

Property	Description
Parameter type	Boolean
Default value	<code>true</code>
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	Multiple instances should use the same value.

When the value of `UNIFORM_LOG_TIMESTAMP_FORMAT` is `TRUE`, the format used for timestamps in trace files is standardized on universal time with millisecond precision. For example:

2012-09-26 00:16:47.154

When the value of `UNIFORM_LOG_TIMESTAMP_FORMAT` is `FALSE`, trace files include a mix of timestamps using different precisions, with some timestamps showing local time and other timestamps showing universal time.

1.368 USE_DEDICATED_BROKER

`USE_DEDICATED_BROKER` determines how dedicated servers are spawned.

Property	Description
Parameter type	Boolean
Default value	<code>False</code> unless multithreaded Oracle is enabled ¹
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	<code>true</code> <code>false</code>
Basic	No
Oracle RAC	If specified, all instances must use the same value

¹ Multithreaded Oracle is enabled by setting the `THREADED_EXECUTION` initialization parameter to `true`.

When this parameter is set to `false`, the listener spawns a dedicated server directly.

When this parameter is set to `true`, the listener hands the connection to a dedicated connection broker that spawns the dedicated server. Unlike the listener, the dedicated connection broker is a database process, and hence it can implement policies leveraging database information before the spawn.

To enable the dedicated connection broker using the `USE_DEDICATED_BROKER` initialization parameter, you must:

1. Set the `USE_DEDICATED_BROKER` initialization parameter to `true`.
 2. Set the `DEDICATED_THROUGH_BROKER_listener-name` parameter to `on` in the `listener.ora` file.
- Performing these two steps configures the Connection Broker Process (`Nnnn`).

 **Note:**

When multithreaded Oracle is enabled, the dedicated connection broker process is also enabled and used.

Configuration of the brokers is controlled by the `CONNECTION_BROKERS` initialization parameter.

 **See Also:**

- "["CONNECTION_BROKERS"](#) for more information about configuring brokers
- [Table F-1](#) for more information about the Connection Broker Process (`Nnnn`)
- "["THREADED_EXECUTION"](#) for more information about enabling multithreaded Oracle
- [Oracle Database Net Services Reference](#) for more information about the `DEDICATED_THROUGH_BROKER_listener-name` parameter in the `listener.ora` file

1.369 USE_LARGE_PAGES

`USE_LARGE_PAGES` is used to manage the database's use of large pages for SGA memory.

 **Note:**

This parameter is applicable only on the Linux operating system. However, setting this parameter to `FALSE` can cause performance degradation on any platform.

Property	Description
Parameter type	String
Syntax	<code>USE_LARGE_PAGES = { TRUE FALSE AUTO ONLY AUTO_ONLY }</code>
Default value	ONLY for Exadata Database Service in the cloud and Base Database Service in the cloud AUTO_ONLY for on-premises Exadata systems running Oracle Database 19c or later TRUE for all other systems
Modifiable	No
Modifiable in a PDB	No

Property	Description
Basic	No
Oracle RAC	Multiple instances can use different values

This parameter does not affect process-private memory allocations.

Values

These values can be specified for `USE_LARGE_PAGES`:

- `TRUE`

Specifies that the instance can use large pages if large pages are configured on the system.

In Oracle Database 11g Release 2 (11.2.0.2), if there are not enough large pages configured on the system, then regular sized pages will be used to allocate SGA memory. This can cause the free large pages to go unused, and the operating system can allocate a huge amount of memory to create page tables to map SGA into physical pages for the Oracle processes. This may lead to `ORA-04030` errors and severe performance degradation on an instance.

In Oracle Database 11g Release 2 (11.2.0.3) and later releases, Oracle allocates as much of the SGA as it can in large pages, and if it runs out, it will allocate the rest of the SGA using regular sized pages. This can cause the instance to create additional shared memory segments for the SGA, but the total SGA size will be unchanged. In this supported mixed page mode allocation, the database will exhaust the available large pages before switching to regular sized pages.

- `FALSE`

Specifies that the instance will not use large pages. This setting is not recommended because it can cause severe performance degradation for the instance. Although the `USE_LARGE_PAGES` initialization parameter applies only to Linux systems, setting this parameter to `FALSE` can cause performance degradation on any platform.

- `AUTO`

Specifies that, during startup, the instance will calculate and request the number of large pages it requires. If the operating system cannot fulfill this request, then the instance will start with a combination of large and regular pages.

- `ONLY`

Specifies that the instance will fail to start if large pages cannot be used for the entire SGA memory. Oracle recommends this setting for consistent performance. This setting is the default setting for Exadata Database Service in the cloud and Base Database Service in the cloud.

- `AUTO_ONLY`

Specifies that, during startup, the instance will calculate and request the number of large pages it requires. If the operating system can fulfill this request, then the instance will start successfully. If the operating system cannot fulfill this request, then the instance will fail to start. This ensures that no instances will run with under-provisioned large pages. This setting is available starting with Oracle Database 19c and it is the default setting for on-premises Exadata systems.

 **Note:**

`USE_LARGE_PAGES` is set to `FALSE` automatically in an Oracle ASM instance when `MEMORY_TARGET` is enabled. In this case, the `FALSE` setting does not cause performance degradation.

 **See Also:**

- *Oracle Database Administrator's Reference for Linux and UNIX-Based Operating Systems* for an overview of HugePages and information on configuring HugePages

1.370 USER_DUMP_DEST

`USER_DUMP_DEST` specifies the pathname for a directory where the server will write debugging trace files on behalf of a user process.

Property	Description
Parameter type	String
Syntax	<code>USER_DUMP_DEST = { pathname directory }</code>
Default value	Operating system-dependent
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	Any valid local path, directory, or disk
Basic	No

 **Note:**

The `USER_DUMP_DEST` initialization parameter is deprecated.

For example, this directory might be set as follows:

- On MS-DOS: `C:\ORACLE\UTRC`
- On UNIX: `/oracle/utrc`
- On VMS: `DISK$UR3:[ORACLE.UTRC]`

 **Note:**

This parameter is ignored by the diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the `DIAGNOSTIC_DEST` initialization parameter.

 **See Also:**

- *Oracle Database SQL Tuning Guide* for more information about the use of trace files
- Your operating system-specific Oracle documentation for the range of values

1.371 WALLET_ROOT

`WALLET_ROOT` specifies the path to the root of a directory tree containing a subdirectory for each pluggable database (PDB).

Property	Description
Parameter type	String
Syntax	<code>WALLET_ROOT = wallet-root-directory-path</code>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances must have the same value.

The name of the various wallet files is always the same, regardless of the component they are associated with. The wallets for each component are stored under each PDB GUID directory within the `WALLET_ROOT` directory structure in a directory whose name is based on the component name. For example, for the TDE component, the subdirectory name is `tde`.

If the `WALLET_ROOT` parameter is not set, the `SQLNET.ENCRYPTION_WALLET_LOCATION` parameter is used (as in Oracle Database releases prior to Oracle Database 18c), but no isolated keystore can be used unless the `WALLET_ROOT` parameter is set. The `TDE_CONFIGURATION` initialization parameter cannot be used to configure any PDB to run in isolated mode unless the `WALLET_ROOT` parameter is also set.

 **Note:**

The `SQLNET.ENCRYPTION_WALLET_LOCATION` parameter is deprecated in Oracle Database 18c.

For example, the contents of the directory at the location specified by the `WALLET_ROOT` initialization parameter could look as follows, where `wallet-root` is the directory specified by the `WALLET_ROOT` parameter:

```
wallet-root/eus/ewallet.p12
wallet-root/tde/ewallet.p12
wallet-root/tde/ewallet_2016120918333644.p12
wallet-root/tde_seps/cwallet.sso
wallet-root/tls/ewallet.p12
wallet-root/xdb_wallet/ewallet.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet_2016110918331622.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet_2016110918332363.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde_seps/cwallet.sso
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tls/cwallet.sso
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tls/ewallet.p12
```

When the `WALLET_ROOT` parameter is set, you can omit the path from some ADMINISTER KEY MANAGEMENT commands.

The `WALLET_ROOT` value can include references to environment variables. The following example shows how to use `WALLET_ROOT` when multiple TDE-enabled databases are installed into the same `ORACLE_HOME`:

```
WALLET_ROOT=/etc/ORACLE/KEYSTORES/$ORACLE_SID
```

The `ORACLE_SID` environment variable (or the `DB_UNIQUE_NAME` environment variable for Oracle RAC) makes sure that each database that is installed into the same `ORACLE_HOME` has its own set of wallets and TDE keys. This sets the root of the wallet directory hierarchy to the directory specified by `wallet-root-directory-path`.

 **Note:**

The normalized length of the `wallet-root-directory-name` that is specified with the `WALLET_ROOT` parameter cannot exceed 255 characters, otherwise one of the following sets of error messages is displayed:

`ORA-46693: The WALLET_ROOT location is missing or invalid.`
`ORA-32021: parameter value longer than 255 characters`
`ORA-01078: failure in processing system parameters`

`ORA-46693: The WALLET_ROOT location is missing or invalid.`
`ORA-07204: sltn: name translation failed due to lack of output buffer space.`
`ORA-01078: failure in processing system parameters`

The normalized length includes the length of expanded environment variables specified with the `WALLET_ROOT` parameter. The values of the environment variables of the user who starts the instance are used in the normalization of the `WALLET_ROOT` parameter.

The `SHOW PARAMETER WALLET_ROOT` command always displays the normalized value (with all the environment variables expanded).

For non-ASM file systems, the PDB GUID-extended paths for the TDE component are created automatically under the directory specified by the `WALLET_ROOT` parameter when any Transparent Data Encryption (TDE) wallet is created for a PDB.

Enabling Automatic Creation of Directories Under `WALLET_ROOT`

By using the specific configuration of `WALLET_ROOT` described in each of the following subsections, Oracle Database can be configured to automatically create the necessary `pdb-guid` and `component name` directories under the `WALLET_ROOT` directory path. Other settings of `WALLET_ROOT` are allowed, but would not result in the automatic creation of the necessary sub-directories by the ASM OMF layer.

Required setting to enable auto-directory creation for a database not using Oracle ASM

For a database not using Oracle ASM filesystems, the `WALLET_ROOT` parameter needs to be set as follows:

```
WALLET_ROOT=wallet-root-directory-path
```

This sets the root of the wallet directory hierarchy to the directory specified by `wallet-root-directory-path`. For example:

```
/etc/ORACLE/KEYSTORES/FINANCE
```

When this is done, Oracle Database automatically creates the directory for the TDE wallet of a CDB\$ROOT at the following location:

```
/etc/ORACLE/KEYSTORES/FINANCE/tde
```

The directories, that Oracle Database automatically creates for holding the TDE wallets of isolated PDBs, will include the `pdb-guid`. For example:

```
/etc/ORACLE/KEYSTORES/FINANCE/3FD1C95B48205D0FE053C5A0E40AEF8C/tde
```

Required setting to enable auto-directory creation for a database using Oracle ASM with Oracle Managed Files

For a database using ASM with OMF, the `WALLET_ROOT` parameter needs to begin with a plus sign followed by a disk group name and the value of the `DB_UNIQUE_NAME` initialization parameter. In the example below, `DATA` is the name of a disk group and `FINRAC` is the value of the `DB_UNIQUE_NAME` initialization parameter:

```
WALLET_ROOT=+DATA/FINRAC
```

When this is done, Oracle Database automatically creates the necessary directory within the ASM filesystem at the following location when the `ADMINISTER KEY MANAGEMENT CREATE KEYSTORE` command is run:

```
+DATA/FINRAC/tde
```

For isolated PDBs, the directories that Oracle Database automatically creates for holding the TDE wallets of PDBs will include the *pdb-guid*. For example:

```
+DATA/FINRAC/3FD1C95B48205D0FE053C5A0E40AEF8C/tde
```

Required setting to enable auto-directory creation for RAC-enabled databases

For a RAC-enabled database, only shared TDE wallets are supported (as opposed to individual TDE-wallets per RAC instance). `WALLET_ROOT` can either point to an ASM disk group, or a directory in ACFS. If the `WALLET_ROOT` parameter points to `+diskgroup/dbname`, then the `/tde` sub-directory is automatically created when issuing an `ADMINISTER KEY MANAGEMENT CREATE KEYSTORE` command. For example, when `WALLET_ROOT` is set to `+DATA/FINANCE`, the directory `+DATA/FINANCE/tde` is automatically created. This guarantees that when multiple databases are installed, their TDE-wallets are kept separate.

 **See Also:**

["TDE_CONFIGURATION"](#)

1.372 WORKAREA_SIZE_POLICY

`WORKAREA_SIZE_POLICY` specifies the policy for sizing work areas. This parameter controls the mode in which working areas are tuned.

Property	Description
Parameter type	String
Syntax	<code>WORKAREA_SIZE_POLICY = { AUTO MANUAL }</code>
Default value	AUTO
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

You can specify the following values for WORKAREA_SIZE_POLICY:

- AUTO

When AUTO is specified, work areas used by memory-intensive operators are sized automatically, based on the PGA memory used by the system, the target PGA memory set in PGA_AGGREGATE_TARGET, and the requirement of each individual operator.

- MANUAL

When MANUAL is specified, the sizing of work areas is manual and based on the values of the *_AREA_SIZE parameter corresponding to the operation (for example, a sort uses SORT_AREA_SIZE). Specifying MANUAL may result in sub-optimal performance and poor PGA memory utilization.

 **See Also:**

Oracle Database Performance Tuning Guide for additional information on setting this parameter

1.373 XML_DB_EVENTS

XML_DB_EVENTS enables or disables XML DB events.

Property	Description
Parameter type	String
Syntax	XML_DB_EVENTS = { enable disable }
Default value	enable
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Changing this parameter through an ALTER SESSION statement affects only the current session. Only users with the XDBADMIN role are allowed to change this parameter in a session.

Changing this parameter through an ALTER SYSTEM statement will make a systemwide change of this parameter; however, the change is only registered by new sessions started after the change. Currently running sessions need to be restarted to pick up the new change. Users must have the ALTER SYSTEM privilege to make a systemwide change.

 **See Also:**

Oracle XML DB Developer's Guide for more information about this parameter

Part II

Static Data Dictionary Views

This part describes data dictionary tables and views. These tables and views are called **static**, because they change only when a change is made to the data dictionary (for example, when a new table is created or when a user is granted new privileges).

This part contains the following chapters:

- Static Data Dictionary Views: ALL_ALL_TABLES to ALL_OUTLINES
- Static Data Dictionary Views: ALL_PART_COL_STATISTICS to DATABASE_PROPERTIES
- Static Data Dictionary Views: DBA_2PC_NEIGHBORS to DBA_HIST_JAVA_POOL_ADVICE
- Static Data Dictionary Views: DBA_HIST_LATCH to DBA_STORED_SETTINGS
- Static Data Dictionary Views: DBA_STREAMS_ADD_COLUMN to USER_ZONEMAPS

 **Note:**

Oracle also maintains views that monitor ongoing database activity. These **dynamic performance views** are described in [Dynamic Performance Views](#).

Static Data Dictionary Views: ALL_ALL_TABLES to ALL_OUTLINES

This chapter describes the first set (in alphabetical order) of static data dictionary views.

The remaining static data dictionary views appear in alphabetical order in [Static Data Dictionary Views: ALL_PART_COL_STATISTICS to DATABASE_PROPERTIES](#) through [Static Data Dictionary Views: DBA_STREAMS_ADD_COLUMN to USER_ZONEMAPS](#).

This chapter contains the following topics:

- [About Static Data Dictionary Views](#)
- [AWR_PDB_* Views](#)
- [AWR_ROOT_* Views](#)
- [CDB_* Views](#)
- [DBA_HIST_* Views](#)
- [Oracle Database Real Application Security Views](#)
- [Oracle Database Vault Views](#)
- [Oracle Label Security Views](#)
- [Oracle Workspace Manager Views](#)
- [Recovery Catalog Views](#)
- [Static Data Dictionary View Descriptions](#)

2.1 About Static Data Dictionary Views

Data dictionary tables are not directly accessible, but you can access information in them through data dictionary views. To list the data dictionary views available to you, query the view `DICTIONARY`.

Many data dictionary tables have three corresponding views:

- An `ALL_` view displays all the information accessible to the current user, including information from the current user's schema as well as information from objects in other schemas, if the current user has access to those objects by way of grants of privileges or roles.
- A `DBA_` view displays all relevant information in the entire database. `DBA_` views are intended only for administrators. They can be queried only by users with the `SYSDBA` system privilege or `SELECT ANY DICTIONARY` privilege, or `SELECT_CATALOG_ROLE` role, or by users with direct privileges granted to them. The `SELECT ANY DICTIONARY` privilege is assigned to the `DBA` role when the system is initially installed.
- A `USER_` view displays all the information from the schema of the current user. No special privileges are required to query these views.

The columns of the `ALL_`, `DBA_`, and `USER_` views corresponding to a single data dictionary table are usually nearly identical. Therefore, these views are described in full only once in this

chapter, at their first occurrence alphabetically, and are listed without full descriptions at their other occurrences.

 **See Also:**

"[Static Data Dictionary View Descriptions](#)" introduces the alphabetical listing of view descriptions that are documented in this manual

2.2 AWR_PDB_* Views

The AWR_PDB views show the local Automatic Workload Repository (AWR) data present on a CDB root or a PDB from where the AWR_PDB views are accessed.

The AWR_PDB views on a CDB root show the AWR data stored on the CDB root.

The AWR_PDB views on a PDB show the AWR data stored on that PDB.

 **See Also:**

- "[AWR_ROOT_* Views](#)"
- *Oracle Database Performance Tuning Guide* for an introduction to AWR
- *Oracle Database Performance Tuning Guide* for more information about AWR_PDB views and related views for accessing AWR in a multitenant environment

2.3 AWR_ROOT_* Views

The AWR_ROOT views show the AWR data stored only on a CDB root. In general, the AWR_ROOT views are equivalent to the DBA_HIST views.

When the AWR_ROOT views are accessed from a CDB root, they show the AWR data specific to the CDB root.

When the AWR_ROOT views are accessed from a PDB, they show the AWR data specific to that PDB.

 **See Also:**

- "[AWR_PDB_* Views](#)"
- *Oracle Database Performance Tuning Guide* for an introduction to AWR
- *Oracle Database Performance Tuning Guide* for more information about AWR_ROOT views and related views for accessing AWR in a multitenant environment

2.4 CDB_* Views

For every DBA_* view, a CDB_* view is defined. In the root of a multitenant container database (CDB), CDB_* views can be used to obtain information about tables, tablespaces, users, privileges, parameters, and so on contained in the root and in pluggable databases (PDBs).

The CDB_* views can be queried only by users with the SYSDBA system privilege or SELECT ANY DICTIONARY privilege, or SELECT_CATALOG_ROLE role, or by users with direct privileges granted to them.

CDB_* views are container data objects. When a user connected to the root queries a CDB_* view, the query results will depend on the CONTAINER_DATA attribute for users for the view. The CONTAINER_DATA clause of the SQL ALTER USER statement is used to set and modify users' CONTAINER_DATA attribute.

The CDB_* views are owned by SYS, regardless of who owns the underlying DBA_* view.

By default, a user connected to the root will only see data pertaining to the root.

See Also:

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the CONTAINER_DATA clause for the SQL ALTER USER statement

CDB_* views include these hidden columns:

- CON\$NAME: This column includes the name of the container whose data a given CDB_* row represents
- CDB\$NAME: This column displays the name of the CDB whose data a given CDB_* row represents

In a PDB, the CDB_* views only show objects visible through a corresponding DBA_* view.

In addition to all the columns found in a given DBA_* view, the corresponding CDB_* view also contains the CON_ID column, which identifies a container whose data a given CDB_* row represents. In a non-CDB, the value of a CON_ID column will be 0.

CDB views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

Data is returned by these views from all open PDBs at the time the query is issued, except for PDBs that are open in RESTRICTED mode. In an Oracle RAC environment, data returned by these views may vary according to the instance to which a session is connected.

2.5 DBA_HIST_* Views

The DBA_HIST views show the local Automatic Workload Repository (AWR) data present on a CDB root or a PDB.

If a DBA_HIST view is queried from a CDB root, the view shows all the AWR data stored on the CDB root.

If a DBA_HIST view is queried from a PDB, the view shows the subset of the CDB root AWR data that is specific to that PDB. Also, the view shows the PDB level snapshots at that PDB, if they exist.

 **See Also:**

- *Oracle Database Performance Tuning Guide* for an introduction to AWR
- *Oracle Database Performance Tuning Guide* for an introduction to Oracle Database views for accessing AWR data stored on the CDB root and individual PDBs in a multitenant environment

2.6 Oracle Database Real Application Security Views

This manual describes these Oracle Database Real Application Security auditing views:

- [DBA_XS_AUDIT_POLICY_OPTIONS](#)
- [DBA_XS_AUDIT_TRAIL](#)
- [DBA_XS_ENB_AUDIT_POLICIES](#)

Descriptions of the other Oracle Database Real Application Security views are provided in *Oracle Database Real Application Security Administrator's and Developer's Guide*.

 **Note:**

Oracle Database Real Application Security views include `_XS_` in the view name.

2.7 Oracle Database Vault Views

Descriptions of Oracle Database Vault views are not provided in this manual.

See *Oracle Database Vault Administrator's Guide* for descriptions of Oracle Database Vault views.

 **Note:**

Oracle Database Vault views include `_DV_` in the view name.

2.8 Oracle Label Security Views

Descriptions of Oracle Label Security views are not provided in this manual.

See *Oracle Label Security Administrator's Guide* for descriptions of Oracle Label Security views.

 **Note:**

Oracle Label Security views include `_SA_` in the view name.

2.9 Oracle Workspace Manager Views

A number of data dictionary views are relevant only if you are using Oracle Workspace Manager:

- `ALL_MP_GRAPH_WORKSPACES` and `USER_MP_GRAPH_WORKSPACES`
- `ALL_MP_PARENT_WORKSPACES` and `USER_MP_PARENT_WORKSPACES`
- `ALL_REMOVED_WORKSPACES` and `USER_REMOVED_WORKSPACES`
- `ALL_VERSION_HVIEW`
- `ALL_WM_CONS_COLUMNS` and `USER_WM_CONS_COLUMNS`
- `ALL_WM_CONSTRAINTS` and `USER_WM_CONSTRAINTS`
- `ALL_WM_IND_COLUMNS` and `USER_WM_IND_COLUMNS`
- `ALL_WM_IND_EXPRESSIONS` and `USER_WM_IND_EXPRESSIONS`
- `ALL_WM_LOCKED_TABLES` and `USER_WM_LOCKED_TABLES`
- `ALL_WM_MODIFIED_TABLES` and `USER_WM_MODIFIED_TABLES`
- `ALL_WM_RIC_INFO` and `USER_WM_RIC_INFO`
- `ALL_WM_TAB_TRIGGERS` and `USER_WM_TAB_TRIGGERS`
- `ALL_WM_VERSIONED_TABLES` and `USER_WM_VERSIONED_TABLES`
- `ALL_WM_VT_ERRORS`, `DBA_WM_VT_ERRORS`, and `USER_WM_VT_ERRORS`
- `ALL_WORKSPACE_PRIVS` and `USER_WORKSPACE_PRIVS`
- `ALL_WORKSPACE_SAVEPOINTS` and `USER_WORKSPACE_SAVEPOINTS`
- `ALL_WORKSPACES`, `DBA_WORKSPACES`, and `USER_WORKSPACES`
- `DBA_WM_SYS_PRIVS`
- `DBA_WORKSPACE_SESSIONS`
- `ROLE_WM_PRIVS`
- `USER_WM_PRIVS`
- `WM_COMPRESS_BATCH_SIZES`
- `WM_COMPRESSIBLE_TABLES`

- WM_EVENTS_INFO
- WM_INSTALLATION

 **See Also:**

Oracle Database Workspace Manager Developer's Guide for information about these views

2.10 Recovery Catalog Views

The following data dictionary views are only available after you create an optional recovery catalog (which contains schemas containing information about backups) for use with Recovery Manager:

```
RC_ARCHIVED_LOG
RC_BACKUP_ARCHIVELOG_DETAILS
RC_BACKUP_ARCHIVELOG_SUMMARY
RC_BACKUP_CONTROLFILE
RC_BACKUP_CONTROLFILE_DETAILS
RC_BACKUP_CONTROLFILE_SUMMARY
RC_BACKUP_COPY_DETAILS
RC_BACKUP_COPY_SUMMARY
RC_BACKUP_CORRUPTION
RC_BACKUP_DATAFILE
RC_BACKUP_DATAFILE_DETAILS
RC_BACKUP_DATAFILE_SUMMARY
RC_BACKUP_FILES

2.11 Static Data Dictionary View Descriptions

The remainder of this chapter describes the static data dictionary views in alphabetical order.

2.12 ALL_ALL_TABLES

`ALL_ALL_TABLES` describes the object tables and relational tables accessible to the current user.

Related Views

- `DBA_ALL_TABLES` describes all object tables and relational tables in the database.
- `USER_ALL_TABLES` describes the object tables and relational tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables
CLUSTER_NAME	VARCHAR2(128)		Name of the cluster, if any, to which the table belongs
IOT_NAME	VARCHAR2(128)		Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name.
STATUS	VARCHAR2(8)		If a previous <code>DROP TABLE</code> operation failed, indicates whether the table is unusable (<code>UNUSABLE</code>) or valid (<code>VALID</code>)
PCT_FREE	NUMBER		Minimum percentage of free space in a block; NULL for partitioned tables
PCT_USED	NUMBER		Minimum percentage of used space in a block; NULL for partitioned tables
INI_TRANS	NUMBER		Initial number of transactions; NULL for partitioned tables
MAX_TRANS	NUMBER		Maximum number of transactions; NULL for partitioned tables
INITIAL_EXTENT	NUMBER		Size of the initial extent (in bytes); NULL for partitioned tables
NEXT_EXTENT	NUMBER		Size of secondary extents (in bytes); NULL for partitioned tables
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment; NULL for partitioned tables
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment; NULL for partitioned tables
PCT_INCREASE	NUMBER		Percentage increase in extent size; NULL for partitioned tables
FREELISTS	NUMBER		Number of process freelists allocated to the segment; NULL for partitioned tables
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to the segment
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the table are logged: <ul style="list-style-type: none"> • YES • NO
BACKED_UP	VARCHAR2(1)		Indicates whether the table has been backed up since the last modification (<code>Y</code>) or not (<code>N</code>)
NUM_ROWS	NUMBER		Number of rows in the table
BLOCKS	NUMBER		Number of used blocks in the table
EMPTY_BLOCKS	NUMBER		Number of empty (never used) blocks in the table
AVG_SPACE	NUMBER		Average available free space in the table
CHAIN_CNT	NUMBER		Number of rows in the table that are chained from one data block to another or that have migrated to a new block, requiring a link to preserve the old rowid. This column is updated only after you analyze the table.
AVG_ROW_LEN	NUMBER		Average row length, including row overhead

Column	Datatype	NULL	Description
AVG_SPACE_FREELIST_BLOCK_S	NUMBER		Average freespace of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist
DEGREE	VARCHAR2(10)		Number of threads per instance for scanning the table, or DEFAULT
INSTANCES	VARCHAR2(10)		Number of instances across which the table is to be scanned, or DEFAULT
CACHE	VARCHAR2(5)		Indicates whether the table is to be cached in the buffer cache (Y) or not (N)
TABLE_LOCK	VARCHAR2(8)		Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the table
LAST_ANALYZED	DATE		Date on which the table was most recently analyzed
PARTITIONED	VARCHAR2(3)		Indicates whether the table is partitioned (YES) or not (NO)
IOT_TYPE	VARCHAR2(12)		If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.
OBJECT_ID_TYPE	VARCHAR2(16)		Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED
TABLE_TYPE_OWNER	VARCHAR2(128)		If an object table, owner of the type from which the table is created
TABLE_TYPE	VARCHAR2(128)		If an object table, type of the table
TEMPORARY	VARCHAR2(1)		Indicates whether the table is temporary (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether the table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge to contain the contents of a domain index (Y) or not (N)
NESTED	VARCHAR2(3)		Indicates whether the table is a nested table (YES) or not (NO)
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for table blocks: <ul style="list-style-type: none">• DEFAULT• KEEP• RECYCLE• NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none">• DEFAULT• KEEP• NONE <p>Solaris and Oracle Linux functionality only.</p>
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none">• DEFAULT• KEEP• NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>

Column	Datatype	NULL	Description
ROW_MOVEMENT	VARCHAR2 (8)		If a partitioned table, indicates whether row movement is enabled (ENABLED) or disabled (DISABLED)
GLOBAL_STATS	VARCHAR2 (3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2 (3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2 (15)		Indicates the duration of a temporary table: SYS\$SESSION - Rows are preserved for the duration of the session SYS\$TRANSACTION - Rows are deleted after COMMIT Null - Permanent table
SKIP_CORRUPT	VARCHAR2 (8)		Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.skip_corrupt_blocks procedure.
MONITORING	VARCHAR2 (3)		Indicates whether the table has the MONITORING attribute set (YES) or not (NO)
CLUSTER_OWNER	VARCHAR2 (128)		Owner of the cluster, if any, to which the table belongs
DEPENDENCIES	VARCHAR2 (8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)
COMPRESSION	VARCHAR2 (8)		Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables
COMPRESS_FOR	VARCHAR2 (30)		Default compression for what kind of operations: <ul style="list-style-type: none"> • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information.
DROPPED	VARCHAR2 (3)		Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables
			This view does not return the names of tables that have been dropped.
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the table segment has been created (YES) or not (NO)
INMEMORY	VARCHAR2 (8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this table

Column	Datatype	NULL	Description
INMEMORY_PRIORITY	VARCHAR2(8)		<p>Indicates the priority at which this table is populated into the In-Memory Column Store (IM column store). Possible values:</p> <ul style="list-style-type: none"> • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NUL for ALL_TAB_PARTITIONS.</p>
INMEMORY_DISTRIBUTE	VARCHAR2(15)		<p>Indicates how the table will be distributed in the IM column stores in an Oracle Real Application Clusters (Oracle RAC) environment:</p> <ul style="list-style-type: none"> • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
INMEMORY_COMPRESSION	VARCHAR2(17)		<p>Compression level for the in-memory store:</p> <ul style="list-style-type: none"> • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW HIGH] • FOR CAPACITY [LOW HIGH] • NULL <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NUL for ALL_TAB_PARTITIONS.</p>
INMEMORY_DUPLICATE	VARCHAR2(13)		<p>Indicates the duplicate setting for the In-Memory Column Store (IM column store) in an Oracle RAC environment:</p> <ul style="list-style-type: none"> • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
EXTERNAL	VARCHAR2(3)		<p>Indicates whether the table is an external table (YES) or not (NO)</p>
HYBRID ¹	VARCHAR2(3)		<p>Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.</p>

Column	Datatype	NULL	Description
CELLMEMORY ²	VARCHAR2 (24)		<p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format
INMEMORY_SERVICE	VARCHAR2 (12)		<p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2 (1000)		<p>Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.</p>
MEMOPTIMIZE_READ	VARCHAR2 (8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2 (8)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2 (3)		Indicates whether the table has one or more sensitive columns (YES) or not (NO)
LOGICAL_REPLICATION ¹	VARCHAR2 (8)		Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.

¹ This column is available starting with Oracle Database 19c.² This column is intended for use with Oracle Exadata.

2.13 ALL_ANALYTIC_VIEW_ATTR_CLASS

`ALL_ANALYTIC_VIEW_ATTR_CLASS` describes the attribute classifications of the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_ATTR_CLASS` describes the attribute classifications of all analytic views in the database.
- `USER_ANALYTIC_VIEW_ATTR_CLASS` describes the attribute classifications of the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of analytic view
DIMENSION_ALIAS	VARCHAR2(128)		Alias of the attribute dimension in the analytic view
HIER_ALIAS	VARCHAR2(128)		Alias of the hierarchy specified by an attribute dimension in the analytic view
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute within the analytic view
CLASSIFICATION	VARCHAR2(128)		Name of analytic view attribute classification
VALUE	CLOB		Value of attribute classification
LANGUAGE	VARCHAR2(64)		Language of attribute classification
ORDER_NUM	NUMBER	NOT NULL	Order number of the attribute classification
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.14 ALL_ANALYTIC_VIEW_ATTR_CLS

`ALL_ANALYTIC_VIEW_ATTR_CLS` is identical to `ALL_ANALYTIC_VIEW_ATTR_CLASS`.

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

See Also:

- "["ALL_ANALYTIC_VIEW_ATTR_CLASS"](#)"

2.15 ALL_ANALYTIC_VIEW_ATTR_CLS_AE

`ALL_ANALYTIC_VIEW_ATTR_CLS_AE` describes the attribute classifications of the analytic views (across all editions) accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_ATTR_CLS_AE` describes the attribute classifications of all analytic views (across all editions) in the database.
- `USER_ANALYTIC_VIEW_ATTR_CLS_AE` describes the attribute classifications of the analytic views (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of analytic view
DIMENSION_ALIAS	VARCHAR2(128)		Alias of the attribute dimension in the analytic view
HIER_ALIAS	VARCHAR2(128)		Alias of the hierarchy specified by an attribute dimension in the analytic view
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute within the analytic view
CLASSIFICATION	VARCHAR2(128)		Name of analytic view attribute classification
VALUE	CLOB		Value of attribute classification
LANGUAGE	VARCHAR2(64)		Language of attribute classification
ORDER_NUM	NUMBER	NOT NULL	Order number of the attribute classification

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

See Also:

- "[DBA_ANALYTIC_VIEW_ATTR_CLS_AE](#)"
- "[USER_ANALYTIC_VIEW_ATTR_CLS_AE](#)"

2.16 ALL_ANALYTIC_VIEW_BAS_MEAS

ALL_ANALYTIC_VIEW_BAS_MEAS is identical to ALL_ANALYTIC_VIEW_BASE_MEAS.

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

See Also:

- "["ALL_ANALYTIC_VIEW_BASE_MEAS"](#)"

2.17 ALL_ANALYTIC_VIEW_BAS_MEAS_AE

ALL_ANALYTIC_VIEW_BAS_MEAS_AE describes the base measures in the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_BAS_MEAS_AE describes the base measures in all analytic views (across all editions) in the database.

- `USER_ANALYTIC_VIEW_BAS_MEAS_AE` describes the base measures in the analytic views (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the analytic view base measure
TABLE_ALIAS	VARCHAR2(128)		Alias of the table or view in the <code>USING</code> clause to which the column belongs
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name in the table or view on which this measure is defined
AGGR_FUNCTION	VARCHAR2(128)		Aggregation operator specified for this measure or <code>NULL</code> if not specified
ORDER_NUM	NUMBER	NOT NULL	Order number of the base measure in the list of measures in the analytic view
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the analytic view is defined

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

- "[DBA_ANALYTIC_VIEW_BAS_MEAS_AE](#)"
- "[USER_ANALYTIC_VIEW_BAS_MEAS_AE](#)"

2.18 ALL_ANALYTIC_VIEW_BASE_MEAS

`ALL_ANALYTIC_VIEW_BASE_MEAS` describes the base measures in the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_BASE_MEAS` describes the base measures in all analytic views in the database.
- `USER_ANALYTIC_VIEW_BASE_MEAS` describes the base measures in the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the analytic view base measure
TABLE_ALIAS	VARCHAR2(128)		Alias of the table or view in the USING clause to which the column belongs
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name in the table or view on which this measure is defined
AGGR_FUNCTION	VARCHAR2(128)		Aggregation operator specified for this measure or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order number of the base measure in the list of measures in the analytic view
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

 **See Also:**

- "[DBA_ANALYTIC_VIEW_BASE_MEAS](#)"
- "[USER_ANALYTIC_VIEW_BASE_MEAS](#)"

2.19 ALL_ANALYTIC_VIEW_CALC_MEAS

ALL_ANALYTIC_VIEW_CALC_MEAS describes the calculated measures in the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_CALC_MEAS describes the calculated measures in all analytic views in the database.
- USER_ANALYTIC_VIEW_CALC_MEAS describes the calculated measures in the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the analytic view calculated measure
MEAS_EXPRESSION	CLOB		Text of the expression for the measure
ORDER_NUM	NUMBER	NOT NULL	Order number of the calculated measure in the list of the measures in the analytic view

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		<p>The ID of the container where the data originates. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

 **See Also:**

- "[DBA_ANALYTIC_VIEW_CALC_MEAS](#)"
- "[USER_ANALYTIC_VIEW_CALC_MEAS](#)"

2.20 ALL_ANALYTIC_VIEW_CLASS

ALL_ANALYTIC_VIEW_CLASS describes the classifications of the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_CLASS describes the classifications of all analytic views in the database.
- USER_ANALYTIC_VIEW_CLASS describes the classifications of the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the analytic view
CLASSIFICATION	VARCHAR2 (128)		Classification associated with the analytic view
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2 (64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the analytic view
ORIGIN_CON_ID	NUMBER		<p>The ID of the container where the data originates. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

 **See Also:**

- "[DBA_ANALYTIC_VIEW_CLASS](#)"
- "[USER_ANALYTIC_VIEW_CLASS](#)"

2.21 ALL_ANALYTIC_VIEW_CLASS_AE

`ALL_ANALYTIC_VIEW_CLASS_AE` describes the classifications of the analytic views (across all editions) accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_CLASS_AE` describes the classifications of all analytic views (across all editions) in the database.
- `USER_ANALYTIC_VIEW_CLASS_AE` describes the classifications of the analytic views (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the analytic view
CLASSIFICATION	VARCHAR2 (128)		Classification associated with the analytic view
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2 (64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the analytic view
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

- "[DBA_ANALYTIC_VIEW_CLASS_AE](#)"
- "[USER_ANALYTIC_VIEW_CLASS_AE](#)"

2.22 ALL_ANALYTIC_VIEW_CLC_MEAS

`ALL_ANALYTIC_VIEW_CLC_MEAS` is identical to `ALL_ANALYTIC_VIEW_CALC_MEAS`.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

- "["ALL_ANALYTIC_VIEW_CALC_MEAS"](#)"

2.23 ALL_ANALYTIC_VIEW_CLC_MEAS_AE

`ALL_ANALYTIC_VIEW_CLC_MEAS_AE` describes the calculated measures in the analytic views (across all editions) accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_CLC_MEAS_AE` describes the calculated measures in all analytic views (across all editions) in the database.
- `USER_ANALYTIC_VIEW_CLC_MEAS_AE` describes the calculated measures in the analytic views (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the analytic view calculated measure
MEAS_EXPRESSION	CLOB		Text of the expression for the measure
ORDER_NUM	NUMBER	NOT NULL	Order number of the calculated measure in the list of the measures in the analytic view

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

See Also:

- "[DBA_ANALYTIC_VIEW_CLC_MEAS_AE](#)"
- "[USER_ANALYTIC_VIEW_CLC_MEAS_AE](#)"

2.24 ALL_ANALYTIC_VIEW_COLUMNS

`ALL_ANALYTIC_VIEW_COLUMNS` describes the columns of the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_COLUMNS` describes the columns of all analytic views in the database.
- `USER_ANALYTIC_VIEW_COLUMNS` describes the columns of the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the analytic view
DIMENSION_NAME	VARCHAR2 (128)		Alias of the analytic view dimension in the analytic view; for a measure the value is <code>MEASURES</code>
HIER_NAME	VARCHAR2 (128)		Alias of the analytic view hierarchy within <code>DIMENSION_NAME</code> in the analytic view; for a measure the value is <code>MEASURES</code>
COLUMN_NAME	VARCHAR2 (128)	NOT NULL	Name of the column

Column	Datatype	NULL	Description
ROLE	VARCHAR2(4)	NOT NULL	The role the attribute plays in the analytic view: <ul style="list-style-type: none"> • KEY • AKEY • HIER • PROP • MEAS
DATA_TYPE	VARCHAR2(106)	NOT NULL	Datatype of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for the NUMBER datatype; binary precision for the FLOAT datatype, NULL for all other datatypes
DATA_SCALE	NUMBER		Number of digits to the right of the decimal point in a number
NULLABLE	CHAR(1)	NOT NULL	Indicates whether a column allows NULL values; the value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: <ul style="list-style-type: none"> • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
ORDER_NUM	NUMBER	NOT NULL	Order of the column, with the hierarchy columns first followed by measure columns. The columns for a hierarchy are grouped together, listed in their order in the HIERARCHIES clause of the analytic view definition. Within a hierarchy, attributes are listed first in order of their definition in the ATTRIBUTES clause of the attribute dimension definition followed by hierarchical attributes in the DIMENSION BY clause of the analytic view.
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root).

2.25 ALL_ANALYTIC_VIEW_COLUMNS_AE

ALL_ANALYTIC_VIEW_COLUMNS_AE describes the columns of the analytic views (across all editions) accessible to the current user.

Related Views

- **DBA_ANALYTIC_VIEW_COLUMNS_AE** describes the columns of all analytic views (across all editions) in the database.
- **USER_ANALYTIC_VIEW_COLUMNS_AE** describes the columns of the analytic views (across all editions) owned by the current user. This view does not display the **OWNER** column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
DIMENSION_NAME	VARCHAR2(128)		Alias of the analytic view dimension in the analytic view; for a measure the value is MEASURES
HIER_NAME	VARCHAR2(128)		Alias of the analytic view hierarchy within DIMENSION_NAME in the analytic view; for a measure the value is MEASURES
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
ROLE	VARCHAR2(4)	NOT NULL	The role the attribute plays in the analytic view: <ul style="list-style-type: none"> • KEY • AKEY • HIER • PROP • MEAS
DATA_TYPE	VARCHAR2(106)	NOT NULL	Datatype of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for the NUMBER datatype; binary precision for the FLOAT datatype, NULL for all other datatypes
DATA_SCALE	NUMBER		Number of digits to the right of the decimal point in a number
NULLABLE	CHAR(1)	NOT NULL	Indicates whether a column allows NULL values; the value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: <ul style="list-style-type: none"> • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> • CHAR • VARCHAR2 • NCHAR • NVARCHAR2

Column	Datatype	NULL	Description
ORDER_NUM	NUMBER	NOT NULL	Order of the column, with the hierarchy columns first followed by measure columns. The columns for a hierarchy are grouped together, listed in their order in the HIERARCHIES clause of the analytic view definition. Within a hierarchy, attributes are listed first in order of their definition in the ATTRIBUTES clause of the attribute dimension definition followed by hierarchical attributes in the DIMENSION BY clause of the analytic view.
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.26 ALL_ANALYTIC_VIEW_DIM_CLASS

ALL_ANALYTIC_VIEW_DIM_CLASS describes the classifications of the attribute dimensions in the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_DIM_CLASS describes the classifications of the attribute dimensions in all analytic views in the database.
- USER_ANALYTIC_VIEW_DIM_CLASS describes the classifications of the attribute dimensions in the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the analytic view
DIMENSION_ALIAS	VARCHAR2 (128)		Alias of the attribute dimension in the analytic view
CLASSIFICATION	VARCHAR2 (128)		Classification associated with the attribute dimension

Column	Datatype	NULL	Description
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2 (64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the attribute dimension
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.27 ALL_ANALYTIC_VIEW_DIM_CLS

ALL_ANALYTIC_VIEW_DIM_CLS is identical to ALL_ANALYTIC_VIEW_DIM_CLASS.

 Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

 See Also:

- "["ALL_ANALYTIC_VIEW_DIM_CLASS"](#)"

2.28 ALL_ANALYTIC_VIEW_DIM_CLS_AE

ALL_ANALYTIC_VIEW_DIM_CLS_AE describes the classifications of the attribute dimensions in the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_DIM_CLS_AE describes the classifications of the attribute dimensions in all analytic views (across all editions) in the database.
- USER_ANALYTIC_VIEW_DIM_CLS_AE describes the classifications of the attribute dimensions in the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the analytic view
DIMENSION_ALIAS	VARCHAR2 (128)		Alias of the attribute dimension in the analytic view
CLASSIFICATION	VARCHAR2 (128)		Classification associated with the attribute dimension
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2 (64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the attribute dimension
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.29 ALL_ANALYTIC_VIEW_DIMENSIONS

`ALL_ANALYTIC_VIEW_DIMENSIONS` describes the attribute dimensions in the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_DIMENSIONS` describes the attribute dimensions in all analytic views in the database.
- `USER_ANALYTIC_VIEW_DIMENSIONS` describes the attribute dimensions in the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the analytic view

Column	Datatype	NULL	Description
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
DIMENSION_OWNER	VARCHAR2(128)	NOT NULL	Owner of the schema containing the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
DIMENSION_ALIAS	VARCHAR2(128)		Alias of the attribute dimension in the analytic view
DIMENSION_TYPE	VARCHAR2(8)		Type of the attribute dimension: <ul style="list-style-type: none">• TIME• STANDARD
ALL_MEMBER_NAME	CLOB		An expression for the name of the ALL member for the attribute dimension
ALL_MEMBER_CAPTION	CLOB		An expression for the caption for the ALL member of the attribute dimension, or NULL if not specified
ALL_MEMBER_DESCRIPTION	CLOB		An expression for the description for the ALL member of the attribute dimension, or NULL if not specified
REFERENCES_DISTINCT	VARCHAR2(1)		Indicates whether the reference between the fact table key and the attribute dimension attribute specifies the DISTINCT keyword. Possible values are: <ul style="list-style-type: none">• Y: The reference specifies the DISTINCT keyword.• N: The reference does not specify the DISTINCT keyword.
ORDER_NUM	NUMBER	NOT NULL	Order number of the attribute dimension in the analytic view
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.• n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root).

- "[USER_ANALYTIC_VIEW_DIMENSIONS](#)"

2.30 ALL_ANALYTIC_VIEW_DIMS

ALL_ANALYTIC_VIEW_DIMS is identical to ALL_ANALYTIC_VIEW_DIMENSIONS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 See Also:["ALL_ANALYTIC_VIEW_DIMENSIONS"](#)

2.31 ALL_ANALYTIC_VIEW_DIMS_AE

ALL_ANALYTIC_VIEW_DIMS_AE describes the attribute dimensions in the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_DIMS_AE describes the attribute dimensions in all analytic views (across all editions) in the database.
- USER_ANALYTIC_VIEW_DIMS_AE describes the attribute dimensions in the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
DIMENSION_OWNER	VARCHAR2(128)	NOT NULL	Owner of the schema containing the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
DIMENSION_ALIAS	VARCHAR2(128)		Alias of the attribute dimension in the analytic view
DIMENSION_TYPE	VARCHAR2(8)		Type of the attribute dimension: <ul style="list-style-type: none"> • TIME • STANDARD
ALL_MEMBER_NAME	CLOB		An expression for the name of the ALL member for the attribute dimension
ALL_MEMBER_CAPTION	CLOB		An expression for the caption for the ALL member of the attribute dimension, or NULL if not specified
ALL_MEMBER_DESCRIPTION	CLOB		An expression for the description for the ALL member of the attribute dimension, or NULL if not specified
REFERENCES_DISTINCT	VARCHAR2(1)		Indicates whether the reference between the fact table key and the attribute dimension attribute specifies the DISTINCT keyword. Possible values are: <ul style="list-style-type: none"> • Y: The reference specifies the DISTINCT keyword. • N: The reference does not specify the DISTINCT keyword.
ORDER_NUM	NUMBER	NOT NULL	Order number of the attribute dimension in the analytic view
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root).

Column	Datatype	NULL	Description
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.32 ALL_ANALYTIC_VIEW_HIER_CLASS

`ALL_ANALYTIC_VIEW_HIER_CLASS` describes the classifications of the hierarchies in the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_HIER_CLASS` describes the classifications of the hierarchies in all analytic views in the database.
- `USER_ANALYTIC_VIEW_HIER_CLASS` describes the classifications of the hierarchies in the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the hierarchy
ANALYTIC_VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the analytic view
DIMENSION_ALIAS	VARCHAR2 (128)		Alias of the attribute dimension in the analytic view
HIER_ALIAS	VARCHAR2 (128)		Alias of the hierarchy in the attribute dimension in the analytic view
CLASSIFICATION	VARCHAR2 (128)		Classification associated with the hierarchy
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2 (64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the hierarchy
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.33 ALL_ANALYTIC_VIEW_HIER_CLS

`ALL_ANALYTIC_VIEW_HIER_CLS` is identical to `ALL_ANALYTIC_VIEW_HIER_CLASS`.

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

See Also:

- "["ALL_ANALYTIC_VIEW_HIER_CLASS"](#)"

2.34 ALL_ANALYTIC_VIEW_HIER_CLS_AE

`ALL_ANALYTIC_VIEW_HIER_CLS_AE` describes the classifications of the hierarchies in the analytic views (across all editions) accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_HIER_CLS_AE` describes the classifications of the hierarchies in all analytic views (across all editions) in the database.
- `USER_ANALYTIC_VIEW_HIER_CLS_AE` describes the classifications of the hierarchies in the analytic views (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
DIMENSION_ALIAS	VARCHAR2(128)		Alias of the attribute dimension in the analytic view
HIER_ALIAS	VARCHAR2(128)		Alias of the hierarchy in the attribute dimension in the analytic view
CLASSIFICATION	VARCHAR2(128)		Classification associated with the hierarchy
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the hierarchy

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.37 ALL_ANALYTIC_VIEW_KEYS

ALL_ANALYTIC_VIEW_KEYS describes the key columns of the attribute dimensions in the analytic views accessible to the current user.

The keys reference attributes of the attribute dimensions of the analytic view.

Related Views

- DBA_ANALYTIC_VIEW_KEYS describes the key columns of the attribute dimensions in all analytic views in the database.
- USER_ANALYTIC_VIEW_KEYS describes the key columns of the attribute dimensions in the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the analytic view
DIMENSION_ALIAS	VARCHAR2 (128)		Alias of the attribute dimension in the analytic view
AV_KEY_TABLE_ALIAS	VARCHAR2 (128)		Table alias of the key column
AV_KEY_COLUMN	VARCHAR2 (128)	NOT NULL	Name of the column for the key
REF_DIMENSION_ATTR	VARCHAR2 (128)		Name of the referenced attribute dimension attribute
ORDER_NUM	NUMBER	NOT NULL	Order number of the key in the list of keys in the analytic view
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root).

DIMENSION_ALIAS	VARCHAR2(128)		Alias of the analytic view dimension in the analytic view
HIER_ALIAS	VARCHAR2(128)		Alias of the hierarchy in the analytic view
LEVEL_NAME	VARCHAR2(128)	NOT NULL	Name of the level in the analytic view
CLASSIFICATION	VARCHAR2(128)		Classification associated with the level
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the level
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.44 ALL_ANALYTIC_VIEW_LVLGRPS

`ALL_ANALYTIC_VIEW_LVLGRPS` describes the analytic view measure and level groups of the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_LVLGRPS` describes the analytic view measure and level groups of all analytic views in the database.
- `USER_ANALYTIC_VIEW_LVLGRPS` describes the analytic view measure and level groups of the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)		Name of the analytic view
CACHE_TYPE	VARCHAR2 (128)		Type of the materialized view; one of the following: • DYNAMIC • MATERIALIZED (the default value)
DIMENSION_ALIAS	VARCHAR2 (128)		Alias of the attribute dimension in the group
HIER_ALIAS	VARCHAR2 (128)		Alias of the hierarchy associated with the attribute dimension in the group
LEVEL_NAME	VARCHAR2 (128)		Name of the level in the hierarchy in the group
MEASURE_NAME	VARCHAR2 (128)		Names of the measures in the group
AV_LVLGRP_ORDER	NUMBER		Order of the groups in the analytic view
LEVEL_MEAS_ORDER	NUMBER		Order of the levels and measures in the group
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i> : This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root).

2.45 ALL_ANALYTIC_VIEW_LVLGRPS_AE

`ALL_ANALYTIC_VIEW_LVLGRPS_AE` describes the analytic view measure and level groups of the analytic views (across all editions) accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_LVLGRPS_AE` describes the analytic view measure and level groups of all analytic views (across all editions) in the database.
- `USER_ANALYTIC_VIEW_LVLGRPS_AE` describes the analytic view measure and level groups of the analytic views (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2 (128)		Name of the analytic view
CACHE_TYPE	VARCHAR2 (128)		Type of the materialized view; one of the following: • DYNAMIC • MATERIALIZED (the default value)
DIMENSION_ALIAS	VARCHAR2 (128)		Alias of the attribute dimension in the group
HIER_ALIAS	VARCHAR2 (128)		Alias of the hierarchy associated with the attribute dimension in the group
LEVEL_NAME	VARCHAR2 (128)		Name of the level in the hierarchy in the group
MEASURE_NAME	VARCHAR2 (128)		Names of the measures in the group
AV_LVLGRP_ORDER	NUMBER		Order of the groups in the analytic view
LEVEL_MEAS_ORDER	NUMBER		Order of the levels and measures in the group
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n : This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.46 ALL_ANALYTIC_VIEW_MEAS_CLASS

`ALL_ANALYTIC_VIEW_MEAS_CLASS` describes the classifications of the measures of the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_MEAS_CLASS` describes the classifications of the measures of all analytic views in the database.
- `USER_ANALYTIC_VIEW_MEAS_CLASS` describes the classifications of the measures of the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the measure associated with the classification
CLASSIFICATION	VARCHAR2(128)		Classification associated with the measure of the analytic view
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the measure
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.47 ALL_ANALYTIC_VIEW_MEAS_CLS

`ALL_ANALYTIC_VIEW_MEAS_CLS` is identical to `ALL_ANALYTIC_VIEW_MEAS_CLASS`.

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

 See Also:

["ALL_ANALYTIC_VIEW_MEAS_CLASS"](#)

2.48 ALL_ANALYTIC_VIEW_MEAS_CLS_AE

ALL_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of all analytic views (across all editions) in the database.
- USER_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the measure associated with the classification
CLASSIFICATION	VARCHAR2(128)		Classification associated with the measure of the analytic view
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the measure
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> 0: This value is used for rows in non-CDBs. This value is not used for CDBs. n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the analytic view is defined

 Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.49 ALL_ANALYTIC_VIEWS

`ALL_ANALYTIC_VIEWS` describes the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEWS` describes all analytic views in the database.
- `USER_ANALYTIC_VIEWS` describes the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
<code>OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the analytic view
<code>ANALYTIC_VIEW_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the analytic view
<code>TABLE_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the fact table or view on which the analytic view is defined
<code>TABLE_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the fact table or view on which the analytic view is defined
<code>TABLE_ALIAS</code>	VARCHAR2(128)		Alias of the fact table or view on which the analytic view is defined; the default is <code>TABLE_NAME</code>
<code>DEFAULT_AGGR</code>	VARCHAR2(128)		Default aggregation of the analytic view
<code>DEFAULT_MEASURE</code>	VARCHAR2(128)		Name of the default measure of the analytic view
<code>COMPILE_STATE</code>	VARCHAR2(7)		Compile status of the analytic view: <ul style="list-style-type: none"> • VALID • INVALID
<code>DYN_ALL_CACHE</code>	VARCHAR2(1)		The value of this column is always N
<code>ORIGIN_CON_ID</code>	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root).

2.50 ALL_ANALYTIC_VIEWS_AE

ALL_ANALYTIC_VIEWS_AE describes the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEWS_AE describes all analytic views (across all editions) in the database.
- USER_ANALYTIC_VIEWS_AE describes the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the fact table or view on which the analytic view is defined
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the fact table or view on which the analytic view is defined
TABLE_ALIAS	VARCHAR2(128)		Alias of the fact table or view on which the analytic view is defined; the default is TABLE_NAME
DEFAULT_AGGR	VARCHAR2(128)		Default aggregation of the analytic view
DEFAULT_MEASURE	VARCHAR2(128)		Name of the default measure of the analytic view
COMPILE_STATE	VARCHAR2(7)		Compile status of the analytic view: <ul style="list-style-type: none"> • VALID • INVALID
DYN_ALL_CACHE	VARCHAR2(1)		The value of this column is always N
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the analytic view is defined

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.51 ALL_APPLY

`ALL_APPLY` displays information about the apply processes that dequeue messages from queues accessible to the current user.

Related View

`DBA_APPLY` displays information about all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue from which the apply process dequeues
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue from which the apply process dequeues
APPLY_CAPTURED	VARCHAR2(3)		Indicates whether the apply process applies captured messages (YES) or user-enqueued messages (NO)
RULE_SET_NAME	VARCHAR2(128)		Name of the positive rule set used by the apply process for filtering
RULE_SET_OWNER	VARCHAR2(128)		Owner of the positive rule set used by the apply process for filtering
APPLY_USER	VARCHAR2(128)		User who is applying messages
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If NULL, then changes are applied to the local database.
APPLY_TAG	RAW(2000)		Tag associated with redo log records that are generated when changes are made by the apply process
DDL_HANDLER	VARCHAR2(98)		Name of the user-specified data definition language (DDL) handler, which handles DDL logical change records (LCRs)
PRECOMMIT_HANDLER	VARCHAR2(98)		Name of the user-specified pre-commit handler
MESSAGE_HANDLER	VARCHAR2(98)		Name of the user-specified procedure that handles dequeued messages other than logical change records (LCRs)
STATUS	VARCHAR2(8)		Status of the apply process: <ul style="list-style-type: none"> • DISABLED • ENABLED • ABORTED
MAX_APPLIED_MESSAGE_NUMB ER	NUMBER		System change number (SCN) corresponding to the apply process high watermark for the last time the apply process was stopped using the <code>DBMS_APPLYADM.STOP_APPLY</code> procedure with the <code>force</code> parameter set to <code>false</code> . The apply process high watermark is the SCN beyond which no messages have been applied.
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the negative rule set used by the apply process for filtering
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the negative rule set used by the apply process for filtering

Column	Datatype	NULL	Description
STATUS_CHANGE_TIME	DATE		Time that the STATUS of the apply process was changed
ERROR_NUMBER	NUMBER		Error number if the apply process was aborted
ERROR_MESSAGE	VARCHAR2 (4000)		Error message if the apply process was aborted
MESSAGE_DELIVERY_MODE	VARCHAR2 (10)		Reserved for internal use
PURPOSE	VARCHAR2 (19)		Purpose of the apply process: <ul style="list-style-type: none"> • GoldenGate Apply - An Oracle GoldenGate Inbound server configured by Oracle GoldenGate integrated replicat • XStream Out - An XStream outbound server in an XStream Out configuration • XStream In - An XStream inbound server in an XStream In configuration • AUDIT VAULT - An apply process in an audit vault configuration • CHANGE DATA CAPTURE - An apply process in a change data capture configuration
LCRID_VERSION	NUMBER		LCR ID format currently being used

See Also:

2.52 ALL_APPLY_CHANGE_HANDLERS

`ALL_APPLY_CHANGE_HANDLERS` displays information about the change handlers on the tables accessible to the current user.

Related View

`DBA_APPLY_CHANGE_HANDLERS` displays information about the change handlers on all tables in the database.

Column	Datatype	NULL	Description
CHANGE_TABLE_OWNER	VARCHAR2 (128)		Owner of the change table
CHANGE_TABLE_NAME	VARCHAR2 (128)		Name of the change table
SOURCE_TABLE_OWNER	VARCHAR2 (128)		Owner of the source table
SOURCE_TABLE_NAME	VARCHAR2 (128)		Name of the source table
HANDLER_NAME	VARCHAR2 (128)		Name of the statement-based change handler

Column	Datatype	NULL	Description
CAPTURE_VALUES	VARCHAR2(3)		Indicates whether to capture the old (OLD), new (NEW), or both (*) values
APPLY_NAME	VARCHAR2(128)		Name of the apply process
OPERATION_NAME	VARCHAR2(10)		Name of the DML operation to which the DML handler is set: <ul style="list-style-type: none"> • DEFAULT • INSERT • UPDATE • DELETE • LOB_UPDATE
CREATION_TIME	TIMESTAMP(6)		Change handler creation time
MODIFICATION_TIME	TIMESTAMP(6)		Change handler modification time

 See Also:["DBA_APPLY_CHANGE_HANDLERS"](#)

2.53 ALL_APPLY_CONFLICT_COLUMNS

ALL_APPLY_CONFLICT_COLUMNS displays information about the conflict handlers on the tables accessible to the current user.

Related View

DBA_APPLY_CONFLICT_COLUMNS displays information about the conflict handlers on all tables in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the object on which the update conflict handler is defined
OBJECT_NAME	VARCHAR2(128)		Name of the object on which the update conflict handler is defined
METHOD_NAME	VARCHAR2(92)		Name of the update conflict handler used to resolve conflicts
RESOLUTION_COLUMN	VARCHAR2(4000)		Name of the column used to resolve conflicts
COLUMN_NAME	VARCHAR2(128)		Name of a column in the column list for the update conflict handler
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.

 See Also:["DBA_APPLY_CONFLICT_COLUMNS"](#)

2.54 ALL_APPLY_DML_CONF_HANDLERS

ALL_APPLY_DML_CONF_HANDLERS provides details about DML conflict handlers on objects visible to the current user.

Related View

DBA_APPLY_DML_CONF_HANDLERS provides details about DML conflict handlers.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)		Name of the apply process
OBJECT_OWNER	VARCHAR2(128)		Owner of the target object
OBJECT_NAME	VARCHAR2(128)		Name of the target object
SOURCE_OBJECT_OWNER	VARCHAR2(128)		Source database owner of the object
SOURCE_OBJECT_NAME	VARCHAR2(128)		Source database name of the object
COMMAND_TYPE	VARCHAR2(6)		Type of the DML operation: INSERT, UPDATE, or DELETE
CONFLICT_TYPE	VARCHAR2(11)		Type of conflict: <ul style="list-style-type: none"> • ROW EXISTS • ROW MISSING
METHOD_NAME	VARCHAR2(9)		Method used for resolving the error, depending on the conflict type: <ul style="list-style-type: none"> • OVERWRITE • RECORD • IGNORE • MAXIMUM • MINIMUM • DELTA
CONFLICT_HANDLER_NAME	VARCHAR2(128)		Name of the conflict handler
RESOLUTION_COLUMN	VARCHAR2(128)		Name of the column used to resolve the conflict for MAXIMUM, MINIMUM, and DELTA
SET_BY	VARCHAR2(10)		Entity that set up the handler: <ul style="list-style-type: none"> • USER • GOLDENGATE

See Also:

["DBA_APPLY_DML_CONF_HANDLERS"](#)

2.55 ALL_APPLY_DML_HANDLERS

ALL_APPLY_DML_HANDLERS displays information about the DML handlers on the tables accessible to the current user.

Related View

DBA_APPLY_DML_HANDLERS displays information about the DML handlers on all tables in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object on which the DML handler is specified
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object on which the DML handler is specified
OPERATION_NAME	VARCHAR2(13)		Name of the DML operation for which the DML handler is used: <ul style="list-style-type: none"> • DEFAULT • INSERT • UPDATE • DELETE • LOB_UPDATE • ASSEMBLE_LOBS
USER_PROCEDURE	VARCHAR2(98)		Name of the user-specified DML handler, which handles row logical change records that contain the DML operation in the OPERATION_NAME column on the object
ERROR_HANDLER	VARCHAR2(1)		Indicates whether the DML handler handles only the relevant row logical change records that result in apply errors (Y) or all relevant row logical change records (N)
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.
APPLY_NAME	VARCHAR2(128)		Name of the apply process for the given object
ASSEMBLE_LOBS	VARCHAR2(1)		Indicates whether LOB assembly is used for LOB columns in logical change records (LCRs) processed by the handler (Y) or not (N) LOB assembly combines multiple LCRs for a LOB column resulting from a single row change into one row LCR before passing the LCR to the handler.
SET_BY	VARCHAR2(10)		Entity that set up the handler. Possible values include: <ul style="list-style-type: none"> • GOLDENGATE • USER

 **See Also:**

- "[DBA_APPLY_DML_HANDLERS](#)"
- *Oracle Database XStream Guide* for more information about DML handlers in an Oracle XStream environment

2.56 ALL_APPLY_ENQUEUE

ALL_APPLY_ENQUEUE displays information about the apply enqueue actions for the rules where the destination queue exists and is accessible to the current user.

Related View

DBA_APPLY_ENQUEUE displays information about the apply enqueue actions for all rules in the database.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
DESTINATION_QUEUE_NAME	VARCHAR2(4000)		Name of the queue where events satisfying the rule will be enqueued

 See Also:["DBA_APPLY_ENQUEUE"](#)

2.57 ALL_APPLY_ERROR

ALL_APPLY_ERROR displays information about the error transactions generated by the apply processes that dequeue messages from queues accessible to the current user.

Related Views

- DBA_APPLY_ERROR displays information about the error transactions generated by all apply processes in the database.
- USER_APPLY_ERROR displays information about the error transactions generated by apply processes visible to the current user. This view does not display the SOURCE_ROOT_NAME column.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)		Name of the apply process at the local database which processed the transaction
QUEUE_NAME	VARCHAR2(128)		Name of the queue at the local database from which the transaction was dequeued
QUEUE_OWNER	VARCHAR2(128)		Owner of the queue at the local database from which the transaction was dequeued
LOCAL_TRANSACTION_ID	VARCHAR2(22)		Local transaction ID for the error transaction
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated
SOURCE_TRANSACTION_ID	VARCHAR2(128)		Original transaction ID at the source database
SOURCE_COMMIT_SCN	NUMBER		Original commit system change number (SCN) for the transaction at the source database
MESSAGE_NUMBER	NUMBER		Identifier for the message in the transaction that raised an error
ERROR_NUMBER	NUMBER		Error number of the error raised by the transaction
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the error raised by the transaction
RECIPIENT_ID	NUMBER		User ID of the original user that applied the transaction
RECIPIENT_NAME	VARCHAR2(128)		Name of the original user that applied the transaction
MESSAGE_COUNT	NUMBER		Total number of messages inside the error transaction
ERROR_CREATION_TIME	DATE		Time that the error was created
SOURCE_COMMIT_POSITION	RAW(64)		Original commit position for the transaction

Column	Datatype	NULL	Description
ERROR_TYPE	VARCHAR2(11)		NULL if the apply process can access all of the LCRs in the error transaction. EAGER ERROR if the apply process cannot access all of the LCRs in the error transaction. This error type typically means that the apply process was applying LCRs in a large transaction. When the <code>ERROR_TYPE</code> is EAGER ERROR, manage the error transaction using the instructions in <i>Oracle Database XStream Guide</i> . RECORD LCR indicates that a single LCR has been recorded as requested by user-specified error handling configuration RECORD TXN NO LCRS indicates that the identified transaction encountered an error and only the transaction ID is recorded as requested by user-specified error handling configuration RECORD TXN WITH LCRS indicates that the identified transaction encountered an error. The entire transaction is recorded as requested by user-specified error handling configuration. UNHANDLED ERRORS NO LCR indicates that the identified transaction encountered an error and there was no error handling specified for this handler. No LCRs are recorded for this transaction. DISCARDED is used to mark recorded and discarded LCRs.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
ERROR_POSITION	RAW(64)		LCR position at which the error occurred

 **See Also:**

- "[DBA_APPLY_ERROR](#)"
- "[USER_APPLY_ERROR](#)"
- *Oracle Database XStream Guide* for information on how to display detailed information about apply errors

2.58 ALL_APPLY_ERROR_MESSAGES

`ALL_APPLY_ERROR_MESSAGES` displays information about the individual messages in an error transaction generated by the apply processes that dequeue messages from queues accessible to the current user.

For XStream inbound servers, each message in an error transaction is an LCR.

 Note:

- Messages that were spilled from memory to hard disk do not appear in this view.
- This view does not contain information related to XStream outbound servers.

Related View

`DBA_APPLY_ERROR_MESSAGES` displays information about the individual messages in all of the error transactions generated by all apply processes in the database.

Column	Datatype	NULL	Description
MESSAGE_ID	RAW(16)		Unique identifier of the message stored in the error queue
LOCAL_TRANSACTION_ID	VARCHAR2(22)		Local transaction ID for the error transaction
TRANSACTION_MESSAGE_NUMB ER	NUMBER		Message number of the message that raised the error. The message number is a sequence number for the messages in the transaction, starting with 1.
ERROR_NUMBER	NUMBER		Error number of the error raised by the transaction. The error number is populated only for the LCR that raised the error. This field is NULL for the other LCRs in the transaction.
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the error raised by the transaction. The error message is populated only for the LCR that raised the error. This field is NULL for the other LCRs in the transaction.
SOURCE_OBJECT_OWNER	VARCHAR2(128)		Owner of the object at the source database
SOURCE_OBJECT_NAME	VARCHAR2(128)		Name of the object at the source database
OBJECT_OWNER	VARCHAR2(128)		Owner of the target table
OBJECT_NAME	VARCHAR2(128)		Object name of the target table
PRIMARY_KEY	VARCHAR2(4000)		Primary key of the table row that caused the source transaction to fail at the target
POSITION	RAW(64)		The LCR position
OPERATION	VARCHAR2(100)		The DML or DDL operation represented in the LCR
CONFLICT_TYPE	VARCHAR2(18)		Conflict type. Possible values: <ul style="list-style-type: none"> • INSERT ROW EXISTS: DML operation is INSERT and a row already exists with the specified key value. • UPDATE ROW EXISTS: DML operation is UPDATE. A row with the specified key exists but has conflicting values for some columns. • UPDATE ROW MISSING: DML operation is UPDATE and no row with the specified key value exists. • DELETE ROW EXISTS: DML operation is DELETE. A row with the specified key exists but has conflicting values for some columns • DELETE ROW MISSING: DML operation is DELETE and no row with the specified key value exists.

Column	Datatype	NULL	Description
APPLIED_STATE	VARCHAR2(7)		Conflict applied state. Possible values: <ul style="list-style-type: none"> • WON: Incoming Logical Change Record was applied in its entirety. • PARTIAL: Incoming Logical Change Record was applied for one or more conflict groups. • LOST: Incoming Logical Change Record was not applied.
SEQ#	NUMBER		Trail file number (Oracle GoldenGate)
RBA	NUMBER		Position with Trail file (Oracle GoldenGate)
CONFLICT_INFO	VARCHAR2(4000)		Identifies the conflict group information
SOURCE_PACKAGE_NAME	VARCHAR2(128)		Package name of the source for procedural replication
PACKAGE_NAME	VARCHAR2(128)		Package name of the destination for procedural replication
MESSAGE	CLOB		The content of the LCR. Content includes column name and value for old and/or new values in DML LCRs. For DDL LCRs, the content is the text of the DDL SQL.

2.59 ALL_APPLY_EXECUTE

`ALL_APPLY_EXECUTE` displays information about the apply execute actions for the rules visible to the current user.

Related View

`DBA_APPLY_EXECUTE` displays information about the apply execute actions for all rules in the database.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
EXECUTE_EVENT	VARCHAR2(2)		Indicates whether the event satisfying the rule is executed

 See Also:

- "[DBA_APPLY_EXECUTE](#)"

2.60 ALL_APPLY_HANDLE_COLLISIONS

ALL_APPLY_HANDLE_COLLISIONS provides details about apply handlers for collisions on objects visible to the user at the table level.

Related View

DBA_APPLY_HANDLE_COLLISIONS provides details about apply handlers for collisions at the table level.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the target object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the target object
SOURCE_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Source database owner of the object
SOURCE_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Source database name of the object
ENABLED	VARCHAR2(1)	NOT NULL	State of the collision handlers: Y for enabled, N for disabled
SET_BY	VARCHAR2(10)		Entity that set up the handler: • USER • GOLDENGATE

See Also:

"DBA_APPLY_HANDLE_COLLISIONS"

2.61 ALL_APPLY_INSTANTIATED_GLOBAL

ALL_APPLY_INSTANTIATED_GLOBAL displays information for the current user about databases for which an instantiation SCN has been set.

Related View

DBA_APPLY_INSTANTIATED_GLOBAL displays information about databases for which an instantiation SCN has been set.

Column	Datatype	NULL	Description
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Name of the database that was instantiated
INSTANTIATION_SCN	NUMBER		Instantiation SCN for the database. Only changes committed after this SCN are applied by an apply process.
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

 See Also:["DBA_APPLY_INSTANTIATED_GLOBAL"](#)

2.62 ALL_APPLY_INSTANTIATED_OBJECTS

ALL_APPLY_INSTANTIATED_OBJECTS displays information about objects accessible to the current user for which an instantiation SCN has been set.

Related View

DBA_APPLY_INSTANTIATED_OBJECTS displays information about objects for which an instantiation SCN has been set.

Column	Datatype	NULL	Description
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Name of the database where the object originated
SOURCE_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object at the source database
SOURCE_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object at the source database
SOURCE_OBJECT_TYPE	VARCHAR2(11)		Type of the object at the source database
INSTANTIATION_SCN	NUMBER		Instantiation SCN for the object. Only changes committed after this SCN are applied by an apply process.
IGNORE_SCN	NUMBER		SCN below which the instantiation SCN cannot be set. This value corresponds to the SCN value at the source database at the time when the object was prepared for instantiation.
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

 See Also:["DBA_APPLY_INSTANTIATED_OBJECTS"](#)

2.63 ALL_APPLY_INSTANTIATED_SCHEMAS

ALL_APPLY_INSTANTIATED_SCHEMAS displays information about schemas accessible to the current user for which an instantiation SCN has been set.

Related View

DBA_APPLY_INSTANTIATED_SCHEMAS displays information about schemas for which an instantiation SCN has been set.

Column	Datatype	NULL	Description
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Name of the database where the schema originated

Column	Datatype	NULL	Description
SOURCE_SCHEMA	VARCHAR2(128)		Name of the schema at the source database
INSTANTIATION_SCN	NUMBER		Instantiation SCN for the schema. Only changes committed after this SCN are applied by an apply process.
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

 See Also:["DBA_APPLY_INSTANTIATED_SCHEMAS"](#)

2.64 ALL_APPLY_KEY_COLUMNS

`ALL_APPLY_KEY_COLUMNS` displays information about the substitute key columns for the tables accessible to the current user. Substitute key columns are set using the `DBMS_APPLYADM.SET_KEY_COLUMNS` procedure.

Related View

`DBA_APPLY_KEY_COLUMNS` displays information about the substitute key columns for all tables in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object on which substitute key columns are set
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object on which substitute key columns are set
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name of a column specified as a substitute key column
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.

 See Also:

- ["DBA_APPLY_KEY_COLUMNS"](#)
- Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_APPLYADM.SET_KEY_COLUMNS` procedure

2.65 ALL_APPLY_PARAMETERS

ALL_APPLY_PARAMETERS displays information about the parameters for the apply processes that dequeue events from queues accessible to the current user.

Related View

DBA_APPLY_PARAMETERS displays information about the parameters for all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
PARAMETER	VARCHAR2(128)	NOT NULL	Name of the parameter
VALUE	VARCHAR2(4000)		Parameter value
SET_BY_USER	VARCHAR2(3)		Indicates whether the parameter value was set by the user (YES) or was not set by the user (NO). If NO for a parameter, then the parameter is set to its default value. If YES for a parameter, then the parameter may or may not be set to its default value.

 See Also:

["DBA_APPLY_PARAMETERS"](#)

2.66 ALL_APPLY_PROGRESS

ALL_APPLY_PROGRESS displays information about the progress made by the apply processes that dequeue events from queues accessible to the current user. This view only contains information about captured events. It does not contain information about user-enqueued events.

Related View

DBA_APPLY_PROGRESS displays information about the progress made by all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Global name of the source database of the changes that are applied by the apply process
APPLIED_MESSAGE_NUMBER	NUMBER	NOT NULL	Message number up to which all transactions have definitely been applied. This value is the low watermark for the apply process. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied.

Column	Datatype	NULL	Description
OLDEST_MESSAGE_NUMBER	NUMBER	NOT NULL	Earliest message number of the transactions currently being dequeued and applied
APPLY_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied
APPLIED_MESSAGE_CREATE_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database
OLDEST_TRANSACTION_ID	VARCHAR2(128)		Oldest transaction ID of interest. (useful for detecting long-running or large transactions)
SPILL_MESSAGE_NUMBER	NUMBER		Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk (it will be dequeued from the Streams queue and capture will not need to resend any logical change records (LCRs) with a lower SCN). Spilled messages may not have been applied yet.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

 **See Also:**

["DBA_APPLY_PROGRESS"](#)

2.67 ALL_APPLY_REPERROR_HANDLERS

ALL_APPLY_REPERROR_HANDLERS provides details about apply reperror handlers on objects visible to the user.

Related View

DBA_APPLY_REPERROR_HANDLERS provides details about apply reperror handlers.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SOURCE_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Source database owner of the source object
SOURCE_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Source database name of the object
ERROR_NUMBER	NUMBER	NOT NULL	Error number for the handler
METHOD	VARCHAR2(18)		Error handling method: <ul style="list-style-type: none"> • ABEND • RECORD • IGNORE • RETRY • RETRY_TRANSACTION • RECORD_TRANSACTION

Column	Datatype	NULL	Description
MAX_TRIES	NUMBER		Maximum number of times to retry for the method RETRY and RETRY_TRANSACTION
DELAY_CSECS	NUMBER		Number of centiseconds to wait between retries for RETRY and RETRY_TRANSACTION
SET_BY	VARCHAR2(10)		Entity that set up the handler: <ul style="list-style-type: none">• USER• GOLDENGATE

 See Also:["DBA_APPLY_REPPEROR_HANDLERS"](#)

2.68 ALL_APPLY_TABLE_COLUMNS

ALL_APPLY_TABLE_COLUMNS displays, for the tables accessible to the current user, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations.

Conflict detection for nonkey columns can be stopped using the DBMS_APPLY_ADM.COMPARE_OLD_VALUES procedure.

Related View

DBA_APPLY_TABLE_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the table
OBJECT_NAME	VARCHAR2(128)		Name of the table
COLUMN_NAME	VARCHAR2(4000)		Name of the column
COMPARE_OLD_ON_DELETE	VARCHAR2(3)		Indicates whether to Compare the old value of the column on deletes (YES) or not (NO)
COMPARE_OLD_ON_UPDATE	VARCHAR2(3)		Indicates whether to Compare the old value of the column on updates (YES) or not (NO)
APPLY_DATABASE_LINK	VARCHAR2(128)		For remote tables, name of the database link pointing to the remote database

 See Also:

- ["DBA_APPLY_TABLE_COLUMNS"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_APPLY_ADM.COMPARE_OLD_VALUES procedure

2.69 ALL_ARGUMENTS

ALL_ARGUMENTS lists the arguments of the functions and procedures that are accessible to the current user.

 **Note:**

The following changes have been made to this view:

- Starting with Oracle Database 12c release 1 (12.1.0.2), this view omits procedures with no arguments. Prior to Oracle Database 12c release 1 (12.1.0.2), a procedure with no arguments was presented as a single row in this view.
- Starting with Oracle Database 18c, this view displays only one row for an argument that is a composite type. Prior to Oracle Database 18c, this view displayed multiple rows for composite types.

To obtain information about composite type arguments, use the value of the `TYPE_NAME` column in this view to query the `ALL_PLSQL_TYPES`, `ALL_PLSQL_TYPE_ATTRS`, and `ALL_PLSQL_COLL_TYPES` views, which fully describe composite types.

See *Oracle Database Upgrade Guide* for more information about these changes.

Related Views

- `DBA_ARGUMENTS` lists the arguments of the functions and procedures that are available in the database.
- `USER_ARGUMENTS` lists the arguments of the functions and procedures that are owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the procedure or function
PACKAGE_NAME	VARCHAR2(128)		Name of the package
OBJECT_ID	NUMBER	NOT NULL	Object number of the object
OVERLOAD	VARCHAR2(40)		Indicates the <i>n</i> th overloading ordered by its appearance in the source; otherwise, it is NULL.
SUBPROGRAM_ID	NUMBER		Unique subprogram identifier
ARGUMENT_NAME	VARCHAR2(128)		Name of the argument A null argument name is used to denote a function return.
POSITION	NUMBER	NOT NULL	This column holds the position of this item in the argument list, or 0 for a function return value.
SEQUENCE	NUMBER	NOT NULL	Defines the sequential order of the argument. Argument sequence starts from 1. Return type comes first, and each argument will follow.

Column	Datatype	NULL	Description
DATA_LEVEL	NUMBER	NOT NULL	Nesting depth of the argument for composite types Note: Starting with Oracle Database 18c, the value of this column is always 0, because this view displays only one row for each argument. This view no longer displays multiple rows for composite type arguments.
DATA_TYPE	VARCHAR2 (30)		Datatype of the argument
DEFAULTED	VARCHAR2 (1)		Specifies whether or not the argument is defaulted
DEFAULT_VALUE	LONG		Reserved for future use
DEFAULT_LENGTH	NUMBER		Reserved for future use
IN_OUT	VARCHAR2 (9)		Direction of the argument: <ul style="list-style-type: none">• IN• OUT• IN/OUT
DATA_LENGTH	NUMBER		Length of the column (in bytes)
DATA_PRECISION	NUMBER		Length in decimal digits (NUMBER) or binary digits (FLOAT)
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
RADIX	NUMBER		Argument radix for a number
CHARACTER_SET_NAME	VARCHAR2 (44)		Character set name for the argument
TYPE_OWNER	VARCHAR2 (128)		Owner of the type of the argument
TYPE_NAME	VARCHAR2 (128)		Name of the type of the argument. If the type is a package local type (that is, it is declared in a package specification), then this column displays the name of the package.
TYPE_SUBNAME	VARCHAR2 (128)		Relevant only for package local types. Displays the name of the type declared in the package identified in the TYPE_NAME column.
TYPE_LINK	VARCHAR2 (128)		Relevant only for package local types when the package identified in the TYPE_NAME column is a remote package. This column displays the database link used to refer to the remote package.
TYPE_OBJECT_TYPE	VARCHAR2 (7)		Displays the type of the type described by the TYPE_OWNER, TYPE_NAME, and TYPE_SUBNAME columns. Possible values are: <ul style="list-style-type: none">• TABLE• VIEW• PACKAGE• TYPE
PLS_TYPE	VARCHAR2 (128)		For numeric arguments, the name of the PL/SQL type of the argument. Null otherwise.
CHAR_LENGTH	NUMBER		Character limit for string datatypes
CHAR_USED	VARCHAR2 (1)		Indicates whether the byte limit (B) or char limit (C) is official for the string

Column	Datatype	NULL	Description
ORIGIN_CON_ID	VARCHAR2(256)		<p>The ID of the container where the data originates. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root)

 **Note:**

To list the procedure names in a package, use the ALL_PROCEDURES view.

- "[DBA_ARGUMENTS](#)"
- "[USER_ARGUMENTS](#)"
- "[ALL_PLSQL_TYPES](#)"
- "[ALL_PLSQL_TYPE_ATTRS](#)"
- "[ALL_PLSQL_COLL_TYPES](#)"
- "[ALL_PROCEDURES](#)" for information about the functions and procedures that are accessible to the current user

2.70 ALL_ASSEMBLIES

ALL_ASSEMBLIES provides information about assemblies accessible to the current user.

Related Views

- DBA_ASSEMBLIES provides information about all assemblies in the database.
- USER_ASSEMBLIES provides information about all assemblies owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the assembly
ASSEMBLY_NAME	VARCHAR2(128)	NOT NULL	Name of the assembly
FILE_SPEC	VARCHAR2(4000)		Operating system file specification of the assembly
SECURITY_LEVEL	VARCHAR2(10)		The maximum security level of the assembly
IDENTITY	VARCHAR2(4000)		The identity of the assembly
STATUS	VARCHAR2(7)		Status of the assembly

 See Also:

- "[DBA_ASSOCIATIONS](#)"
- "[USER_ASSOCIATIONS](#)"

2.71 ALL_ASSOCIATIONS

`ALL_ASSOCIATIONS` describes user-defined statistics associated with objects accessible to the current user.

Related Views

- `DBA_ASSOCIATIONS` describes all user-defined statistics in the database.
- `USER_ASSOCIATIONS` describes user-defined statistics associated with objects owned by the current user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object for which the association is being defined
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object for which the association is being defined
COLUMN_NAME	VARCHAR2(128)		Column name in the object for which the association is being defined
OBJECT_TYPE	VARCHAR2(9)		Kind of object with which statistics are being associated: column, type, package or function, indextype, or domain index.
STATSTYPE_SCHEMA	VARCHAR2(128)		Owner of the statistics type
STATSTYPE_NAME	VARCHAR2(128)		Name of statistics type that contains the cost, selectivity or statistics functions
DEF_SELECTIVITY	NUMBER		Default selectivity of the object, if any
DEF_CPU_COST	NUMBER		Default CPU cost of the object, if any
DEF_IO_COST	NUMBER		Default I/O cost of the object, if any
DEF_NET_COST	NUMBER		Default networking cost of the object, if any
INTERFACE_VERSION	NUMBER		Identifies the version number of the <code>ODCISStats</code> interface. Value is 1 for statistics type implementing Oracle8i 8.1; 0 for types implementing Oracle9i 9.0.0.
MAINTENANCE_TYPE	VARCHAR2(14)		Specifies whether the object is system-managed or user-managed

 See Also:

- "[DBA_ASSOCIATIONS](#)"
- "[USER_ASSOCIATIONS](#)"

2.72 ALL_ATTRIBUTE_DIM_ATTR_CLASS

`ALL_ATTRIBUTE_DIM_ATTR_CLASS` describes the attribute classifications of the attribute dimensions accessible to the current user.

Related Views

- `DBA_ATTRIBUTE_DIM_ATTR_CLASS` describes the attribute classifications of all attribute dimensions in the database.
- `USER_ATTRIBUTE_DIM_ATTR_CLASS` describes the attribute classifications of the attribute dimensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2 (128)	NOT NULL	Name of the attribute dimension
ATTRIBUTE_NAME	VARCHAR2 (128)		Name of the attribute
CLASSIFICATION	VARCHAR2 (128)		Classification associated with the attribute
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2 (64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the attribute
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

See Also:

- "[DBA_ATTRIBUTE_DIM_ATTR_CLASS](#)"
- "[USER_ATTRIBUTE_DIM_ATTR_CLASS](#)"

2.73 ALL_ATTRIBUTE_DIM_ATTR_CLS

`ALL_ATTRIBUTE_DIM_ATTR_CLS` is identical to `ALL_ATTRIBUTE_DIM_ATTR_CLASS`.

Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

 See Also:["ALL_ATTRIBUTE_DIM_ATTR_CLASS"](#)

2.74 ALL_ATTRIBUTE_DIM_ATTR_CLS_AE

`ALL_ATTRIBUTE_DIM_ATTR_CLS_AE` describes the attribute classifications of the attribute dimensions (across all editions) accessible to the current user.

Related Views

- `DBA_ATTRIBUTE_DIM_ATTR_CLS_AE` describes the attribute classifications of all attribute dimensions (across all editions) in the database.
- `USER_ATTRIBUTE_DIM_ATTR_CLS_AE` describes the attribute classifications of the attribute dimensions (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute
CLASSIFICATION	VARCHAR2(128)		Classification associated with the attribute
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the attribute
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the attribute dimension is defined

 Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

 See Also:

- "[DBA_ATTRIBUTE_DIM_ATTR_CLS_AE](#)"
- "[USER_ATTRIBUTE_DIM_ATTR_CLS_AE](#)"

2.75 ALL_ATTRIBUTE_DIM_ATTRS

`ALL_ATTRIBUTE_DIM_ATTRS` describes the attributes of the attribute dimensions accessible to the current user.

Related Views

- `DBA_ATTRIBUTE_DIM_ATTRS` describes the attributes of all attribute dimensions in the database.
- `USER_ATTRIBUTE_DIM_ATTRS` describes the attributes of the attribute dimensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute dimension attribute
TABLE_ALIAS	VARCHAR2(128)		Alias of the table or view in the <code>USING</code> clause to which the column belongs
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column in the table or view on which the attribute is defined
ORDER_NUM	NUMBER	NOT NULL	Order of the attribute in the list of attribute dimension attributes
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.82 ALL_ATTRIBUTE_DIM_KEYS

ALL_ATTRIBUTE_DIM_KEYS describes the keys of the attribute dimensions accessible to the current user.

Related Views

- DBA_ATTRIBUTE_DIM_KEYS describes the keys of all attribute dimensions in the database.
- USER_ATTRIBUTE_DIM_KEYS describes the keys of the attribute dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension

Column	Datatype	NULL	Description
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
LEVEL_NAME	VARCHAR2(128)		Name of the level of the key
IS_ALTERNATE	VARCHAR2(1)		Indicates whether the attribute dimension key is an alternate key (Y) or not (N)
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the key attribute
ATTR_ORDER_NUM	NUMBER	NOT NULL	Order of the attribute in the list of attributes comprising the key
KEY_ORDER_NUM	NUMBER	NOT NULL	Order of the key in the list of keys (if alternate keys are specified)
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root).

- "[USER_ATTRIBUTE_DIM_KEYS](#)"

2.83 ALL_ATTRIBUTE_DIM_KEYS_AE

ALL_ATTRIBUTE_DIM_KEYS_AE describes the keys of the attribute dimensions (across all editions) accessible to the current user.

Related Views

- DBA_ATTRIBUTE_DIM_KEYS_AE describes the keys of all attribute dimensions (across all editions) in the database.
- USER_ATTRIBUTE_DIM_KEYS_AE describes the keys of the attribute dimensions (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
LEVEL_NAME	VARCHAR2(128)		Name of the level of the key
IS_ALTERNATE	VARCHAR2(1)		Indicates whether the attribute dimension key is an alternate key (Y) or not (N)
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the key attribute
ATTR_ORDER_NUM	NUMBER	NOT NULL	Order of the attribute in the list of attributes comprising the key

Column	Datatype	NULL	Description
KEY_ORDER_NUM	NUMBER	NOT NULL	Order of the key in the list of keys (if alternate keys are specified)
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the attribute dimension is defined

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.84 ALL_ATTRIBUTE_DIM_LEVEL_ATTRS

`ALL_ATTRIBUTE_DIM_LEVEL_ATTRS` describes the attributes of the levels of the attribute dimensions accessible to the current user.

Related Views

- `DBA_ATTRIBUTE_DIM_LEVEL_ATTRS` describes the attributes of the levels of all attribute dimensions in the database.
- `USER_ATTRIBUTE_DIM_LEVEL_ATTRS` describes the attributes of the levels of the attribute dimensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)		Name of the attribute dimension
LEVEL_NAME	VARCHAR2(128)		Name of the attribute dimension level
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute determined by the level
ROLE	VARCHAR2(4)		Role of the attribute determined by the level
IS_MINIMAL_DTM	VARCHAR2(1)		Indicates whether the attribute is minimally determined (Y) or not (N)
ORDER_NUM	NUMBER		Order of the attribute in the list of attributes determined by the level

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		<p>The ID of the container where the data originates. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.100 ALL_AUDIT_POLICIES

`ALL_AUDIT_POLICIES` describes the fine-grained auditing policies on the tables and views accessible to the current user.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Related Views

- `DBA_AUDIT_POLICIES` describes all fine-grained auditing policies in the database.
- `USER_AUDIT_POLICIES` describes the fine-grained auditing policies on the tables and views owned by the current user. This view does not display the `OBJECT_SCHEMA` column.

Column	Datatype	NULL	Description
<code>OBJECT_SCHEMA</code>	VARCHAR2(128)		Name of the schema that includes the table or view
<code>OBJECT_NAME</code>	VARCHAR2(128)		Name of the table or view
<code>POLICY_OWNER</code>	VARCHAR2(128)		Owner of the policy
<code>POLICY_NAME</code>	VARCHAR2(128)		Name of the policy
<code>POLICY_TEXT</code>	VARCHAR2(4000)		Audit condition
<code>POLICY_COLUMN</code>	VARCHAR2(128)		Relevant column
<code>PF_SCHEMA</code>	VARCHAR2(128)		Owner of the audit handler function
<code>PF_PACKAGE</code>	VARCHAR2(128)		Name of the package containing the audit handler function
<code>PF_FUNCTION</code>	VARCHAR2(128)		Name of the audit handler function
<code>ENABLED</code>	VARCHAR2(3)		Indicates whether the policy is enabled (YES) or disabled (NO)
<code>SEL</code>	VARCHAR2(3)		Indicates whether the policy is applied to queries on the object (YES) or not (NO)
<code>INS</code>	VARCHAR2(3)		Indicates whether the policy is applied to INSERT statements on the object (YES) or not (NO)
<code>UPD</code>	VARCHAR2(3)		Indicates whether the policy is applied to UPDATE statements on the object (YES) or not (NO)
<code>DEL</code>	VARCHAR2(3)		Indicates whether the policy is applied to DELETE statements on the object (YES) or not (NO)

Column	Datatype	NULL	Description
AUDIT_TRAIL	VARCHAR2(12)		Indicates the audit trail to which the audit records generated by this audit policy will be written: <ul style="list-style-type: none"> • DB - Audit records are written to DBA_FGA_AUDIT_TRAIL (fine-grained audit trail) • DB+EXTENDED - Audit records are written to DBA_FGA_AUDIT_TRAIL (fine-grained audit trail) and the SQL_TEXT and SQL_BIND columns are populated for this policy • XML - Audit records are written to V\$XML_AUDIT_TRAIL (XML audit files) • XML+EXTENDED - Audit records are written to V\$XML_AUDIT_TRAIL (XML audit files) and the SQL_TEXT and SQL_BIND columns are populated for this policy
POLICY_COLUMN_OPTIONS	VARCHAR2(11)		Indicates whether all columns in the AUDIT_COLUMN parameter (ALL_COLUMNS) or any of the columns in the AUDIT_COLUMN parameter (ANY_COLUMNS) are considered for triggering fine-grained auditing
COMMON	VARCHAR2(3)		Indicates whether the policy applies across multiple containers (YES) or not (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy was inherited from another container (YES) or not (NO)

2.102 ALL_AW_PS

ALL_AW_PS describes the page spaces in the analytic workspaces accessible to the current user.

Related Views

- DBA_AW_PS describes the page spaces in all analytic workspaces in the database.
- USER_AW_PS describes the page spaces in the analytic workspaces owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic workspace
AW_NUMBER	NUMBER	NOT NULL	Number of the analytic workspace
AW_NAME	VARCHAR2(128)		Name of the analytic workspace
PSNUMBER	NUMBER(10)		Number of the page space
GENERATIONS	NUMBER		Number of active generations in the page space
MAXPAGES	NUMBER		Maximum pages allocated in the page space

 **See Also:**

- "[DBA_AW_PS](#)"
- "[USER_AW_PS](#)"
- *Oracle OLAP User's Guide* for more information about the OLAP option for Oracle Database

2.103 ALL_AWS

ALL_AWS describes the analytic workspaces accessible to the current user.

Related Views

- **DBA_AWS** describes all analytic workspaces in the database.
- **USER_AWS** describes the analytic workspaces owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic workspace
AW_NUMBER	NUMBER	NOT NULL	Number of the analytic workspace
AW_NAME	VARCHAR2(128)		Name of the analytic workspace
AW_VERSION	VARCHAR2(4)		Format version of the analytic workspace: <ul style="list-style-type: none">• 9.1• 10.1• 10.2• 11.1
PAGESPACES	NUMBER		Number of pagespaces in the analytic workspace
GENERATIONS	NUMBER		Number of active generations in the analytic workspace
FROZEN	VARCHAR2(6)		Freeze state of the analytic workspace: <ul style="list-style-type: none">• Frozen• NoThaw

 **See Also:**

- "[DBA_AWS](#)"
- "[USER_AWS](#)"
- *Oracle OLAP User's Guide* for more information about the OLAP option for Oracle Database

2.104 ALL_BASE_TABLE_MVIEWS

`ALL_BASE_TABLE_MVIEWS` describes the materialized views using materialized view logs accessible to the current user. A materialized view log can be created for a master, base table, or master materialized view. Query this view at the master site or the master materialized view site to show one row for each materialized view using a materialized view log.

Related Views

- `DBA_BASE_TABLE_MVIEWS` describes all materialized views using materialized view logs in the database.
- `USER_BASE_TABLE_MVIEWS` describes the materialized views using materialized view logs owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Schema in which the master table or the master materialized view was created
MASTER	VARCHAR2 (128)	NOT NULL	Name of the master table or the master materialized view
MVIEW_LAST_REFRESH_TIME	DATE	NOT NULL	Date when the materialized view based on the master was last refreshed
MVIEW_ID	NUMBER (38)		Unique identifier of the materialized view that is based on the master

See Also:

- "[DBA_BASE_TABLE_MVIEWS](#)"
- "[USER_BASE_TABLE_MVIEWS](#)"

2.105 ALL_BLOCKCHAIN_TABLES

`ALL_BLOCKCHAIN_TABLES` describes the blockchain tables accessible to the current user.

Related Views

- `DBA_BLOCKCHAIN_TABLES` describes all blockchain tables in the database.
- `USER_BLOCKCHAIN_TABLES` describes the blockchain tables owned by the current user. This view does not display the `SCHEMA_NAME` column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2 (128)	NOT NULL	The schema containing the blockchain table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the blockchain table

Column	Datatype	NULL	Description
ROW_RETENTION	NUMBER		Row retention period for the blockchain table, that is, the minimum number of days a row must be retained and cannot be deleted after it is inserted into the table. If the value of this column is NULL, then rows can never be deleted from the table.
ROW_RETENTION_LOCKED	VARCHAR2 (3)		Indicates whether the row retention period for the blockchain table is locked. Possible values: <ul style="list-style-type: none"> YES: The row retention period is locked. You cannot change the row retention period NO: The row retention period is not locked. You can change the row retention period to a value higher than the current value with the SQL statement <code>ALTER TABLE ... NO DELETE UNTIL n DAYS AFTER INSERT</code>
TABLE_INACTIVITY_RETENTION	NUMBER		Number of days for which the blockchain table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped. A table with no rows can be dropped at any time, regardless of this column value.
HASH_ALGORITHM	VARCHAR2 (8)		Algorithm used for computing the hash value for each table row

Note:

This view is available starting with Oracle Database 19c, Release Update 19.10.

2.106 ALL_CAPTURE

`ALL_CAPTURE` displays information about the capture processes that enqueue the captured changes into queues accessible to the current user.

Related View

`DBA_CAPTURE` displays information about all capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2 (128)		Name of the capture process
QUEUE_NAME	VARCHAR2 (128)		Name of the queue used for staging captured changes

Column	Datatype	NULL	Description
QUEUE_OWNER	VARCHAR2(128)		Owner of the queue used for staging captured changes
RULE_SET_NAME	VARCHAR2(128)		Name of the positive rule set used by the capture process for filtering
RULE_SET_OWNER	VARCHAR2(128)		Owner of the positive rule set
CAPTURE_USER	VARCHAR2(128)		Current user who is enqueueing captured messages
START_SCN	NUMBER		System change number (SCN) from which the capture process will start to capture changes. START_SCN is only modified as the result of an ALTER_CAPTURE statement or if the FIRST_SCN moves beyond the existing START_SCN.
STATUS	VARCHAR2(8)		Status of the capture process: <ul style="list-style-type: none">• DISABLED• ENABLED• ABORTED
CAPTURED_SCN	NUMBER		System change number (SCN) of the last redo log record scanned
APPLIED_SCN	NUMBER		System change number (SCN) of the most recent message dequeued by the relevant apply processes. All changes below this SCN have been dequeued by all apply processes that apply changes captured by this capture process.
USE_DATABASE_LINK	VARCHAR2(3)		Indicates whether the source database name is used as the database link to connect to the source database from the downstream database (YES) or not (NO). If the capture process was created at the source database, then this column will be NULL.
FIRST_SCN	NUMBER		System change number (SCN) from which the capture process can be restarted. FIRST_SCN indicates the lowest SCN to which the capture can be repositioned.
SOURCE_DATABASE	VARCHAR2(128)		Global name of the source database
SOURCE_DBID	NUMBER		Database ID of the source database
SOURCE_RESETLOGS_SCN	NUMBER		Resetlogs system change number (SCN) of the source database
SOURCE_RESETLOGS_TIME	NUMBER		Resetlogs time of the source database
LOGMINER_ID	NUMBER		Session ID of the Oracle LogMiner session associated with the capture process
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the negative rule set used by the capture process for filtering
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the negative rule set used by the capture process for filtering
MAX_CHECKPOINT_SCN	NUMBER		System change number (SCN) at which the last checkpoint was taken by the capture process
REQUIRED_CHECKPOINT_SCN	NUMBER		Lowest checkpoint SCN for which the capture process requires redo information. Note: This SCN value does not necessarily correspond with a checkpoint SCN value.

Column	Datatype	NULL	Description
LOGFILE_ASSIGNMENT	VARCHAR2 (8)		LogFile assignment type for the capture process: <ul style="list-style-type: none">• IMPLICIT• EXPLICIT
STATUS_CHANGE_TIME	DATE		Time that the STATUS of the capture process was changed
ERROR_NUMBER	NUMBER		Error number if the capture process was aborted
ERROR_MESSAGE	VARCHAR2 (4000)		Error message if the capture process was aborted
VERSION	VARCHAR2 (64)		Version number of the capture process
CAPTURE_TYPE	VARCHAR2 (10)		Type of the capture process: <ul style="list-style-type: none">• DOWNSTREAM• LOCAL
LAST_ENQUEUED_SCN	NUMBER		Last enqueueued system change number (SCN)
CHECKPOINT_RETENTION_TIME	NUMBER		Checkpoint retention time
	E		Note: When the checkpoint retention time for a capture process is set to INFINITE, then the value displayed in this column is 4294967295.
START_TIME	TIMESTAMP (6)		Time from which the capture process will start to capture changes. START_TIME is related to START_SCN and can only be modified by an ALTER_CAPTURE statement. You can modify either START_SCN or START_TIME, but not both at the same time.
PURPOSE	VARCHAR2 (19)		Purpose of the capture process: <ul style="list-style-type: none">• GoldenGate Capture - A capture process configured using Oracle GoldenGate Extract in integrated capture mode• XStream Out - A capture process in an XStream Out configuration• AUDIT VAULT - A capture process in an audit vault configuration
SOURCE_ROOT_NAME	VARCHAR2 (128)		The global name of the source root database
CLIENT_NAME	VARCHAR2 (4000)		Client name of the capture process. This is the outbound name for XStream Out, and the extract name for GoldenGate.

Column	Datatype	NULL	Description
CLIENT_STATUS	VARCHAR2 (8)		Status of the client process: <ul style="list-style-type: none"> • DISABLED - For XStream Out if the outbound server is not running; for GoldenGate if the capture process is not running • DETACHED - For XStream Out if the outbound server is running, but the XStream client application is not attached to it; For GoldenGate if the capture process is running, but the extract process is not attached to it • ATTACHED - For XStream out if the outbound server is running and the XStream client application is attached to it; For GoldenGate if the capture process is running and the extract process is attached to it • ABORTED - For XStream out if the outbound server became disabled because it encountered an error; for GoldenGate if the capture process became disabled because it encountered an error
OLDEST_SCN	NUMBER		Oldest SCN of the transactions currently being processed
FILTERED_SCN	NUMBER		SCN of the low watermark transaction processed

2.107 ALL_CAPTURE_EXTRA_ATTRIBUTES

`ALL_CAPTURE_EXTRA_ATTRIBUTES` displays information about the extra attributes for the capture processes accessible to the current user.

Related View

`DBA_CAPTURE_EXTRA_ATTRIBUTES` displays information about the extra attributes for all capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2 (128)	NOT NULL	Name of the capture process
ATTRIBUTE_NAME	VARCHAR2 (128)	NOT NULL	Name of the extra attribute
INCLUDE	VARCHAR2 (3)		Indicates whether the extra attribute is included (YES) or not (NO)
ROW_ATTRIBUTE	VARCHAR2 (3)		Indicates whether the extra attribute is a row LCR attribute (YES) or not (NO)
DDL_ATTRIBUTE	VARCHAR2 (3)		Indicates whether the extra attribute is a DDL LCR attribute (YES) or not (NO)

 **See Also:**

["DBA_CAPTURE_EXTRA_ATTRIBUTES"](#)

2.108 ALL_CAPTURE_PARAMETERS

ALL_CAPTURE_PARAMETERS displays information about the parameters for the capture processes that enqueue the captured changes into queues accessible to the current user.

Related View

DBA_CAPTURE_PARAMETERS displays information about the parameters for all capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
PARAMETER	VARCHAR2(128)	NOT NULL	Name of the parameter
VALUE	VARCHAR2(4000)		Parameter value
SET_BY_USER	VARCHAR2(3)		Indicates whether the parameter value was set by the user (YES) or was not set by the user (NO). If NO, then the parameter is set to its default value. If YES, then the parameter may or may not be set to its default value.
SOURCE_DATABASE	VARCHAR2(128)		Global name of the container for which the capture parameter is defined

 **See Also:**

["DBA_CAPTURE_PARAMETERS"](#)

2.109 ALL_CAPTURE_PREPARED_DATABASE

ALL_CAPTURE_PREPARED_DATABASE displays information about when the local database was prepared for instantiation. If the local database was not prepared for instantiation, then this view contains no rows.

Related View

DBA_CAPTURE_PREPARED_DATABASE displays information about when the local database was prepared for instantiation.

Column	Datatype	NULL	Description
TIMESTAMP	DATE		Date and time at which the local database was ready to be instantiated

Column	Datatype	NULL	Description
SUPPLEMENTAL_LOG_DATA_PK	VARCHAR2(8)		Status of database-level PRIMARY KEY COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_UI	VARCHAR2(8)		Status of database-level UNIQUE INDEX COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_FK	VARCHAR2(8)		Status of database-level FOREIGN KEY COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_AL	VARCHAR2(8)		Status of database-level ALL COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO

 See Also:["DBA_CAPTURE_PREPARED_DATABASE"](#)

2.110 ALL_CAPTURE_PREPARED_SCHEMAS

ALL_CAPTURE_PREPARED_SCHEMAS displays information about the schemas prepared for instantiation that are accessible to the current user at the local database.

Related View

DBA_CAPTURE_PREPARED_SCHEMAS displays information about all schemas prepared for instantiation at the local database.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Name of the schema that is ready to be instantiated
TIMESTAMP	DATE		Date and time at which the schema was ready to be instantiated
SUPPLEMENTAL_LOG_DATA_PK	VARCHAR2(8)		Status of schema-level PRIMARY KEY COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO

Column	Datatype	NULL	Description
SUPPLEMENTAL_LOG_DATA_UI	VARCHAR2(8)		Status of schema-level UNIQUE INDEX COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_FK	VARCHAR2(8)		Status of schema-level FOREIGN KEY COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_AL	VARCHAR2(8)		Status of schema-level ALL COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO

 See Also:["DBA_CAPTURE_PREPARED_SCHEMAS"](#)

2.111 ALL_CAPTURE_PREPARED_TABLES

ALL_CAPTURE_PREPARED_TABLES displays information about the tables prepared for instantiation that are accessible to the current user at the local database.

Related View

DBA_CAPTURE_PREPARED_TABLES displays information about all tables prepared for instantiation at the local database.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table that is ready to be instantiated
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table that is ready to be instantiated
SCN	NUMBER	NOT NULL	Smallest system change number (SCN) for which the table can be instantiated
TIMESTAMP	DATE		Date and time at which the table was ready to be instantiated
SUPPLEMENTAL_LOG_DATA_PK	VARCHAR2(8)		Status of table-level PRIMARY KEY COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_UI	VARCHAR2(8)		Status of table-level UNIQUE INDEX COLUMNS supplemental logging: <ul style="list-style-type: none"> • IMPLICIT • EXPLICIT • NO

Column	Datatype	NULL	Description
SUPPLEMENTAL_LOG_DATA_FK	VARCHAR2(8)		Status of table-level FOREIGN KEY COLUMNS supplemental logging: <ul style="list-style-type: none">• IMPLICIT• EXPLICIT• NO
SUPPLEMENTAL_LOG_DATA_AL	VARCHAR2(8)	L	Status of table-level ALL COLUMNS supplemental logging: <ul style="list-style-type: none">• IMPLICIT• EXPLICIT• NO

 See Also:["DBA_CAPTURE_PREPARED_TABLES"](#)

2.112 ALL_CATALOG

ALL_CATALOG displays the tables, clusters, views, synonyms, and sequences accessible to the current user.

Related Views

- DBA_CATALOG displays all tables, clusters, views, synonyms, and sequences in the entire database.
- USER_CATALOG displays the tables, clusters, views, synonyms, and sequences in the current user's schema. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED
TABLE_TYPE	VARCHAR2(11)		Type of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED

 See Also:

- ["DBA_CATALOG"](#)
- ["USER_CATALOG"](#)

2.113 ALL_CERTIFICATES

`ALL_CERTIFICATES` displays the certificates accessible to the current user which are used for signature verification for blockchain tables.

Related Views

- `DBA_CERTIFICATES` displays all certificates in the database which are used for signature verification for blockchain tables.
- `USER_CERTIFICATES` displays the certificates added by the current user which are used for signature verification for blockchain tables. This view does not display the `USER_NAME` column.

Column	Datatype	NULL	Description
CERTIFICATE_ID	RAW(16)	NOT NULL	ID for the certificate
USER_NAME	VARCHAR2(128)	NOT NULL	User who added the certificate
DISTINGUISHED_NAME	VARCHAR2(2000)		Uniquely identifies the entity that owns the certificate
CERTIFICATE	BLOB		Contents of the certificate

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.10.

 **See Also:**

- "[DBA_CERTIFICATES](#)"
- "[USER_CERTIFICATES](#)"

2.114 ALL_CLUSTER_HASH_EXPRESSIONS

`ALL_CLUSTER_HASH_EXPRESSIONS` displays hash functions for all hash clusters accessible to the current user.

Related Views

- `DBA_CLUSTER_HASH_EXPRESSIONS` displays hash functions for all hash clusters in the database.
- `USER_CLUSTER_HASH_EXPRESSIONS` displays hash functions for all hash clusters owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cluster
CLUSTER_NAME	VARCHAR2(128)	NOT NULL	Name of the cluster

Column	Datatype	NULL	Description
HASH_EXPRESSION	LONG		Text of the hash function of the hash cluster

 See Also:

- "[DBA_CLUSTER_HASH_EXPRESSIONS](#)"
- "[USER_CLUSTER_HASH_EXPRESSIONS](#)"

2.115 ALL_CLUSTERING_DIMENSIONS

ALL_CLUSTERING_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause that the user owns or has system privileges for.

Related Views

- DBA_CLUSTERING_DIMENSIONS describes dimension tables associated with all tables with an attribute clustering clause in the database.
- USER_CLUSTERING_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute clustering table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute clustering table
DIMENSION_OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension table
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension table

 See Also:

- "[DBA_CLUSTERING_DIMENSIONS](#)"
- "[USER_CLUSTERING_DIMENSIONS](#)"

2.116 ALL_CLUSTERING_JOINS

ALL_CLUSTERING_JOINS describes joins to the dimension tables associated with tables with an attribute clustering clause the user owns or has system privileges for.

Related Views

- DBA_CLUSTERING_JOINS describes joins to the dimension tables associated with all tables with an attribute clustering clause in the database.
- USER_CLUSTERING_JOINS describes joins to the dimension tables associated with tables with an attribute clustering clause owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute clustering table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute clustering table
TAB1_OWNER	VARCHAR2(128)	NOT NULL	Table 1 owner of the join
TAB1_NAME	VARCHAR2(128)	NOT NULL	Table 1 name of the join
TAB1_COLUMN	VARCHAR2(128)	NOT NULL	Table 1 column name of the join
TAB2_OWNER	VARCHAR2(128)	NOT NULL	Table 2 owner of the join
TAB2_NAME	VARCHAR2(128)	NOT NULL	Table 2 name of the join
TAB2_COLUMN	VARCHAR2(128)	NOT NULL	Table 2 column name of the join

2.117 ALL_CLUSTERING_KEYS

ALL_CLUSTERING_KEYS describes clustering keys for tables with an attribute clustering clause accessible to the user.

Related Views

- DBA_CLUSTERING_KEYS describes clustering keys for all tables with an attribute clustering clause.
- USER_CLUSTERING_KEYS describes clustering keys for tables with an attribute clustering clause owned by the user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table on which the clustering clause is defined
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table on which the clustering clause is defined
DETAIL_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detailed table contributing to the clustering keys
DETAIL_NAME	VARCHAR2(128)	NOT NULL	Name of the detailed table contributing to the clustering keys
DETAIL_COLUMN	VARCHAR2(128)	NOT NULL	Name of the detail column
POSITION	NUMBER	NOT NULL	Position of the column in the clustering clause
GROUPID	NUMBER	NOT NULL	Group ID of the column in the clustering clause

See Also:

- "[DBA_CLUSTERING_KEYS](#)"
- "[USER_CLUSTERING_KEYS](#)"

2.118 ALL_CLUSTERING_TABLES

`ALL_CLUSTERING_TABLES` describes tables with an attribute clustering clause that are accessible to the user.

Related Views

- `DBA_CLUSTERING_TABLES` describes all the tables with an attribute clustering clause.
- `USER_CLUSTERING_TABLES` describes the tables with an attribute clustering clause owned by the user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
CLUSTERING_TYPE	VARCHAR2(11)		Clustering type: <ul style="list-style-type: none"> • INTERLEAVED • LINEAR
ON_LOAD	VARCHAR2(3)		Indicates whether Oracle will cluster data on load (YES) or not (NO)
ON_DATAMOVEMENT	VARCHAR2(3)		Indicates whether Oracle will cluster data on data movement, for example, partition move (YES), or not (NO)
VALID	VARCHAR2(3)		Indicates if clustering is valid (YES) or not (NO). For clustering with dimension tables, it is required that the joins of the fact table to the dimensions is via primary key or unique key on the dimension table. Therefore, dimension join keys must have a valid primary key or unique key constraint. If the primary key or unique key constraint is not valid, then clustering will not occur. If there are no joins in the CLUSTERING clause, then the value of this column is YES.
WITH_ZONEMAP	VARCHAR2(3)		Indicates if a zonemap was created with clustering (YES) or not (NO).
LAST_LOAD_CLST	TIMESTAMP(6)		Last time the clustering occurred on load
LAST_DATAMOVE_CLST	TIMESTAMP(6)		Last time the clustering occurred on data movement, for example, partition move

 See Also:

- "[DBA_CLUSTERING_TABLES](#)"
- "[USER_CLUSTERING_TABLES](#)"
- The `ALTER TABLE` section in *Oracle Database SQL Language Reference* for information about using the `CLUSTERING` clause to create an attribute clustering table

- *Oracle Database Data Warehousing Guide* for information about dimension tables
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

2.119 ALL_CLUSTERS

`ALL_CLUSTERS` describes all clusters accessible to the current user.

Related Views

- `DBA_CLUSTERS` describes all clusters in the database.
- `USER_CLUSTERS` describes all clusters owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the cluster
CLUSTER_NAME	VARCHAR2 (128)	NOT NULL	Name of the cluster
TABLESPACE_NAME	VARCHAR2 (30)	NOT NULL	Name of the tablespace containing the cluster
PCT_FREE	NUMBER		Minimum percentage of free space in a block
PCT_USED	NUMBER		Minimum percentage of used space in a block
KEY_SIZE	NUMBER		Estimated size of cluster key plus associated rows
INI_TRANS	NUMBER	NOT NULL	Initial number of transactions
MAX_TRANS	NUMBER	NOT NULL	Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes
MIN_EXTENTS	NUMBER	NOT NULL	Minimum number of extents allowed in the segment
MAX_EXTENTS	NUMBER	NOT NULL	Maximum number of extents allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
FREELISTS	NUMBER		Number of process freelists allocated to this segment
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to this segment
AVG_BLOCKS_PER_KEY	NUMBER		Number of blocks in the table divided by number of cluster keys

Column	Datatype	NULL	Description
CLUSTER_TYPE	VARCHAR2 (5)		Type of the cluster: <ul style="list-style-type: none"> INDEX - B*-Tree index HASH - Hash
FUNCTION	VARCHAR2 (15)		If the cluster is a hash cluster, the hash function
HASHKEYS	NUMBER		If the cluster is a hash cluster, the number of hash keys (hash buckets)
DEGREE	VARCHAR2 (10)		Number of threads per instance for scanning the cluster, or DEFAULT
INSTANCES	VARCHAR2 (10)		Number of instances across which the cluster is to be scanned , or DEFAULT
CACHE	VARCHAR2 (5)		Indicates whether the cluster is to be cached in the buffer cache (Y) or not (N)
BUFFER_POOL	VARCHAR2 (7)		Buffer pool to be used for cluster blocks: <ul style="list-style-type: none"> DEFAULT KEEP RECYCLE NULL
FLASH_CACHE	VARCHAR2 (7)		Database Smart Flash Cache hint to be used for cluster blocks: <ul style="list-style-type: none"> DEFAULT KEEP NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2 (7)		Cell flash cache hint to be used for cluster blocks: <ul style="list-style-type: none"> DEFAULT KEEP NONE
SINGLE_TABLE	VARCHAR2 (5)		See Also: Oracle Exadata Storage Server Software documentation for more information Indicates whether this is a single-table cluster (Y) or not (N)
DEPENDENCIES	VARCHAR2 (8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)

 **See Also:**

- "[DBA_CLUSTERS](#)"
- "[USER_CLUSTERS](#)"

2.120 ALL_CODE_ROLE_PRIVS

ALL_CODE_ROLE_PRIVS describes all the roles that are associated with program units owned or accessible by the current user.

Related Views

- DBA_CODE_ROLE_PRIVS describes all the roles that are associated with program units in the database.
- USER_CODE_ROLE_PRIVS describes all the roles that are associated with program units owned by current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Username of the owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
OBJECT_TYPE	VARCHAR2(9)		Type of the object
ROLE	VARCHAR2(128)	NOT NULL	The role associated with the object

See Also:

- "DBA_CODE_ROLE_PRIVS"
- "USER_CODE_ROLE_PRIVS"
- Oracle Database Security Guide* for more information about granting and revoking roles to and from program units

2.121 ALL_COL_COMMENTS

ALL_COL_COMMENTS displays comments on the columns of the tables and views accessible to the current user.

Related Views

- DBA_COL_COMMENTS displays comments on the columns of all tables and views in the database.
- USER_COL_COMMENTS displays comments on the columns of the tables and views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the object
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
COMMENTS	VARCHAR2(4000)		Comment on the column

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		<p>The ID of the container where the data originates. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs • n: This value is used for rows containing data that originate in the container with the ID n ($n=1$ if the data originates in root)

 See Also:

- ["DBA_COL_COMMENTS"](#)

2.122 ALL_COL_PENDING_STATS

ALL_COL_PENDING_STATS describes the pending statistics of the columns accessible to the current user.

Related Views

- DBA_COL_PENDING_STATS describes the pending statistics of all columns in the database.
- USER_COL_PENDING_STATS describes the pending statistics of the columns owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
COLUMN_NAME	VARCHAR2(128)		Name of the column
NUM_DISTINCT	NUMBER		Number of distinct values in the column
LOW_VALUE	RAW(32)		Low value in the column
HIGH_VALUE	RAW(32)		High value in the column
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is $1/\text{NUM_DISTINCT}$.
NUM_NULLS	NUMBER		Number of NULLs in the column
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the column
LAST_ANALYZED	DATE		Most recent date on which the column was analyzed

2.123 ALL_COL_PRIVS

ALL_COL_PRIVS describes the following types of grants:

- Column object grants for which the current user is the object owner, grantor, or grantee
- Column object grants for which an enabled role or PUBLIC is the grantee

Related Views

- DBA_COL_PRIVS describes all column object grants in the database.
- USER_COL_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee.

Column	Datatype	NULL	Description
GRANTOR	VARCHAR2 (128)		Name of the user who performed the grant
GRANTEE	VARCHAR2 (128)		Name of the user or role to whom access was granted
TABLE_SCHEMA	VARCHAR2 (128)		Schema of the object
TABLE_NAME	VARCHAR2 (128)		Name of the object
COLUMN_NAME	VARCHAR2 (128)		Name of the column
PRIVILEGE	VARCHAR2 (40)		Privilege on the column: <ul style="list-style-type: none"> • INSERT • REFERENCES • UPDATE
GRANTABLE	VARCHAR2 (3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
COMMON	VARCHAR2 (3)		Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2 (3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

 See Also:

- "[DBA_COL_PRIVS](#)"
- "[USER_COL_PRIVS](#)"

2.124 ALL_COL_PRIVS_MADE

ALL_COL_PRIVS_MADE describes the column object grants for which the current user is the object owner or grantor.

Related View

USER_COL_PRIVS_MADE describes the column object grants for which the current user is the object owner. This view does not display the OWNER column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
COLUMN_NAME	VARCHAR2(128)		Name of the column
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2(40)		Privilege on the column: <ul style="list-style-type: none"> • INSERT • REFERENCES • UPDATE
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

See Also:

"USER_COL_PRIVS_MADE"

2.125 ALL_COL_PRIVS_REC'D

ALL_COL_PRIVS_REC'D describes the following types of grants:

- Column object grants for which the current user is the grantee
- Column object grants for which an enabled role or PUBLIC is the grantee

Related View

USER_COL_PRIVS_REC'D describes the column object grants for which the current user is the grantee. This view does not display the GRANTEE column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
COLUMN_NAME	VARCHAR2(128)		Name of the column
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2(40)		Privilege on the column: <ul style="list-style-type: none">• INSERT• REFERENCES• UPDATE
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: <ul style="list-style-type: none">• YES if the privilege was granted commonly (CONTAINER=ALL was used)• NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

See Also:

"USER_COL_PRIVS_RECV"

2.126 ALL_COLL_TYPES

ALL_COLL_TYPES describes all named collection types (varrays and nested tables) accessible to the current user.

Related Views

- DBA_COLL_TYPES describes all named collection types in the database.
- USER_COLL_TYPES describes all named collection types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the collection
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the collection
COLL_TYPE	VARCHAR2(128)	NOT NULL	Description of the collection, such as VARYING ARRAY, [nested] TABLE
UPPER_BOUND	NUMBER		For varrays only, maximum size
ELEM_TYPE_MOD	VARCHAR2(7)		Type modifier of the element
ELEM_TYPE_OWNER	VARCHAR2(128)		Owner of the type upon which the collection is based. This value is useful primarily for a user-defined type.

Column	Datatype	NULL	Description
ELEM_TYPE_NAME	VARCHAR2(128)		Name of the data type or user-defined type upon which the collection is based
LENGTH	NUMBER		Length of CHAR elements or maximum length of VARCHAR or VARCHAR2 elements
PRECISION	NUMBER		Decimal precision of NUMBER or DECIMAL elements; binary precision of FLOAT elements
SCALE	NUMBER		Scale of NUMBER or DECIMAL elements
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set (CHAR_CS NCHAR_CS)
ELEM_STORAGE	VARCHAR2(7)		Obsolete column
NULLS_STORED	VARCHAR2(3)		Obsolete column
CHAR_USED	VARCHAR2(1)		Indicates whether the attribute uses BYTE length semantics (B) or CHAR length semantics (C). For NCHAR and NVARCHAR2 attribute types, this value is always C.

- "[DBA_COLL_TYPES](#)"
- "[USER_COLL_TYPES](#)"

2.127 ALL_CONS_COLUMNS

ALL_CONS_COLUMNS describes columns that are accessible to the current user and that are specified in constraints.

Related Views

- DBA_CONS_COLUMNS describes all columns in the database that are specified in constraints.
- USER_CONS_COLUMNS describes columns that are owned by the current user and that are specified in constraints.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the constraint definition
CONSTRAINT_NAME	VARCHAR2(128)	NOT NULL	Name of the constraint definition
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table with the constraint definition
COLUMN_NAME	VARCHAR2(4000)		Name of the column or attribute of the object type column specified in the constraint definition Note: If you create a constraint on a user-defined REF column, the system creates the constraint on the attributes that make up the REF column. Therefore, the column names displayed in this view are the attribute names, with the REF column name as a prefix, in the following form: "REF_name"."attribute"

Column	Datatype	NULL	Description
POSITION	NUMBER		Original position of the column or attribute in the definition of the object

 **See Also:**

- "[DBA_CONS_COLUMNS](#)"
- "[USER_CONS_COLUMNS](#)"

2.128 ALL_CONS_OBJ_COLUMNS

`ALL_CONS_OBJ_COLUMNS` displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables accessible to the current user.

Related Views

- `DBA_CONS_OBJ_COLUMNS` displays information about the types that object columns (or attributes) or collection elements have been constrained to, in all tables in the database.
- `USER_CONS_OBJ_COLUMNS` displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table containing the object column or attribute
COLUMN_NAME	VARCHAR2(4000)		Fully qualified name of the object column or attribute
CONS_TYPE_OWNER	VARCHAR2(128)		Owner of the type that the column (or element) is constrained to
CONS_TYPE_NAME	VARCHAR2(128)		Name of the type that the column (or element) is constrained to
CONS_TYPE_ONLY	VARCHAR2(15)		Indicates whether the column (or element) is constrained to <code>ONLY</code> type (<code>Y</code>) or not (<code>N</code>)

 **See Also:**

- "[DBA_CONS_OBJ_COLUMNS](#)"
- "[USER_CONS_OBJ_COLUMNS](#)"

2.129 ALL_CONSTRAINTS

ALL_CONSTRAINTS describes constraint definitions on tables accessible to the current user.

Related Views

- DBA_CONSTRAINTS describes all constraint definitions in the database.
- USER_CONSTRAINTS describes constraint definitions on tables in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the constraint definition
CONSTRAINT_NAME	VARCHAR2(128)		Name of the constraint definition
CONSTRAINT_TYPE	VARCHAR2(1)		Type of the constraint definition: <ul style="list-style-type: none"> C - Check constraint on a table P - Primary key U - Unique key R - Referential integrity V - With check option, on a view O - With read only, on a view H - Hash expression F - Constraint that involves a REF column S - Supplemental logging
TABLE_NAME	VARCHAR2(128)		Name associated with the table (or view) with the constraint definition
SEARCH_CONDITION	LONG		Text of search condition for a check constraint. This column returns the correct value only when the row originates from the current container.
SEARCH_CONDITION_VC	VARCHAR2(4000)		Text of search condition for a check constraint. This column may truncate the search condition.
R_OWNER	VARCHAR2(128)		Owner of the table referred to in a referential constraint
R_CONSTRAINT_NAME	VARCHAR2(128)		Name of the unique constraint definition for the referenced table
DELETE_RULE	VARCHAR2(9)		Delete rule for a referential constraint: <ul style="list-style-type: none"> CASCADE SET NULL NO ACTION
STATUS	VARCHAR2(8)		Enforcement status of the constraint: <ul style="list-style-type: none"> ENABLED DISABLED
DEFERRABLE	VARCHAR2(14)		Indicates whether the constraint is deferrable (DEFERRABLE) or not (NOT DEFERRABLE)
DEFERRED	VARCHAR2(9)		Indicates whether the constraint was initially deferred (DEFERRED) or not (IMMEDIATE)

Column	Datatype	NULL	Description
VALIDATED	VARCHAR2 (13)		<p>When STATUS = ENABLED, possible values are:</p> <ul style="list-style-type: none"> • VALIDATED - All data obeys the constraint (that is, the existing data in the table was validated when the constraint was enabled, as well as any subsequent data entered into the table) • NOT VALIDATED - All data may not obey the constraint (that is, the existing data in the table was not validated when the constraint was enabled, but subsequent data entered into the table was validated) <p>When STATUS = DISABLED, possible values are:</p> <ul style="list-style-type: none"> • VALIDATED - All data obeys the constraint, but the unique index on the constraint has been dropped. This setting is useful in data warehousing environments, but has some restrictions. Refer to <i>Oracle Database Data Warehousing Guide</i> for more information on this setting. • NOT VALIDATED - All data may not obey the constraint
GENERATED	VARCHAR2 (14)		Indicates whether the name of the constraint is user-generated (USER NAME) or system-generated (GENERATED NAME)
BAD	VARCHAR2 (3)		Indicates whether this constraint specifies a century in an ambiguous manner (BAD) or not (NULL). To avoid errors resulting from this ambiguity, rewrite the constraint using the TO_DATE function with a four-digit year.
RELY	VARCHAR2 (4)		<p>When VALIDATED = NOT VALIDATED, this column indicates whether the constraint is to be taken into account for query rewrite (RELY) or not (NULL).</p> <p>When VALIDATED = VALIDATED, this column is not meaningful.</p> <p>See Also: constraints in <i>Oracle Database SQL Language Reference</i></p>
LAST_CHANGE	DATE		When the constraint was last enabled or disabled
INDEX_OWNER	VARCHAR2 (128)		Name of the user owning the index
INDEX_NAME	VARCHAR2 (128)		Name of the index (only shown for unique and primary-key constraints)
INVALID	VARCHAR2 (7)		Indicates whether the constraint is invalid (INVALID) or not (NULL)
VIEW RELATED	VARCHAR2 (14)		Indicates whether the constraint depends on a view (DEPEND ON VIEW) or not (NULL)
ORIGIN_CON_ID	VARCHAR2 (256)		<p>The ID of the container where the data originates. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)

- "[DBA_CONSTRAINTS](#)"
- "[USER_CONSTRAINTS](#)"

2.130 ALL_CONTEXT

`ALL_CONTEXT` describes all context namespaces in the current session for which attributes and values have been specified using the `DBMS_SESSION.SET_CONTEXT` procedure. This view does not display the `TYPE` and `ORIGIN_CON_ID` columns.

Related View

`DBA_CONTEXT` describes all context namespaces defined in the database, regardless whether any attributes have been specified for them using the `DBMS_SESSION.SET_CONTEXT` procedure.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2 (128)	NOT NULL	Name of the context namespace
SCHEMA	VARCHAR2 (128)	NOT NULL	Schema name of the designated package that can set attributes using this namespace
PACKAGE	VARCHAR2 (128)	NOT NULL	Package name of the designated package that can set attributes using this namespace

 See Also:

- "[DBA_CONTEXT](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_SESSION.SET_CONTEXT` procedure

2.131 ALL_CREDENTIALS

`ALL_CREDENTIALS` lists all credentials visible to the user.

Related Views

- `DBA_CREDENTIALS` lists all credentials in the database.
- `USER_CREDENTIALS` lists credentials owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the credential
CREDENTIAL_NAME	VARCHAR2 (128)	NOT NULL	Name of the credential

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (128)		Name of the user that will be used to log in to the remote database or the remote or local operating system
WINDOWS_DOMAIN	VARCHAR2 (30)		For a Windows target, the Windows domain to use when logging in
COMMENTS	VARCHAR2 (4000)		Comments on the credential
ENABLED	VARCHAR2 (5)		Indicates whether this credential is enabled (<code>TRUE</code>) or not (<code>FALSE</code>)

Note:

`DBMS_CREDENTIAL` lists credentials that can be used to run external procedures, or by `DBMS_SCHEDULER` for remote or external jobs, or for storing or retrieving files from the operating system.

If a credential is disabled, then any of the actions above that attempts to use the credential will fail.

See Also:

- "[DBA_CREDENTIALS](#)"
- "[USER_CREDENTIALS](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_CREDENTIAL` package
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_SCHEDULER` package

2.132 ALL_CUBE_ATTR_VISIBILITY

`ALL_CUBE_ATTR_VISIBILITY` describes the OLAP attributes visible for the dimensions, hierarchies, and levels accessible to the current user.

Related Views

- `DBA_CUBE_ATTR_VISIBILITY` describes all OLAP attributes visible for the dimensions, hierarchies, and levels in the database.
- `USER_CUBE_ATTR_VISIBILITY` describes the OLAP attributes visible for the dimensions, hierarchies, and levels owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the cube dimension
DIMENSION_NAME	VARCHAR2 (128)		Name of a cube dimension (such as <code>TIME</code>)

Column	Datatype	NULL	Description
ATTRIBUTE_NAME	VARCHAR2(128)		Name of an attribute of the dimension (such as LONG_DESCRIPTION or END_DATE)
HIERARCHY_NAME	VARCHAR2(128)		Name of a hierarchy for the dimension (such as CALENDAR)
LEVEL_NAME	VARCHAR2(128)		Name of the dimension level (such as MONTH)
FROM_TYPE	VARCHAR2(10)		Identifies the dimension type that the current row derives the attribute visibility from. Possible values: <ul style="list-style-type: none"> • DIMENSION - Derives the attribute visibility from itself. • HIERARCHY - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION or itself. • DIM_LEVEL - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION or itself. • HIER_LEVEL - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION, HIERARCHY, DIM_LEVEL, or itself.
TO_TYPE	VARCHAR2(10)		Identifies the dimension type for the current row. Possible values: <ul style="list-style-type: none"> • DIMENSION - When the TO_TYPE is DIMENSION, then only the DIMENSION_NAME is populated. • HIERARCHY - When the TO_TYPE is HIERARCHY, then only the DIMENSION_NAME and HIERARCHY_NAME are populated. • DIM_LEVEL - When the TO_TYPE is DIM_LEVEL, then only the DIMENSION_NAME and LEVEL_NAME are populated. • HIER_LEVEL - When the TO_TYPE is HIER_LEVEL, then only the HIERARCHY_NAME and LEVEL_NAME are populated.

See Also:

- "[DBA_CUBE_ATTR_VISIBILITY](#)"
- "[USER_CUBE_ATTR_VISIBILITY](#)"

2.133 ALL_CUBE_ATTRIBUTES

ALL_CUBE_ATTRIBUTES describes the attributes for the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_ATTRIBUTES describes the attributes for all OLAP cube dimensions in the database.

- `USER_CUBE_ATTRIBUTES` describes the attributes for the OLAP cube dimensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2 (128)	NOT NULL	Name of a cube dimension (such as <code>TIME</code>)
ATTRIBUTE_NAME	VARCHAR2 (128)	NOT NULL	Name of an attribute of the dimension (such as <code>LONG_DESCRIPTION</code> or <code>END_DATE</code>)
ATTRIBUTE_ID	NUMBER	NOT NULL	ID of the attribute of the dimension
TARGET_DIMENSION_NAME	VARCHAR2 (128)		Name of the target dimension of the attribute
ATTRIBUTE_ROLE	VARCHAR2 (17)		Special role this attribute plays; NULL if none: <ul style="list-style-type: none"> • <code>SHORT_DESCRIPTION</code> • <code>LONG_DESCRIPTION</code> • <code>DESCRIPTION</code> • <code>TIME_SPAN</code> • <code>END_DATE</code>
DESCRIPTION	NVARCHAR2 (300)		Description of the attribute in the session language
ATTRIBUTE_GROUP_NAME	VARCHAR2 (200)		Name of the attribute group
DATA_TYPE	VARCHAR2 (106)		Data type of the attribute, (such as <code>VARCHAR2</code> or <code>FLOAT</code>)
DATA_LENGTH	NUMBER	NOT NULL	Length of a text data type
DATA_PRECISION	NUMBER		Precision of a numeric data type
DATA_SCALE	NUMBER		Scale of a numeric data type
CREATE_INDEX	VARCHAR2 (3)		Create index flag of the OLAP attribute. Possible values: <ul style="list-style-type: none"> • YES: The attribute is represented in the AW as a relation. Setting <code>CreateIndex=True</code> in the metadata guarantees that it will be represented in the AW as a relation. • NO: The attribute is not represented in the AW as a relation. Setting <code>CreateIndex=False</code> in the metadata does not guarantee that it will be represented in the AW as a variable; the system will make that determination.
IS_MULTI_LINGUAL	VARCHAR2 (3)		Shows the setting for the <code>IsMultiLingual</code> flag of the OLAP Attribute. Possible values: <ul style="list-style-type: none"> • YES: The attribute is set as multilingual. Setting <code>IsMultiLingual</code> to <code>True</code> in the metadata means that the attribute can have a value per language instead of a single value. • NO: The attribute is not set as multilingual. Setting <code>IsMultiLingual</code> to <code>False</code> in the metadata means that the attribute has only one value, independent of language.

 See Also:

- "[DBA_CUBE_ATTRIBUTES](#)"
- "[USER_CUBE_ATTRIBUTES](#)"

2.134 ALL_CUBE_BUILD_PROCESSES

`ALL_CUBE_BUILD_PROCESSES` describes the OLAP build processes and maintenance scripts accessible to the current user.

Related Views

- `DBA_CUBE_BUILD_PROCESSES` describes all OLAP build processes and maintenance scripts in the database.
- `USER_CUBE_BUILD_PROCESSES` describes the OLAP build processes and maintenance scripts owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the build process
BUILD_PROCESS_NAME	VARCHAR2(128)	NOT NULL	Name of the build process
BUILD_PROCESS_ID	NUMBER	NOT NULL	ID of the build process
BUILD_PROCESS	CLOB		Syntax of the build process
DESCRIPTION	NVARCHAR2(300)		Description of the build process in the session language

 See Also:

- "[DBA_CUBE_BUILD_PROCESSES](#)"
- "[USER_CUBE_BUILD_PROCESSES](#)"

2.135 ALL_CUBE_CALCULATED_MEMBERS

`ALL_CUBE_CALCULATED_MEMBERS` describes the calculated members for the OLAP cube dimensions accessible to the current user.

Related Views

- `DBA_CUBE_CALCULATED_MEMBERS` describes the calculated members for all OLAP cube dimensions in the database.
- `USER_CUBE_CALCULATED_MEMBERS` describes the calculated members for the OLAP cube dimensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension
MEMBER_NAME	VARCHAR2(128)	NOT NULL	Name of a calculated member in the cube dimension
IS_CUSTOM_AGGREGATE	VARCHAR2(3)		Indicates whether the calculated member is a custom aggregate (YES) or not (NO)
STORAGE_TYPE	VARCHAR2(10)		Storage type of the calculated member:
			<ul style="list-style-type: none"> • DYNAMIC - Value of the member is calculated for a query • PRECOMPUTE - Value of the member is calculated and stored during data maintenance
EXPRESSION	CLOB		Expression used to generate the value of the calculated member

 See Also:

- "[DBA_CUBE_CALCULATED_MEMBERS](#)"
- "[USER_CUBE_CALCULATED_MEMBERS](#)"

2.136 ALL_CUBE_DIM_LEVELS

`ALL_CUBE_DIM_LEVELS` describes the OLAP dimension levels accessible to the current user.

Related Views

- `DBA_CUBE_DIM_LEVELS` describes all OLAP dimension levels in the database.
- `USER_CUBE_DIM_LEVELS` describes the OLAP dimension levels owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a dimension, such as <code>CUSTOMER</code>
LEVEL_NAME	VARCHAR2(128)	NOT NULL	Name of a level in the dimension, such as <code>WAREHOUSE</code>
LEVEL_ID	NUMBER	NOT NULL	ID of the dimension level
DESCRIPTION	NVARCHAR2(300)		Description of the dimension level in the session language

 See Also:

- "[DBA_CUBE_DIM_LEVELS](#)"
- "[USER_CUBE_DIM_LEVELS](#)"

2.137 ALL_CUBE_DIM_MODELS

ALL_CUBE_DIM_MODELS describes the models for the OLAP dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIM_MODELS describes the models for all OLAP dimensions in the database.
- USER_CUBE_DIM_MODELS describes the models for the OLAP dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of a model for the cube dimension
MODEL_ID	NUMBER	NOT NULL	ID of the model
DESCRIPTION	NVARCHAR2(300)		Description of the model in the session language

See Also:

- "DBA_CUBE_DIM_MODELS"
- "USER_CUBE_DIM_MODELS"

2.138 ALL_CUBE_DIM_VIEW_COLUMNS

ALL_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of all OLAP cube dimensions in the database.
- USER_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)		Name of a cube dimension, such as PRODUCT
VIEW_NAME	VARCHAR2(128)		Name of a view of the dimension, such as PRODUCT_VIEW
COLUMN_NAME	VARCHAR2(128)		Name of a column in the view, such as LONG_DESCRIPTION or WAREHOUSE_ID

Column	Datatype	NULL	Description
COLUMN_TYPE	VARCHAR2 (11)		Type of the column: <ul style="list-style-type: none"> KEY - A key of the dimension view (that is, the dimension value itself) LEVEL_NAME - Name of the level (if any) corresponding to a row in the view DIM_ORDER - A column by which the results may be ordered (if present) MEMBER_TYPE ATTRIBUTE - An attribute owned by the dimension
OBJECT_NAME	VARCHAR2 (128)		Name of the level or attribute represented in the column, such as LONG_DESCRIPTION or WAREHOUSE_ID

 **See Also:**

- ["DBA_CUBE_DIM_VIEW_COLUMNS"](#)
- ["USER_CUBE_DIM_VIEW_COLUMNS"](#)

2.139 ALL_CUBE_DIM_VIEWS

ALL_CUBE_DIM_VIEWS describes the relational views of the OLAP dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIM_VIEWS describes the relational views of all OLAP dimensions in the database.
- USER_CUBE_DIM_VIEWS describes the relational views of the OLAP dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2 (128)	NOT NULL	Name of a cube dimension, such as PRODUCT
VIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of a view of the cube dimension, such as PRODUCT_VIEW

 **See Also:**

- ["DBA_CUBE_DIM_VIEWS"](#)
- ["USER_CUBE_DIM_VIEWS"](#)

2.140 ALL_CUBE_DIMENSIONALITY

ALL_CUBE_DIMENSIONALITY describes the dimension order for the OLAP cubes accessible to the current user.

Related Views

- DBA_CUBE_DIMENSIONALITY describes the dimension order for all OLAP cubes in the database.
- USER_CUBE_DIMENSIONALITY describes the dimension order for the OLAP cubes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as UNITS_CUBE
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a dimension of the cube, such as PRODUCT
DIMENSIONALITY_NAME	VARCHAR2(200)		The name of a dimensionality of the cube. For example, a cube dimensioned by the PRODUCT dimension can have a product dimension named PRODUCT_DIM.
DIMENSIONALITY_ID	NUMBER	NOT NULL	ID of the cube dimensionality
ORDER_NUM	NUMBER	NOT NULL	Order number of the dimension in the cube
IS_SPARSE	NUMBER		Indicates whether the dimension is sparse in the cube (1) or not sparse (0)
ET_ATTR_PREFIX	VARCHAR2(200)		Specifies the prefix that will be added to the column names in the Materialized Views to ensure uniqueness. If the user does not specify an ET_ATTR_PREFIX for any dimensions in a cube, then they default in the pattern D1_, D2_, and so on.

See Also:

- "DBA_CUBE_DIMENSIONALITY"
- "USER_CUBE_DIMENSIONALITY"

2.141 ALL_CUBE_DIMENSIONS

ALL_CUBE_DIMENSIONS describes the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIMENSIONS describes all OLAP cube dimensions in the database.
- USER_CUBE_DIMENSIONS describes the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension, such as TIME
DIMENSION_ID	NUMBER	NOT NULL	ID of the cube dimension
DIMENSION_TYPE	VARCHAR2(17)		Type of the OLAP cube dimension: <ul style="list-style-type: none"> • STANDARD • TIME
AW_NAME	VARCHAR2(128)		Name of the analytic workspace that contains the cube dimension, such as GLOBAL
DEFAULT_HIERARCHY_NAME	VARCHAR2(128)		Name of the default hierarchy for the cube dimension, such as FISCAL
DESCRIPTION	NVARCHAR2(300)		Description of the cube dimension in the session language
HIERARCHY_CONSISTENCY_RULE	VARCHAR2(200)		Hierarchy consistency rule of the OLAP cube dimension. Possible values: <ul style="list-style-type: none"> • CONSISTENT • STAR_CONSISTENT • SOLVE_CONSISTENT
ADD_UNIQUE_KEY_PREFIX	VARCHAR2(3)		Add_Unique_Key_Prefix flag of the OLAP cube dimension. Possible values: <ul style="list-style-type: none"> • YES: This is the value if AddUniqueKeyPrefix="True" was set in the metadata. This tells the system to add the level name prefix to the dimension members. This should be done when a dimension member can have the same value across different levels, for example, New York (state) and New York (city). • NO: This is the value if AddUniqueKeyPrefix="True" was not set in the metadata.
CUSTOM_ORDER	CLOB		The textual representation of the sort orderby clause used to load dimension members into the AW

 **See Also:**

- "[USER_CUBE_DIMENSIONS](#)"

2.142 ALL_CUBE_HIER_LEVELS

ALL_CUBE_HIER_LEVELS describes the hierarchy levels for the OLAP cube dimensions accessible to the current user.

Related Views

- `DBA_CUBE_HIER_LEVELS` describes the hierarchy levels for all OLAP cube dimensions in the database.

- `USER_CUBE_HIER_LEVELS` describes the hierarchy levels for the OLAP cube dimensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension, such as <code>TIME</code>
HIERARCHY_NAME	VARCHAR2(128)	NOT NULL	Name of a hierarchy for the dimension, such as <code>CALENDAR</code>
LEVEL_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension level, such as <code>MONTH</code>
HIERARCHY_LEVEL_ID	NUMBER	NOT NULL	ID of the hierarchy level
ORDER_NUM	NUMBER	NOT NULL	Order number of the level within the hierarchy; 0 is the top level
DESCRIPTION	NVARCHAR2(300)		Description of the level in the session language

 **See Also:**

- "[DBA_CUBE_HIER_LEVELS](#)"
- "[USER_CUBE_HIER_LEVELS](#)"

2.143 ALL_CUBE_HIER_VIEW_COLUMNS

`ALL_CUBE_HIER_VIEW_COLUMNS` describes the columns of the relational hierarchy views of the OLAP cube dimensions accessible to the current user.

Related Views

- `DBA_CUBE_HIER_VIEW_COLUMNS` describes the columns of the relational hierarchy views of all OLAP cube dimensions in the database.
- `USER_CUBE_HIER_VIEW_COLUMNS` describes the columns of the relational hierarchy views of the OLAP cube dimensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)		Name of a cube dimension, such as <code>TIME</code>
HIERARCHY_NAME	VARCHAR2(128)		Name of a hierarchy for the cube dimension, such as <code>CALENDAR</code>
VIEW_NAME	VARCHAR2(128)		Name of a view of the hierarchy, such as <code>TIME_CALENDAR_VIEW</code>
COLUMN_NAME	VARCHAR2(128)		Name of a column in the view, such as <code>CALENDAR_QUARTER</code> or <code>PARENT</code>

Column	Datatype	NULL	Description
COLUMN_TYPE	VARCHAR2(11)		<p>Type of the column:</p> <ul style="list-style-type: none"> • KEY - A key of the hierarchy view (that is, the hierarchy value itself) • PARENT - Dimension value of the parent of the current row in the view (or NULL if no parent) • LEVEL_NAME - Name of the level (if any) corresponding to a row in the view • DEPTH - Depth in the hierarchy tree of the current row in the view • HIER_ORDER - A column by which the results may be ordered (if present) • MEMBER_TYPE • ATTRIBUTE - An attribute owned by the hierarchy • LEVEL - One of the level columns comprising the hierarchy
OBJECT_NAME	VARCHAR2(128)		Name of a level or attribute for the dimension

 **See Also:**

- "[DBA_CUBE_HIER_VIEW_COLUMNS](#)"
- "[USER_CUBE_HIER_VIEW_COLUMNS](#)"

2.144 ALL_CUBE_HIER_VIEWS

ALL_CUBE_HIER_VIEWS describes the hierarchies for the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_HIER_VIEWS describes the hierarchies for all OLAP cube dimensions in the database.
- USER_CUBE_HIER_VIEWS describes the hierarchies for the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension, such as TIME
HIERARCHY_NAME	VARCHAR2(128)	NOT NULL	Name of a hierarchy for the cube dimension, such as CALENDAR
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of a view of the hierarchy, such as TIME_CALENDAR_VIEW

 See Also:

- ["DBA_CUBE_HIER_VIEWS"](#)
- ["USER_CUBE_HIER_VIEWS"](#)

2.145 ALL_CUBE_HIERARCHIES

`ALL_CUBE_HIERARCHIES` describes the OLAP dimension hierarchies accessible to the current user.

Related Views

- `DBA_CUBE_HIERARCHIES` describes all OLAP dimension hierarchies in the database.
- `USER_CUBE_HIERARCHIES` describes the OLAP dimension hierarchies owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a dimension, such as <code>TIME</code>
HIERARCHY_NAME	VARCHAR2(128)	NOT NULL	Name of a hierarchy for the dimension, such as <code>CALENDAR</code>
HIERARCHY_ID	NUMBER	NOT NULL	ID of the hierarchy
HIERARCHY_TYPE	VARCHAR2(5)		Type of the hierarchy: <ul style="list-style-type: none"> • <code>LEVEL</code> • <code>VALUE</code>
DESCRIPTION	NVARCHAR2(300)		Description of the hierarchy in the session language
IS_RAGGED	NUMBER		Indicates whether ragged hierarchies are permitted in subsequent builds. User dimensions that are enabled for materialized views and Time dimensions are set to 0. Builds then check the data for ragged hierarchies and fail if one is detected. When User dimensions are set to 1, the builds do not check for ragged hierarchies.
IS_SKIP_LEVEL	NUMBER		Indicates whether skip-level hierarchies are permitted in subsequent builds. User dimensions that are enabled for materialized views and Time dimensions are set to 0. Builds then check the data for skip-level hierarchies and fail if one is detected. When User dimensions are set to 1, the builds do not check for skip-level hierarchies.
REFRESH_MVIEW_NAME	VARCHAR2(200)		Name of the Refresh Materialized View associated with the hierarchy
CUSTOM_ORDER	CLOB		The textual representation of the sort orderby clause used to load dimension members of the hierarchy into the AW

 See Also:

- "[DBA_CUBE_HIERARCHIES](#)"
- "[USER_CUBE_HIERARCHIES](#)"

2.146 ALL_CUBE_MEASURES

`ALL_CUBE_MEASURES` describes the measures for the OLAP cubes accessible to the current user.

Related Views

- `DBA_CUBE_MEASURES` describes the measures for all OLAP cubes in the database.
- `USER_CUBE_MEASURES` describes the measures for the OLAP cubes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as <code>UNITS_CUBE</code>
MEASURE_NAME	VARCHAR2(128)	NOT NULL	Name of a measure in the cube, such as <code>SALES</code>
MEASURE_ID	NUMBER	NOT NULL	ID of a measure
OVERRIDE_SOLVE_SPEC	CLOB		Syntax text for the measure's consistent solve specification that overrides that of its cube
MEASURE_TYPE	VARCHAR2(7)		Type of the OLAP measure: <ul style="list-style-type: none"> • <code>BASE</code> - Base measures store the data • <code>DERIVED</code> - Derived measures calculate the data from base measures; also called calculated measures
EXPRESSION	CLOB		Expression that provides the values of the measure
DESCRIPTION	NVARCHAR2(300)		Description of the measure in the session language
DATA_TYPE	VARCHAR2(106)		Data type of the measure, such as <code>NUMBER</code>
DATA_LENGTH	NUMBER	NOT NULL	Length of a character data type
DATA_PRECISION	NUMBER		Precision of a numeric data type
DATA_SCALE	NUMBER		Scale of a numeric data type
LOOP_VAR_OVERRIDE	VARCHAR2(200)		The value that overrides the <code>\$LOOP_VAR</code> property of the OLAP derived measure
LOOP_DENSE_OVERRIDE	VARCHAR2(200)		The value that overrides the <code>\$LOOP_DENSE</code> property of the OLAP derived measure
LOOP_TYPE	VARCHAR2(200)		The <code>\$LOOP_TYPE</code> property of the OLAP derived measure. Possible values: <ul style="list-style-type: none"> • <code>INNER</code> • <code>OUTER</code> • <code>DENSE</code>

 See Also:

- "[DBA_CUBE_MEASURES](#)"
- "[USER_CUBE_MEASURES](#)"

2.147 ALL_CUBE_NAMED_BUILD_SPECS

`ALL_CUBE_NAMED_BUILD_SPECS` describes the OLAP cube named build specifications in the database that are accessible by the user.

Related Views

- `DBA_CUBE_NAMED_BUILD_SPECS` describes the OLAP cube named build specifications in the database.
- `USER_CUBE_NAMED_BUILD_SPECS` describes the OLAP cube named build specifications in the database that are owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OLAP named build specification
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of the OLAP cube
NAMED_BUILD_SPEC	CLOB		Name of the OLAP cube named build specification

 See Also:

- "[DBA_CUBE_NAMED_BUILD_SPECS](#)"
- "[USER_CUBE_NAMED_BUILD_SPECS](#)"

2.148 ALL_CUBE_SUB_PARTITION_LEVELS

`ALL_CUBE_SUB_PARTITION_LEVELS` describes the OLAP secondary partition levels in the database that are accessible by the user.

Related Views

- `DBA_CUBE_SUB_PARTITION_LEVELS` describes the OLAP secondary partition levels in the database.
- `USER_CUBE_SUB_PARTITION_LEVELS` describes the OLAP secondary partition levels in the database that are owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the OLAP secondary partition level
CUBE_NAME	VARCHAR2(128)		Name of the OLAP cube

Column	Datatype	NULL	Description
SUB_PARTITION_LEVEL_NAME	VARCHAR2(200)		Name of the secondary partition level of the OLAP cube
PRECOMPUTE_PERCENT	NUMBER		Precompute percent of the secondary partition level of the OLAP cube
PARTITION_DIMENSION_NAME	VARCHAR2(128)		Name of the cube dimension for which there is a secondary partition level on the OLAP cube
PARTITION_HIERARCHY_NAME	VARCHAR2(128)		Name of the hierarchy for which there is a secondary partition level on the OLAP cube
PARTITION_LEVEL_NAME	VARCHAR2(128)		Name of the hierarchy level for which there is a secondary partition level on the OLAP cube
SUB_PARTITION_LEVEL_ORDER	NUMBER	R	Order number of the secondary partition level on the OLAP cube

 See Also:

- ["DBA_CUBE_SUB_PARTITION_LEVELS"](#)
- ["USER_CUBE_SUB_PARTITION_LEVELS"](#)

2.149 ALL_CUBE_VIEW_COLUMNS

ALL_CUBE_VIEW_COLUMNS describes the columns of the relational views of the OLAP cubes accessible to the current user.

Related Views

- DBA_CUBE_VIEW_COLUMNS describes the columns of relational views of all OLAP cubes in the database.
- USER_CUBE_VIEW_COLUMNS describes the columns of relational views of OLAP cubes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube
CUBE_NAME	VARCHAR2(128)		Name of a cube, such as UNITS_CUBE
VIEW_NAME	VARCHAR2(128)		Name of a view of the cube, such as PRODUCT_VIEW
COLUMN_NAME	VARCHAR2(128)		Name of a column in the view, such as DIM_KEY or LEVEL_NAME
COLUMN_TYPE	VARCHAR2(7)		Type of the column: <ul style="list-style-type: none"> • MEASURE • KEY
OBJECT_NAME	VARCHAR2(128)		Name of the measure or dimension represented in the column

 See Also:

- "[DBA_CUBE_VIEW_COLUMNS](#)"
- "[USER_CUBE_VIEW_COLUMNS](#)"

2.150 ALL_CUBE_VIEWS

`ALL_CUBE_VIEWS` describes the relational views of the OLAP cubes accessible to the current user.

Related Views

- `DBA_CUBE_VIEWS` describes the relational views of all OLAP cubes in the database.
- `USER_CUBE_VIEWS` describes the relational views of the OLAP cubes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as <code>UNITS_CUBE</code>
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of a view of the cube, such as <code>UNITS_CUBE_VIEW</code>

 See Also:

- "[DBA_CUBE_VIEWS](#)"
- "[USER_CUBE_VIEWS](#)"

2.151 ALL_CUBES

`ALL_CUBES` describes the OLAP cubes accessible to the current user.

Related Views

- `DBA_CUBES` describes all OLAP cubes in the database.
- `USER_CUBES` describes the OLAP cubes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as <code>UNITS_CUBE</code>
CUBE_ID	NUMBER	NOT NULL	ID of a cube
AW_NAME	VARCHAR2(128)		Name of the analytic workspace that contains the cube, such as <code>GLOBAL</code>
CONSISTENT_SOLVE_SPEC	CLOB		Default aggregation rules for the cube

Column	Datatype	NULL	Description
DESCRIPTION	NVARCHAR2 (300)		Description of the cube in the session language
SPARSE_TYPE	VARCHAR2 (200)		Text value indicating the type of sparsity for the OLAP cube
PRECOMPUTE_CONDITION	CLOB		Condition syntax representing the precompute condition of the OLAP cube
PRECOMPUTE_PERCENT	NUMBER		Percentage of aggregate data values that are calculated and stored during data maintenance. If the cube is partitioned, then this percentage is for the bottom partitions.
PRECOMPUTE_PERCENT_TOP	NUMBER		Percentage of aggregate data values in the top partition that are calculated and stored during data maintenance
PARTITION_DIMENSION_NAME	VARCHAR2 (128)		Name of the dimension used to partition the cube, such as TIME
PARTITION_HIERARCHY_NAME	VARCHAR2 (128)		Name of the dimension hierarchy used to partition the cube, such as CALENDAR
PARTITION_LEVEL_NAME	VARCHAR2 (128)		Name of the level used to partition the cube, such as QUARTER
REFRESH_MVIEW_NAME	VARCHAR2 (200)		Name of the refresh materialized view for the OLAP cube
REWRITE_MVIEW_NAME	VARCHAR2 (200)		Name of the rewrite materialized view for the OLAP cube
DEFAULT_BUILD_SPEC	CLOB		The default build specification for the OLAP cube
MEASURE_STORAGE	VARCHAR2 (200)		The measure storage for the OLAP cube. Possible values: <ul style="list-style-type: none"> • INDEPENDENT • SHARED
SQL_CUBE_STORAGE_TYPE	CLOB		The SQL cube storage type for the OLAP cube. This value represents a SQL data type.
CUBE_STORAGE_TYPE	VARCHAR2 (200)		The cube storage type for the OLAP cube. This value represents a DML data type.

 **See Also:**

- "[DBA_CUBES](#)"
- "[USER_CUBES](#)"

2.152 ALL_DB_LINKS

ALL_DB_LINKS describes the database links accessible to the current user.

Related Views

- DBA_DB_LINKS describes all database links in the database.
- USER_DB_LINKS describes the database links owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the database link
DB_LINK	VARCHAR2(128)	NOT NULL	Name of the database link
USERNAME	VARCHAR2(128)		Name of the user when logging in
HOST	VARCHAR2(2000)		Oracle Net connect string
CREATED	DATE	NOT NULL	Creation time of the database link
HIDDEN	VARCHAR2(3)		For internal use only
SHARD_INTERNAL	VARCHAR2(3)		Indicates whether the database link is used to support operations across sharded databases. Possible values: <ul style="list-style-type: none"> YES: The database link is used and managed for to support sharded databases NO: The database link is not used and managed to support sharded databases Users should not alter or delete database links that are used and managed to support sharded databases.
VALID	VARCHAR2(3)		Indicates whether the database link is valid and usable. Possible values: <ul style="list-style-type: none"> YES: The database link is valid and usable. NO: The database link is invalid and unusable.
INTRA_CDB ¹	VARCHAR2(3)		For internal use only

¹ This column is available starting with Oracle Database 19c.

See Also:

- ["DBA_DB_LINKS"](#)
- ["USER_DB_LINKS"](#)
- ["DBA_DB_LINK_SOURCES"](#)
- ["DBA_EXTERNAL_SCN_ACTIVITY"](#)

2.153 ALL_DEF_AUDIT_OPTS

ALL_DEF_AUDIT_OPTS contains default object-auditing options that will be applied when objects are created.

The output for each column takes one of the following forms:

- /-: no default auditing
- S/-: auditing whenever successful
- /S: auditing whenever not successful

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
ALT	VARCHAR2 (3)		Auditing ALTER WHENEVER SUCCESSFUL / UNSUCCESSFUL
AUD	VARCHAR2 (3)		Auditing AUDIT WHENEVER SUCCESSFUL / UNSUCCESSFUL
COM	VARCHAR2 (3)		Auditing COMMENT WHENEVER SUCCESSFUL / UNSUCCESSFUL
DEL	VARCHAR2 (3)		Auditing DELETE WHENEVER SUCCESSFUL / UNSUCCESSFUL
GRA	VARCHAR2 (3)		Auditing GRANT WHENEVER SUCCESSFUL / UNSUCCESSFUL
IND	VARCHAR2 (3)		Auditing INDEX WHENEVER SUCCESSFUL / UNSUCCESSFUL
INS	VARCHAR2 (3)		Auditing INSERT WHENEVER SUCCESSFUL / UNSUCCESSFUL
LOC	VARCHAR2 (3)		Auditing LOCK WHENEVER SUCCESSFUL / UNSUCCESSFUL
REN	VARCHAR2 (3)		Auditing RENAME WHENEVER SUCCESSFUL / UNSUCCESSFUL
SEL	VARCHAR2 (3)		Auditing SELECT WHENEVER SUCCESSFUL / UNSUCCESSFUL
UPD	VARCHAR2 (3)		Auditing UPDATE WHENEVER SUCCESSFUL / UNSUCCESSFUL
EXE	VARCHAR2 (3)		Auditing EXECUTE WHENEVER SUCCESSFUL / UNSUCCESSFUL
FBK	VARCHAR2 (3)		Auditing FLASHBACK WHENEVER SUCCESSFUL / UNSUCCESSFUL
REA	VARCHAR2 (3)		Auditing READ WHENEVER SUCCESSFUL / UNSUCCESSFUL

2.154 ALL_DEPENDENCIES

`ALL_DEPENDENCIES` describes dependencies between procedures, packages, functions, package bodies, and triggers accessible to the current user, including dependencies on views created without any database links. This view does not display the `SCHEMADID` column.

Related Views

- `DBA_DEPENDENCIES` describes all dependencies between objects in the database. This view does not display the `SCHEMADID` column.
- `USER_DEPENDENCIES` describes dependencies between objects in the current user's schema. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(18)		Type of the object
REFERENCED_OWNER	VARCHAR2(128)		Owner of the referenced object (remote owner if remote object)
REFERENCED_NAME	VARCHAR2(128)		Name of the referenced object
REFERENCED_TYPE	VARCHAR2(18)		Type of the referenced object
REFERENCED_LINK_NAME	VARCHAR2(128)		Name of the link to the parent object (if remote)
DEPENDENCY_TYPE	VARCHAR2(4)		Indicates whether the dependency is a REF dependency (REF) or not (HARD)

 See Also:

- "[DBA_DEPENDENCIES](#)"
- "[USER_DEPENDENCIES](#)"

2.155 ALL_DEQUEUE_QUEUES

ALL_DEQUEUE_QUEUES describes all queues on which the current user has dequeue privileges. If the user has any Advanced Queuing system privileges, such as DEQUEUE ANY QUEUE or MANAGE ANY QUEUE, then this view describes all queues in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue
NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_TABLE	VARCHAR2(128)	NOT NULL	Name of the table in which the queue data resides
QID	NUMBER	NOT NULL	Object number of the queue
QUEUE_TYPE	VARCHAR2(20)		Type of the queue: <ul style="list-style-type: none"> • EXCEPTION_QUEUE • NORMAL_QUEUE
MAX_RETRIES	NUMBER		Maximum number of retries allowed when dequeuing from the queue
RETRY_DELAY	NUMBER		Time interval between retries
ENQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for enqueue (YES) or not (NO)
DEQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for dequeue (YES) or not (NO)
RETENTION	VARCHAR2(40)		Time interval that processed messages are retained in the queue, or FOREVER
USER_COMMENT	VARCHAR2(50)		User-specified comment
NETWORK_NAME	VARCHAR2(512)		Network name of the queue service

Column	Datatype	NULL	Description
SHARDED	VARCHAR2 (5)		TRUE if the queue is sharded, FALSE otherwise

2.156 ALL_DIM_ATTRIBUTES

ALL_DIM_ATTRIBUTES describes the relationship between a dimension level and a functionally dependent column. The level columns and the dependent column must be in the same table.

Related Views

- DBA_DIM_ATTRIBUTES describes all such dimension relationships in the database.
- USER_DIM_ATTRIBUTES describes all such dimension attributes in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2 (128)	NOT NULL	Name of the dimension
ATTRIBUTE_NAME	VARCHAR2 (128)		Name of the attribute
LEVEL_NAME	VARCHAR2 (128)		Name of the hierarchy level
COLUMN_NAME	VARCHAR2 (128)	NOT NULL	Dependent column name
INFERRRED	CHAR (1)		Indicates whether the attribute is inferred from a JOIN KEY specification (Y) or not (N)

See Also:

- "[DBA_DIM_ATTRIBUTES](#)"
- "[USER_DIM_ATTRIBUTES](#)"

2.157 ALL_DIM_CHILD_OF

ALL_DIM_CHILD_OF describes hierarchical relationships of 1 to n between the pairs of levels in the dimensions accessible to the current user.

Related Views

- DBA_DIM_CHILD_OF describes all such hierarchical relationships in the database.
- USER_DIM_CHILD_OF describes all such hierarchical attributes in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2 (128)	NOT NULL	Name of the dimension
HIERARCHY_NAME	VARCHAR2 (128)		Hierarchy name

Column	Datatype	NULL	Description
POSITION	NUMBER	NOT NULL	Hierarchical position within this hierarchy, position 1 being the most detailed
CHILD_LEVEL_NAME	VARCHAR2(128)		Child side of 1:n relationship
JOIN_KEY_ID	VARCHAR2(40)		If non-null, then the child joins to the parent
PARENT_LEVEL_NAME	VARCHAR2(128)		Parent side of 1:n relationship in relation to the CHILD_LEVEL_NAME

 **See Also:**

- "[DBA_DIM_CHILD_OF](#)"
- "[USER_DIM_CHILD_OF](#)"

2.158 ALL_DIM_HIERARCHIES

ALL_DIM_HIERARCHIES describes all dimension hierarchies accessible to the current user.

Related Views

- DBA_DIM_HIERARCHIES describes all such hierarchies in the database.
- USER_DIM_HIERARCHIES describes all such hierarchies owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
HIERARCHY_NAME	VARCHAR2(128)		Hierarchy name

 **See Also:**

- "[DBA_DIM_HIERARCHIES](#)"
- "[USER_DIM_HIERARCHIES](#)"

2.159 ALL_DIM_JOIN_KEY

ALL_DIM_JOIN_KEY describes the joins between two dimension tables that are accessible to the current user. The join is always specified between a parent dimension level column and a child column.

Related Views

- DBA_DIM_JOIN_KEY describes all such joins in the database.
- USER_DIM_JOIN_KEY describes all such joins owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
DIM_KEY_ID	NUMBER	NOT NULL	Join key ID (unique within a dimension)
LEVEL_NAME	VARCHAR2(128)		Name of the hierarchy level
KEY_POSITION	NUMBER	NOT NULL	Ordinal position of the key column within the level
HIERARCHY_NAME	VARCHAR2(128)		Name of the hierarchy
CHILD_JOIN_OWNER	VARCHAR2(128)	NOT NULL	Owner of the join column table
CHILD_JOIN_TABLE	VARCHAR2(128)	NOT NULL	Name of the join column table
CHILD_JOIN_COLUMN	VARCHAR2(128)	NOT NULL	Name of the join column
CHILD_LEVEL_NAME	VARCHAR2(128)		Name of the child hierarchy level of the join key

 See Also:

- "[DBA_DIM_JOIN_KEY](#)"
- "[USER_DIM_JOIN_KEY](#)"

2.160 ALL_DIM_LEVEL_KEY

ALL_DIM_LEVEL_KEY describes a column of a dimension level accessible to the current user. The position of a column within a level is specified by KEY_POSITION.

Related Views

- DBA_DIM_LEVEL_KEY describes all columns of dimension levels in the database.
- USER_DIM_LEVEL_KEY describes all columns of dimension levels owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
LEVEL_NAME	VARCHAR2(128)		Name of the hierarchy level
KEY_POSITION	NUMBER	NOT NULL	Ordinal position of the key column within the level
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the key column

 See Also:

- "[DBA_DIM_LEVEL_KEY](#)"
- "[USER_DIM_LEVEL_KEY](#)"

2.161 ALL_DIM_LEVELS

`ALL_DIM_LEVELS` describes the dimension levels accessible to the current user. All columns of a dimension level must come from the same relation.

Related Views

- `DBA_DIM_LEVELS` describes all dimension levels in the database.
- `USER_DIM_LEVELS` describes the levels of all dimensions owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
LEVEL_NAME	VARCHAR2(128)		Unique within a dimension
NUM_COLUMNS	NUMBER		Number of columns in the level definition
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detail object that the keys of this level come from
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Name of the table that the keys of this level come from
SKIP_WHEN_NULL	VARCHAR2(1)		Indicates whether the level is declared with the <code>SKIP WHEN NULL</code> clause (Y) or not (N)

See Also:

- "[DBA_DIM_LEVELS](#)"
- "[USER_DIM_LEVELS](#)"

2.162 ALL_DIMENSIONS

`ALL_DIMENSIONS` describes the dimension objects accessible to the current user.

Related Views

- `DBA_DIMENSIONS` describes all dimensions in the database.
- `USER_DIMENSIONS` describes the dimensions in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
INVALID	VARCHAR2(1)		Indicates whether the dimension is invalid (Y) or valid (N)
COMPILE_STATE	VARCHAR2(13)		Compile status of the dimension: <ul style="list-style-type: none"> • INVALID • NEEDS_COMPILE • ERROR

Column	Datatype	NULL	Description
REVISION	NUMBER		Dimension revision level

 See Also:

- "[DBA_DIMENSIONS](#)"
- "[USER_DIMENSIONS](#)"

2.163 ALL_DIRECTORIES

`ALL_DIRECTORIES` describes all directories accessible to the current user.

Related View

`DBA_DIRECTORIES` describes all directories in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the directory (always <code>SYS</code>)
DIRECTORY_NAME	VARCHAR2(128)	NOT NULL	Name of the directory
DIRECTORY_PATH	VARCHAR2(4000)		Operating system pathname for the directory
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)

 See Also:

- "[DBA_DIRECTORIES](#)"

2.164 ALL_EDITION_COMMENTS

`ALL_EDITION_COMMENTS` describes the comments on the editions accessible to the current user.

Related View

`DBA_EDITION_COMMENTS` describes the comments on all editions in the database.

Column	Datatype	NULL	Description
EDITION_NAME	VARCHAR2(128)	NOT NULL	Name of the edition
COMMENTS	VARCHAR2(4000)		Edition comments

 **See Also:**

["DBA_EDITION_COMMENTS"](#)

2.165 ALL_EDITIONING_VIEW_COLS

ALL_EDITIONING_VIEW_COLS describes the relationship between the columns of the editioning views accessible to the current user and the table columns to which they map.

Related Views

- DBA_EDITIONING_VIEW_COLS describes the relationship between the columns of all editioning views in the database and the table columns to which they map.
- USER_EDITIONING_VIEW_COLS describes the relationship between the columns of the editioning views owned by the current user and the table columns to which they map. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of an editioning view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view
VIEW_COLUMN_ID	NUMBER	NOT NULL	Column number within the editioning view
VIEW_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column in the editioning view
TABLE_COLUMN_ID	NUMBER	NOT NULL	Column number of a table column to which this editioning view column maps
TABLE_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of a table column to which this editioning view column maps

 **See Also:**

- ["DBA_EDITIONING_VIEW_COLS"](#)
- ["USER_EDITIONING_VIEW_COLS"](#)

2.166 ALL_EDITIONING_VIEW_COLS_AE

ALL_EDITIONING_VIEW_COLS_AE describes the relationship between the columns of the editioning views (across all editions) accessible to the current user and the table columns to which they map.

Related Views

- DBA_EDITIONING_VIEW_COLS_AE describes the relationship between the columns of all editioning views (across all editions) in the database and the table columns to which they map.

- `USER_EDITIONING_VIEW_COLS_AE` describes the relationship between the columns of the editioning views (across all editions) owned by the current user and the table columns to which they map. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of an editioning view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view
VIEW_COLUMN_ID	NUMBER	NOT NULL	Column number within the editioning view
VIEW_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column in the editioning view
TABLE_COLUMN_ID	NUMBER	NOT NULL	Column number of a table column to which this editioning view column maps
TABLE_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of a table column to which this editioning view column maps
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the editioning view is defined

 **See Also:**

- "[DBA_EDITIONING_VIEW_COLS_AE](#)"
- "[USER_EDITIONING_VIEW_COLS_AE](#)"

2.167 ALL_EDITIONING_VIEWS

`ALL_EDITIONING_VIEWS` describes the editioning views accessible to the current user.

Related Views

- `DBA_EDITIONING_VIEWS` describes all editioning views in the database.
- `USER_EDITIONING_VIEWS` describes the editioning views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of an editioning view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view's base table

 **See Also:**

- "[DBA_EDITIONING_VIEWS](#)"
- "[USER_EDITIONING_VIEWS](#)"

2.168 ALL_EDITIONING_VIEWS_AE

ALL_EDITIONING_VIEWS_AE describes the editioning views (across all editions) accessible to the current user.

Related Views

- DBA_EDITIONING_VIEWS_AE describes all editioning views (across all editions) in the database.
- USER_EDITIONING_VIEWS_AE describes the editioning views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of an editioning view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view's base table
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the editioning view is defined

See Also:

- "DBA_EDITIONING_VIEWS_AE"
- "USER_EDITIONING_VIEWS_AE"

2.169 ALL_EDITIONS

ALL_EDITIONS describes the editions accessible to the current user.

Related View

DBA_EDITIONS describes all editions in the database.

Column	Datatype	NULL	Description
EDITION_NAME	VARCHAR2(128)	NOT NULL	Name of the edition
PARENT_EDITION_NAME	VARCHAR2(128)		Name of the parent edition for this edition
USABLE	VARCHAR2(3)		Indicates whether the edition is usable (YES) or unusable (NO)

See Also:

- "DBA_EDITIONS"
- Oracle Database Development Guide* for more information about editions

2.170 ALL_ENCRYPTED_COLUMNS

`ALL_ENCRYPTED_COLUMNS` displays encryption algorithm information for the encrypted columns in the tables accessible to the current user.

Related Views

- `DBA_ENCRYPTED_COLUMNS` displays encryption algorithm information for all encrypted columns in the database.
- `USER_ENCRYPTED_COLUMNS` displays encryption algorithm information for the encrypted columns in the tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
ENCRYPTION_ALG	VARCHAR2(29)		Encryption algorithm used to protect secrecy of data in this column: <ul style="list-style-type: none">• 3 Key Triple DES 168 bits key• AES 128 bits key• AES 192 bits key• AES 256 bits key
SALT	VARCHAR2(3)		Indicates whether the column is encrypted with SALT (YES) or not (NO)
INTEGRITY_ALG	VARCHAR2(12)		Integrity algorithm used for the column: <ul style="list-style-type: none">• SHA-1• NOMAC

See Also:

- "[DBA_ENCRYPTED_COLUMNS](#)"
- "[USER_ENCRYPTED_COLUMNS](#)"

2.171 ALL_ERROR_TRANSLATIONS

`ALL_ERROR_TRANSLATIONS` describes all error translations accessible to the user.

Related Views

- `DBA_ERROR_TRANSLATIONS` describes all error translations in the database.
- `USER_ERROR_TRANSLATIONS` describes all error translations owned by the user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the SQL translation profile
PROFILE_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL translation profile
ERROR_CODE	NUMBER	NOT NULL	The Oracle error code
TRANSLATED_CODE	NUMBER		The translated error code
TRANSLATED_SQLSTATE	VARCHAR2(5)		The translated SQLSTATE
ENABLED	VARCHAR2(5)		TRUE if the translation is enabled, FALSE otherwise.
REGISTRATION_TIME	TIMESTAMP(6)		Time the translation was registered
COMMENTS	VARCHAR2(4000)		Comment on the translation

 **See Also:**

- "[DBA_ERROR_TRANSLATIONS](#)"
- "[USER_ERROR_TRANSLATIONS](#)"

2.172 ALL_ERRORS

`ALL_ERRORS` describes the current errors on the stored objects accessible to the current user.

Related Views

- `DBA_ERRORS` describes the current errors on all stored objects in the database.
- `USER_ERRORS` describes the current errors on the stored objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(12)		Type of the object: <ul style="list-style-type: none"> • VIEW • PROCEDURE • FUNCTION • PACKAGE • PACKAGE BODY • TRIGGER • TYPE • TYPE BODY • LIBRARY • JAVA SOURCE • JAVA CLASS • DIMENSION
SEQUENCE	NUMBER	NOT NULL	Sequence number (for ordering purposes)
LINE	NUMBER	NOT NULL	Line number at which the error occurred
POSITION	NUMBER	NOT NULL	Position in the line at which the error occurred

Column	Datatype	NULL	Description
TEXT	VARCHAR2(4000)	NOT NULL	Text of the error
ATTRIBUTE	VARCHAR2(9)		Indicates whether the error is an error (ERROR) or a warning (WARNING)
MESSAGE_NUMBER	NUMBER		Numeric error number (without any prefix)

 See Also:

- ["DBA_ERRORS"](#)
- ["USER_ERRORS"](#)

2.173 ALL_ERRORS_AE

ALL_ERRORS_AE describes the current errors on the stored objects (across all editions) accessible to the current user.

Related Views

- DBA_ERRORS_AE describes the current errors on all stored objects (across all editions) in the database.
- USER_ERRORS_AE describes the current errors on the stored objects (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(12)		Type of the object: <ul style="list-style-type: none"> • TYPE • TYPE BODY • VIEW • PROCEDURE • FUNCTION • PACKAGE • PACKAGE BODY • TRIGGER • JAVA SOURCE • JAVA CLASS
SEQUENCE	NUMBER	NOT NULL	Sequence number (for ordering purposes)
LINE	NUMBER	NOT NULL	Line number at which this error occurred
POSITION	NUMBER	NOT NULL	Position in the line at which this error occurred
TEXT	VARCHAR2(4000)	NOT NULL	Text of the error
ATTRIBUTE	VARCHAR2(9)		Indicates whether the error is an error (ERROR) or a warning (WARNING)
MESSAGE_NUMBER	NUMBER		Numeric error number (without any prefix)

Column	Datatype	NULL	Description
EDITION_NAME	VARCHAR2(128)		Name of the edition in which the object is actual

 **See Also:**

- "[DBA_ERRORS_AE](#)"
- "[USER_ERRORS_AE](#)"

2.174 ALL_EVALUATION_CONTEXT_TABLES

ALL_EVALUATION_CONTEXT_TABLES describes the tables in the rule evaluation contexts accessible to the current user.

Related Views

- DBA_EVALUATION_CONTEXT_TABLES describes the tables in all rule evaluation contexts in the database.
- USER_EVALUATION_CONTEXT_TABLES describes the tables in the rule evaluation contexts owned by the current user. This view does not display the EVALUATION_CONTEXT_OWNER column.

Column	Datatype	NULL	Description
EVALUATION_CONTEXT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the evaluation context
EVALUATION_CONTEXT_NAME	VARCHAR2(128)	NOT NULL	Name of the evaluation context
TABLE_ALIAS	VARCHAR2(128)		Alias for a table in the evaluation context
TABLE_NAME	VARCHAR2(4000)		Name of the table referred to by the table alias

 **See Also:**

- "[DBA_EVALUATION_CONTEXT_TABLES](#)"
- "[USER_EVALUATION_CONTEXT_TABLES](#)"

2.175 ALL_EVALUATION_CONTEXT_VARS

ALL_EVALUATION_CONTEXT_VARS describes the variables in the rule evaluation contexts accessible to the current user.

Related Views

- DBA_EVALUATION_CONTEXT_VARS describes the variables in all rule evaluation contexts in the database.

- `USER_EVALUATION_CONTEXT_VARS` describes the variables in the rule evaluation contexts owned by the current user. This view does not display the `EVALUATION_CONTEXT_OWNER` column.

Column	Datatype	NULL	Description
<code>EVALUATION_CONTEXT_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the evaluation context
<code>EVALUATION_CONTEXT_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the evaluation context
<code>VARIABLE_NAME</code>	VARCHAR2(128)		Name of a variable in the evaluation context
<code>VARIABLE_TYPE</code>	VARCHAR2(4000)		Datatype of the variable
<code>VARIABLE_VALUE_FUNCTION</code>	VARCHAR2(4000)		Function used to retrieve the value of the variable; NULL for variables that are not implicit
<code>VARIABLE_METHOD_FUNCTION</code>	VARCHAR2(228)		Function used to retrieve the result of method invocation on the variable. Such a function can speed up evaluation, if there are many simple rules that invoke the method on the variable.

 **See Also:**

- "[DBA_EVALUATION_CONTEXT_VARS](#)"
- "[USER_EVALUATION_CONTEXT_VARS](#)"

2.176 ALL_EVALUATION_CONTEXTS

`ALL_EVALUATION_CONTEXTS` describes the rule evaluation contexts accessible to the current user.

Related Views

- `DBA_EVALUATION_CONTEXTS` describes all rule evaluation contexts in the database.
- `USER_EVALUATION_CONTEXTS` describes the rule evaluation contexts owned by the current user. This view does not display the `EVALUATION_CONTEXT_OWNER` column.

Column	Datatype	NULL	Description
<code>EVALUATION_CONTEXT_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the evaluation context
<code>EVALUATION_CONTEXT_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the evaluation context
<code>EVALUATION_FUNCTION</code>	VARCHAR2(4000)		Evaluation function associated with the evaluation context, if any
<code>EVALUATION_CONTEXT_COMMENT</code>	VARCHAR2(4000)		Comment specified with the evaluation context, if any

 **See Also:**

- "[DBA_EVALUATION_CONTEXTS](#)"
- "[USER_EVALUATION_CONTEXTS](#)"

2.177 ALL_EXPRESSION_STATISTICS

ALL_EXPRESSION_STATISTICS provides expression usage tracking statistics for tables that are accessible to the current user.

Related Views

- DBA_EXPRESSION_STATISTICS provides expression usage tracking statistics for all the tables in the database.
- USER_EXPRESSION_STATISTICS provides expression usage tracking statistics for tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table contained in the expression
EXPRESSION_ID	NUMBER		Expression ID of the current expression
SNAPSHOT	VARCHAR2(10)		Type of snapshot for the expression: <ul style="list-style-type: none"> • LATEST: Latest snapshot • CUMULATIVE: Cumulative snapshot • WINDOW: Window snapshot
EVALUATION_COUNT	NUMBER		Number of times the expression has been evaluated
FIXED_COST	NUMBER	NOT NULL	Optimizer fixed cost of evaluating the expression
DYNAMIC_COST	NUMBER		Optimizer dynamic cost of evaluating the expression
EXPRESSION_TEXT	VARCHAR2(4000)	NOT NULL	Text of the expression
CREATED	DATE	NOT NULL	Time this expression is first evaluated
LAST_MODIFIED	DATE		Time this expression is last evaluated

See Also:

- "[DBA_EXPRESSION_STATISTICS](#)"
- "[USER_EXPRESSION_STATISTICS](#)"
- "[V\\$EXP_STATS](#)"

2.178 ALL_EXTERNAL_LOCATIONS

ALL_EXTERNAL_LOCATIONS describes the locations (data sources) of the external tables accessible to the current user.

Related Views

- DBA_EXTERNAL_LOCATIONS describes the locations (data sources) of all external tables in the database.
- USER_EXTERNAL_LOCATIONS describes the locations (data sources) of the external tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the external table location
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the corresponding external table
LOCATION	VARCHAR2(4000)		External table location clause
DIRECTORY_OWNER	CHAR(3)		Owner of the directory containing the external table location
DIRECTORY_NAME	VARCHAR2(128)		Name of the directory containing the external table location

 See Also:

- "[DBA_EXTERNAL_LOCATIONS](#)"
- "[USER_EXTERNAL_LOCATIONS](#)"

2.179 ALL_EXTERNAL_TABLES

ALL_EXTERNAL_TABLES describes the external tables accessible to the current user.

Related Views

- DBA_EXTERNAL_TABLES describes all external tables in the database.
- USER_EXTERNAL_TABLES describes the external tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the external table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the external table
TYPE_OWNER	CHAR(3)		Owner of the implementation type for the external table access driver
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the implementation type for the external table access driver
DEFAULT_DIRECTORY_OWNER	CHAR(3)		Owner of the default directory for the external table
DEFAULT_DIRECTORY_NAME	VARCHAR2(128)	NOT NULL	Name of the default directory for the external table
REJECT_LIMIT	VARCHAR2(40)		Reject limit for the external table, or UNLIMITED
ACCESS_TYPE	VARCHAR2(7)		Type of access parameters for the external table: <ul style="list-style-type: none"> • BLOB • CLOB
ACCESS_PARAMETERS	CLOB		Access parameters for the external table
PROPERTY	VARCHAR2(10)		Property of the external table: <ul style="list-style-type: none"> • REFERENCED - Referenced columns • ALL - All columns
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this table

Column	Datatype	NULL	Description
INMEMORY_COMPRESSION	VARCHAR2(17)		<p>Indicates the compression level for the IM column store:</p> <ul style="list-style-type: none"> • NO MEMCOMPRESS • FOR DML • FOR CAPACITY [HIGH LOW] • FOR QUERY [HIGH LOW] • NULL <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_EXTERNAL_TABLES but non-NUL for ALL_XTERNAL_TAB_PARTITIONS.</p>

 **See Also:**

- "[DBA_EXTERNAL_TABLES](#)"
- "[USER_EXTERNAL_TABLES](#)"

2.180 ALL_FILE_GROUP_EXPORT_INFO

ALL_FILE_GROUP_EXPORT_INFO shows export-related information for each version accessible to the current user. There will only be information in this view for versions that have a valid Data Pump dump file.

Related Views

- DBA_FILE_GROUP_EXPORT_INFO shows export-related information for each version in the database that has a valid Data Pump dump file.
- USER_FILE_GROUP_EXPORT_INFO shows export-related information for all file groups owned by the current user. This view does not display the FILE_GROUP_OWNER column.

Column	Datatype	NULL	Description
FILE_GROUP_OWNER	VARCHAR2(128)	NOT NULL	Owner of the file group
FILE_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the file group
VERSION_NAME	VARCHAR2(128)	NOT NULL	User-specified name for the version
VERSION	NUMBER	NOT NULL	Internal version number
EXPORT_VERSION	VARCHAR2(128)	NOT NULL	Version of exported objects
PLATFORM_NAME	VARCHAR2(101)	NOT NULL	Platform on which the export was performed
EXPORT_TIME	DATE	NOT NULL	Time at which the export job was performed
EXPORT_SCN	NUMBER		SCN of the export job
SOURCE_GLOBAL_NAME	VARCHAR2(128)		Global name of the exporting database

 **See Also:**

- "[DBA_FILE_GROUP_EXPORT_INFO](#)"
- "[USER_FILE_GROUP_EXPORT_INFO](#)"

2.181 ALL_FILE_GROUP_FILES

`ALL_FILE_GROUP_FILES` shows the file set for each versioned file group accessible to the current user.

Related Views

- `DBA_FILE_GROUP_FILES` shows the file set for each versioned group in the database.
- `USER_FILE_GROUP_FILES` shows the file set for each versioned group owned by the current user. This view does not display the `FILE_GROUP_OWNER` column.

Column	Datatype	NULL	Description
<code>FILE_GROUP_OWNER</code>	<code>VARCHAR2(128)</code>	NOT NULL	Owner of the file group
<code>FILE_GROUP_NAME</code>	<code>VARCHAR2(128)</code>	NOT NULL	Name of the file group
<code>VERSION_NAME</code>	<code>VARCHAR2(128)</code>	NOT NULL	Name of the version to which the file belongs
<code>VERSION</code>	<code>NUMBER</code>	NOT NULL	Internal version number of the file group version to which the file belongs
<code>FILE_NAME</code>	<code>VARCHAR2(512)</code>	NOT NULL	Name of the file
<code>FILE_DIRECTORY</code>	<code>VARCHAR2(128)</code>	NOT NULL	Directory object for the directory where the file is stored
<code>FILE_TYPE</code>	<code>VARCHAR2(32)</code>		User-specified file type
<code>FILE_SIZE</code>	<code>NUMBER</code>		Size of the file
<code>FILE_BLOCK_SIZE</code>	<code>NUMBER</code>		Block size for the file
<code>COMMENTS</code>	<code>VARCHAR2(4000)</code>		Comments about the file group

 **See Also:**

- "[DBA_FILE_GROUP_FILES](#)"
- "[USER_FILE_GROUP_FILES](#)"

2.182 ALL_FILE_GROUP_TABLES

`ALL_FILE_GROUP_TABLES` shows information about the tables accessible to the current user that can be imported using the file set.

Related Views

- `DBA_FILE_GROUP_TABLES` shows information about all the tables in the database that can be imported using the file set.

- `USER_FILE_GROUP_TABLES` shows information about tables owned by the current user that can be imported using the file set. This view does not display the `FILE_GROUP_OWNER` column.

Column	Datatype	NULL	Description
FILE_GROUP_OWNER	VARCHAR2(128)	NOT NULL	Owner of the file group
FILE_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the file group
VERSION_NAME	VARCHAR2(128)	NOT NULL	Version of the file group that contains the table
VERSION	NUMBER	NOT NULL	Internal version number
OWNER	VARCHAR2(128)	NOT NULL	Schema to which the table belongs
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace to which the table belongs
SCN	NUMBER		SCN at which the table was exported (available only for Streams-prepared tables)

 **See Also:**

- "[DBA_FILE_GROUP_TABLES](#)"
- "[USER_FILE_GROUP_TABLES](#)"

2.183 ALL_FILE_GROUP_TABLESPACES

`ALL_FILE_GROUP_TABLESPACES` shows information about the transportable tablespaces present (partially or completely) in the file groups accessible to the current user (when the file groups contain dump files).

Related Views

- `DBA_FILE_GROUP_TABLESPACES` shows information about the transportable tablespaces present (partially or completely) in all file groups in the database (when the file groups contain dump files).
- `USER_FILE_GROUP_TABLESPACES` shows information about the transportable tablespaces present (partially or completely) in the file groups owned by the current user (when the file groups contain dump files). This view does not display the `FILE_GROUP_OWNER` column.

Column	Datatype	NULL	Description
FILE_GROUP_OWNER	VARCHAR2(128)	NOT NULL	Owner of the file group
FILE_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the file group
VERSION_NAME	VARCHAR2(128)	NOT NULL	Version of the file group that contains the tablespace
VERSION	NUMBER	NOT NULL	Internal version number
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace

 **See Also:**

- "[DBA_FILE_GROUP_TABLESPACES](#)"
- "[USER_FILE_GROUP_TABLESPACES](#)"

2.184 ALL_FILE_GROUP VERSIONS

`ALL_FILE_GROUP VERSIONS` shows top-level version information for the file groups accessible to the current user.

Related Views

- `DBA_FILE_GROUP VERSIONS` shows top-level version information for all file groups in the database.
- `USER_FILE_GROUP VERSIONS` shows top-level version information for all file groups owned by the current user. This view does not display the `FILE_GROUP_OWNER` column.

Column	Datatype	NULL	Description
<code>FILE_GROUP_OWNER</code>	<code>VARCHAR2(128)</code>	NOT NULL	Owner of the file group
<code>FILE_GROUP_NAME</code>	<code>VARCHAR2(128)</code>	NOT NULL	Name of the file group
<code>VERSION_NAME</code>	<code>VARCHAR2(128)</code>	NOT NULL	User-specified name for the version
<code>VERSION</code>	<code>NUMBER</code>	NOT NULL	Internal version number
<code>CREATOR</code>	<code>VARCHAR2(128)</code>	NOT NULL	User who created the version
<code>CREATED</code>	<code>TIMESTAMP(6) WITH TIME ZONE</code>	NOT NULL	Time at which the version was created
<code>COMMENTS</code>	<code>VARCHAR2(4000)</code>		Comments about the file group
<code>DEFAULT_DIRECTORY</code>	<code>VARCHAR2(128)</code>		Default directory object for this version, if specified

 **See Also:**

- "[DBA_FILE_GROUP VERSIONS](#)"
- "[USER_FILE_GROUP VERSIONS](#)"

2.185 ALL_FILE_GROUPS

`ALL_FILE_GROUPS` shows top-level metadata about the file groups accessible to the current user.

Related Views

- `DBA_FILE_GROUPS` shows top-level metadata about all file groups in the database.
- `USER_FILE_GROUPS` shows top-level metadata about file groups owned by the current user. This view does not display the `FILE_GROUP_OWNER` column.

Column	Datatype	NULL	Description
FILE_GROUP_OWNER	VARCHAR2(128)	NOT NULL	Owner of the file group
FILE_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the file group
KEEP_FILES	VARCHAR2(1)	NOT NULL	A value of Y or N to indicate whether or not files should be deleted when a version is purged
MIN VERSIONS	NUMBER	NOT NULL	Autopurge should not drop a version if this condition will become violated
MAX VERSIONS	NUMBER	NOT NULL	Autopurge will drop the oldest version when this condition is violated
RETENTION_DAYS	NUMBER	NOT NULL	Autopurge will drop versions older than this if doing so does not violate MIN VERSIONS
CREATED	TIMESTAMP(6) WITH TIME ZONE	NOT NULL	Time at which the file group was created
COMMENTS	VARCHAR2(4000)		Comments about the file group
DEFAULT_DIRECTORY	VARCHAR2(128)		Name of the default directory object

 See Also:

- ["DBA_FILE_GROUPS"](#)
- ["USER_FILE_GROUPS"](#)

2.186 ALL_GG_AUTO_CDR_COLUMN_GROUPS

ALL_GG_AUTO_CDR_COLUMN_GROUPS provides details about Oracle GoldenGate automatic conflict detection and resolution (CDR) column groups owned by the current user.

Related View

DBA_GG_AUTO_CDR_COLUMN_GROUPS provides details about all of the Oracle GoldenGate automatic CDR column groups in the database.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name
COLUMN_GROUP_NAME	VARCHAR2(128)	NOT NULL	Column group name
RESOLUTION_COLUMN	VARCHAR2(128)	NOT NULL	Timestamp resolution column

 See Also:

- ["DBA_GG_AUTO_CDR_COLUMN_GROUPS"](#)

2.187 ALL_GG_AUTO_CDR_COLUMNS

ALL_GG_AUTO_CDR_COLUMNS provides details about Oracle GoldenGate automatic conflict detection and resolution (CDR) columns owned by the current user.

Related View

DBA_GG_AUTO_CDR_COLUMNS provides details about all of the Oracle GoldenGate automatic CDR columns in the database.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2 (128)		Owner of the table
TABLE_NAME	VARCHAR2 (128)		Table name
COLUMN_GROUP_NAME	VARCHAR2 (128)		Column group name
COLUMN_NAME	VARCHAR2 (128)		Column name
RESOLUTION_COLUMN	VARCHAR2 (128)		Timestamp resolution column

See Also:

["DBA_GG_AUTO_CDR_COLUMNS"](#)

2.188 ALL_GG_AUTO_CDR_TABLES

ALL_GG_AUTO_CDR_TABLES provides details about tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR) that are owned by the current user.

Related View

DBA_GG_AUTO_CDR_TABLES provides details about all the tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR).

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Table name
RESOLUTION_GRANULARITY	VARCHAR2 (6)		Resolution granularity: <ul style="list-style-type: none"> • ROW • COLUMN
FETCHCOLS	VARCHAR2 (3)		Extract fetchcols configuration: <ul style="list-style-type: none"> • Yes: Extract will fetch non-scalar data • No: Extract will not fetch non-scalar data
RECORD_CONFLICTS	VARCHAR2 (3)		Monitoring of conflicts: <ul style="list-style-type: none"> • Yes: Conflict info is recorded • No: Conflict info is not recorded
USE_CUSTOM_HANDLERS	VARCHAR2 (4)		Use of customized or automatic conflict handlers: <ul style="list-style-type: none"> • All: If using custom handlers • None: If using automatic handlers

Column	Datatype	NULL	Description
TOMBSTONE_TABLE	VARCHAR2(128)		Tombstone table name (if table has delete tombstoning enabled)
ROW_RESOLUTION_COLUMN	VARCHAR2(128)	NOT NULL	Name of row-level timestamp column
EXISTING_DATA_TIMESTAMP	TIMESTAMP(6)		Timestamp to give existing rows when a new timestamp column is added

 See Also:["DBA_GG_AUTO_CDR_TABLES"](#)

2.189 ALL_GG_INBOUND_PROGRESS

ALL_GG_INBOUND_PROGRESS displays information about the progress made by the GoldenGate inbound servers accessible to the current user.

Related View

DBA_GG_INBOUND_PROGRESS displays information about the progress made by all GoldenGate inbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the inbound server
PROCESSED_LOW_POSITION	VARCHAR2(4000)		Position of the processed low transaction
APPLIED_LOW_POSITION	VARCHAR2(4000)		All messages with commit position less than this value have been applied.
APPLIED_HIGH_POSITION	VARCHAR2(4000)		This column should be used to view the progress of the GoldenGate apply. This column will hold an Oracle SCN numeric value in text format for an Oracle source database. For a non-Oracle source database, this column will hold the apply low position in GoldenGate CSN text format for that specific source database.
SPILL_POSITION	VARCHAR2(4000)		Highest commit position of a transaction that has been applied
OLDEST_POSITION	VARCHAR2(4000)		Position of the spill low watermark of the transactions currently being applied
APPLIED_LOW_SCN	NUMBER	NOT NULL	Earliest position of the transactions currently being applied
APPLIED_TIME	DATE		All SCN below or equal to this number have been successfully applied. This column is not applicable for GoldenGate replication since the source database may be non-Oracle.
APPLIED_MESSAGE_CREATE_TIME	DATE		Time at which the APPLIED_MESSAGE_NUMBER message was created
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated

Column	Datatype	NULL	Description
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database where all transactions originated
LOGBSN	VARCHAR2(4000)		Log BSN value from the GoldenGate trail file

 **See Also:**["DBA_GG_INBOUND_PROGRESS"](#)

2.190 ALL_GOLDENGATE_INBOUND

ALL_GOLDENGATE_INBOUND displays information about the GoldenGate inbound servers accessible to the current user.

Related View

DBA_GOLDENGATE_INBOUND displays information about all GoldenGate inbound servers in the database.

Column	Datatype	NULL	Description
REPLICAT_NAME	VARCHAR2(4000)		The name of the replicat group created from GGSCI using GoldenGate
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the inbound server
APPLY_USER	VARCHAR2(128)		Name of the user who can connect to the inbound server and apply messages
USER_COMMENT	VARCHAR2(4000)		User comment
CREATE_DATE	TIMESTAMP(6)		Date when inbound server was created
STATUS	VARCHAR2(8)		Status of the inbound server: <ul style="list-style-type: none"> • DISABLED - The inbound server is not running. • DETACHED - The inbound server is running, but the GoldenGate client application is not attached to it. • ATTACHED - The inbound server is running, and the GoldenGate client application is attached to it. • ABORTED - The inbound server became disabled because it encountered an error.

 **See Also:**["DBA_GOLDENGATE_INBOUND"](#)

2.191 ALL_GOLDENGATE_PRIVILEGES

`ALL_GOLDENGATE_PRIVILEGES` displays details about Oracle GoldenGate privileges for the user. Oracle GoldenGate privileges are granted using the `DBMS_GOLDENGATE_AUTH` package.

Related Views

- `DBA_GOLDENGATE_PRIVILEGES` displays details about Oracle GoldenGate privileges for all users who have been granted Oracle GoldenGate privileges.
- `USER_GOLDENGATE_PRIVILEGES` displays details about Oracle GoldenGate privileges. This view does not display the `USERNAME` column.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user that is granted the privilege
PRIVILEGE_TYPE	VARCHAR2(7)		Type of privilege granted: <ul style="list-style-type: none"> • APPLY • CAPTURE • *: Both APPLY and CAPTURE
GRANT_SELECT_PRIVILEGES	VARCHAR2(3)		Shows whether the set of privileges granted to the administrator make the administrator a full privilege administrator or a minimum privilege administrator: <ul style="list-style-type: none"> • YES: The administrator has the <code>SELECT_CATALOG_ROLE</code> role and other privileges, is considered a full privilege administrator, and can manage any Oracle GoldenGate configuration. • NO: The administrator is considered a minimum privilege administrator, and can only manage Oracle GoldenGate configurations where the <code>apply_user</code> or <code>capture_user</code> (based on the <code>PRIVILEGE_TYPE</code> column) matches the username.
CREATE_TIME	TIMESTAMP(6)		Time at which the privilege was granted

2.192 ALL_GOLDENGATE_RULES

`ALL_GOLDENGATE_RULES` displays information about the GoldenGate rules accessible to the current user.

Related View

`DBA_GOLDENGATE_RULES` displays information about all GoldenGate server rules in the database.

Column	Datatype	NULL	Description
COMPONENT_NAME	VARCHAR2(128)		Name of the GoldenGate process
COMPONENT_TYPE	VARCHAR2(12)		Type of the GoldenGate process: <ul style="list-style-type: none">• CAPTURE• APPLY
COMPONENT_RULE_TYPE	VARCHAR2(9)		For global, schema or table rules, the GoldenGate type of the rule: <ul style="list-style-type: none">• TABLE• SCHEMA• GLOBAL
RULE_SET_OWNER	VARCHAR2(128)		Owner of the rule set
RULE_SET_NAME	VARCHAR2(128)		Name of the rule set
RULE_SET_TYPE	CHAR(8)		Type of the rule set: <ul style="list-style-type: none">• POSITIVE• NEGATIVE
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_TYPE	VARCHAR2(9)		For global, schema or table rules, the type of the rule: <ul style="list-style-type: none">• DML• DDL
RULE_CONDITION	CLOB		Current rule condition
SCHEMA_NAME	VARCHAR2(128)		For table and schema rules, the schema name
OBJECT_NAME	VARCHAR2(128)		For table rules, the table name
INCLUDE_TAGGED_LCR	VARCHAR2(3)		For global, schema or table rules, indicates whether to include tagged LCRs (YES) or not (NO)
SUBSETTING_OPERATION	VARCHAR2(6)		For subset rules, the type of operation: <ul style="list-style-type: none">• INSERT• UPDATE• DELETE
DML_CONDITION	VARCHAR2(4000)		For subset rules, the row subsetting condition
SOURCE_DATABASE	VARCHAR2(128)		For global, schema or table rules, the name of the database where the LCRs originated
ORIGINAL_RULE_CONDITION	VARCHAR2(4000)		For rules created by GoldenGate administrative APIs, the original rule condition when the rule was created
SAME_RULE_CONDITION	VARCHAR2(3)		For rules created by GoldenGate administrative APIs, indicates whether the current rule condition is the same as the original rule condition (YES) or not (NO)
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database where the transactions originated
SOURCE_CONTAINER_NAME	VARCHAR2(128)		The container name of the database where the transactions originated

2.193 ALL_HEAT_MAP_SEG_HISTOGRAM

ALL_HEAT_MAP_SEG_HISTOGRAM displays segment access information for all segments visible to the user.

Related Views

- DBA_HEAT_MAP_SEG_HISTOGRAM displays segment access information for all segments.
- USER_HEAT_MAP_SEG_HISTOGRAM displays segment access information for segments owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Table owner
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the sub-object
TRACK_TIME	DATE		System time when the segment access was tracked
SEGMENT_WRITE	VARCHAR2(3)		Indicates whether the segment has write access (YES or NO)
FULL_SCAN	VARCHAR2(3)		Indicates whether the segment has full table scan (YES or NO)
LOOKUP_SCAN	VARCHAR2(3)		Indicates whether the segment has lookup scan (YES or NO)

2.194 ALL_HEAT_MAP_SEGMENT

ALL_HEAT_MAP_SEGMENT displays the latest segment access time for all segments visible to the user. The timestamps in the view are coarse with a granularity of a day reflecting the flush times of the heat map.

Related Views

- DBA_HEAT_MAP_SEGMENT displays the latest segment access time for all segments.
- USER_HEAT_MAP_SEGMENT displays the latest segment access time for all segments owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Table owner
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the sub-object

Column	Datatype	NULL	Description
SEGMENT_WRITE_TIME	DATE		Latest timestamp on which the segment has write access
SEGMENT_READ_TIME	DATE		Latest timestamp on which the segment has read access
FULL_SCAN	DATE		Latest timestamp on which the segment has full table scan
LOOKUP_SCAN	DATE		Latest timestamp on which the segment has index scan

2.195 ALL_HIER_CLASS

ALL_HIER_CLASS describes the classifications of the hierarchies accessible to the current user.

Related Views

- DBA_HIER_CLASS describes the classifications of all hierarchies in the database.
- USER_HIER_CLASS describes the classifications of the hierarchies owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2 (128)	NOT NULL	Name of the hierarchy
CLASSIFICATION	VARCHAR2 (128)		Classification associated with the hierarchy
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2 (64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the hierarchy
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.196 ALL_HIER_CLASS_AE

`ALL_HIER_CLASS_AE` describes the classifications of the hierarchies (across all editions) accessible to the current user.

Related Views

- `DBA_HIER_CLASS_AE` describes the classifications of all hierarchies (across all editions) in the database.
- `USER_HIER_CLASS_AE` describes the classifications of the hierarchies (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2(128)	NOT NULL	Name of the hierarchy
CLASSIFICATION	VARCHAR2(128)		Classification associated with the hierarchy
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the hierarchy
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the hierarchy is defined

 Note:

This view is available starting with Oracle Database 19c, Release Update 19.13.

2.197 ALL_HIER_COLUMNS

`ALL_HIER_COLUMNS` describes the columns of the hierarchies accessible to the current user.

Related Views

- `DBA_HIER_COLUMNS` describes the columns of all hierarchies in the database.
- `USER_HIER_COLUMNS` describes the columns of the hierarchies owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2(128)	NOT NULL	Name of the hierarchy
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
ROLE	VARCHAR2(4)		The role the attribute plays in the hierarchy: <ul style="list-style-type: none"> • KEY • AKEY • HIER • PROP
DATA_TYPE	VARCHAR2(106)		Datatype of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for the <code>NUMBER</code> datatype; binary precision for the <code>FLOAT</code> datatype, <code>NULL</code> for all other datatypes
DATA_SCALE	NUMBER		Number of digits to the right of the decimal point in a number
NULLABLE	CHAR(1)		Indicates whether a column allows <code>NULL</code> values; the value is <code>N</code> if there is a <code>NOT NULL</code> constraint on the column or if the column is part of a <code>PRIMARY KEY</code>
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: <ul style="list-style-type: none"> • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
CHAR_USED	VARCHAR2(1)		Indicates that the column uses <code>BYTE</code> length semantics (<code>B</code>) or <code>CHAR</code> length semantics (<code>C</code>), or whether the datatype is not any of the following (<code>NULL</code>): <ul style="list-style-type: none"> • CHAR • VARCHAR2 • NCHAR • NVARCHAR2

Column	Datatype	NULL	Description
ORDER_NUM	NUMBER	NOT NULL	Order of the column, with attributes first in the order specified in the definition of the hierarchy followed by hierarchical attributes
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.• n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

`ALL_HIERARCHIES` describes the hierarchies accessible to the current user.

Related Views

- `DBA_HIERARCHIES` describes all hierarchies in the database.
- `USER_HIERARCHIES` describes the hierarchies owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
<code>OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
<code>HIER_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the hierarchy
<code>DIMENSION_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension used by the hierarchy
<code>DIMENSION_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the attribute dimension used by the hierarchy
<code>PARENT_ATTR</code>	VARCHAR2		The value of this column is always NULL
<code>COMPILE_STATE</code>	VARCHAR2(7)		Compile status of the hierarchy: <ul style="list-style-type: none"> • VALID • INVALID
<code>ORIGIN_CON_ID</code>	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root).

2.210 ALL_HIERARCHIES_AE

`ALL_HIERARCHIES_AE` describes the hierarchies (across all editions) accessible to the current user.

Related Views

- `DBA_HIERARCHIES_AE` describes all hierarchies (across all editions) in the database.

- `USER_HIERARCHIES_AE` describes the hierarchies (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2 (128)	NOT NULL	Name of the hierarchy
DIMENSION_OWNER	VARCHAR2 (128)	NOT NULL	Owner of the attribute dimension used by the hierarchy
DIMENSION_NAME	VARCHAR2 (128)	NOT NULL	Name of the attribute dimension used by the hierarchy
PARENT_ATTR	VARCHAR2		The value of this column is always NULL
COMPILE_STATE	VARCHAR2 (7)		Compile status of the hierarchy: <ul style="list-style-type: none"> VALID INVALID
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> 0: This value is used for rows in non-CDBs. This value is not used for CDBs. <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root).
EDITION_NAME	VARCHAR2 (128)		Name of the application edition where the hierarchy is defined

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

- "[DBA_HIERARCHIES_AE](#)"
- "[USER_HIERARCHIES_AE](#)"

2.211 ALL_HISTOGRAMS

`ALL_HISTOGRAMS` is a synonym for `ALL_TAB_HISTOGRAMS`.

 **See Also:**

- "["ALL_TAB_HISTOGRAMS"](#)"

2.212 ALL_HIVE_COLUMNS

`ALL_HIVE_COLUMNS` describes all Hive columns accessible to the current user in a Hive metastore.

Related Views

- `DBA_HIVE_COLUMNS` describes all Hive columns in a Hive metastore.
- `USER_HIVE_COLUMNS` describes all Hive columns owned by the current user in a Hive metastore.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2 (4000)		Identifier for the Hadoop cluster
DATABASE_NAME	VARCHAR2 (4000)		Hive database where the owning Hive table resides
TABLE_NAME	VARCHAR2 (4000)		Hive table name that the column belongs to
COLUMN_NAME	VARCHAR2 (4000)		Hive column name
HIVE_COLUMN_TYPE	VARCHAR2 (4000)		Data type of the Hive column
ORACLE_COLUMN_TYPE	VARCHAR2 (4000)		Equivalent Oracle data type of the Hive column
LOCATION	VARCHAR2 (4000)		Physical location of the Hive table
OWNER	VARCHAR2 (4000)		Owner of the Hive table
CREATION_TIME	DATE		Time that the Hive column was created
HIVE_URI	VARCHAR2 (4000)		The connection string (URI and port number) for the metastore database

See Also:

- "[DBA_HIVE_COLUMNS](#)"
- "[USER_HIVE_COLUMNS](#)"

2.213 ALL_HIVE_DATABASES

`ALL_HIVE_DATABASES` describes all the Hive schemas accessible to the current user in a Hadoop cluster.

Related Views

- `DBA_HIVE_DATABASES` describes all the Hive schemas in a Hadoop cluster.
- `USER_HIVE_DATABASES` describes all the Hive schemas owned by the current user in a Hadoop cluster.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2 (4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2 (4000)		Name of the Hive database
DESCRIPTION	VARCHAR2 (4000)		Description of the Hive database

Column	Datatype	NULL	Description
DB_LOCATION	VARCHAR2(4000)		Physical location of the Hive database
HIVE_URI	VARCHAR2(4000)		The connection string (URI and port number) for the metastore database

 **See Also:**

- "[DBA_HIVE_DATABASES](#)"
- "[USER_HIVE_DATABASES](#)"

2.214 ALL_HIVE_PART_KEY_COLUMNS

`ALL_HIVE_PART_KEY_COLUMNS` provides information about all Hive table partition columns accessible to the current user in the database.

Related Views

- `DBA_HIVE_PART_KEY_COLUMNS` provides information about all Hive table partition columns in the database.
- `USER_HIVE_PART_KEY_COLUMNS` provides information about all Hive table partition columns owned by the current user in the database.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2(4000)		Hive database where the Hive table resides
TABLE_NAME	VARCHAR2(4000)		Hive table name
OWNER	VARCHAR2(4000)		Owner of the Hive table
COLUMN_NAME	VARCHAR2(4000)		Partition column name
COLUMN_TYPE	VARCHAR2(4000)		Partition column type
COLUMN_POSITION	NUMBER		Partition column position in the Hive partition specification
ORACLE_COLUMN_TYPE	VARCHAR2(4000)		Equivalent Oracle data type of the Hive column

 **See Also:**

- "[DBA_HIVE_PART_KEY_COLUMNS](#)"
- "[USER_HIVE_PART_KEY_COLUMNS](#)"

2.215 ALL_HIVE_TAB_PARTITIONS

ALL_HIVE_TAB_PARTITIONS provides information about all Hive table partitions accessible to the current user in the database.

Related Views

- DBA_HIVE_TAB_PARTITIONS provides information about all Hive table partitions in the database.
- USER_HIVE_TAB_PARTITIONS provides information about all Hive table partitions owned by the current user in the database.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2(4000)		Hive database where the Hive table resides
TABLE_NAME	VARCHAR2(4000)		Hive table name
LOCATION	VARCHAR2(4000)		Physical location of the Hive partition
OWNER	VARCHAR2(4000)		Owner of the Hive table
PARTITION_SPECS	VARCHAR2(4000)		The current Hive partition specification
PART_SIZE	NUMBER		Partition size in bytes
CREATION_TIME	DATE		Time that the partition was created

See Also:

- "[DBA_HIVE_TAB_PARTITIONS](#)"
- "[USER_HIVE_TAB_PARTITIONS](#)"

2.216 ALL_HIVE_TABLES

ALL_HIVE_TABLES provides information about all the Hive tables accessible to the current user in the Hive metastore.

Related Views

- DBA_HIVE_TABLES provides information about all Hive tables in the Hive metastore.
- USER_HIVE_TABLES provides information about all Hive tables owned by the current user in the Hive metastore.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2(4000)		Hive database where the Hive table resides
TABLE_NAME	VARCHAR2(4000)		Hive table name
LOCATION	VARCHAR2(4000)		Physical location of the Hive table
NO_OF_COLS	NUMBER		Number of columns in the Hive table

Column	Datatype	NULL	Description
CREATION_TIME	DATE		Creation time of the Hive table
LAST_ACCESSED_TIME	DATE		Time that the Hive table was last accessed
OWNER	VARCHAR2 (4000)		Owner of the Hive table
TABLE_TYPE	VARCHAR2 (4000)		Type of the Hive table
PARTITIONED	VARCHAR2 (4000)		Is this Hive table partitioned?
NO_OF_PART_KEYS	NUMBER		Number of partition keys in the Hive table
INPUT_FORMAT	VARCHAR2 (4000)		Hive table input format
OUTPUT_FORMAT	VARCHAR2 (4000)		Hive table output format
SERIALIZATION	VARCHAR2 (4000)		Hive table serialization
COMPRESSED	NUMBER		Is this Hive table compressed?
HIVE_URI	VARCHAR2 (4000)		The connection string (URI and port number) for the metastore database

 See Also:

- "[DBA_HIVE_TABLES](#)"
- "[USER_HIVE_TABLES](#)"

2.217 ALL_IDENTIFIERS

ALL_IDENTIFIERS displays information about the identifiers in the stored objects accessible to the current user.

Related Views

- DBA_IDENTIFIERS displays information about the identifiers in all stored objects in the database.
- USER_IDENTIFIERS displays information about the identifiers in the stored objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the identifier
NAME	VARCHAR2 (128)		Name of the identifier
SIGNATURE	VARCHAR2 (32)		Signature of the identifier

Column	Datatype	NULL	Description
TYPE	VARCHAR2(18)		<p>Type of the identifier.</p> <p>For SQL identifiers, the types include:</p> <ul style="list-style-type: none"> • TABLE • VIEW • SEQUENCE • ALIAS • COLUMN • MATERIALIZED VIEW • OPERATOR <p>For PL/SQL identifiers, the types include:</p> <ul style="list-style-type: none"> • FUNCTION • PROCEDURE • PACKAGE
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object where the identifier action occurred
OBJECT_TYPE	VARCHAR2(13)		Type of the object where the identifier action occurred
USAGE	VARCHAR2(11)		<p>Type of the identifier usage:</p> <ul style="list-style-type: none"> • DECLARATION • DEFINITION • CALL • REFERENCE • ASSIGNMENT
USAGE_ID	NUMBER		Unique key for the identifier usage within the object
LINE	NUMBER		Line number of the identifier action
COL	NUMBER		Column number of the identifier action
USAGE_CONTEXT_ID	NUMBER		Context USAGE_ID of the identifier usage
CHARACTER_SET	VARCHAR2(10)		Contains the value of the character set clause when it is used in a variable identifier declaration. These are the possible values when the character set is derived from another variable identifier:
			<ul style="list-style-type: none"> • CHAR_CS • NCHAR_CS • IDENTIFIER
ATTRIBUTE	VARCHAR2(7)		<p>Column contains the attribute value when %attribute is used in a variable declaration. Possible values:</p> <ul style="list-style-type: none"> • ROWTYPE • TYPE • CHARSET
CHAR_USED	VARCHAR2(4)		Contains the type of the length constraint when it is used in a string length constraint declaration. Possible values:
			<ul style="list-style-type: none"> • CHAR • BYTE
LENGTH	NUMBER		Contains the numeric length constraint value for a string length constraint declaration
PRECISION	NUMBER		Contains the numeric precision when it is used in a variable declaration
PRECISION2	NUMBER		Contains the numeric second precision value (for instance, interval types) used in a variable declaration

Column	Datatype	NULL	Description
SCALE	NUMBER		Contains the numeric scale value used in a variable declaration.
LOWER_RANGE	NUMBER		Contains the numeric lower range value used by a variable declaration with a range constraint
UPPER_RANGE	NUMBER		Contains the numeric upper range value used by a variable declaration with a range constraint
NULL_CONSTRAINT	VARCHAR2 (8)		This column is set when a <code>NULL</code> constraint is used by a variable declaration. Possible values: <ul style="list-style-type: none"> • <code>NULL</code> • <code>NOT NULL</code>
SQL_BUILTIN	VARCHAR2 (3)		Is set to <code>YES</code> when an identifier is a SQL builtin used in a SQL statement issued from PL/SQL. Otherwise, this column is set to <code>NO</code> .
IMPLICIT ¹	VARCHAR2 (3)		Indicates whether the identifier is an implicit identifier that does not appear in the source (<code>YES</code>) or not (<code>NO</code>)
DECLARED_OWNER ¹	VARCHAR2 (128)	NOT NULL	Owner of the object in which this identifier was declared
DECLARED_OBJECT_NAME ¹	VARCHAR2 (128)	NOT NULL	Name of the object in which this identifier was declared
DECLARED_OBJECT_TYPE ¹	VARCHAR2 (12)		Type of the object in which this identifier was declared
ORIGIN_CON_ID	VARCHAR2 (256)		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • <code>0</code>: This value is used for rows in non-CDBs. This value is not used for CDBs. • <code>n</code>: This value is used for rows containing data that originate in the container with container ID <code>n</code> (<code>n = 1</code> if the row originates in root)

¹ This column is available starting with Oracle Database 19c.

 **See Also:**

- "[DBA_IDENTIFIERS](#)"
- "[USER_IDENTIFIERS](#)"

2.218 ALL_IMMUTABLE_TABLES

`ALL_IMMUTABLE_TABLES` describes the immutable tables accessible to the current user.

Related Views

- `DBA_IMMUTABLE_TABLES` describes all immutable tables in the database.
- `USER_IMMUTABLE_TABLES` describes the immutable tables owned by the current user. This view does not display the `SCHEMA_NAME` column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	The schema containing the immutable table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the immutable table
ROW_RETENTION	NUMBER		Row retention period for the immutable table, that is, the minimum number of days a row must be retained and cannot be deleted after it is inserted into the table If the value of this column is NULL, then rows can never be deleted from the table.
ROW_RETENTION_LOCKED	VARCHAR2(3)		Indicates whether the row retention period for the immutable table is locked. Possible values: <ul style="list-style-type: none">• YES: The row retention period is locked. You cannot change the row retention period• NO: The row retention period is not locked. You can change the row retention period to a value higher than the current value with the SQL statement <code>ALTER TABLE ... NO DELETE UNTIL n DAYS AFTER INSERT</code>
TABLE_INACTIVITY_RETENTION	NUMBER	ON	Number of days for which the immutable table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped A table with no rows can be dropped at any time, regardless of this column value.

Note:

This view is available starting with Oracle Database 19c, Release Update 19.11.

See Also:

- "[DBA_IMMUTABLE_TABLES](#)"
- "[USER_IMMUTABLE_TABLES](#)"

2.219 ALL_IND_COLUMNS

ALL_IND_COLUMNS describes the columns of indexes on all tables accessible to the current user.

Related Views

- DBA_IND_COLUMNS describes the columns of indexes on all tables in the database.
- USER_IND_COLUMNS describes the columns of indexes owned by the current user and columns of indexes on tables owned by the current user. This view does not display the INDEX_OWNER or TABLE_OWNER columns.

 **Note:**

For join indexes, the TABLE_NAME and TABLE_OWNER columns in this view may not match the TABLE_NAME and TABLE_OWNER columns you find in the *_INDEXES (and other similar) data dictionary views.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table or cluster
COLUMN_NAME	VARCHAR2(4000)		Column name or attribute of the object type column Note: If you create an index on a user-defined REF column, the system creates the index on the attributes that make up the REF column. Therefore, the column names displayed in this view are the attribute names, with the REF column name as a prefix, in the following form: "REF_name". "attribute"
COLUMN_POSITION	NUMBER	NOT NULL	Position of the column or attribute within the index
COLUMN_LENGTH	NUMBER	NOT NULL	Indexed length of the column
CHAR_LENGTH	NUMBER		Maximum codepoint length of the column
DESCEND	VARCHAR2(4)		Indicates whether the column is sorted in descending order (DESC) or ascending order (ASC)
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of the column for which this column provides linguistic ordering

 **See Also:**

- ["DBA_IND_COLUMNS"](#)
- ["USER_IND_COLUMNS"](#)

2.220 ALL_IND_EXPRESSIONS

ALL_IND_EXPRESSIONS describes the expressions of function-based indexes on tables accessible to the current user.

Related Views

- DBA_IND_EXPRESSIONS describes the expressions of all function-based indexes in the database.
- USER_IND_EXPRESSIONS describes the expressions of function-based indexes on tables owned by the current user. This view does not display the INDEX_OWNER or TABLE_OWNER columns.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table or cluster
COLUMN_EXPRESSION	LONG		Function-based index expression defining the column
COLUMN_POSITION	NUMBER	NOT NULL	Position of the column or attribute within the index

 See Also:

- "[DBA_IND_EXPRESSIONS](#)"
- "[USER_IND_EXPRESSIONS](#)"

2.221 ALL_IND_PARTITIONS

ALL_IND_PARTITIONS displays, for each index partition accessible to the current user, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the DBMS_STATS package.

Related Views

- DBA_IND_PARTITIONS describes all index partitions in the database.
- USER_IND_PARTITIONS describes the index partitions owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)		Owner of the index
INDEX_NAME	VARCHAR2(128)		Name of the index
COMPOSITE	VARCHAR2(3)		Indicates whether the partition belongs to a local index on a composite-partitioned table (YES) or not (NO)
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_COUNT	NUMBER		If a local index on a composite-partitioned table, the number of subpartitions in the partition
HIGH_VALUE	LONG		Partition bound value expression
HIGH_VALUE_LENGTH	NUMBER		Length of the partition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the index
STATUS	VARCHAR2(8)		Indicates whether the index partition is usable (USABLE) or not (UNUSABLE)
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the partition
PCT_FREE	NUMBER		Minimum percentage of free space in a block
INI_TRANS	NUMBER		Initial number of transactions
MAX_TRANS	NUMBER		Maximum number of transactions

Column	Datatype	NULL	Description
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
FREELISTS	NUMBER		Number of process freelists allocated in this segment
FREELIST_GROUPS	NUMBER		Number of process freelist groups allocated in this segment
LOGGING	VARCHAR2(7)		Indicates whether or not changes to the index are logged: <ul style="list-style-type: none">• NONE - Not specified• See Also: the *_IND_SUBPARTITIONS view• YES• NO
COMPRESSION	VARCHAR2(13)		Type of compression being used for the partition: <ul style="list-style-type: none">• ENABLED - Prefix compression• ADVANCED HIGH - Advanced high compression• ADVANCED LOW - Advanced low compression• DISABLED - No compression is present
BLEVEL	NUMBER		B*-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index partition
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index partition
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.
CLUSTERING_FACTOR	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. <ul style="list-style-type: none">• If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks.• If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.
NUM_ROWS	NUMBER		Number of rows returned
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this partition
LAST_ANALYZED	DATE		Date on which this partition was most recently analyzed

Column	Datatype	NULL	Description
BUFFER_POOL	VARCHAR2(7)		<p>Actual buffer pool for the partition:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		<p>Database Smart Flash Cache hint to be used for partition blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE
CELL_FLASH_CACHE	VARCHAR2(7)		<p>Solaris and Oracle Linux functionality only.</p> <p>Cell flash cache hint to be used for partition blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
PCT_DIRECT_ACCESS	NUMBER		If a secondary index on index-organized table, the percentage of rows with VALID guess
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have been aggregated from subpartitions or have not been gathered
DOMIDX_OPSTATUS	VARCHAR2(6)		<p>Status of the operation on a domain index:</p> <ul style="list-style-type: none"> • NULL - Index is not a domain index • VALID - Operation performed without errors • FAILED - Operation failed with an error
PARAMETERS	VARCHAR2(1000)		For a domain index, the parameter string
INTERVAL	VARCHAR2(3)		Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the index partition segment has been created (YES) or not (NO); N/A indicates that this index is subpartitioned and no segment exists at the partition level
ORPHANED_ENTRIES	VARCHAR2(3)		<p>Indicates whether a global index partition contains stale entries because of deferred index maintenance during DROP/TRUNCATE PARTITION, or MODIFY PARTITION INDEXING OFF operations.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • YES - the index partition contains orphaned entries • NO - the index partition does not contain orphaned entries

2.222 ALL_IND_PENDING_STATS

`ALL_IND_PENDING_STATS` describes the pending statistics for tables, partitions, and subpartitions accessible to the current user collected using the `DBMS_STATS` package.

Related Views

- `DBA_IND_PENDING_STATS` describes pending statistics for all tables, partitions, and subpartitions in the database.
- `USER_IND_PENDING_STATS` describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Name of the index owner
INDEX_NAME	VARCHAR2 (128)		Index name
TABLE_OWNER	VARCHAR2 (128)		Table owner name
TABLE_NAME	VARCHAR2 (128)		Name of the table
PARTITION_NAME	VARCHAR2 (128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2 (128)		Name of the subpartition
BLEVEL	NUMBER		Number of levels in the index
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks per key
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks per key
CLUSTERING_FACTOR	NUMBER		Clustering factor
NUM_ROWS	NUMBER		Number of rows in the index
SAMPLE_SIZE	NUMBER		Sample size
LAST_ANALYZED	DATE		Time of the last analysis

 See Also:

- "[DBA_IND_PENDING_STATS](#)"
- "[USER_IND_PENDING_STATS](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_STATS` package

2.223 ALL_IND_STATISTICS

`ALL_IND_STATISTICS` displays optimizer statistics for the indexes on the tables accessible to the current user collected using the `DBMS_STATS` package.

Related Views

- `DBA_IND_STATISTICS` displays optimizer statistics for all indexes in the database.
- `USER_IND_STATISTICS` displays optimizer statistics for the indexes on the tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the index
INDEX_NAME	VARCHAR2(128)		Name of the index
TABLE_OWNER	VARCHAR2(128)		Owner of the indexed object
TABLE_NAME	VARCHAR2(128)		Name of the indexed object
PARTITION_NAME	VARCHAR2(128)		Name of the partition
PARTITION_POSITION	NUMBER		Position of the partition within the index
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
SUBPARTITION_POSITION	NUMBER		Position of the subpartition within the partition
OBJECT_TYPE	VARCHAR2(12)		Type of the object: <ul style="list-style-type: none"> • INDEX • PARTITION • SUBPARTITION
BLEVEL	NUMBER		B-Tree level
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks per key
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks per key
CLUSTERING_FACTOR	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. <ul style="list-style-type: none"> • If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks. • If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.

Column	Datatype	NULL	Description
NUM_ROWS	NUMBER		Number of rows in the index
AVG_CACHED_BLOCKS	NUMBER		Average number of blocks in the buffer cache
AVG_CACHE_HIT_RATIO	NUMBER		Average cache hit ratio for the object
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the index
LAST_ANALYZED	DATE		Date of the most recent time the index was analyzed
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
STATTYPE_LOCKED	VARCHAR2(5)		Type of statistics lock
STALE_STATS	VARCHAR2(3)		Whether statistics for the object are stale or not
SCOPE	VARCHAR2(7)		The value is SHARED for statistics gathered on any table other than global temporary tables. For a global temporary table, the possible values are: <ul style="list-style-type: none">• SESSION - Indicates that the statistics are session-specific• SHARED - Indicates that the statistics are shared across all sessions See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.

2.224 ALL_IND_SUBPARTITIONS

ALL_IND_SUBPARTITIONS displays, for each index subpartition accessible to the current user, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the DBMS_STATS package.

Related Views

- DBA_IND_SUBPARTITIONS describes all index subpartitions in the database.
- USER_IND_SUBPARTITIONS describes the index subpartitions owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
HIGH_VALUE	LONG		Subpartition bound value expression
HIGH_VALUE_LENGTH	NUMBER	NOT NULL	Length of the subpartition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the index
SUBPARTITION_POSITION	NUMBER		Position of a subpartition within a partition
STATUS	VARCHAR2(8)		Indicates whether the index partition is usable (USABLE) or not (UNUSABLE)
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace containing the partition
PCT_FREE	NUMBER	NOT NULL	Minimum percentage of free space in a block
INI_TRANS	NUMBER	NOT NULL	Initial number of transactions
MAX_TRANS	NUMBER	NOT NULL	Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment
PCT_INCREASE	NUMBER	NOT NULL	Percentage increase in extent size
FREELISTS	NUMBER		Number of process freelists allocated in this segment
FREELIST_GROUPS	NUMBER		Number of process freelist groups allocated in this segment
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the index are logged: <ul style="list-style-type: none">• YES• NO
COMPRESSION	VARCHAR2(13)		Type of compression being used for the subpartition: <ul style="list-style-type: none">• ENABLED - Prefix compression• ADVANCED HIGH - Advanced high compression• ADVANCED LOW - Advanced low compression• DISABLED - No compression is present
BLEVEL	NUMBER		B-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index partition
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.

Column	Datatype	NULL	Description
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.
CLUSTERING_FACTOR	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. <ul style="list-style-type: none"> If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks. If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.
NUM_ROWS	NUMBER		Number of rows in this index subpartition
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this subpartition
LAST_ANALYZED	DATE		Date on which this partition was most recently analyzed
BUFFER_POOL	VARCHAR2 (7)		Buffer pool for the subpartition: <ul style="list-style-type: none"> DEFAULT KEEP RECYCLE NULL
FLASH_CACHE	VARCHAR2 (7)		Database Smart Flash Cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> DEFAULT KEEP NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2 (7)		Cell flash cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> DEFAULT KEEP NONE See Also: Oracle Exadata Storage Server Software documentation for more information
USER_STATS	VARCHAR2 (3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
GLOBAL_STATS	VARCHAR2 (3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered
INTERVAL	VARCHAR2 (3)		Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the index subpartition segment has been created (YES) or not (NO); N/A indicates that this index is not subpartitioned
DOMIDX_OPSTATUS	VARCHAR2 (6)		Status of the operation on the domain index: <ul style="list-style-type: none"> NULL - Index is not a domain index VALID - Operation performed without errors FAILED - Operation failed with an error

Column	Datatype	NULL	Description
PARAMETERS	VARCHAR2 (1000)		For a domain index, the parameter string

2.225 ALL_INDEXES

`ALL_INDEXES` describes the indexes on the tables accessible to the current user.

To gather statistics for this view and the related views `DBA_INDEXES` and `USER_INDEXES`, use the `DBMS_STATS` package.

Related Views

- `DBA_INDEXES` describes all indexes in the database.
- `USER_INDEXES` describes the indexes owned by the current user. This view does not display the `OWNER` column.

Note:

Column names followed by an asterisk are populated only if you collect statistics on the index using the `DBMS_STATS` package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2 (128)	NOT NULL	Name of the index
INDEX_TYPE	VARCHAR2 (27)		Type of the index: <ul style="list-style-type: none"> • LOB • NORMAL • NORMAL/REV • BITMAP • FUNCTION-BASED NORMAL • FUNCTION-BASED NORMAL/REV • FUNCTION-BASED BITMAP • FUNCTION-BASED DOMAIN • CLUSTER • IOT - TOP • DOMAIN
TABLE_OWNER	VARCHAR2 (128)	NOT NULL	Owner of the indexed object

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the indexed object
TABLE_TYPE	CHAR(11)		Type of the indexed object: <ul style="list-style-type: none"> • NEXT OBJECT • INDEX • TABLE • CLUSTER • VIEW • SYNONYM • SEQUENCE
UNIQUENESS	VARCHAR2(9)		Indicates whether the index is unique (UNIQUE) or nonunique (NONUNIQUE)
COMPRESSION	VARCHAR2(13)		Type of compression being used for the index: <ul style="list-style-type: none"> • ENABLED - Prefix compression • ADVANCED HIGH - Advanced high compression • ADVANCED LOW - Advanced low compression • DISABLED - No compression is present
PREFIX_LENGTH	NUMBER		Number of columns in the prefix of the compression key
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the index
INI_TRANS	NUMBER		Initial number of transactions
MAX_TRANS	NUMBER		Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent
NEXT_EXTENT	NUMBER		Size of secondary extents
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
PCT_THRESHOLD	NUMBER		Threshold percentage of block space allowed per index entry
INCLUDE_COLUMN	NUMBER		Column ID of the last column to be included in index-organized table primary key (non-overflow) index. This column maps to the COLUMN_ID column of the *_TAB_COLUMNS view.
FREELISTS	NUMBER		Number of process frelists allocated to this segment
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to this segment
PCT_FREE	NUMBER		Minimum percentage of free space in a block
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the index are logged: <ul style="list-style-type: none"> • YES • NO
BLEVEL*	NUMBER		B*-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.
LEAF_BLOCKS*	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS*	NUMBER		Number of distinct indexed values. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is the same as the number of rows in the table (*_TABLES.NUM_ROWS)

Column	Datatype	NULL	Description
AVG_LEAF_BLOCKS_PER_KEY*	NUMBER		Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.
AVG_DATA_BLOCKS_PER_KEY*	NUMBER		Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.
CLUSTERING_FACTOR*	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. <ul style="list-style-type: none"> • If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks. • If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.
STATUS	VARCHAR2 (8)		For bitmap indexes, this column is not applicable.
NUM_ROWS	NUMBER		Number of rows in the index. For bitmap indexes, this column is the number of distinct keys, so its value is the same as the DISTINCT_KEYS column.
SAMPLE_SIZE	NUMBER		Size of the sample used to analyze the index
LAST_ANALYZED	DATE		Date on which this index was most recently analyzed
DEGREE	VARCHAR2 (40)		Number of threads per instance for scanning the index, or DEFAULT
INSTANCES	VARCHAR2 (40)		Number of instances across which the indexes to be scanned, or DEFAULT
PARTITIONED	VARCHAR2 (3)		Indicates whether the index is partitioned (YES) or not (NO)
TEMPORARY	VARCHAR2 (1)		Indicates whether the index is on a temporary table (Y) or not (N)
GENERATED	VARCHAR2 (1)		Indicates whether the name of the index is system-generated (Y) or not (N)
SECONDARY	VARCHAR2 (1)		Indicates whether the index is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
BUFFER_POOL	VARCHAR2 (7)		Buffer pool to be used for index blocks: <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL

Column	Datatype	NULL	Description
FLASH_CACHE	VARCHAR2(7)		<p>Database Smart Flash Cache hint to be used for index blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>Solaris and Oracle Linux functionality only.</p>
CELL_FLASH_CACHE	VARCHAR2(7)		<p>Cell flash cache hint to be used for index blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2(15)		Indicates the duration of a temporary table: <ul style="list-style-type: none"> • SYS\$SESSION - Rows are preserved for the duration of the session • SYS\$TRANSACTION - Rows are deleted after COMMIT • NULL - Permanent table
PCT_DIRECT_ACCESS	NUMBER		For a secondary index on an index-organized table, the percentage of rows with VALID guess
ITYP_OWNER	VARCHAR2(128)		For a domain index, the owner of the indextype
ITYP_NAME	VARCHAR2(128)		For a domain index, the name of the indextype
PARAMETERS	VARCHAR2(1000)		For a domain index, the parameter string
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
DOMIDX_STATUS	VARCHAR2(12)		Status of a domain index: <ul style="list-style-type: none"> • NULL - Index is not a domain index • VALID - Index is a valid domain index • IDXTYP_INVLD - Indextype of the domain index is invalid
DOMIDX_OPSTATUS	VARCHAR2(6)		Status of the operation on a domain index: <ul style="list-style-type: none"> • NULL - Index is not a domain index • VALID - Operation performed without errors • FAILED - Operation failed with an error
FUNCIDX_STATUS	VARCHAR2(8)		Status of a function-based index: <ul style="list-style-type: none"> • NULL - Index is not a function-based index • ENABLED - Function-based index is enabled • DISABLED - Function-based index is disabled
JOIN_INDEX	VARCHAR2(3)		Indicates whether the index is a join index (YES) or not (NO)
IOT_REDUNDANT_PKEY_ELIM	VARCHAR2(3)		Indicates whether redundant primary key columns are eliminated from secondary indexes on index-organized tables (YES) or not (NO)

Column	Datatype	NULL	Description
DROPPED	VARCHAR2 (3)		Indicates whether the index has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables This view does not return the names of indexes that have been dropped.
VISIBILITY	VARCHAR2 (9)		Indicates whether the index is VISIBLE or INVISIBLE to the optimizer
DOMIDX_MANAGEMENT	VARCHAR2 (14)		If this is a domain index, indicates whether the domain index is system-managed (SYSTEM_MANAGED) or user-managed (USER_MANAGED)
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the index segment has been created (YES) or not (NO)
ORPHANED_ENTRIES	VARCHAR2 (3)		Indicates whether a global index contains stale entries because of deferred index maintenance during DROP/TRUNCATE PARTITION, or MODIFY PARTITION INDEXING OFF operations. Possible values: <ul style="list-style-type: none">• YES - The index contains orphaned entries• NO - The index does not contain orphaned entries
INDEXING	VARCHAR2 (7)		Indicates whether a global index is decoupled from the underlying table. Possible values: <ul style="list-style-type: none">• PARTIAL - The index is partial, that is, it will follow the table's indexing property.• FULL - The index will include all partitions of the table.
AUTO ¹	VARCHAR2 (3)		Indicates whether the index is an auto index (YES) or not (NO)
CONSTRAINT_INDEX ¹	VARCHAR2 (3)		Indicates whether the index was created as part of a constraint (YES) or not (NO)

¹ This column is available starting with Oracle Database 19c.

2.226 ALL_INDEXTYPE_ARRAYTYPES

ALL_INDEXTYPE_ARRAYTYPES displays information about the array types specified by the indextypes accessible to the current user.

Related Views

- DBA_INDEXTYPE_ARRAYTYPES displays information about the array types specified by all indextypes in the database.
- USER_INDEXTYPE_ARRAYTYPES displays information about the array types specified by the indextypes owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the indextype
INDEXTYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the indextype
BASE_TYPE_SCHEMA	VARCHAR2(128)		Name of the base type schema
BASE_TYPE_NAME	VARCHAR2(128)		Name of the base type name
BASE_TYPE	VARCHAR2(30)		Datatype of the base type
ARRAY_TYPE_SCHEMA	VARCHAR2(128)	NOT NULL	Name of the array type schema
ARRAY_TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the array type name

See Also:

- "DBA_INDEXTYPE_ARRAYTYPES"
- "USER_INDEXTYPE_ARRAYTYPES"

2.227 ALL_INDEXTYPE_COMMENTS

ALL_INDEXTYPE_COMMENTS displays comments for the user-defined indextypes accessible to the current user.

Related Views

- DBA_INDEXTYPE_COMMENTS displays comments for all user-defined indextypes in the database.
- USER_INDEXTYPE_COMMENTS displays comments for the user-defined indextypes owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the user-defined indextype
INDEXTYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the user-defined indextype
COMMENTS	VARCHAR2(4000)		Comment for the user-defined indextype

 **See Also:**

- "[DBA_INDEXTYPE_COMMENTS](#)"
- "[USER_INDEXTYPE_COMMENTS](#)"

2.228 ALL_INDEXTYPE_OPERATORS

ALL_INDEXTYPE_OPERATORS lists all operators supported by indextypes accessible to the current user.

Related Views

- DBA_INDEXTYPE_OPERATORS lists all operators supported by indextypes in the database.
- USER_INDEXTYPE_OPERATORS lists all operators supported by indextypes owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the indextype
INDEXTYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the indextype
OPERATOR_SCHEMA	VARCHAR2(128)	NOT NULL	Name of the operator schema
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the operator for which the indextype is defined
BINDING#	NUMBER	NOT NULL	Binding number associated with the operator

 **See Also:**

- "[DBA_INDEXTYPE_OPERATORS](#)"
- "[USER_INDEXTYPE_OPERATORS](#)"

2.229 ALL_INDEXTYPES

ALL_INDEXTYPES displays information about the indextypes accessible to the current user.

Related Views

- DBA_INDEXTYPES displays information about all indextypes in the database.
- USER_INDEXTYPES displays information about the indextypes owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the indextype
INDEXTYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the indextype
IMPLEMENTATION_SCHEMA	VARCHAR2(128)	NOT NULL	Name of the schema for the indextype implementation (that is, containing the indextype operators)

Column	Datatype	NULL	Description
IMPLEMENTATION_NAME	VARCHAR2(128)	NOT NULL	Name of the indextype implementation type
INTERFACE_VERSION	NUMBER		Version of the indextype interface
IMPLEMENTATION_VERSION	NUMBER	NOT NULL	Version of the indextype implementation
NUMBER_OF_OPERATORS	NUMBER		Number of operators associated with the indextype
PARTITIONING	VARCHAR2(10)		Kinds of local partitioning supported by the indextype: <ul style="list-style-type: none"> • NONE - Indextype does not support local domain indexes • RANGE - Indextype can support range partitioned local user managed domain indexes • LOCAL - Indextype can support local system managed domain indexes (range, list, hash, or interval)
ARRAY_DML	VARCHAR2(3)		Indicates whether the indextype supports array DML (YES) or not (NO)
MAINTENANCE_TYPE	VARCHAR2(14)		Indicates whether the indextype is system-managed (SYSTEM_MANAGED) or user-managed (USER_MANAGED)

 See Also:

- "[DBA_INDEXTYPES](#)"
- "[USER_INDEXTYPES](#)"

2.230 ALL_INTERNAL_TRIGGER

ALL_INTERNAL_TRIGGER describes internal triggers on tables accessible to the current user. Internal triggers are internal pieces of code executed when a particular flag is set for a table. This view does not display the OWNER_NAME column.

Related Views

- DBA_INTERNAL_TRIGGER describes internal triggers on all tables in the database.
- USER_INTERNAL_TRIGGER describes all internal triggers on tables owned by the current user. This view does not display the OWNER_NAME column.

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the table on which the trigger is defined
INTERNAL_TRIGGER_TYPE	VARCHAR2(19)		Indicates the type of internal trigger on the table

 See Also:

- "[DBA_INTERNAL_TRIGGER](#)"
- "[USER_INTERNAL_TRIGGER](#)"

2.231 ALL_JAVA_ARGUMENTS

ALL_JAVA_ARGUMENTS displays argument information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_ARGUMENTS displays argument information about all stored Java classes in the database.
- USER_JAVA_ARGUMENTS displays argument information about the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
METHOD_INDEX	NUMBER		Index of the hosting method of the argument
METHOD_NAME	VARCHAR2(4000)		Name of the hosting method of the argument
ARGUMENT_POSITION	NUMBER		Position of the argument, starting from 0
ARRAY_DEPTH	NUMBER		Array depth of the type of the argument
BASE_TYPE	VARCHAR2(7)		Base type of the type of the argument: <ul style="list-style-type: none"> • int • long • float • double • boolean • byte • char • short • class
ARGUMENT_CLASS	VARCHAR2(4000)		Actual class name of the argument if the base type is class

See Also:

- "[DBA_JAVA_ARGUMENTS](#)"
- "[USER_JAVA_ARGUMENTS](#)"

2.232 ALL_JAVA_CLASSES

ALL_JAVA_CLASSES displays class level information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_CLASSES displays class level information about all stored Java classes in the database.

- `USER_JAVA_CLASSES` displays class level information about the stored Java classes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2 (4000)		Name of the Java class
MAJOR	NUMBER		Major version number of the Java class, as defined in the JVM specification
MINOR	NUMBER		Minor version number of the Java class, as defined in the JVM specification
KIND	VARCHAR2 (50)		Indicates whether the stored object is a Java class (<code>CLASS</code>) or a Java interface (<code>INTERFACE</code>)
ACCESSIBILITY	VARCHAR2 (9)		Accessibility of the Java class
IS_INNER	VARCHAR2 (3)		Indicates whether this Java class is an inner class (<code>YES</code>) or not (<code>NO</code>)
IS_ABSTRACT	VARCHAR2 (3)		Indicates whether this Java class is an abstract class (<code>YES</code>) or not (<code>NO</code>)
IS_FINAL	VARCHAR2 (3)		Indicates whether this Java class is a final class (<code>YES</code>) or not (<code>NO</code>)
IS_STATIC	VARCHAR2 (3)		Indicates whether this is a static inner class (<code>YES</code>) or not (<code>NO</code>)
IS_STRICTFP	VARCHAR2 (3)		Indicates whether the class is declared strict floating point for portability (<code>YES</code>) or not (<code>NO</code>)
IS_SYNTHETIC	VARCHAR2 (3)		Indicates whether this is an inner class generated by the compiler (<code>YES</code>) or not (<code>NO</code>)
IS_DEBUG	VARCHAR2 (3)		Indicates whether this Java class contains debug information (<code>YES</code>) or not (<code>NO</code>)
SOURCE	VARCHAR2 (4000)		Source designation of the Java class
SUPER	VARCHAR2 (4000)		Super class of this Java class
OUTER	VARCHAR2 (4000)		Outer class of this Java class if this Java class is an inner class

 **See Also:**

- "[DBA_JAVA_CLASSES](#)"
- "[USER_JAVA_CLASSES](#)"

2.233 ALL_JAVA_COMPILER_OPTIONS

`ALL_JAVA_COMPILER_OPTIONS` displays information about the native compiler options accessible to the current user.

Related Views

- `DBA_JAVA_COMPILER_OPTIONS` displays information about all native compiler options in the database.

- `USER_JAVA_COMPILER_OPTIONS` displays information about the native compiler options owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the native compiler option
OPTION_NAME	VARCHAR2 (64)		Name of the native compiler option
VALUE	VARCHAR2 (4000)		Value of the native compiler option

 **See Also:**

- "[DBA_JAVA_COMPILER_OPTIONS](#)"
- "[USER_JAVA_COMPILER_OPTIONS](#)"

2.234 ALL_JAVA_DERIVATIONS

`ALL_JAVA_DERIVATIONS` displays mapping information about Java source objects and their derived Java class objects and Java resource objects for the Java classes accessible to the current user.

Related Views

- `DBA_JAVA_DERIVATIONS` displays mapping information about Java source objects and their derived Java class objects and Java resource objects for all Java classes in the database.
- `USER_JAVA_DERIVATIONS` displays mapping information about Java source objects and their derived Java class objects and Java resource objects for the Java classes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java source object
SOURCE_NAME	VARCHAR2 (4000)		Name of the Java source object
CLASS_INDEX	NUMBER		Index of the derived Java class object
CLASS_NAME	VARCHAR2 (4000)		Name of the derived Java class object

 **See Also:**

- "[DBA_JAVA_DERIVATIONS](#)"
- "[USER_JAVA_DERIVATIONS](#)"

2.235 ALL_JAVA_FIELDS

ALL_JAVA_FIELDS displays field information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_FIELDS displays field information about all stored Java classes in the database.
- USER_JAVA_FIELDS displays field information about the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
FIELD_INDEX	NUMBER		Index of the field
FIELD_NAME	VARCHAR2(4000)		Name of the field identified by the FIELD_INDEX column
ACCESSIBILITY	VARCHAR2(9)		Accessibility of the field: <ul style="list-style-type: none"> PUBLIC PRIVATE PROTECTED
IS_STATIC	VARCHAR2(3)		Indicates whether the field is a static field (YES) or not (NO)
IS_FINAL	VARCHAR2(3)		Indicates whether the field is a final field (YES) or not (NO)
IS_VOLATILE	VARCHAR2(3)		Indicates whether the field is volatile (YES) or not (NO)
IS_TRANSIENT	VARCHAR2(3)		Indicates whether the field is transient (YES) or not (NO)
IS_SYNTHETIC	VARCHAR2(3)		Indicates whether the field is generated by the compiler (YES) or not (NO)
IS_ENUM	VARCHAR2(3)		Indicates whether the field is a member of an enum (YES) or not (NO)
ARRAY_DEPTH	NUMBER		Array depth of the type of the field
BASE_TYPE	VARCHAR2(7)		Base type of the type of the field: <ul style="list-style-type: none"> int long float double boolean byte char short class
FIELD_CLASS	VARCHAR2(4000)		Actual class name of the base object if the base type is class

 See Also:

- "[DBA_JAVA_FIELDS](#)"
- "[USER_JAVA_FIELDS](#)"

2.236 ALL_JAVA_IMPLEMENT

`ALL_JAVA_IMPLEMENT` describes interfaces implemented by the stored Java classes accessible to the current user.

Related Views

- `DBA_JAVA_IMPLEMENT` describes interfaces implemented by all stored Java classes in the database.
- `USER_JAVA_IMPLEMENT` describes interfaces implemented by the stored Java classes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2 (4000)		Name of the Java class
INTERFACE_INDEX	NUMBER		Index of the interfaces implemented by the Java class
INTERFACE_NAME	VARCHAR2 (4000)		Name of the interface identified by the <code>INTERFACE_INDEX</code> column

 See Also:

- "[DBA_JAVA_IMPLEMENT](#)"
- "[USER_JAVA_IMPLEMENT](#)"

2.237 ALL_JAVA_INNERS

`ALL_JAVA_INNERS` displays information about inner classes referred to by the stored Java classes accessible to the current user.

Related Views

- `DBA_JAVA_INNERS` displays information about inner classes referred to by all stored Java classes in the database.
- `USER_JAVA_INNERS` displays information about inner classes referred to by the stored Java classes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class

Column	Datatype	NULL	Description
NAME	VARCHAR2(4000)		Name of the Java class
INNER_INDEX	NUMBER		Index of the referred inner class
SIMPLE_NAME	VARCHAR2(4000)		Simple name of the referred inner class
FULL_NAME	VARCHAR2(4000)		Full name of the referred inner class
ACCESSIBILITY	VARCHAR2(9)		Accessibility of the referred inner class: <ul style="list-style-type: none">• PUBLIC• PRIVATE• PROTECTED
IS_STATIC	VARCHAR2(3)		Indicates whether the referred inner class is declared static in the source file (YES) or not (NO)
IS_FINAL	VARCHAR2(3)		Indicates whether the referred inner class is declared final in the source file (YES) or not (NO)
IS_ABSTRACT	VARCHAR2(3)		Indicates whether the referred inner class is declared abstract in the source file (YES) or not (NO)
IS_INTERFACE	VARCHAR2(3)		Indicates whether the referred inner class is declared interface in the source file (YES) or not (NO)
IS_STRICTFP	VARCHAR2(3)		Indicates whether the inner class is declared strictfp (YES) or not (NO)
IS_SYNTHETIC	VARCHAR2(3)		Indicates whether the inner class is generated by the compiler (YES) or not (NO)
IS_ENUM	VARCHAR2(3)		Indicates whether the inner class is an enum (YES) or not (NO)
IS_ANNOTATION	VARCHAR2(3)		Indicates whether the inner class is an annotation (YES) or not (NO)
KIND	VARCHAR2(50)		Type (class, interface, enum or annotation) of the inner class
ALL_QUALIFIERS	VARCHAR2(101)		Concatenation of accessibility, type and other attributes of the inner class

 **See Also:**

- "[DBA_JAVA_INNERS](#)"
- "[USER_JAVA_INNERS](#)"

2.238 ALL_JAVA_LAYOUTS

ALL_JAVA_LAYOUTS displays class layout information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_LAYOUTS displays class layout information about all stored Java classes in the database.

- `USER_JAVA_LAYOUTS` displays class layout information about the stored Java classes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2 (4000)		Name of the Java class
INTERFACES	NUMBER		Number of interfaces that this Java class implements
INNER_CLASSES	NUMBER		Number of inner classes that this Java class contains
FIELDS	NUMBER		Number of locally declared fields that this Java class contains
STATIC_FIELDS	NUMBER		Number of locally declared static fields that this Java class contains
METHODS	NUMBER		Number of locally declared methods that this Java class contains
STATIC_METHODS	NUMBER		Number of locally declared static methods that this Java class contains
NATIVE_METHODS	NUMBER		Number of locally declared native methods that this Java class contains

 **See Also:**

- "[DBA_JAVA_LAYOUTS](#)"
- "[USER_JAVA_LAYOUTS](#)"

2.239 ALL_JAVA_METHODS

`ALL_JAVA_METHODS` displays method information about the stored Java classes accessible to the current user.

Related Views

- `DBA_JAVA_METHODS` displays method information about all stored Java classes in the database.
- `USER_JAVA_METHODS` displays method information about the stored Java classes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2 (4000)		Name of the Java class
METHOD_INDEX	NUMBER		Index of the method
METHOD_NAME	VARCHAR2 (4000)		Name of the method identified by the <code>METHOD_INDEX</code> column
ACCESSIBILITY	VARCHAR2 (9)		Accessibility of the method: <ul style="list-style-type: none"> • PUBLIC • PRIVATE • PROTECTED

Column	Datatype	NULL	Description
IS_STATIC	VARCHAR2 (3)		Indicates whether the method is a static method (YES) or not (NO)
IS_FINAL	VARCHAR2 (3)		Indicates whether the method is a final method (YES) or not (NO)
IS_SYNCHRONIZED	VARCHAR2 (3)		Indicates whether the method is a synchronized method (YES) or not (NO)
HAS_VARARGS	VARCHAR2 (3)		Indicates whether the method has a variable number of arguments (YES) or not (NO)
IS_NATIVE	VARCHAR2 (3)		Indicates whether the method is a native method (YES) or not (NO)
IS_ABSTRACT	VARCHAR2 (3)		Indicates whether the method is an abstract method (YES) or not (NO)
IS_STRICTFP	VARCHAR2 (3)		Indicates whether the method is a strict method (YES) or not (NO)
IS_SYNTHETIC	VARCHAR2 (3)		Indicates whether the method is generated by the compiler (YES) or not (NO)
ARGUMENTS	NUMBER		Number of arguments of the method
THROWS	NUMBER		Number of exceptions thrown by the method
ARRAY_DEPTH	NUMBER		Array depth of the return type of the method
BASE_TYPE	VARCHAR2 (7)		Base type of the return type of the method: <ul style="list-style-type: none">• int• long• float• double• boolean• byte• char• short• class• void
RETURN_CLASS	VARCHAR2 (4000)		Actual class name of the return value if the base type is class
IS_COMPILED	VARCHAR2 (3)		Indicates whether the Java method has been natively compiled by the JIT compiler (YES) or not (NO)

2.240 ALL_JAVA_NCOMPS

ALL_JAVA_NCOMPS displays ncomp-related information about the Java classes accessible to the current user.

Related Views

- DBA_JAVA_NCOMPS displays ncomp-related information about all Java classes in the database.
- USER_JAVA_NCOMPS displays ncomp-related information about the Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class object
NAME	VARCHAR2 (4000)		Name of the Java class object
SOURCE	VARCHAR2 (4000)		ncomp source shown in this row
INITIALIZER	VARCHAR2 (4000)		ncomp initializer shown in this row
LIBRARYFILE	VARCHAR2 (4000)		ncomp library file shown in this row
LIBRARY	VARCHAR2 (4000)		ncomp library shown in this row

See Also:

- "[DBA_JAVA_NCOMPS](#)"
- "[USER_JAVA_NCOMPS](#)"

2.241 ALL_JAVA_RESOLVERS

ALL_JAVA_RESOLVERS displays information about resolvers of the Java classes accessible to the current user.

Related Views

- DBA_JAVA_RESOLVERS displays information about resolvers of all Java classes in the database.
- USER_JAVA_RESOLVERS displays information about resolvers of the Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class object
NAME	VARCHAR2 (4000)		Name of the Java class object
TERM_INDEX	NUMBER		Index of the resolver term in this row
PATTERN	VARCHAR2 (4000)		Resolver pattern of the resolver term identified by the TERM_INDEX column

Column	Datatype	NULL	Description
SCHEMA	VARCHAR2 (64)		Resolver schema of the resolver term identified by the TERM_INDEX column

 **See Also:**

- "[DBA_JAVA_RESOLVERS](#)"
- "[USER_JAVA_RESOLVERS](#)"

2.242 ALL_JAVA_THROWNS

ALL_JAVA_THROWNS displays information about exceptions thrown from methods of the Java classes accessible to the current user.

Related Views

- DBA_JAVA_THROWNS displays information about exceptions thrown from methods of all Java classes in the database.
- USER_JAVA_THROWNS displays information about exceptions thrown from methods of the Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2 (4000)		Name of the Java class
METHOD_INDEX	NUMBER		Index of the throwing method of the exception
METHOD_NAME	VARCHAR2 (4000)		Name of the throwing method of the exception
EXCEPTION_INDEX	NUMBER		Index of the exception
EXCEPTION_CLASS	VARCHAR2 (4000)		Class of the exception

 **See Also:**

- "[DBA_JAVA_THROWNS](#)"
- "[USER_JAVA_THROWNS](#)"

2.243 ALL_JOBS

ALL_JOBS is a synonym for USER_JOBS.

 **See Also:**

["USER_JOBS"](#)

2.244 ALL_JOIN_IND_COLUMNS

ALL_JOIN_IND_COLUMNS describes the join conditions of bitmap join indexes accessible to the current user. Bitmap join indexes are indexes built on a child table with an index key containing columns from associated parent tables, where all of the tables are connected through join conditions. There is one row for each join condition.

Related Views

- DBA_JOIN_IND_COLUMNS describes all join conditions in the database.
- USER_JOIN_IND_COLUMNS describes the join conditions owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the bitmap join index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the bitmap join index
INNER_TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the fact table
INNER_TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the fact table
INNER_TABLE_COLUMN	VARCHAR2(128)	NOT NULL	Name of the fact table join column
OUTER_TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension table
OUTER_TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension table
OUTER_TABLE_COLUMN	VARCHAR2(128)	NOT NULL	Name of the dimension table join column

 **See Also:**

- ["DBA_JOIN_IND_COLUMNS"](#)
- ["USER_JOIN_IND_COLUMNS"](#)

2.245 ALL_JSON_COLUMNS

ALL_JSON_COLUMNS provides information on the JavaScript Object Notation (JSON) columns accessible to the current user. Each column that has an IS JSON check constraint in an AND

condition and is accessible to the user appears in this view. This view enables a user to find all the JSON columns that are accessible to him or her.

For example, if a check constraint combines the IS JSON condition with another condition using logical condition OR, then the column is not listed in this view. In this case, it is not certain that the data in the column is JSON data. For example, the following constraint does not ensure that the data in column jcol is JSON data:

```
jcol is json OR length(jcol) < 1000
```

Related Views

- `DBA_JSON_COLUMNS` provides information on all JSON columns.
- `USER_JSON_COLUMNS` provides information on the JSON columns for which the user is the owner. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the table with the JSON column
TABLE_NAME	VARCHAR2 (128)		Name of the table with the JSON column
OBJECT_TYPE	VARCHAR2 (5)		Object type: <ul style="list-style-type: none"> • TABLE • VIEW
COLUMN_NAME	VARCHAR2 (128)		Name of the JSON column
FORMAT	VARCHAR2 (9)		Format of the JSON data
DATA_TYPE	VARCHAR2 (13)		Data type of the JSON column

See Also:

- "[DBA_JSON_COLUMNS](#)"
- "[USER_JSON_COLUMNS](#)"
- *Oracle Database JSON Developer's Guide* for more information about using JSON with Oracle Database

2.246 ALL_JSON_DATAGUIDE_FIELDS

`ALL_JSON_DATAGUIDE_FIELDS` extracts the path and type information from the data guides accessible to the current user, which are the data guides returned to the user by the `ALL_JSON_DATAGUIDE` view.

Related Views

- `DBA_JSON_DATAGUIDE_FIELDS` extracts the path and type information from all the data guides in the database, which are the data guides returned by the `DBA_JSON_DATAGUIDE` view.
- `USER_JSON_DATAGUIDE_FIELDS` extracts the path and type information from all the data guides in the current user's schema, which are the data guides returned to the user by the `USER_JSON_DATAGUIDE` view. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the table containing the JSON column
TABLE_NAME	VARCHAR2 (128)		Name of the table containing the JSON column
COLUMN_NAME	VARCHAR2 (128)		Name of the JSON column that has data guide enabled
PATH	VARCHAR2 (4000)		Path to the JSON field in the data guide
TYPE	VARCHAR2 (40)		Type of the JSON field in the data guide
LENGTH	NUMBER		Maximum length of the JSON field value, in bytes

 See Also:

- ["DBA_JSON_DATAGUIDE_FIELDS"](#)
- ["USER_JSON_DATAGUIDE_FIELDS"](#)

2.247 ALL_JSON_DATAGUIDES

ALL_JSON_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns accessible to the current user that have data guide enabled.

Related Views

- DBA_JSON_DATAGUIDES provides information on all JavaScript Object Notation (JSON) columns in the database that have data guide enabled.
- USER_JSON_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns owned by the current user that have data guide enabled. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table containing the JSON column
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table containing the JSON column
COLUMN_NAME	VARCHAR2 (128)	NOT NULL	Name of the JSON column that has data guide enabled
DATAGUIDE	CLOB		The data guide of the JSON column in flat format

 See Also:

- ["DBA_JSON_DATAGUIDES"](#)
- ["USER_JSON_DATAGUIDES"](#)

2.248 ALL_LIBRARIES

ALL_LIBRARIES describes the libraries accessible to the current user.

Related Views

- DBA_LIBRARIES describes all libraries in the database.
- USER_LIBRARIES describes the libraries owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the library
LIBRARY_NAME	VARCHAR2(128)	NOT NULL	Library name
FILE_SPEC	VARCHAR2(2000)		Operating system file specification associated with the library
DYNAMIC	VARCHAR2(1)		Indicates whether the library is dynamically loadable (Y) or not (N)
STATUS	VARCHAR2(7)		Status of the library: <ul style="list-style-type: none"> • N/A • VALID • INVALID
AGENT	VARCHAR2(128)		Agent of the library
LEAF_FILENAME	VARCHAR2(2000)		Leaf filename of the library
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root)

See Also:

- "[DBA_LIBRARIES](#)"
- "[USER_LIBRARIES](#)"

2.249 ALL_LOB_PARTITIONS

ALL_LOB_PARTITIONS displays the LOB partitions in the tables accessible to the current user.

Related Views

- DBA_LOB_PARTITIONS displays all LOB partitions in the database.
- USER_LOB_PARTITIONS displays the LOB partitions owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
COLUMN_NAME	VARCHAR2(4000)		Name of the LOB column
LOB_NAME	VARCHAR2(128)		Name of the partitioned LOB item
PARTITION_NAME	VARCHAR2(128)		Name of the table partition
LOB_PARTITION_NAME	VARCHAR2(128)		Name of the LOB data partition
LOB_INDPART_NAME	VARCHAR2(128)		Name of the corresponding LOB index partition
PARTITION_POSITION	NUMBER		Position of the LOB data partition within the LOB item
COMPOSITE	VARCHAR2(3)		Indicates whether the partition is composite (YES) or not (NO)
CHUNK	NUMBER		Value of the CHUNK attribute of the LOB data partition
PCTVERSION	NUMBER		Value of the PCTVERSION attribute of the LOB data partition
CACHE	VARCHAR2(10)		Indicates whether and how the LOB data is to be cached in the buffer cache: <ul style="list-style-type: none"> • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations
IN_ROW	VARCHAR2(3)		Indicates whether the STORAGE IN ROW attribute is enabled for the LOB data partition (YES) or not (NO)
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the LOB data partition
INITIAL_EXTENT	VARCHAR2(40)		Size (in bytes) of the initial extent of the LOB data partition, or DEFAULT
NEXT_EXTENT	VARCHAR2(40)		Size (in bytes) of secondary extents of the LOB data partition, or DEFAULT
MIN_EXTENTS	VARCHAR2(40)		Minimum number of extents allowed in the segment of the LOB data partition, or DEFAULT
MAX_EXTENTS	VARCHAR2(40)		Maximum number of extents allowed in the segment of the LOB data partition, or DEFAULT
MAX_SIZE	VARCHAR2(40)		Maximum number of blocks allowed in the segment of the LOB data partition, or DEFAULT

Column	Datatype	NULL	Description
RETENTION	VARCHAR2 (7)		<p>Retention option.</p> <p>Possible values for a SecureFiles segment:</p> <ul style="list-style-type: none"> • NONE • AUTO • MIN • MAX • DEFAULT • INVALID <p>Possible values for a BasicFiles segment:</p> <ul style="list-style-type: none"> • YES • NO
MINRETENTION	VARCHAR2 (40)		Minimum retention duration for a SecureFiles segment, or DEFAULT
PCT_INCREASE	VARCHAR2 (40)		Percentage increase in extent size for the LOB data partition, or DEFAULT
FREELISTS	VARCHAR2 (40)		Number of process freelists allocated in the segment of the LOB data partition, or DEFAULT
FREELIST_GROUPS	VARCHAR2 (40)		Number of freelist groups allocated in the segment of the LOB data partition, or DEFAULT
LOGGING	VARCHAR2 (7)		<p>Indicates whether or not changes to the LOB are logged:</p> <ul style="list-style-type: none"> • NONE - Not specified • See Also: the *_LOB_SUBPARTITIONS view • YES • NO
BUFFER_POOL	VARCHAR2 (7)		Buffer pool for the LOB partition blocks:
FLASH_CACHE	VARCHAR2 (7)		<p>Database Smart Flash Cache hint to be used for partition blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL <p>Solaris and Oracle Linux functionality only.</p>
CELL_FLASH_CACHE	VARCHAR2 (7)		<p>Cell flash cache hint to be used for partition blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>
ENCRYPT	VARCHAR2 (4)		<p>Indicates whether or not the LOB is encrypted.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> • YES • NO <p>Possible value for BasicFiles:</p> <ul style="list-style-type: none"> • NONE - Not applicable

Column	Datatype	NULL	Description
COMPRESSION	VARCHAR2 (6)		<p>Level of compression used for this LOB.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> LOW MEDIUM HIGH NO - Compression is off <p>Possible value for BasicFiles:</p> <ul style="list-style-type: none"> NONE - Not applicable
DEDUPLICATION	VARCHAR2 (15)		<p>Kind of deduplication used for this LOB.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> LOB - Deduplicate NO - Keep duplicates <p>Possible value for BasicFiles:</p> <ul style="list-style-type: none"> NONE - Not applicable
SECUREFILE	VARCHAR2 (3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the LOB partition segment has been created (YES) or not (NO); N/A indicates that this LOB is subpartitioned and no segment exists at the partition level

See Also:

- "DBA_LOB_PARTITIONS"

2.250 ALL_LOB_SUBPARTITIONS

ALL_LOB_SUBPARTITIONS displays partition-level attributes of the LOB data subpartitions accessible to the current user.

Related Views

- DBA_LOB_SUBPARTITIONS displays partition-level attributes of all LOB data subpartitions in the database.
- USER_LOB_SUBPARTITIONS displays the LOB subpartitions owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2 (4000)		Name of the LOB column
LOB_NAME	VARCHAR2 (128)	NOT NULL	Name of the partitioned LOB item

Column	Datatype	NULL	Description
LOB_PARTITION_NAME	VARCHAR2(128)		Name of the LOB data partition to which this LOB data subpartition belongs
SUBPARTITION_NAME	VARCHAR2(128)		Name of the table subpartition to which this LOB subpartition corresponds
LOB_SUBPARTITION_NAME	VARCHAR2(128)		Name of the LOB subpartition
LOB_INDSUBPART_NAME	VARCHAR2(128)		Name of the corresponding LOB index subpartition
SUBPARTITION_POSITION	NUMBER		Position of the LOB data partition within the LOB item
CHUNK	NUMBER		Value of the CHUNK attribute of the LOB data partition
PCTVERSION	NUMBER	NOT NULL	Value of the PCTVERSION attribute of the LOB data partition
CACHE	VARCHAR2(10)		Indicates whether and how the LOB data is to be cached in the buffer cache: <ul style="list-style-type: none"> • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations
IN_ROW	VARCHAR2(3)		Indicates whether the STORAGE IN ROW attribute of the LOB data partition is enabled (YES) or not (NO)
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace containing the LOB data partition
INITIAL_EXTENT	VARCHAR2(40)		Size in bytes of the initial extent for the LOB data partition
NEXT_EXTENT	VARCHAR2(40)		Size in bytes of secondary extents for the LOB data partition
MIN_EXTENTS	VARCHAR2(40)	NOT NULL	Minimum number of extents allowed in the segment of the LOB data partition
MAX_EXTENTS	VARCHAR2(40)	NOT NULL	Maximum number of extents allowed in the segment of the LOB data partition
MAX_SIZE	VARCHAR2(40)		Maximum number of blocks allowed in the segment of the LOB data partition
RETENTION	VARCHAR2(7)		Retention option. Possible values for a SecureFiles segment: <ul style="list-style-type: none"> • NONE • AUTO • MIN • MAX • DEFAULT • INVALID Possible values for a BasicFiles segment: <ul style="list-style-type: none"> • YES • NO
MINRETENTION	VARCHAR2(40)		Minimum retention duration for a SecureFiles segment
PCT_INCREASE	VARCHAR2(40)		Percentage increase in extent size for the LOB data partition

Column	Datatype	NULL	Description
FREELISTS	VARCHAR2(40)		Number of process freelists allocated in the segment of the LOB data partition
FREELIST_GROUPS	VARCHAR2(40)		Number of freelist groups allocated in the segment of the LOB data partition
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the LOB are logged: <ul style="list-style-type: none">• YES• NO
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for the LOB data partition blocks: <ul style="list-style-type: none">• DEFAULT• KEEP• RECYCLE• NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for subpartition blocks: <ul style="list-style-type: none">• DEFAULT• KEEP• NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for subpartition blocks: <ul style="list-style-type: none">• DEFAULT• KEEP• NONE
ENCRYPT	VARCHAR2(4)		Indicates whether or not the LOB is encrypted. Possible values for SecureFiles: <ul style="list-style-type: none">• YES• NO Possible value for BasicFiles: <ul style="list-style-type: none">• NONE - Not applicable
COMPRESSION	VARCHAR2(6)		Level of compression used for this LOB. Possible values for SecureFiles: <ul style="list-style-type: none">• LOW• MEDIUM• HIGH• NO - Compression is off Possible value for BasicFiles: <ul style="list-style-type: none">• NONE - Not applicable
DEDUPLICATION	VARCHAR2(15)		Kind of deduplication used for this LOB. Possible values for SecureFiles: <ul style="list-style-type: none">• LOB - Deduplicate• NO - Keep duplicates Possible value for BasicFiles: <ul style="list-style-type: none">• NONE - Not applicable
SECUREFILE	VARCHAR2(3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)

Column	Datatype	NULL	Description
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the LOB subpartition segment has been created (YES) or not (NO); N/A indicates that this LOB is not subpartitioned

 See Also:

- ["DBA_LOB_SUBPARTITIONS"](#)
- ["USER_LOB_SUBPARTITIONS"](#)

2.251 ALL_LOB_TEMPLATES

ALL_LOB_TEMPLATES describes the LOB subpartition templates accessible to the current user.

Related Views

- DBA_LOB_TEMPLATES describes all LOB subpartition templates in the database.
- USER_LOB_TEMPLATES describes the LOB subpartition templates owned by the current user. This view does not display the USER_NAME column.

Column	Datatype	NULL	Description
USER_NAME	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table
LOB_COL_NAME	VARCHAR2 (4000)		Name of the LOB column
SUBPARTITION_NAME	VARCHAR2 (132)	NOT NULL	Name of the subpartition
LOB_SEGMENT_NAME	VARCHAR2 (132)	NOT NULL	Name of the LOB segment
TABLESPACE_NAME	VARCHAR2 (30)		Tablespace name of the subpartition

 See Also:

- ["DBA_LOB_TEMPLATES"](#)
- ["USER_LOB_TEMPLATES"](#)

2.252 ALL_LOBS

ALL_LOBS displays the large objects (LOBs) contained in tables accessible to the current user. LOBs include binary large objects (BLOBs) and character large objects (CLOBs). Binary files (BFILEs) are stored outside the database, so they are not displayed by this view or the related views.

Related Views

- DBA_LOBS describes all LOBs in the database.

- **USER_LOBS** describes the LOBs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the object containing the LOB
TABLE_NAME	VARCHAR2 (128)		Name of the object containing the LOB
COLUMN_NAME	VARCHAR2 (4000)		Name of the LOB column or attribute
SEGMENT_NAME	VARCHAR2 (128)		Name of the LOB segment
TABLESPACE_NAME	VARCHAR2 (30)		Name of the tablespace containing the LOB segment
INDEX_NAME	VARCHAR2 (128)		Name of the LOB index
CHUNK	NUMBER		Size (in bytes) of the LOB chunk as a unit of allocation or manipulation
PCTVERSION	NUMBER		Maximum percentage of the LOB space used for versioning
RETENTION	NUMBER		Maximum time duration for versioning of the LOB space
FREEPOOLS	NUMBER		Number of freepools for this LOB segment
CACHE	VARCHAR2 (10)		Indicates whether and how the LOB data is to be cached in the buffer cache: <ul style="list-style-type: none"> • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations
LOGGING	VARCHAR2 (7)		Indicates whether or not changes to the LOB are logged: <ul style="list-style-type: none"> • NONE - Not specified • See Also: the *_LOB_SUBPARTITIONS view • YES • NO
ENCRYPT	VARCHAR2 (4)		Indicates whether or not the LOB is encrypted. Possible values for SecureFiles: <ul style="list-style-type: none"> • YES • NO Possible value for BasicFiles: <ul style="list-style-type: none"> • NONE - Not applicable
COMPRESSION	VARCHAR2 (6)		Level of compression used for this LOB. Possible values for SecureFiles: <ul style="list-style-type: none"> • LOW • MEDIUM • HIGH • NO - Compression is off Possible value for BasicFiles: <ul style="list-style-type: none"> • NONE - Not applicable

Column	Datatype	NULL	Description
DEDUPLICATION	VARCHAR2 (15)		<p>Kind of deduplication used for this LOB.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> • LOB - Deduplicate • NO - Keep duplicates <p>Possible value for BasicFiles:</p> <ul style="list-style-type: none"> • NONE - Not applicable
IN_ROW	VARCHAR2 (3)		Indicates whether some LOBs are stored inline with the base row (YES) or not (NO). For partitioned objects, refer to the *_LOB_PARTITIONS and *_PART_LOBS views.
FORMAT	VARCHAR2 (15)		Indicates whether the LOB storage format depends on the endianness of the platform:
PARTITIONED	VARCHAR2 (3)		Indicates whether the LOB column is in a partitioned table (YES) or not (NO)
SECUREFILE	VARCHAR2 (3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the LOB segment has been created (YES) or not (NO)
RETENTION_TYPE	VARCHAR2 (7)		<p>Type of retention used for this LOB.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> • NONE • AUTO • MIN • MAX • DEFAULT • INVALID <p>Possible values for BasicFiles:</p> <ul style="list-style-type: none"> • YES • NO
RETENTION_VALUE	NUMBER		Minimum retention time (in seconds). This column is only meaningful for SecureFiles with RETENTION_TYPE set to MIN.

- "[DBA_LOBS](#)"
- "[USER_LOBS](#)"

2.253 ALL_LOG_GROUP_COLUMNS

`ALL_LOG_GROUP_COLUMNS` describes columns that are accessible to the current user and that are specified in log groups.

Related Views

- `DBA_LOG_GROUP_COLUMNS` describes all columns in the database that are specified in log groups.
- `USER_LOG_GROUP_COLUMNS` describes columns that are owned by the current user and that are specified in log groups.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the log group definition
LOG_GROUP_NAME	VARCHAR2 (128)	NOT NULL	Name of the log group definition
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table in which the log group is defined
COLUMN_NAME	VARCHAR2 (4000)		Name of the column or attribute of the object type column specified in the log group definition
POSITION	NUMBER		Original position of the column or attribute in the definition of the object
LOGGING_PROPERTY	VARCHAR2 (6)		Indicates whether the column or attribute would be supplementally logged (<code>LOG</code>) or not (<code>NO LOG</code>)

See Also:

- "[DBA_LOG_GROUP_COLUMNS](#)"
- "[USER_LOG_GROUP_COLUMNS](#)"

2.254 ALL_LOG_GROUPS

`ALL_LOG_GROUPS` describes the log group definitions on the tables accessible to the current user.

Related Views

- `DBA_LOG_GROUPS` describes the log group definitions on all tables in the database.
- `USER_LOG_GROUPS` describes the log group definitions on the tables owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the log group definition
LOG_GROUP_NAME	VARCHAR2 (128)	NOT NULL	Name of the log group definition
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table on which the log group is defined

Column	Datatype	NULL	Description
LOG_GROUP_TYPE	VARCHAR2(28)		Type of the log group: <ul style="list-style-type: none"> • PRIMARY KEY LOGGING • UNIQUE KEY LOGGING • FOREIGN KEY LOGGING • ALL COLUMN LOGGING • USER LOG GROUP
ALWAYS	VARCHAR2(11)		Y indicates the log group is logged any time a row is updated; N indicates the log group is logged any time a member column is updated
GENERATED	VARCHAR2(14)		Indicates whether the name of the supplemental log group was system generated (GENERATED NAME) or not (USER NAME)

 See Also:

- "[DBA_LOG_GROUPS](#)"
- "[USER_LOG_GROUPS](#)"

2.255 ALL_MEASURE_FOLDER_CONTENTS

ALL_MEASURE_FOLDER_CONTENTS describes the contents of the OLAP measure folders accessible to the current user.

Related Views

- DBA_MEASURE_FOLDER_CONTENTS describes the contents of all OLAP measure folders in the database.
- USER_MEASURE_FOLDER_CONTENTS describes the contents of the OLAP measure folders owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the measure folder
MEASURE_FOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of a measure folder
CUBE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube included in the measure folder
MEASURE_NAME	VARCHAR2(128)	NOT NULL	Name of a measure in the cube
ORDER_NUM	NUMBER	NOT NULL	Order number of the measure in the folder

 See Also:

- "[DBA_MEASURE_FOLDER_CONTENTS](#)"
- "[USER_MEASURE_FOLDER_CONTENTS](#)"

2.256 ALL_MEASURE_FOLDER_SUBFOLDERS

ALL_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders accessible to the user.

Related Views

- DBA_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the database OLAP measure folders.
- USER_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OLAP measure folder that contains a subfolder
MEASURE_FOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of the OLAP measure folder that contains a subfolder
MEASURE_SUBFOLDER_OWNER	VARCHAR2(128)	NOT NULL	Owner of the OLAP measure folder subfolder
MEASURE_SUBFOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of the owning OLAP measure folder subfolder

See Also:

- "DBA_MEASURE_FOLDER_SUBFOLDERS"
- "USER_MEASURE_FOLDER_SUBFOLDERS"

2.257 ALL_MEASURE_FOLDERS

ALL_MEASURE_FOLDERS describes the OLAP measure folders accessible to the current user.

Related Views

- DBA_MEASURE_FOLDERS describes all OLAP measure folders in the database.
- USER_MEASURE_FOLDERS describes the OLAP measure folders owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the measure folder
MEASURE_FOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of a measure folder
MEASURE_FOLDER_ID	NUMBER	NOT NULL	ID of a measure folder
DESCRIPTION	NVARCHAR2(300)		Description of the measure folder in the session language

 **See Also:**

- "[DBA_MEASURE_FOLDERS](#)"
- "[USER_MEASURE_FOLDERS](#)"

2.258 ALL_METADATA_PROPERTIES

`ALL_METADATA_PROPERTIES` describes OLAP metadata properties in the database that are accessible to the current user.

Related Views

- `DBA_METADATA_PROPERTIES` describes OLAP metadata properties in the database.
- `USER_METADATA_PROPERTIES` describes OLAP metadata properties in the current user's schema. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the OLAP metadata property
OWNING_OBJECT_ID	NUMBER		Dictionary ID of the OLAP metadata property owner
OWNING_TYPE	VARCHAR2 (23)		Owning type of the OLAP metadata property
PROPERTY_ID	NUMBER		Dictionary Id of the OLAP metadata property
PROPERTY_KEY	VARCHAR2 (128)		Key of the OLAP metadata property
PROPERTY_VALUE	CLOB		Value of the OLAP metadata property
PROPERTY_ORDER	NUMBER		Order number of the OLAP metadata property

 **See Also:**

- "[DBA_METADATA_PROPERTIES](#)"
- "[USER_METADATA_PROPERTIES](#)"

2.259 ALL_METHOD_PARAMS

`ALL_METHOD_PARAMS` describes the method parameters of the object types accessible to the current user.

Related Views

- `DBA_METHOD_PARAMS` describes the method parameters of all object types in the database.
- `USER_METHOD_PARAMS` describes the method parameters of the object types owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the type

Column	Datatype	NULL	Description
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
METHOD_NO	NUMBER	NOT NULL	For an overloaded method, a number distinguishing this method from others of the same. Do not confuse this number with the object ID.
PARAM_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAM_NO	NUMBER	NOT NULL	Parameter number (position)
PARAM_MODE	VARCHAR2(6)		Mode of the parameter (IN, OUT, IN OUT)
PARAM_TYPE_MOD	VARCHAR2(7)		Whether this parameter is a REF to another object
PARAM_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the parameter
PARAM_TYPE_NAME	VARCHAR2(128)		Name of the type of the parameter
CHARACTER_SET_NAME	VARCHAR2(44)		Whether the character set or the method is fixed-length character set (CHAR_CS) or fixed-length national character set (NCHAR_CS), or a particular character set specified by the user

See Also:

- ["DBA_METHOD_PARAMS"](#)
- ["USER_METHOD_PARAMS"](#)

2.260 ALL_METHOD_RESULTS

ALL_METHOD_RESULTS describes the method results of the object types accessible to the current user.

Related Views

- DBA_METHOD_RESULTS describes the method results of all object types in the database.
- USER_METHOD_RESULTS describes the method results of the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
METHOD_NO	NUMBER	NOT NULL	For an overloaded method, a number distinguishing this method from others of the same. Do not confuse this number with the object ID.
RESULT_TYPE_MOD	VARCHAR2(7)		Whether this result is a REF to another object
RESULT_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the result
RESULT_TYPE_NAME	VARCHAR2(128)		Name of the type of the result

Column	Datatype	NULL	Description
CHARACTER_SET_NAME	VARCHAR2(44)		Whether the character set or the method is fixed-length character set (CHAR_CS) or fixed-length national character set (NCHAR_CS), or a particular character set specified by the user

 See Also:

- "[DBA_METHOD_RESULTS](#)"
- "[USER_METHOD_RESULTS](#)"

2.261 ALL_MINING_ALGORITHMS

`ALL_MINING_ALGORITHMS` describes the settings for a current user.

Column	Datatype	NULL	Description
ALGORITHM_NAME	VARCHAR2(128)		Algorithm used by the model.
MINING_FUNCTION	VARCHAR2(30)		Function of the mining model. The mining function is specified when the model is built: <ul style="list-style-type: none"> • CLASSIFICATION • REGRESSION • CLUSTERING • FEATURE_EXTRACTION • ASSOCIATION_RULES • ATTRIBUTE_IMPORTANCE • ANOMALY_DETECTION
ALGORITHM_TYPE	VARCHAR2(20)		Algorithm type of the model
ALGORITHM_METADATA	CLOB		Metadata of the algorithm
DESCRIPTION	VARCHAR2(4000)		Description of the algorithm

2.262 ALL_MINING_MODEL_ATTRIBUTES

`ALL_MINING_MODEL_ATTRIBUTES` describes the attributes of the mining models accessible to the current user. Only the attributes in the model signature are included in this view. The attributes in the model signature correspond to the columns in the training data that were used to build the model.

Mining models are schema objects created by Oracle Data Mining.

Related Views

- `DBA_MINING_MODEL_ATTRIBUTES` describes the attributes of all mining models in the database.
- `USER_MINING_MODEL_ATTRIBUTES` describes the attributes of the mining models owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the mining model
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the mining model
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute
ATTRIBUTE_TYPE	VARCHAR2(11)	—	<p>Logical type of the attribute. The type is identified during the model build or apply process:</p> <ul style="list-style-type: none"> • NUMERICAL: Numeric data • CATEGORICAL: Character data • TEXT: Unstructured text data • PARTITION: The input signature column is used for the partitioning key • MIXED: The input signature column takes on more than one attribute type. <p>This is due to user-defined embedded transformations that allow an input column to be transformed into multiple independent mining attributes, including mining attributes of different types.</p>
DATA_TYPE	VARCHAR2(106)	—	Data type of the attribute
DATA_LENGTH	NUMBER	—	Length of the data type
DATA_PRECISION	NUMBER	—	Precision of a fixed point number. Precision, which is the total number of significant decimal digits, is represented as p in the data type NUMBER(p, s).
DATA_SCALE	NUMBER	—	Scale of a fixed point number. Scale, which is the number of digits from the decimal to the least significant digit, is represented as s in the data type NUMBER(p, s).
USAGE_TYPE	VARCHAR2(8)	—	Indicates whether the attribute was used to construct the model (ACTIVE) or not (INACTIVE). Some attributes may be eliminated by transformations or algorithmic processing. The *_MINING_MODEL_ATTRIBUTES view only lists the attributes used by the model, therefore the value of this column is always ACTIVE .
TARGET	VARCHAR2(3)	—	Indicates whether the attribute is the target of a predictive model (YES) or not (NO). The target describes the result that is produced when the model is applied.

Column	Datatype	NULL	Description
ATTRIBUTE_SPEC	VARCHAR2(4000)	—	<p>One or more keywords that identify special treatment for the attribute during model build. Values are:</p> <ul style="list-style-type: none"> • FORCE_IN: (GLM only) When feature selection is enabled, forces the inclusion of the attribute in the model build. Feature selection is disabled by default. If the model is not using GLM with feature selection enabled, this value is ignored. • NOPREP: When ADP is on, prevents automatic transformation of the attribute. If ADP is OFF, this value is ignored. • TEXT: Causes the attribute to be treated as unstructured text data. The TEXT value supports three subsettings: POLICY_NAME, MAX_FEATURES, TOKEN_TYPE, and MIN_DOCUMENTS. Subsettings are specified as name:value pairs within parentheses. For example: (POLICY_NAME:mypolicy) (MAX_FEATURES:2000) (TOKEN_TYPE:THEME). See <i>Oracle Data Mining User's Guide</i> for details. • NULL: The ATTRIBUTE_SPEC for this attribute is NULL. <p>ATTRIBUTE_SPEC is a parameter to the PL/SQL procedure DBMS_DATA_MINING_TRANSFORM.SET_TRANSFORM. See <i>Oracle Database PL/SQL Packages and Types Reference</i> for details.</p>

2.263 ALL_MINING_MODEL_PARTITIONS

ALL_MINING_MODEL_PARTITIONS describes all the model partitions accessible to the user.

Related Views

- DBA_MINING_MODEL_PARTITIONS describes all the model partitions accessible to the system.
- USER_MINING_MODEL_PARTITIONS describes the user's own model partitions. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Name of the model owner
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the model
PARTITION_NAME	VARCHAR2(128)	—	Name of the model partition

Column	Datatype	NULL	Description
POSITION	NUMBER	—	Column position number for partitioning column. Column position represents the position of the column in a multi-column partitioning key, or 1 for a unary column partitioning key.
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column used for partitioning
COLUMN_VALUE	VARCHAR2(4000)	—	Value of the column for this partition

2.264 ALL_MINING_MODEL_SETTINGS

ALL_MINING_MODEL_SETTINGS describes the settings of the mining models accessible to the current user.

Mining models are schema objects created by Oracle Data Mining.

Related Views

- DBA_MINING_MODEL_SETTINGS describes the settings of all mining models in the database.
- USER_MINING_MODEL_SETTINGS describes the settings of the mining models owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the mining model
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the mining model
SETTING_NAME	VARCHAR2(30)	NOT NULL	Name of the setting
SETTING_VALUE	VARCHAR2(4000)	—	Value of the setting
SETTING_TYPE	VARCHAR2(7)	—	Indicates whether the default value (DEFAULT) or a user-specified value (INPUT) is used by the model

See Also:

Oracle Database PL/SQL Packages and Types Reference for descriptions of model settings

2.265 ALL_MINING_MODEL_VIEWS

ALL_MINING_MODEL_VIEWS provides a description of all the model views accessible to the user.

Related Views

- DBA_MINING_MODEL_VIEWS provides a description of all the model views in the database.
- USER_MINING_MODEL_VIEWS provides a description of the user's own model views. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the model view
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the model to which model views belongs
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the model view
VIEW_TYPE	VARCHAR2(128)	—	Type of the model view

 **See Also:**

"ALL_MINING_MODEL_VIEWS" in *Oracle Data Mining User's Guide*

2.266 ALL_MINING_MODEL_XFORMS

ALL_MINING_MODEL_XFORMS describes the user-specified transformations embedded in all models accessible to the user.

Related Views

- DBA_MINING_MODEL_XFORMS describes the user-specified transformations embedded in all models accessible in the system.
- USER_MINING_MODEL_XFORMS describes the user-specified transformations embedded with the user's own models. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Name of the model owner
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the model
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute used in the transformation
ATTRIBUTE_SUBNAME	VARCHAR2(4000)		Subname of the attribute used in the transformation
ATTRIBUTE_SPEC	VARCHAR2(4000)		Attribute specification provided to model training
EXPRESSION	CLOB		Transformation expression provided to model training
REVERSE	VARCHAR2(3)		Indicates whether the specified transformation is a reverse transformation (YES) or a forward expression (NO)

2.267 ALL_MINING_MODELS

ALL_MINING_MODELS describes the mining models accessible to the current user.

Mining models are schema objects created by Oracle Data Mining.

Related Views

- DBA_MINING_MODELS describes all mining models in the database.
- USER_MINING_MODELS describes the mining models owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the mining model
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the mining model
MINING_FUNCTION	VARCHAR2(30)	NOT NULL	<p>Function of the mining model. The function identifies the class of problems that can be solved by this model. The mining function is specified when the model is built:</p> <ul style="list-style-type: none"> • CLASSIFICATION • REGRESSION • CLUSTERING • FEATURE_EXTRACTION • ASSOCIATION_RULES • ATTRIBUTE_IMPORTANCE
ALGORITHM	VARCHAR2(30)	NOT NULL	<p>Algorithm used by the model. Each mining function has a default algorithm. The default can be overridden with a model setting (see *_MINING_MODEL_SETTINGS):</p> <ul style="list-style-type: none"> • CUR_DECOMPOSITION • NAIVE_BAYES • DECISION_TREE • EXPLICIT_SEMANTIC_ANALYS • EXPONENTIAL_SMOOTHING • SUPPORT_VECTOR_MACHINES • KMEANS • O_CLUSTER • NONNEGATIVE_MATRIX_FACTOR • NEURAL_NETWORK • GENERALIZED_LINEAR_MODEL • APRIORI_ASSOCIATION_RULES • MINIMUM_DESCRIPTION_LENGTH • EXPECTATION_MAXIMIZATION • RANDOM_FOREST • SINGULAR_VALUE_DECOMP • R_EXTENSIBLE
ALGORITHM_TYPE	VARCHAR2(10)	NOT NULL	Algorithm type of the model
CREATION_DATE	DATE	NOT NULL	Date that the model was created
BUILD_DURATION	NUMBER	NOT NULL	Time (in seconds) of the model build process
MODEL_SIZE	NUMBER	NOT NULL	Size of the model (in megabytes)
PARTITIONED	VARCHAR2(3)	NOT NULL	<p>Indicates whether the model is partitioned or not. Possible values:</p> <ul style="list-style-type: none"> • YES: The model is partitioned. • NO: The model is not partitioned
COMMENTS	VARCHAR2(4000)	NOT NULL	Comment applied to the model with a SQL COMMENT statement

 **See Also:**

- *Oracle Data Mining User's Guide* for information about mining model schema objects
- *Oracle Data Mining Concepts* for an introduction to Data Mining

2.268 ALL_MVIEW_AGGREGATES

`ALL_MVIEW_AGGREGATES` describes the grouping functions (aggregate operations) that appear in the `SELECT` list of materialized aggregate views accessible to the current user.

Related Views

- `DBA_MVIEW_AGGREGATES` describes all such grouping functions defined for all materialized views in the database.
- `USER_MVIEW_AGGREGATES` describes all such grouping functions defined for all materialized views owned by the current user.

 **Note:**

All three views exclude materialized views that reference remote tables or that include references to a nonstatic value such as `SYSDATE` or `USER`. These views also exclude materialized views that were created as "snapshots" before Oracle8i and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
POSITION_IN_SELECT	NUMBER	NOT NULL	Ordinal position of this aggregation within the <code>SELECT</code> list. For the position of nonaggregate elements of the select list, see " ALL_MVIEW_KEYS ".
CONTAINER_COLUMN	VARCHAR2(128)	NOT NULL	Name of this column in the container table
AGG_FUNCTION	VARCHAR2(8)		Aggregation function
DISTINCTFLAG	VARCHAR2(1)		Indicates whether this aggregation is distinct (Y) or not (N)
MEASURE	LONG		SQL text of the measure, excluding the aggregation function. Equal to * for <code>COUNT(*)</code> .

 **See Also:**

- "[DBA_MVIEW_AGGREGATES](#)"
- "[USER_MVIEW_AGGREGATES](#)"

2.269 ALL_MVIEW_ANALYSIS

`ALL_MVIEW_ANALYSIS` describes the materialized views accessible to the current user. It provides additional information for analysis by applications. Minimal information is displayed for materialized views that do not support query rewrite (such as materialized views with remote master tables or nondeterministic functions).

Related Views

- `DBA_MVIEW_ANALYSIS` describes all such materialized views in the database.
- `USER_MVIEW_ANALYSIS` describes all such materialized views owned by the current user.

 **Note:**

All of the information in these views is also displayed in `ALL_MVIEWS` and its related views. Oracle recommends that you refer to `ALL_MVIEWS` for this information instead of these views.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
MVIEW_TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the container table (see next column)
CONTAINER_NAME	VARCHAR2(128)		Name of the internal container in which the materialized view data is held. Normally this is the same as <code>MVIEW_NAME</code> . For materialized views created before Oracle8i, Oracle Database attaches the 6-byte prefix <code>SNAPS_</code> . If <code>MVIEW_NAME</code> has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and adds a 4-byte sequence number as a suffix to produce a nonambiguous <code>CONTAINER_NAME</code> .
LAST_REFRESH_SCN	NUMBER		System change number (SCN) of the last refresh operation
LAST_REFRESH_DATE	DATE		SYSDATE of the last refresh
REFRESH_METHOD	VARCHAR2(8)		Default refresh method: <ul style="list-style-type: none"> • FORCE • FAST • COMPLETE • NEVER
SUMMARY	VARCHAR2(1)		Indicates whether this materialized view includes a <code>GROUP BY</code> clause or aggregation (<code>Y</code>) or not (<code>N</code>)
FULLREFRESHTIM	NUMBER		Approximate refresh time, in seconds, for full refresh
INCREFRESHTIM	NUMBER		Approximate refresh time, in seconds, for fast refresh
CONTAINS_VIEWS	VARCHAR2(1)		Indicates whether this materialized view contains a view in its definition (<code>Y</code>) or not (<code>N</code>)

Column	Datatype	NULL	Description
UNUSABLE	VARCHAR2 (1)		Indicates whether this materialized view is UNUSABLE (inconsistent data) (Y) or not (N). A materialized view can be UNUSABLE if a system failure occurs during a full refresh.
RESTRICTED_SYNTAX	VARCHAR2 (1)		Indicates whether this materialized view had a restriction in its defining query that limits the use of query rewrite (Y) or not (N). More complete information is provided by the REWRITE_CAPABILITY column of the *_MVIEWS view.
INC_REFRESHABLE	VARCHAR2 (1)		Indicates whether this materialized view can be fast refreshed (Y) or not (N)
KNOWN_STALE	VARCHAR2 (1)		Indicates whether the data contained in the materialized view is known to be inconsistent with the master table data because that has been updated since the last successful refresh (Y) or not (N)
INVALID	VARCHAR2 (1)		Indicates whether this materialized view is in an invalid state (inconsistent metadata) (Y) or not (N)
REWRITE_ENABLED	VARCHAR2 (1)		Indicates whether this materialized view is currently enabled for query rewrite (Y) or not (N)
QUERY_LEN	NUMBER		Length (in bytes) of the query field
QUERY	LONG		SELECT expression of the materialized view definition
REVISION	NUMBER	NOT NULL	Reserved for internal use

 **See Also:**

- ["DBA_MVIEW_ANALYSIS"](#)
- ["USER_MVIEW_ANALYSIS"](#)

2.270 ALL_MVIEW_COMMENTS

ALL_MVIEW_COMMENTS displays comments on the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_COMMENTS displays comments on the materialized views in the database.
- USER_MVIEW_COMMENTS displays comments on the materialized views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2 (128)	NOT NULL	Name of the materialized view
COMMENTS	VARCHAR2 (4000)		Comment on the materialized view

 See Also:

- "[DBA_MVIEW_COMMENTS](#)"
- "[USER_MVIEW_COMMENTS](#)"

2.271 ALL_MVIEW_DETAIL_PARTITION

`ALL_MVIEW_DETAIL_PARTITION` displays freshness information, with respect to partition change tracking (PCT) detail partitions, for the materialized views accessible to the current user.

Related Views

- `DBA_MVIEW_DETAIL_PARTITION` displays freshness information, with respect to PCT detail partitions, for all materialized views in the database.
- `USER_MVIEW_DETAIL_PARTITION` displays freshness information, with respect to PCT detail partitions, for the materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detail object
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Name of the detail object
DETAIL_PARTITION_NAME	VARCHAR2(128)		Name of the detail object partition
DETAIL_PARTITION_POSITION	NUMBER		Position of the detail object partition
FRESHNESS	VARCHAR2(7)		Freshness state of the detail object logical partition. Possible values: <ul style="list-style-type: none"> • FRESH • STALE • UNKNOWN
LAST_REFRESH_TIME ¹	DATE		Date and time at which the materialized view was last refreshed

¹ This column is available starting with Oracle Database 19c.

 See Also:

- "[DBA_MVIEW_DETAIL_PARTITION](#)"
- "[USER_MVIEW_DETAIL_PARTITION](#)"

2.272 ALL_MVIEW_DETAIL_RELATIONS

`ALL_MVIEW_DETAIL_RELATIONS` describes the named detail relations that are either specified in the `FROM` list of the subquery that defines a materialized view accessible to the current user, or

that are indirectly referenced through views in that `FROM` list. Inline views in the materialized view definition are not represented in this view or the related views.

Related Views

- `DBA_MVIEW_DETAIL_RELATIONS` describes all such detail relations defined for all materialized views in the database.
- `USER_MVIEW_DETAIL_RELATIONS` describes such detail relations defined for all materialized views owned by the current user.

 **Note:**

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as `SYSDATE` or `USER`. These views also exclude materialized views that were created as *snapshots* before Oracle8i and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Detail object owner
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Detail object name (that is, the name of a table or view)
DETAILOBJ_TYPE	VARCHAR2(9)		Detail object type: <ul style="list-style-type: none"> • TABLE • VIEW • SNAPSHOT • CONTAINER • UNDEFINED
DETAILOBJ_ALIAS	VARCHAR2(128)		Implicit or explicit alias for detail relation
DETAILOBJ_PCT	VARCHAR2(1)		Indicates whether the detail object PCT is supported (Y) or not (N)
NUM_FRESH_PCT_PARTITIONS	NUMBER		Number of fresh PCT partitions
NUM_STALE_PCT_PARTITIONS	NUMBER		Number of stale PCT partitions

 **See Also:**

- "[DBA_MVIEW_DETAIL_RELATIONS](#)"
- "[USER_MVIEW_DETAIL_RELATIONS](#)"

2.273 ALL_MVIEW_DETAIL_SUBPARTITION

ALL_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to partition change tracking (PCT) detail subpartitions, for the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to PCT detail subpartitions, for all materialized views in the database.
- USER_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to PCT detail subpartitions, for the materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detail object
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Name of the detail object
DETAIL_PARTITION_NAME	VARCHAR2(128)		Name of the detail object partition
DETAIL_SUBPARTITION_NAME	VARCHAR2(128)		Name of the detail object subpartition
DETAIL_SUBPARTITION_POSITION	NUMBER		Position of the detail object subpartition
FRESHNESS	CHAR(5)		Freshness state of the detail object subpartition (FRESH or STALE)

See Also:

- "[DBA_MVIEW_DETAIL_SUBPARTITION](#)"
- "[USER_MVIEW_DETAIL_SUBPARTITION](#)"

2.274 ALL_MVIEW_JOINS

ALL_MVIEW_JOINS describes joins between two columns in the WHERE clause of the subquery that defines a materialized view accessible to the current user.

Related Views

- DBA_MVIEW_JOINS describes all such joins for all materialized views in the database.
- USER_MVIEW_JOINS describes such joins for all materialized views owned by the current user.

 **Note:**

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as "snapshots" before Oracle8i and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Materialized view name
DETAILOBJ1_OWNER	VARCHAR2(128)	NOT NULL	Owner of the first object in the join ¹
DETAILOBJ1_RELATION	VARCHAR2(128)	NOT NULL	Name of the first object in the join ¹
DETAILOBJ1_COLUMN	VARCHAR2(128)	NOT NULL	Join column of the first object in the join ¹
OPERATOR	CHAR(1)		Join operator ¹
OPERATOR_TYPE	VARCHAR2(1)		Indicates whether the join is an inner join (<code>I</code>) or the DETAILOBJ1 table is the left side of an outer join (<code>L</code>) ¹
DETAILOBJ2_OWNER	VARCHAR2(128)	NOT NULL	Owner of the second object in the join ¹
DETAILOBJ2_RELATION	VARCHAR2(128)	NOT NULL	Name of the second object in the join ¹
DETAILOBJ2_COLUMN	VARCHAR2(128)	NOT NULL	Join column of the second object in the join ¹

¹ These rows relate only to materialized join views and materialized aggregate views. They describe the two detail objects of a materialized view join.

 **See Also:**

- "[DBA_MVIEW_JOINS](#)"
- "[USER_MVIEW_JOINS](#)"

2.275 ALL_MVIEW_KEYS

ALL_MVIEW_KEYS describes the columns or expressions in the SELECT list upon which materialized views accessible to the current user are based.

Related Views

- DBA_MVIEW_KEYS describes such columns and expressions for all materialized views in the database.
- USER_MVIEW_KEYS describes such columns and expressions for all materialized views owned by the current user.

 **Note:**

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as *snapshots* before Oracle8i and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Materialized view name
POSITION_IN_SELECT	NUMBER	NOT NULL	Ordinal position of this key within the SELECT list
CONTAINER_COLUMN	VARCHAR2(128)	NOT NULL	Name of the column in the container table
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Detail object owner
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Detail object name (for example, the name of a table or view)
DETAILOBJ_ALIAS	VARCHAR2(128)		Implicit or explicit alias for detail relation
DETAILOBJ_TYPE	VARCHAR2(5)		Detail object type: <ul style="list-style-type: none">• TABLE• VIEW
DETAILOBJ_COLUMN	VARCHAR2(128)	NOT NULL	Name of the detail relation column

 **See Also:**

- "[DBA_MVIEW_KEYS](#)"
- "[USER_MVIEW_KEYS](#)"

2.276 ALL_MVIEW_LOGS

ALL_MVIEW_LOGS describes all materialized view logs accessible to the current user.

Related Views

- DBA_MVIEW_LOGS describes all materialized view logs in the database.
- USER_MVIEW_LOGS describes all materialized view logs owned by the current user.

Column	Datatype	NULL	Description
LOG_OWNER	VARCHAR2(128)		Owner of the materialized view log
MASTER	VARCHAR2(128)		Name of the master table or master materialized view whose changes are logged
LOG_TABLE	VARCHAR2(128)		Name of the table where the changes to the master table or master materialized view are logged
LOG_TRIGGER	VARCHAR2(128)		Obsolete with Oracle8i and later. Set to NULL. Formerly, this parameter was an after-row trigger on the master which inserted rows into the log.

Column	Datatype	NULL	Description
ROWIDS	VARCHAR2 (3)		Indicates whether rowid information is recorded (YES) or not (NO)
PRIMARY_KEY	VARCHAR2 (3)		Indicates whether primary key information is recorded (YES) or not (NO)
OBJECT_ID	VARCHAR2 (3)		Indicates whether object identifier information in an object table is recorded (YES) or not (NO)
FILTER_COLUMNS	VARCHAR2 (3)		Indicates whether filter column information is recorded (YES) or not (NO)
SEQUENCE	VARCHAR2 (3)		Indicates whether the sequence value, which provides additional ordering information, is recorded (YES) or not (NO)
INCLUDE_NEW_VALUES	VARCHAR2 (3)		Indicates whether both old and new values are recorded (YES) or old values are recorded but new values are not recorded (NO)
PURGE_ASYNCNOMOUS	VARCHAR2 (3)		Indicates whether the materialized view log is purged asynchronously (YES) or not (NO)
PURGE_DEFERRED	VARCHAR2 (3)		Indicates whether the materialized view log is purged in a deferred manner (YES) or not (NO)
PURGE_START	DATE		For deferred purge, the purge start date
PURGE_INTERVAL	VARCHAR2 (200)		For deferred purge, the purge interval
LAST_PURGE_DATE	DATE		Date of the last purge
LAST_PURGE_STATUS	NUMBER		Status of the last purge (error code or 0 for success)
NUM_ROWS_PURGED	NUMBER		Number of rows purged in the last purge
COMMIT_SCN_BASED	VARCHAR2 (3)		Indicates whether the materialized view log is commit SCN-based (YES) or not (NO)
STAGING_LOG	VARCHAR2 (3)		Indicates whether the materialized view log is a staging log for synchronous refresh (YES) or not (NO)

2.277 ALL_MVIEW_REFRESH_TIMES

ALL_MVIEW_REFRESH_TIMES describes refresh times of the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_REFRESH_TIMES describes refresh times of all materialized views in the database.
- USER_MVIEW_REFRESH_TIMES describes refresh times of the materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
MASTER_OWNER	VARCHAR2(128)		Owner of the master table
MASTER	VARCHAR2(128)		Name of the master table
LAST_REFRESH	DATE		SYSDATE from the master site at the time of the last refresh

 See Also:

- "[DBA_MVIEW_REFRESH_TIMES](#)"
- "[USER_MVIEW_REFRESH_TIMES](#)"

2.278 ALL_MVIEWS

`ALL_MVIEWS` describes all materialized views accessible to the current user.

Related Views

- `DBA_MVIEWS` describes all materialized views in the database.
- `USER_MVIEWS` describes all materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Schema in which the materialized view was created
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
CONTAINER_NAME	VARCHAR2(128)	NOT NULL	Name of the container in which the materialized view's data is held. Normally this is the same as <code>MVIEW_NAME</code> . For materialized views created before Oracle8i, Oracle Database attaches the 6-byte prefix <code>SNAP\$</code> . If <code>MVIEW_NAME</code> has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and may add a 4-byte sequence number as a suffix to produce a nonambiguous <code>CONTAINER_NAME</code> .
QUERY	LONG		Query that defines the materialized view
QUERY_LEN	NUMBER(38)		Length (in bytes) of the defining query
UPDATABLE	VARCHAR2(1)		Indicates whether the materialized view is updatable (Y) or not (N)
UPDATE_LOG	VARCHAR2(128)		For updatable materialized views, the filename of the update log
MASTER_ROLLBACK_SEG	VARCHAR2(128)		Rollback segment for the master site or the master materialized view site
MASTER_LINK	VARCHAR2(128)		Database link for the master site or the master materialized view site
REWRITE_ENABLED	VARCHAR2(1)		Indicates whether rewrite is enabled (Y) or not (N)

Column	Datatype	NULL	Description
REWRITE_CAPABILITY	VARCHAR2 (9)		<p>Indicates whether the materialized view is eligible for rewrite, and if so, what rules must be followed:</p> <ul style="list-style-type: none"> • NONE - Materialized view cannot be used for rewrite, because rewrite is disallowed or prevented • TEXTMATCH - Defining query of the materialized view contained restrictions on the use of query rewrite • GENERAL - Defining query of the materialized view contained no restrictions on the use of query rewrite, so Oracle Database can apply any rewrite rule that is supported
REFRESH_MODE	VARCHAR2 (6)		<p>Refresh mode of the materialized view:</p> <ul style="list-style-type: none"> • DEMAND - Oracle Database refreshes this materialized view whenever an appropriate refresh procedure is called • COMMIT - Oracle Database refreshes this materialized view when a transaction on one of the materialized view's masters commits • NEVER - Oracle Database never refreshes this materialized view
REFRESH_METHOD	VARCHAR2 (8)		<p>Default method used to refresh the materialized view (can be overridden through the API):</p> <ul style="list-style-type: none"> • COMPLETE - Materialized view is completely refreshed from the masters • FORCE - Oracle Database performs a fast refresh if possible, otherwise a complete refresh • FAST - Oracle Database performs an incremental refresh applying changes that correspond to changes in the masters since the last refresh • NEVER - User specified that Oracle Database should not refresh this materialized view
BUILD_MODE	VARCHAR2 (9)		<p>Indicates how the materialized view was populated during creation:</p> <ul style="list-style-type: none"> • IMMEDIATE - Populated from the masters during creation • DEFERRED - Not populated during creation. Must be explicitly populated later by the user. • PREBUILT - Populated with an existing table during creation. The relationship of the contents of this prebuilt table to the materialized view's masters is unknown to Oracle Database.
FAST_REFRESHABLE	VARCHAR2 (18)		<p>Indicates whether the materialized view is eligible for incremental (fast) refresh. Oracle Database calculates this value statically, based on the materialized view definition query:</p> <ul style="list-style-type: none"> • NO - Materialized view is not fast refreshable, and hence is complex • DML - Fast refresh is supported only for DML operations • DIRLOAD_DML - Fast refresh is supported for both direct loads and DML operations • DIRLOAD_LIMITEDDML - Fast refresh is supported for direct loads and a subset of DML operations

Column	Datatype	NULL	Description
LAST_REFRESH_TYPE	VARCHAR2(8)		<p>Method used for the most recent refresh:</p> <ul style="list-style-type: none"> COMPLETE - Most recent refresh was complete FAST - Most recent refresh was fast (incremental) NA - Materialized view has not yet been refreshed (for example, if it was created DEFERRED)
LAST_REFRESH_DATE	DATE		Date on which the materialized view was most recently refreshed (blank if not yet populated)
LAST_REFRESH_END_TIME	DATE		End time of the most recent refresh on the materialized view (blank if not yet populated)
STALENESS	VARCHAR2(19)		<p>Relationship between the contents of the materialized view and the contents of the materialized view's masters:</p> <ul style="list-style-type: none"> FRESH - Materialized view is a read-consistent view of the current state of its masters IMPORT - Materialized view is imported from another database (the value of the UNKNOWN_IMPORT column is Y). Therefore, it is unknown whether the materialized view is in a read-consistent view of its masters from any point in time. The STALENESS of this view will turn to FRESH on a complete refresh. NEEDS_COMPILE - Some object upon which the materialized view depends has changed. An ALTER MATERIALIZED VIEW...COMPILE statement is required to validate this materialized view and compute the staleness of the contents. STALE - Materialized view is out of date because one or more of its masters has changed. If the materialized view was FRESH before it became STALE, then it is a read-consistent view of a former state of its masters. UNDEFINED - Materialized view has remote masters. The concept of staleness is not defined for such materialized views. UNKNOWN - Oracle Database does not know whether the materialized view is in a read-consistent view of its masters from any point in time (this is the case for materialized views created on prebuilt tables) UNUSABLE - Materialized view is not a read-consistent view of its masters from any point in time
AFTER_FAST_REFRESH	VARCHAR2(19)		Specifies the staleness value that will occur if a fast refresh is applied to this materialized view. Its values are the same as for the STALENESS column, plus the value NA, which is used when fast refresh is not applicable to this materialized view.
UNKNOWN_PREBUILT	VARCHAR2(1)		Indicates whether the materialized view is prebuilt (Y) or not (N)
UNKNOWN_PLSQL_FUNC	VARCHAR2(1)		Indicates whether the materialized view contains PL/SQL functions (Y) or not (N)
UNKNOWN_EXTERNAL_TABLE	VARCHAR2(1)		Indicates whether the materialized view contains external tables (Y) or not (N)

Column	Datatype	NULL	Description
UNKNOWN_CONSIDER_FRESH	VARCHAR2(1)		Indicates whether the materialized view is considered fresh (Y) or not (N)
UNKNOWN_IMPORT	VARCHAR2(1)		Indicates whether the materialized view is imported (Y) or not (N)
UNKNOWN_TRUSTED_FD	VARCHAR2(1)		Indicates whether the materialized view uses trusted constraints for refresh (Y) or not (N)
COMPILE_STATE	VARCHAR2(19)		Validity of the materialized view with respect to the objects upon which it depends: <ul style="list-style-type: none"> • VALID - Materialized view has been validated without error, and no object upon which it depends has changed since the last validation • NEEDS_COMPILE - Some object upon which the materialized view depends has changed. An ALTER MATERIALIZED VIEW...COMPILE statement is required to validate this materialized view. • ERROR - Materialized view has been validated with one or more errors
USE_NO_INDEX	VARCHAR2(1)		Indicates whether the materialized view was created using the USING NO INDEX clause (Y) or the materialized view was created with the default index (N). The USING NO INDEX clause suppresses the creation of the default index.
STALE_SINCE	DATE		Time from when the materialized view became stale
NUM_PCT_TABLES	NUMBER		Number of PCT detail tables
NUM_FRESH_PCT_REGIONS	NUMBER		Number of fresh PCT partition regions
NUM_STALE_PCT_REGIONS	NUMBER		Number of stale PCT partition regions
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the materialized view was created using the SEGMENT CREATION DEFERRED clause. The value is YES if the segment for the materialized view is created and NO if it is not.
EVALUATION_EDITION	VARCHAR2(128)		Name of the edition in which editioned objects referenced in an expression column are resolved
UNUSABLE_BEFORE	VARCHAR2(128)		Name of the oldest edition in which the stored results of the materialized view's subquery may be used for query rewrite. In editions before the specified edition, the stored results of the materialized view's data are considered unusable. This value is NULL if no such edition is specified.
UNUSABLE_BEGINNING	VARCHAR2(128)		Name of the oldest edition in which the stored results of the materialized view's subquery may <i>not</i> be used for query rewrite. The data is unusable for query rewrite in the specified edition and in any descendants of this edition. This value is NULL if no such edition is specified.
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the materialized view
ON_QUERY_COMPUTATION	VARCHAR2(1)		Indicates whether the materialized view is a real-time materialized view (Y) or not (N)

2.279 ALL_NESTED_TABLE_COLS

`ALL_NESTED_TABLE_COLS` describes the columns of the nested tables accessible to the current user. To gather statistics for this view, use the `DBMS_STATS` package.

Related Views

- `DBA_NESTED_TABLE_COLS` describes the columns of all nested tables in the database.
- `USER_NESTED_TABLE_COLS` describes the columns of the nested tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the nested table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the nested table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
DATA_TYPE	VARCHAR2(128)		Data type of the column
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for <code>NUMBER</code> data type; binary precision for <code>FLOAT</code> data type; <code>NULL</code> for all other data types
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows <code>NULL</code> s. The value is <code>N</code> if there is a <code>NOT NULL</code> constraint on the column or if the column is part of a <code>PRIMARY KEY</code> .
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
NUM_DISTINCT	NUMBER		Number of distinct values in the column.
LOW_VALUE	RAW(1000)		This column remains for backward compatibility with Oracle7. This information is now in the <code>{TAB PART}_COL_STATISTICS</code> views. Low value in the column.
			This column remains for backward compatibility with Oracle7. This information is now in the <code>{TAB PART}_COL_STATISTICS</code> views.

Column	Datatype	NULL	Description
HIGH_VALUE	RAW(1000)		High value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT. This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in the histogram for the column Note: The number of buckets in a histogram is specified in the SIZE parameter of the SQL ANALYZE statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: <ul style="list-style-type: none">• CHAR_CS• NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following data types: <ul style="list-style-type: none">• CHAR• VARCHAR2• NCHAR• NVARCHAR2
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the data type is not any of the following (NULL): <ul style="list-style-type: none">• CHAR• VARCHAR2• NCHAR• NVARCHAR2

Column	Datatype	NULL	Description
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HIDDEN_COLUMN	VARCHAR2(3)		Indicates whether the column is a hidden column (YES) or not (NO)
VIRTUAL_COLUMN	VARCHAR2(3)		Indicates whether the column is a virtual column (YES) or not (NO)
SEGMENT_COLUMN_ID	NUMBER		Sequence number of the column in the segment
INTERNAL_COLUMN_ID	NUMBER	NOT NULL	Internal sequence number of the column
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: <ul style="list-style-type: none">• NONE• FREQUENCY• HEIGHT BALANCED
QUALIFIED_COL_NAME	VARCHAR2(4000)		Qualified column name

See Also:

- "[DBA_NESTED_TABLE_COLS](#)"

2.280 ALL_NESTED_TABLES

`ALL_NESTED_TABLES` describes the nested tables in tables accessible to the current user.

Related Views

- `DBA_NESTED_TABLES` describes all nested tables in the database.
- `USER_NESTED_TABLES` describes nested tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the nested table
TABLE_NAME	VARCHAR2(128)		Name of the nested table
TABLE_TYPE_OWNER	VARCHAR2(128)		Owner of the type of which the nested table was created
TABLE_TYPE_NAME	VARCHAR2(128)		Name of the type of the nested table
PARENT_TABLE_NAME	VARCHAR2(128)		Name of the parent table containing the nested table
PARENT_TABLE_COLUMN	VARCHAR2(4000)		Column name of the parent table that corresponds to the nested table

Column	Datatype	NULL	Description
STORAGE_SPEC	VARCHAR2(30)		Indicates whether storage for the nested table is USER_SPECIFIED or DEFAULT
RETURN_TYPE	VARCHAR2(20)		Return type of the varray column (LOCATOR) or (VALUE)
ELEMENT_SUBSTITUTABLE	VARCHAR2(25)		Indicates whether the nested table element is substitutable (Y) or not (N)

 See Also:

- ["DBA_NESTED_TABLES"](#)
- ["USER_NESTED_TABLES"](#)

2.281 ALL_OBJ_COLATTRS

ALL_OBJ_COLATTRS describes object columns and attributes contained in the tables accessible to the current user.

Related Views

- DBA_OBJ_COLATTRS describes object columns and attributes contained in all tables in the database.
- USER_OBJ_COLATTRS describes object columns and attributes contained in the tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table containing the object column or attribute
COLUMN_NAME	VARCHAR2(4000)		Fully qualified name of the object column or attribute
SUBSTITUTABLE	VARCHAR2(15)		Indicates whether the column is substitutable (Y) or not (N)

 See Also:

- ["DBA_OBJ_COLATTRS"](#)
- ["USER_OBJ_COLATTRS"](#)

2.282 ALL_OBJECT_TABLES

ALL_OBJECT_TABLES describes the object tables accessible to the current user.

Related Views

- DBA_OBJECT_TABLES describes all object tables in the database.
- USER_OBJECT_TABLES describes the object tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables
CLUSTER_NAME	VARCHAR2(128)		Name of the cluster, if any, to which the table belongs
IOT_NAME	VARCHAR2(128)		Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name.
STATUS	VARCHAR2(8)		If a previous <code>DROP TABLE</code> operation failed, indicates whether the table is unusable (<code>UNUSABLE</code>) or valid (<code>VALID</code>)
PCT_FREE	NUMBER		Minimum percentage of free space in a block; NULL for partitioned tables
PCT_USED	NUMBER		Minimum percentage of used space in a block; NULL for partitioned tables
INI_TRANS	NUMBER		Initial number of transactions; NULL for partitioned tables
MAX_TRANS	NUMBER		Maximum number of transactions; NULL for partitioned tables
INITIAL_EXTENT	NUMBER		Size of the initial extent (in bytes); NULL for partitioned tables
NEXT_EXTENT	NUMBER		Size of secondary extents (in bytes); NULL for partitioned tables
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment; NULL for partitioned tables
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment; NULL for partitioned tables
PCT_INCREASE	NUMBER		Percentage increase in extent size; NULL for partitioned tables
FREELISTS	NUMBER		Number of process freelists allocated to the segment; NULL for partitioned tables
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to the segment; NULL for partitioned tables
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the table are logged: <ul style="list-style-type: none"> YES NO

Column	Datatype	NULL	Description
BACKED_UP	VARCHAR2(1)		Indicates whether the table has been backed up since the last modification (Y) or not (N)
NUM_ROWS	NUMBER		Number of rows in the table
BLOCKS	NUMBER		Number of used blocks in the table
EMPTY_BLOCKS	NUMBER		Number of empty (never used) blocks in the table
AVG_SPACE	NUMBER		Average available free space in the table
CHAIN_CNT	NUMBER		Number of chained rows in the table
AVG_ROW_LEN	NUMBER		Average row length, including row overhead
AVG_SPACE_FREELIST_BLOCK_S	NUMBER		Average free space of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist
DEGREE	VARCHAR2(10)		Number of parallel execution processes per instance for scanning the table, or DEFAULT
INSTANCES	VARCHAR2(10)		Number of instances across which the table is to be scanned, or DEFAULT
CACHE	VARCHAR2(5)		Indicates whether the table is to be cached in the buffer cache (Y) or not (N)
TABLE_LOCK	VARCHAR2(8)		Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this table
LAST_ANALYZED	DATE		Date on which this table was most recently analyzed
PARTITIONED	VARCHAR2(3)		Indicates whether the table is partitioned (YES) or not (NO)
IOT_TYPE	VARCHAR2(12)		If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.
OBJECT_ID_TYPE	VARCHAR2(16)		Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED
TABLE_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the table
TABLE_TYPE	VARCHAR2(128)		Type of the table
TEMPORARY	VARCHAR2(1)		Indicates whether this is a temporary table (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether the object table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NESTED	VARCHAR2(3)		Indicates whether the table is a nested table (YES) or not (NO)
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for table blocks: <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL

Column	Datatype	NULL	Description
FLASH_CACHE	VARCHAR2(7)		<p>Database Smart Flash Cache hint to be used for table blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>Solaris and Oracle Linux functionality only.</p>
CELL_FLASH_CACHE	VARCHAR2(7)		<p>Cell flash cache hint to be used for table blocks:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>
ROW_MOVEMENT	VARCHAR2(8)		Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2(15)		<p>Indicates the duration of a temporary table:</p> <ul style="list-style-type: none"> • SYS\$SESSION - Rows are preserved for the duration of the session • SYS\$TRANSACTION - Rows are deleted after COMMIT • Null - Permanent table
SKIP_CORRUPT	VARCHAR2(8)		Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.
MONITORING	VARCHAR2(3)		Indicates whether the table has the MONITORING attribute set (YES) or not (NO)
CLUSTER_OWNER	VARCHAR2(128)		Owner of the cluster, if any, to which the table belongs
DEPENDENCIES	VARCHAR2(8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)
COMPRESSION	VARCHAR2(8)		Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables
COMPRESS_FOR	VARCHAR2(30)		<p>Default compression for what kind of operations:</p> <ul style="list-style-type: none"> • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL <p>The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database. See <i>Oracle Database Concepts</i> for more information.</p>

Column	Datatype	NULL	Description
DROPPED	VARCHAR2 (3)		Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables This view does not return the names of tables that have been dropped.
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the table segment has been created (YES) or not (NO)
INMEMORY	VARCHAR2 (8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this segment
INMEMORY_PRIORITY	VARCHAR2 (8)		Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none"> • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL
INMEMORY_DISTRIBUTE	VARCHAR2 (15)		This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NUL for ALL_TAB_PARTITIONS.
INMEMORY_COMPRESSION	VARCHAR2 (17)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
INMEMORY_DUPLICATE	VARCHAR2 (13)		Indicates the compression level for the IM column store: <ul style="list-style-type: none"> • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW HIGH] • FOR CAPACITY [LOW HIGH] • NULL
EXTERNAL	VARCHAR2 (3)		This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NUL for ALL_TAB_PARTITIONS.
			Indicates the duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none"> • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
			Indicates whether the table is an external table (YES) or not (NO).

Column	Datatype	NULL	Description
CELLMEMORY ¹	VARCHAR2 (24)		The value for columnar compression in the storage cell flash cache. Possible values: <ul style="list-style-type: none"> ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form DISABLED: Oracle Exadata Storage is prevented from caching in columnar form NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format
HYBRID ²	VARCHAR2 (3)		Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.
INMEMORY_SERVICE	VARCHAR2 (12)		Indicates how the IM column store is populated on various instances. The possible values are: <ul style="list-style-type: none"> DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. NONE: Data is not populated on any instance. ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2 (1000)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
MEMOPTIMIZE_READ	VARCHAR2 (8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2 (8)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2 (3)		Indicates whether the table has one or more sensitive columns (YES) or not (NO)
LOGICAL_REPLICATION ²	VARCHAR2 (8)		Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.

¹ This column is intended for use with Oracle Exadata.

² This column is available starting with Oracle Database 19c.

2.283 ALL_OBJECTS

`ALL_OBJECTS` describes all objects accessible to the current user.

Related Views

- `DBA_OBJECTS` describes all objects in the database.
- `USER_OBJECTS` describes all objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2 (128)	NOT NULL	Name of the object
SUBOBJECT_NAME	VARCHAR2 (128)		Name of the subobject (for example, partition)
OBJECT_ID	NUMBER	NOT NULL	Dictionary object number of the object
DATA_OBJECT_ID	NUMBER		Dictionary object number of the segment that contains the object. Note: <code>OBJECT_ID</code> and <code>DATA_OBJECT_ID</code> display data dictionary metadata. Do not confuse these numbers with the unique 16-byte object identifier (<i>object ID</i>) that Oracle Database assigns to row objects in object tables in the system.
OBJECT_TYPE	VARCHAR2 (23)		Type of the object (such as <code>TABLE</code> , <code>INDEX</code>)
CREATED	DATE	NOT NULL	Timestamp for the creation of the object
LAST_DDL_TIME	DATE	NOT NULL	Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)
TIMESTAMP	VARCHAR2 (19)		Timestamp for the specification of the object (character data)
STATUS	VARCHAR2 (7)		Status of the object: <ul style="list-style-type: none"> • VALID • INVALID • N/A
TEMPORARY	VARCHAR2 (1)		Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)
GENERATED	VARCHAR2 (1)		Indicates whether the name of this object was system-generated (Y) or not (N)

Column	Datatype	NULL	Description
SECONDARY	VARCHAR2 (1)		Indicates whether this is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NAMESPACE	NUMBER	NOT NULL	Namespace for the object
EDITION_NAME	VARCHAR2 (128)		Name of the edition in which the object is actual
SHARING	VARCHAR2 (18)		Values: <ul style="list-style-type: none">• DATA LINK - If the object is data-linked or a data link to an object in the root• METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root• EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root• NONE - If none of the above applies
EDITIONABLE	VARCHAR2 (1)		Values: <ul style="list-style-type: none">• Y - For objects marked EDITIONABLE• N - For objects marked NONEDITIONABLE• NULL - For objects whose type is not editable in the database
ORACLE_MAINTAINED	VARCHAR2 (1)		Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
APPLICATION	VARCHAR2 (1)		Indicates whether the object is an Application common object (Y) or not (N)
DEFAULT_COLLATION	VARCHAR2 (100)		Default collation for the object
DUPLICATED	VARCHAR2 (1)		Indicates whether this object is duplicated on this shard (Y) or not (N)
SHARDED	VARCHAR2 (1)		Indicates whether this object is sharded (Y) or not (N)
CREATED_APPID	NUMBER		ID of the Application that created the object
CREATED_VSNID	NUMBER		ID of the Application Version that created the object
MODIFIED_APPID	NUMBER		ID of the Application that last modified the object
MODIFIED_VSNID	NUMBER		ID of the Application Version that last modified the object

2.284 ALL_OBJECTS_AE

`ALL_OBJECTS_AE` describes the objects (across all editions) accessible to the current user.
Dropped objects appear in this view with `OBJECT_TYPE = NON-EXISTENT`.

Related Views

- `DBA_OBJECTS_AE` describes all objects (across all editions) in the database.
- `USER_OBJECTS_AE` describes the objects (across all editions) owned by the current user.
This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example, partition)
OBJECT_ID	NUMBER	NOT NULL	Dictionary object number of the object
DATA_OBJECT_ID	NUMBER		Dictionary object number of the segment which contains the object
OBJECT_TYPE	VARCHAR2(23)		Type of the object
CREATED	DATE	NOT NULL	Timestamp for the creation of the object
LAST_DDL_TIME	DATE	NOT NULL	Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)
TIMESTAMP	VARCHAR2(19)		Timestamp for the specification of the object (character data)
STATUS	VARCHAR2(7)		Status of the object: <ul style="list-style-type: none"> • VALID • INVALID • N/A
TEMPORARY	VARCHAR2(1)		Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)
GENERATED	VARCHAR2(1)		Indicates whether the name of this object was system-generated (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether this is a secondary object created by the <code>ODCIIndexCreate</code> method of the Oracle Data Cartridge (Y) or not (N)
NAMESPACE	NUMBER	NOT NULL	Namespace for the object
EDITION_NAME	VARCHAR2(128)		Name of the edition in which the object is actual
SHARING	VARCHAR2(18)		Values: <ul style="list-style-type: none"> • DATA LINK - If the object is data-linked or a data link to an object in the root • METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root • EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root • NONE - If none of the above applies

Column	Datatype	NULL	Description
EDITIONABLE	VARCHAR2 (1)		Values: <ul style="list-style-type: none">• Y - For objects marked EDITIONABLE• N - For objects marked NONEDITIONABLE• NULL - For objects whose type is not editable in the database
ORACLE_MAINTAINED	VARCHAR2 (1)		Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
APPLICATION	VARCHAR2 (1)		Indicates whether the object is an Application common object (Y) or not (N)
DEFAULT_COLLATION	VARCHAR2 (100)		Default collation for the object
DUPLICATED	VARCHAR2 (1)		Indicates whether this object is duplicated on this shard (Y) or not (N)
SHARDED	VARCHAR2 (1)		Indicates whether this object is sharded (Y) or not (N)
CREATED_APPID	NUMBER		ID of the Application that created the object
CREATED_VSNID	NUMBER		ID of the Application Version that created the object
MODIFIED_APPID	NUMBER		ID of the Application that last modified the object
MODIFIED_VSNID	NUMBER		ID of the Application Version that last modified the object

- "[DBA_OBJECTS_AE](#)"
- "[USER_OBJECTS_AE](#)"

2.285 ALL_OPANCILLARY

ALL_OPANCILLARY describes operators whose bindings are ancillary to other (primary) operators.

Related Views

- DBA_OPANCILLARY describes such information about all operators in the database.
- USER_OPANCILLARY describes such information about operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the ancillary operator
OPERATOR_NAME	VARCHAR2 (128)	NOT NULL	Name of the ancillary operator
BINDING#	NUMBER	NOT NULL	Binding number of the ancillary operator
PRIMOP_OWNER	VARCHAR2 (128)	NOT NULL	Owner of the primary operator
PRIMOP_NAME	VARCHAR2 (128)	NOT NULL	Name of the primary operator

Column	Datatype	NULL	Description
PRIMOP_BIND#	NUMBER	NOT NULL	Binding number of the primary operator

 **See Also:**

- "[DBA_OPANCILLARY](#)"
- "[USER_OPANCILLARY](#)"

2.286 ALL_OPARGUMENTS

ALL_OPARGUMENTS describes arguments for each operator binding accessible to the current user.

Related Views

- [DBA_OPARGUMENTS](#) describes arguments of all operator bindings in the database.
- [USER_OPARGUMENTS](#) describes arguments of all operator bindings owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the operator argument
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the operator argument
BINDING#	NUMBER	NOT NULL	Binding number of the operator argument
POSITION	NUMBER	NOT NULL	Position of the operator argument (1, 2, 3, ...)
ARGUMENT_TYPE	VARCHAR2(61)		Datatype of the operator argument

 **See Also:**

- "[DBA_OPARGUMENTS](#)"
- "[USER_OPARGUMENTS](#)"

2.287 ALL_OPBINDINGS

ALL_OPBINDINGS describes the binding functions and methods on the operators accessible to the current user.

Related Views

- [DBA_OPBINDINGS](#) describes the binding functions and methods on all operators in the database.
- [USER_OPBINDINGS](#) describes the binding functions and methods on the operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the operator
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the operator
BINDING#	NUMBER	NOT NULL	Binding number of the operator
FUNCTION_NAME	VARCHAR2(92)		Name of the binding function or method as specified by the user
RETURN_SCHEMA	VARCHAR2(128)		Name of the schema of the return type if the return type of the binding is an object type
RETURN_TYPE	VARCHAR2(128)		Name of the return type
IMPLEMENTATION_TYPE_SCHE MA	VARCHAR2(128)		If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the schema of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax). See Also: the CREATE OPERATOR statement in <i>Oracle Database SQL Language Reference</i>
IMPLEMENTATION_TYPE	VARCHAR2(128)		If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the name of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax). See Also: the CREATE OPERATOR statement in <i>Oracle Database SQL Language Reference</i>
PROPERTY	VARCHAR2(43)		Property of the operator binding: <ul style="list-style-type: none">• WITH INDEX CONTEXT• COMPUTE ANCILLARY DATA• ANCILLARY TO• WITH COLUMN CONTEXT• WITH INDEX, COLUMN CONTEXT• COMPUTE ANCILLARY DATA, WITH COLUMN CONTEXT

 **See Also:**

- "[DBA_OPBINDINGS](#)"
- "[USER_OPBINDINGS](#)"

2.288 ALL_OPERATOR_COMMENTS

ALL_OPERATOR_COMMENTS displays comments for the user-defined operators accessible to the current user.

Related Views

- `DBA_OPERATOR_COMMENTS` displays comments for all user-defined operators in the database.
- `USER_OPERATOR_COMMENTS` displays comments for the user-defined operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the user-defined operator
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the user-defined operator
COMMENTS	VARCHAR2(4000)		Comment for the user-defined operator

 **See Also:**

- "[DBA_OPERATOR_COMMENTS](#)"
- "[USER_OPERATOR_COMMENTS](#)"

2.289 ALL_OPERATORS

`ALL_OPERATORS` describes the operators accessible to the current user.

Related Views

- `DBA_OPERATORS` describes all operators in the database.
- `USER_OPERATORS` describes the operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the operator
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the operator
NUMBER_OF_BINDS	NUMBER	NOT NULL	Number of bindings associated with the operator

 **See Also:**

- "[DBA_OPERATORS](#)"
- "[USER_OPERATORS](#)"

2.290 ALL_OUTLINE_HINTS

`ALL_OUTLINE_HINTS` is a synonym for `USER_OUTLINE_HINTS`.

 **See Also:**

- "[USER_OUTLINE_HINTS](#)"

2.291 ALL_OUTLINES

ALL_OUTLINES is a synonym for USER_OUTLINES.

See Also:

"USER_OUTLINES"

Static Data Dictionary Views: ALL_PART_COL_STATISTICS to DATABASE_PROPERTIES

This chapter contains the static data dictionary views `ALL_PART_COL_STATISTICS` through `DATABASE_PROPERTIES`.

3.1 ALL_PART_COL_STATISTICS

`ALL_PART_COL_STATISTICS` displays column statistics and histogram information for the table partitions accessible to the current user.

Related Views

- `DBA_PART_COL_STATISTICS` displays column statistics and histogram information for all table partitions in the database.
- `USER_PART_COL_STATISTICS` displays column statistics and histogram information for the table partitions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the table partition
COLUMN_NAME	VARCHAR2(4000)		Name of the column
NUM_DISTINCT	NUMBER		Number of distinct values in the column
LOW_VALUE	RAW(2000)		Low value in the column
HIGH_VALUE	RAW(2000)		High value in the column
DENSITY	NUMBER		If a histogram is available on <code>COLUMN_NAME</code> , then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on <code>COLUMN_NAME</code> , then the value of this column is <code>1/NUM_DISTINCT</code> .
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in histogram for the column
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the column
LAST_ANALYZED	DATE		Date on which the column was most recently analyzed
GLOBAL_STATS	VARCHAR2(3)		<code>GLOBAL_STATS</code> will be YES if statistics have been gathered or NO if statistics have been aggregated from subpartitions or have not been gathered

Column	Datatype	NULL	Description
USER_STATS	VARCHAR2 (3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
NOTES	VARCHAR2 (81)		Additional properties of the statistics, if any. Possible values: <ul style="list-style-type: none"> ADAPTIVE_SAMPLING: The column has synopses, and the synopses are in the adaptive sampling format introduced in Oracle Database 11g Release 1 (11.1). HIST_FOR_INCREM_STATS: A histogram used to support incremental statistics has been created and it is not used for optimization. HISTOGRAM_ONLY: Table statistics were gathered using the GATHER AUTO option and histograms were gathered without re-gathering other table and column statistics. HYPERLOGLOG: The column has synopses, and the synopses are in the HyperLogLog format introduced in Oracle Database 12c Release 2 (12.2.0.1). INCREMENTAL: The column has synopses. STATS_ON_LOAD: Online statistics were gathered during direct path load. This column can be used to determine whether synopses in the adaptive sampling format have been phased out entirely and purged properly.
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
HISTOGRAM	VARCHAR2 (15)		Indicates existence/type of histogram: <ul style="list-style-type: none"> NONE FREQUENCY HEIGHT BALANCED HYBRID TOP-FREQUENCY

See Also:

- "DBA_PART_COL_STATISTICS"
- "USER_PART_COL_STATISTICS"

3.2 ALL_PART_HISTOGRAMS

ALL_PART_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on the table partitions accessible to the current user.

Related Views

- DBA_PART_HISTOGRAMS displays the histogram data for the histograms on all table partitions in the database.

- `USER_PART_HISTOGRAMS` displays the histogram data for the histograms on the table partitions owned by the current user. This view does not display the `OWNER` column.

 **Note:**

These views are populated only if you collect statistics on the index using the `DBMS_STATS` package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the table
TABLE_NAME	VARCHAR2 (128)		Name of the table
PARTITION_NAME	VARCHAR2 (128)		Name of the table partition
COLUMN_NAME	VARCHAR2 (4000)		Name of the column
BUCKET_NUMBER	NUMBER		Bucket number of the histogram
ENDPOINT_VALUE	NUMBER		Normalized endpoint values for the bucket
ENDPOINT_ACTUAL_VALUE	VARCHAR2 (4000)		Actual (not normalized) string value of the endpoint for the bucket
ENDPOINT_ACTUAL_VALUE_RAW	RAW (1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)

 **See Also:**

- ["DBA_PART_HISTOGRAMS"](#)
- ["USER_PART_HISTOGRAMS"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_STATS` package

3.3 ALL_PART_INDEXES

`ALL_PART_INDEXES` displays the object-level partitioning information for the partitioned indexes accessible to the current user.

Related Views

- `DBA_PART_INDEXES` displays the object-level partitioning information for all partitioned indexes in the database.
- `USER_PART_INDEXES` displays the object-level partitioning information for the partitioned indexes owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the partitioned index

Column	Datatype	NULL	Description
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned index
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned table
PARTITIONING_TYPE	VARCHAR2(9)		Type of the partitioning method: <ul style="list-style-type: none"> • NONE - Not specified See Also: the *_INDEXES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
SUBPARTITIONING_TYPE	VARCHAR2(9)		Type of the composite partitioning method: <ul style="list-style-type: none"> • NONE - Not specified See Also: the *_INDEXES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
PARTITION_COUNT	NUMBER	NOT NULL	Number of partitions in the index
DEF_SUBPARTITION_COUNT	NUMBER		For a composite-partitioned index, the default number of subpartitions, if specified
PARTITIONING_KEY_COUNT	NUMBER	NOT NULL	Number of columns in the partitioning key
SUBPARTITIONING_KEY_COUN T	NUMBER		For a composite-partitioned index, the number of columns in the subpartitioning key
LOCALITY	VARCHAR2(6)		Indicates whether the partitioned index is local (<code>LOCAL</code>) or global (<code>GLOBAL</code>)
ALIGNMENT	VARCHAR2(12)		Indicates whether the partitioned index is prefixed (<code>PREFIXED</code>) or non-prefixed (<code>NON_PREFIXED</code>)
DEF_TABLESPACE_NAME	VARCHAR2(30)		For a local index, the default tablespace to be used when adding or splitting a table partition
DEF_PCT_FREE	NUMBER	NOT NULL	For a local index, the default <code>PCTFREE</code> value to be used when adding a table partition
DEF_INI_TRANS	NUMBER	NOT NULL	For a local index, the default <code>INITRANS</code> value to be used when adding a table partition
DEF_MAX_TRANS	NUMBER	NOT NULL	For a local index, the default <code>MAXTRANS</code> value to be used when adding a table partition
DEF_INITIAL_EXTENT	VARCHAR2(40)		For a local index, the default <code>INITIAL</code> value (in Oracle blocks) to be used when adding a table partition, or <code>DEFAULT</code> if no <code>INITIAL</code> value was specified
DEF_NEXT_EXTENT	VARCHAR2(40)		For a local index, the default <code>NEXT</code> value (in Oracle blocks) to be used when adding a table partition, or <code>DEFAULT</code> if no <code>NEXT</code> value was specified
DEF_MIN_EXTENTS	VARCHAR2(40)		For a local index, the default <code>MINEXTENTS</code> value to be used when adding a table partition, or <code>DEFAULT</code> if no <code>MINEXTENTS</code> value was specified
DEF_MAX_EXTENTS	VARCHAR2(40)		For a local index, the default <code>MAXEXTENTS</code> value to be used when adding a table partition, or <code>DEFAULT</code> if no <code>MAXEXTENTS</code> value was specified

Column	Datatype	NULL	Description
DEF_MAX_SIZE	VARCHAR2(40)		For a local index, the default MAXSIZE value to be used when adding a table partition, or DEFAULT if no MAXSIZE value was specified
DEF_PCT_INCREASE	VARCHAR2(40)		For a local index, the default PCTINCREASE value to be used when adding a table partition, or DEFAULT if no PCTINCREASE value was specified
DEF_FREELISTS	NUMBER	NOT NULL	For a local index, the default FREELISTS value to be used when adding a table partition
DEF_FREELIST_GROUPS	NUMBER	NOT NULL	For a local index, the default FREELIST GROUPS value to be used when adding a table partition
DEF_LOGGING	VARCHAR2(7)		For a local index, the default LOGGING attribute to be used when adding a table partition: <ul style="list-style-type: none"> • NONE - Not specified • See Also: the *_INDEXES view • YES • NO
DEF_BUFFER_POOL	VARCHAR2(7)		For a local index, the default buffer pool to be used when adding a table partition: <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL
DEF_FLASH_CACHE	VARCHAR2(7)		For a local index, the default Database Smart Flash Cache hint to be used when adding a table partition: <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE
DEF_CELL_FLASH_CACHE	VARCHAR2(7)		Solaris and Oracle Linux functionality only.
DEF_PARAMETERS	VARCHAR2(1000)		For a local index, the default cell flash cache hint to be used when adding a table partition: <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE
INTERVAL	VARCHAR2(1000)		See Also: Oracle Exadata Storage Server Software documentation for more information
AUTOLIST	VARCHAR2(3)		Default parameter string for domain indexes
INTERVAL_SUBPARTITION	VARCHAR2(1000)		String of the interval value
AUTOLIST_SUBPARTITION	VARCHAR2(3)		Indicates whether a local index is partitioned by auto list partitioning (YES) or not (NO)
			Indicates whether a local index is subpartitioned by auto list partitioning (YES) or not (NO)

 See Also:

- "[DBA_PART_INDEXES](#)"
- "[USER_PART_INDEXES](#)"

3.4 ALL_PART_KEY_COLUMNS

`ALL_PART_KEY_COLUMNS` describes the partitioning key columns for the partitioned objects accessible to the current user.

Related Views

- `DBA_PART_KEY_COLUMNS` describes the partitioning key columns for all partitioned objects in the database.
- `USER_PART_KEY_COLUMNS` describes the partitioning key columns for the partitioned objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the partitioned table or index
NAME	VARCHAR2(128)		Name of the partitioned table or index
OBJECT_TYPE	CHAR(5)		Object type: <ul style="list-style-type: none"> • TABLE • INDEX
COLUMN_NAME	VARCHAR2(4000)		Name of the column
COLUMN_POSITION	NUMBER		Position of the column within the partitioning key
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of the column for which this column provides linguistic ordering

 See Also:

- "[DBA_PART_KEY_COLUMNS](#)"
- "[USER_PART_KEY_COLUMNS](#)"

3.5 ALL_PART_LOBS

`ALL_PART_LOBS` displays table-level information about the partitioned LOBs accessible to the current user, including default attributes for LOB data partitions.

Related Views

- `DBA_PART_LOBS` displays table-level information about all partitioned LOBs in the database.
- `USER_PART_LOBS` displays table-level information about the partitioned LOBs owned by the current user. This view does not display the `TABLE_OWNER` column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned table containing the LOBs
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned table containing the LOBs
COLUMN_NAME	VARCHAR2(4000)		Name of the LOB column
LOB_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned LOB
LOB_INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned LOB index
DEF_CHUNK	NUMBER	NOT NULL	Default value of CHUNK for a LOB data partition to be used when adding a partition
DEF_PCTVERSION	NUMBER	NOT NULL	Default value of PCTVERSION for a LOB data partition to be used when adding a partition
DEF_CACHE	VARCHAR2(10)		Indicates whether and how the LOB data is cached by default in the buffer cache: <ul style="list-style-type: none"> • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations
DEF_IN_ROW	VARCHAR2(3)		Indicates whether LOB data < 4000 bytes is stored by default inline (in the row) (YES) or not (NO); that is, whether or not ENABLE STORAGE IN ROW was specified when the LOB column was created or last altered
DEF_TABLESPACE_NAME	VARCHAR2(30)		Default tablespace for a LOB data partition to be used when adding a partition
DEF_INITIAL_EXTENT	VARCHAR2(40)		Default value of INITIAL for a LOB data partition to be used when adding a partition, or DEFAULT if no INITIAL value was specified
DEF_NEXT_EXTENT	VARCHAR2(40)		Default value of NEXT for a LOB data partition to be used when adding a partition, or DEFAULT if no NEXT value was specified
DEF_MIN_EXTENTS	VARCHAR2(40)		Default value of MINEXTENTS for a LOB data partition to be used when adding a partition, or DEFAULT if no MINEXTENTS value was specified
DEF_MAX_EXTENTS	VARCHAR2(40)		Default value of MAXEXTENTS for a LOB data partition to be used when adding a partition, or DEFAULT if no MAXEXTENTS value was specified
DEF_MAX_SIZE	VARCHAR2(40)		Default value of MAXSIZE for a LOB data partition to be used when adding a partition, or DEFAULT if no MAXSIZE value was specified

Column	Datatype	NULL	Description
DEF_RETENTION	VARCHAR2(7)		<p>Default value of RETENTION for a LOB data partition to be used when adding a partition.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> • NONE • AUTO • MIN • MAX • DEFAULT • INVALID <p>Possible values for BasicFiles:</p> <ul style="list-style-type: none"> • YES • NO
DEF_MINRET	VARCHAR2(40)		<p>Default value of RETENTION MIN for a LOB data partition to be used when adding a partition, or DEFAULT if no RETENTION MIN value was specified</p>
DEF_PCT_INCREASE	VARCHAR2(40)		<p>Default value of PCTINCREASE for a LOB data partition to be used when adding a partition, or DEFAULT if no PCTINCREASE value was specified</p>
DEF_FREELISTS	VARCHAR2(40)		<p>Default value of FREELISTS for a LOB data partition to be used when adding a partition, or DEFAULT if no FREELISTS value was specified</p>
DEF_FREELIST_GROUPS	VARCHAR2(40)		<p>Default value of FREELIST GROUPS for a LOB data partition to be used when adding a partition, or DEFAULT if no FREELIST GROUPS value was specified</p>
DEF_LOGGING	VARCHAR2(7)		<p>Default LOGGING attribute for a LOB data partition to be used when adding a partition:</p> <ul style="list-style-type: none"> • NONE - Not specified <p>See Also: the *_LOBS and *_LOB_PARTITIONS views</p> <ul style="list-style-type: none"> • YES • NO
DEF_BUFFER_POOL	VARCHAR2(7)		<p>Default buffer pool for a LOB data partition to be used when adding a partition:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL
DEF_FLASH_CACHE	VARCHAR2(7)		<p>Default Database Smart Flash Cache hint to be used when adding a partition:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>Solaris and Oracle Linux functionality only.</p>
DEF_CELL_FLASH_CACHE	VARCHAR2(7)		<p>Default cell flash cache hint to be used when adding a partition:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>

Column	Datatype	NULL	Description
DEF_ENCRYPT	VARCHAR2 (4)		<p>Default value of ENCRYPT for a LOB data partition to be used when adding a partition.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> YES NO <p>Possible value for BasicFiles:</p> <ul style="list-style-type: none"> NONE - Not applicable
DEF_COMPRESS	VARCHAR2 (6)		<p>Default value of COMPRESS for a LOB data partition to be used when adding a partition.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> LOW MEDIUM HIGH NO - Compression is off <p>Possible value for BasicFiles:</p> <ul style="list-style-type: none"> NONE - Not applicable
DEF_DEDUPLICATE	VARCHAR2 (15)		<p>Default value of DEDUPLICATE for a LOB data partition to be used when adding a partition.</p> <p>Possible values for SecureFiles:</p> <ul style="list-style-type: none"> LOB - Deduplicate NO - Keep duplicates <p>Possible values for BasicFiles:</p> <ul style="list-style-type: none"> NONE - Not applicable
DEF_SECUREFILE	VARCHAR2 (3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)

- "DBA_PART_LOBS"
- "USER_PART_LOBS"

3.6 ALL_PART_TABLES

ALL_PART_TABLES displays the object-level partitioning information for the partitioned tables accessible to the current user.

Related Views

- DBA_PART_TABLES displays the object-level partitioning information for all partitioned tables in the database.
- USER_PART_TABLES displays the object-level partitioning information for the partitioned tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the partitioned table

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the partitioned table
PARTITIONING_TYPE	VARCHAR2(9)		Type of the partitioning method: <ul style="list-style-type: none"> • UNKNOWN - Not specified See Also: the *_TABLES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
SUBPARTITIONING_TYPE	VARCHAR2(9)		Type of the composite partitioning method: <ul style="list-style-type: none"> • NONE - Not subpartitioned See Also: the *_TABLES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
PARTITION_COUNT	NUMBER		Number of partitions in the table. For interval partitioned tables, the value of this column is always 1048575.
DEF_SUBPARTITION_COUNT	NUMBER		For a composite-partitioned table, the default number of subpartitions, if specified
PARTITIONING_KEY_COUNT	NUMBER		Number of columns in the partitioning key
SUBPARTITIONING_KEY_COUN T	NUMBER		For a composite-partitioned table, the number of columns in the subpartitioning key
STATUS	VARCHAR2(8)		If a previous <code>DROP TABLE</code> operation failed, indicates whether the table is unusable (<code>UNUSABLE</code>) or valid (<code>VALID</code>)
DEF_TABLESPACE_NAME	VARCHAR2(30)		Default tablespace to be used when adding a partition
DEF_PCT_FREE	NUMBER		Default value of <code>PCTFREE</code> to be used when adding a partition
DEF_PCT_USED	NUMBER		Default value of <code>PCUSED</code> to be used when adding a partition
DEF_INI_TRANS	NUMBER		Default value of <code>INITTRANS</code> to be used when adding a partition
DEF_MAX_TRANS	NUMBER		Default value of <code>MAXTRANS</code> to be used when adding a partition
DEF_INITIAL_EXTENT	VARCHAR2(40)		Default value of <code>INITIAL</code> (in Oracle blocks) to be used when adding a partition, or <code>DEFAULT</code> if no <code>INITIAL</code> value was specified
DEF_NEXT_EXTENT	VARCHAR2(40)		Default value of <code>NEXT</code> (in Oracle blocks) to be used when adding a partition, or <code>DEFAULT</code> if no <code>NEXT</code> value was specified
DEF_MIN_EXTENTS	VARCHAR2(40)		Default value of <code>MINEXTENTS</code> to be used when adding a partition, or <code>DEFAULT</code> if no <code>MINEXTENTS</code> value was specified

Column	Datatype	NULL	Description
DEF_MAX_EXTENTS	VARCHAR2 (40)		Default value of MAXEXTENTS to be used when adding a partition, or DEFAULT if no MAXEXTENTS value was specified
DEF_MAX_SIZE	VARCHAR2 (40)		Default value of MAXSIZE to be used when adding a partition, or DEFAULT if no MAXSIZE value was specified
DEF_PCT_INCREASE	VARCHAR2 (40)		Default value of PCTINCREASE to be used when adding a partition, or DEFAULT if no PCTINCREASE value was specified
DEF_FREELISTS	NUMBER		Default value of FREELISTS to be used when adding a partition
DEF_FREELIST_GROUPS	NUMBER		Default value of FREELIST GROUPS to be used when adding a partition
DEF_LOGGING	VARCHAR2 (7)		Default LOGGING attribute to be used when adding a partition: <ul style="list-style-type: none"> • NONE - Not specified See Also: the *_TABLES view • YES • NO
DEF_COMPRESSION	VARCHAR2 (8)		Default compression to be used when adding a partition: <ul style="list-style-type: none"> • NONE - Not specified See Also: the *_TABLES view • ENABLED • DISABLED
DEF_COMPRESS_FOR	VARCHAR2 (30)		Default compression for what kind of operations to be used when adding a partition: <ul style="list-style-type: none"> • BASIC • ADVANCED • QUERY LOW¹ • QUERY HIGH¹ • ARCHIVE LOW¹ • ARCHIVE HIGH¹ • UNKNOWN • NULL
DEF_BUFFER_POOL	VARCHAR2 (7)		Default buffer pool to be used when adding a partition: <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL
DEF_FLASH_CACHE	VARCHAR2 (7)		Default Database Smart Flash Cache hint to be used when adding a partition: <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE
			Solaris and Oracle Linux functionality only.

Column	Datatype	NULL	Description
DEF_CELL_FLASH_CACHE	VARCHAR2 (7)		<p>Default cell flash cache hint to be used when adding a partition:</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>
REF_PTN_CONSTRAINT_NAME	VARCHAR2 (128)		Name of the partitioning referential constraint for reference-partitioned tables
INTERVAL	VARCHAR2 (1000)		String of the interval value
AUTOLIST	VARCHAR2 (3)		Indicates whether a table is partitioned by auto list partitioning (YES) or not (NO)
INTERVAL_SUBPARTITION	VARCHAR2 (1000)		String of the subpartition interval value
AUTOLIST_SUBPARTITION	VARCHAR2 (3)		Indicates whether auto list partitioning is being used (YES) or not (NO) for this subpartition
IS_NESTED	VARCHAR2 (3)		Indicates whether the partitioned table is a nested table (YES) or not (NO)
DEF_SEGMENT_CREATION	VARCHAR2 (4)		<p>Specifies whether the default for segment creation was specified on the table level:</p> <ul style="list-style-type: none"> • NO - deferred was specified • YES - immediate was specified • NONE - a default for segment creation was not specified
DEF_INDEXING	VARCHAR2 (3)		<p>Indicates the indexing property specified for the table.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • ON - INDEXING on was specified explicitly, or no indexing property was specified • OFF - INDEXING off was specified.
DEF_INMEMORY	VARCHAR2 (8)		Indicates whether the In-Memory Column Store (IM column store) is by default enabled (ENABLED), disabled (DISABLED), or not specified (NONE) for partitions in this table
DEF_INMEMORY_PRIORITY	VARCHAR2 (8)		<p>Indicates the default priority for In-Memory Column Store (IM column store) population. Possible values:</p> <ul style="list-style-type: none"> • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL
DEF_INMEMORY_DISTRIBUTE	VARCHAR2 (15)		<p>Indicates how the IM column store is distributed by default for partitions of the table in an Oracle Real Application Clusters (Oracle RAC) environment:</p> <ul style="list-style-type: none"> • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION

Column	Datatype	NULL	Description
DEF_INMEMORY_COMPRESSION	VARCHAR2(17)		<p>Default compression level for the IM column store:</p> <ul style="list-style-type: none"> • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW HIGH] • FOR CAPACITY [LOW HIGH] • NULL
DEF_INMEMORY_DUPLICATE	VARCHAR2(13)		<p>Indicates the default duplicate setting for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"> • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
DEF_READ_ONLY	VARCHAR2(3)		<p>Indicates the default setting for new partitions:</p> <ul style="list-style-type: none"> • YES: The default setting for new partitions is read-only. • NO: The default setting for new partitions is read/write.
DEF_CELLMEMORY ²	VARCHAR2(24)		<p>Shows the default value for the CELLMEMORY attribute that new partitions in the parent table will inherit unless the behavior is overridden explicitly</p>
DEF_INMEMORY_SERVICE	VARCHAR2(12)		<p>Indicates how the IM column store is populated on various instances by default for partitions of the table. The possible values are:</p> <ul style="list-style-type: none"> • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the DEF_INMEMORY_SERVICE_NAME column.
DEF_INMEMORY_SERVICE_NAM	VARCHAR2(1000) E		<p>Specifies the service name for the service on which the IM column store should be populated by default for partitions of the table. This column has a value only when the corresponding DEF_INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.</p>

¹ Hybrid Columnar Compression is a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See *Oracle Database Concepts* for more information.

² This column is intended for use with Oracle Exadata

3.7 ALL_PARTIAL_DROP_TABS

`ALL_PARTIAL_DROP_TABS` describes tables accessible to the current user that have partially completed `DROP COLUMN` operations. Such operations might have been interrupted by the user or by a system crash.

Related Views

- `DBA_PARTIAL_DROP_TABS` describes all tables in the database that have partially completed `DROP COLUMN` operations.
- `USER_PARTIAL_DROP_TABS` describes tables in the schema of the current user that have partially completed `DROP COLUMN` operations. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the object
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table

 See Also:

- "[DBA_PARTIAL_DROP_TABS](#)"
- "[USER_PARTIAL_DROP_TABS](#)"

3.8 ALL_PENDING_CONV_TABLES

`ALL_PENDING_CONV_TABLES` describes the pending conversion tables (tables which are not upgraded to the latest type version) accessible to the current user.

Related Views

- `DBA_PENDING_CONV_TABLES` describes all pending conversion tables in the database.
- `USER_PENDING_CONV_TABLES` describes the pending conversion tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table

 See Also:

- "[DBA_PENDING_CONV_TABLES](#)"
- "[USER_PENDING_CONV_TABLES](#)"

3.9 ALL_PLSQL_COLL_TYPES

`ALL_PLSQL_COLL_TYPES` describes named PL/SQL collection types accessible to the user.

Related Views

- `DBA_PLSQL_COLL_TYPES` describes all named PL/SQL collection types in the database. This view does not display the `CHAR_USED` column.
- `USER_PLSQL_COLL_TYPES` describes the user's own named PL/SQL collection types. This view does not display the `OWNER` or `CHAR_USED` columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)		Name of the type
PACKAGE_NAME	VARCHAR2(128)		Name of the package containing the collection
COLL_TYPE	VARCHAR2(128)		Collection type
UPPER_BOUND	NUMBER		The upper bound of a varray or length constraint of an index by VARCHAR2 table
ELEM_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the element
ELEM_TYPE_NAME	VARCHAR2(136)		Name of the type of the element
ELEM_TYPE_PACKAGE	VARCHAR2(128)		Name of the package containing the element
LENGTH	NUMBER		Length of the CHAR element or maximum length of the VARCHAR or VARCHAR2 element
PRECISION	NUMBER		Decimal precision of the NUMBER or DECIMAL element or binary precision of the FLOAT element
SCALE	NUMBER		Scale of the NUMBER or DECIMAL element
CHARACTER_SET_NAME	VARCHAR2(44)		Character set name of the element
ELEM_STORAGE	VARCHAR2(7)		Storage optimization specification for VARRAY of numeric elements
NULLS_STORED	VARCHAR2(3)		Indicates whether null information is stored with each VARRAY element (YES) or not (NO)
CHAR_USED	VARCHAR2(1)		C if the width was specified in characters, B if in bytes
INDEX_BY	VARCHAR2(14)		Index by BINARY_INTEGER or VARCHAR2
ELEM_TYPE_MOD	VARCHAR2(7)		Type modifier of the element

 See Also:

- "[DBA_PLSQL_COLL_TYPES](#)"
- "[USER_PLSQL_COLL_TYPES](#)"

3.10 ALL_PLSQL_OBJECT_SETTINGS

`ALL_PLSQL_OBJECT_SETTINGS` displays information about the compiler settings for the stored objects accessible to the current user.

Related Views

- `DBA_PLSQL_OBJECT_SETTINGS` displays information about the compiler settings for all stored objects in the database.
- `USER_PLSQL_OBJECT_SETTINGS` displays information about the compiler settings for the stored objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(12)		Type of the object: <ul style="list-style-type: none"> • PROCEDURE • FUNCTION • PACKAGE • PACKAGE BODY • TRIGGER • TYPE • TYPE BODY
PLSQL_OPTIMIZE_LEVEL	NUMBER		Optimization level that was used to compile the object
PLSQL_CODE_TYPE	VARCHAR2(4000)		Compilation mode for the object
PLSQL_DEBUG	VARCHAR2(4000)		Indicates whether the object was compiled with debug information or not
PLSQL_WARNINGS	VARCHAR2(4000)		Compiler warning settings that were used to compile the object
NLS_LENGTH_SEMANTICS	VARCHAR2(4000)		NLS length semantics that were used to compile the object
PLSQL_CCFLAGS	VARCHAR2(4000)		Conditional compilation flag settings that were used to compile the object
PLSCOPE_SETTINGS	VARCHAR2(4000)		Settings for using PL/Scope
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)

 See Also:

- "[DBA_PLSQL_OBJECT_SETTINGS](#)"
- "[USER_PLSQL_OBJECT_SETTINGS](#)"

3.11 ALL_PLSQL_TYPE_ATTRS

`ALL_PLSQL_TYPE_ATTRS` describes the attributes of PL/SQL types accessible to the user.

Related Views

- `DBA_PLSQL_TYPE_ATTRS` describes the attributes of all PL/SQL types in the database.
- `USER_PLSQL_TYPE_ATTRS` describes the attributes of the user's own PL/SQL types. This view does not display the `OWNER` or `CHAR_USED` columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(136)		Name of the type
PACKAGE_NAME	VARCHAR2(128)		Name of the package containing the type
ATTR_NAME	VARCHAR2(128)		Name of the attribute
ATTR_TYPE_MOD	VARCHAR2(7)		Type modifier of the attribute
ATTR_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the attribute
ATTR_TYPE_NAME	VARCHAR2(136)		Name of the type of the attribute
ATTR_TYPE_PACKAGE	VARCHAR2(128)		Name of the package containing the attribute type
LENGTH	NUMBER		Length of the <code>CHAR</code> attribute or maximum length of the <code>VARCHAR</code> or <code>VARCHAR2</code> attribute
PRECISION	NUMBER		Decimal precision of the <code>NUMBER</code> or <code>DECIMAL</code> attribute or binary precision of the <code>FLOAT</code> attribute
SCALE	NUMBER		Scale of the <code>NUMBER</code> or <code>DECIMAL</code> attribute
CHARACTER_SET_NAME	VARCHAR2(44)		Character set name of the attribute
ATTR_NO	NUMBER		Syntactical order number or position of the attribute as specified in the type specification or <code>CREATE TYPE</code> statement (not to be used as ID number)
CHAR_USED	VARCHAR2(1)		C if the width was specified in characters, B if in bytes

 See Also:

- "[DBA_PLSQL_TYPE_ATTRS](#)"
- "[USER_PLSQL_TYPE_ATTRS](#)"

3.12 ALL_PLSQL_TYPES

ALL_PLSQL_TYPES describes the PL/SQL types accessible to the user.

Related Views

- DBA_PLSQL_TYPES describes all the PL/SQL types in the database.
- USER_PLSQL_TYPES describes the user's own PL/SQL types. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(136)		Name of the type
PACKAGE_NAME	VARCHAR2(128)	NOT NULL	Name of the package containing the type
TYPE_OID	RAW(16)	NOT NULL	Object identifier (OID) of the type
TYPECODE	VARCHAR2(58)		Typecode of the type
ATTRIBUTES	NUMBER		Number of attributes in the type
CONTAINS_PLSQL	VARCHAR2(3)		Indicates whether the type contains PL/SQL-specific data types (YES) or not (NO)

See Also:

- "[DBA_PLSQL_TYPES](#)"
- "[USER_PLSQL_TYPES](#)"

3.13 ALL_POLICIES

ALL_POLICIES describes all Oracle Virtual Private Database (VPD) security policies for objects accessible to the current user. A security policy is a list of security requirements and rules that regulate row level access to those database objects.

Related Views

- DBA_POLICIES describes all Oracle Virtual Private Database (VPD) security policies in the database.
- USER_POLICIES describes all Oracle Virtual Private Database (VPD) security policies associated with objects owned by the current user. This view does not display the OBJECT_OWNER column.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2(128)		Name of the synonym, table, or view
POLICY_GROUP	VARCHAR2(128)		Name of the policy group
POLICY_NAME	VARCHAR2(128)		Name of the policy

Column	Datatype	NULL	Description
PF_OWNER	VARCHAR2(128)		Owner of the policy function
PACKAGE	VARCHAR2(128)		Name of the package containing the policy function
FUNCTION	VARCHAR2(128)		Name of the policy function
SEL	VARCHAR2(3)		Indicates whether the policy is applied to queries on the object (YES) or not (NO)
INS	VARCHAR2(3)		Indicates whether the policy is applied to INSERT statements on the object (YES) or not (NO)
UPD	VARCHAR2(3)		Indicates whether the policy is applied to UPDATE statements on the object (YES) or not (NO)
DEL	VARCHAR2(3)		Indicates whether the policy is applied to DELETE statements on the object (YES) or not (NO)
IDX	VARCHAR2(3)		Indicates whether the policy is enforced for index maintenance on the object (YES) or not (NO)
CHK_OPTION	VARCHAR2(3)		Indicates whether the check option is enforced for the policy (YES) or not (NO)
ENABLE	VARCHAR2(3)		Indicates whether the policy is enabled (YES) or disabled (NO)
STATIC_POLICY	VARCHAR2(3)		Indicates whether the policy is static (YES) or not (NO). This column is obsolete because information about static policies is shown in the POLICY_TYPE column.
POLICY_TYPE	VARCHAR2(24)		<p>Policy type:</p> <ul style="list-style-type: none"> • STATIC • SHARED_STATIC • CONTEXT_SENSITIVE • SHARED_CONTEXT_SENSITIVE • DYNAMIC
LONG_PREDICATE	VARCHAR2(3)		Indicates whether the policy function can return a maximum of 32 KB of predicate (YES) or not (NO). If NO, the default maximum predicate size is 4000 bytes.
COMMON	VARCHAR2(3)		Indicates whether the policy is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy is inherited from the root (YES) or not (NO)

See Also:

- "[DBA_POLICIES](#)"
- "[USER_POLICIES](#)"
- *Oracle Database Concepts* for an overview of security policies and fine-grained access control
- *Oracle Database Security Guide* for more information about security policies
- The DBMS_RLS package in *Oracle Database PL/SQL Packages and Types Reference* for information on administering security policies

3.14 ALL_POLICY_ATTRIBUTES

`ALL_POLICY_ATTRIBUTES` lists the attribute associations {Namespaces, Attributes} of context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies for objects accessible to the current user.

Related Views

- `DBA_POLICY_ATTRIBUTES` lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies in the database.
- `USER_POLICY_ATTRIBUTES` lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared-context sensitive Oracle Virtual Private Database (VPD) policies for synonyms, tables, or views owned by the user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2 (128)		Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2 (128)		Name of the synonym, table, or view
POLICY_GROUP	VARCHAR2 (128)		Name of the policy group
POLICY_NAME	VARCHAR2 (128)		Name of the policy
NAMESPACE	VARCHAR2 (128)		Name of the local application context
ATTRIBUTE	VARCHAR2 (128)		Name of the attribute
COMMON	VARCHAR2 (3)		Indicates whether the policy attribute is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2 (3)		Indicates whether the policy attribute is inherited from the root (YES) or not (NO)

See Also:

- "[DBA_POLICY_ATTRIBUTES](#)"
- "[USER_POLICY_ATTRIBUTES](#)"

3.15 ALL_POLICY_CONTEXTS

`ALL_POLICY_CONTEXTS` describes the driving contexts defined for the synonyms, tables, and views accessible to the current user.

Related Views

- `DBA_POLICY_CONTEXTS` describes all driving contexts in the database.
- `USER_POLICY_CONTEXTS` describes the driving contexts defined for the synonyms, tables, and views owned by the current user. This view does not display the `OBJECT_OWNER` column.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the synonym, table, or view
NAMESPACE	VARCHAR2(128)	NOT NULL	Namespace of the driving context
ATTRIBUTE	VARCHAR2(128)	NOT NULL	Attribute of the driving context
COMMON	VARCHAR2(3)		Indicates whether the policy context is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy context is inherited from the root (YES) or not (NO)

 See Also:

- "[DBA_POLICY_CONTEXTS](#)"
- "[USER_POLICY_CONTEXTS](#)"

3.16 ALL_POLICY_GROUPS

ALL_POLICY_GROUPS describes the policy groups defined for the synonyms, tables, and views accessible to the current user.

Related Views

- DBA_POLICY_GROUPS describes all policy groups in the database.
- USER_POLICY_GROUPS describes the policy groups defined for the synonyms, tables, and views owned by the current user. This view does not display the OBJECT_OWNER column.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2(128)		Name of the synonym, table, or view
POLICY_GROUP	VARCHAR2(128)		Name of the policy group
COMMON	VARCHAR2(3)		Indicates whether the policy group is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy group is inherited from the root (YES) or not (NO)

 See Also:

- "[DBA_POLICY_GROUPS](#)"
- "[USER_POLICY_GROUPS](#)"

3.17 ALL_PROCEDURES

`ALL_PROCEDURES` lists all functions and procedures that are accessible to the current user, along with associated properties. For example, `ALL_PROCEDURES` indicates whether or not a function is pipelined, parallel enabled or an aggregate function. If a function is pipelined or an aggregate function, the associated implementation type (if any) is also identified.

Related Views

- `DBA_PROCEDURES` lists all functions and procedures available in the database, along with associated properties.
- `USER_PROCEDURES` lists all functions and procedures owned by the current user, along with associated properties. It does not contain the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the procedure
OBJECT_NAME	VARCHAR2(128)		Name of the object: top-level function, procedure, or package name
PROCEDURE_NAME	VARCHAR2(128)		Name of the procedure
OBJECT_ID	NUMBER		Object number of the object
SUBPROGRAM_ID	NUMBER		Unique subprogram identifier
OVERLOAD	VARCHAR2(40)		Overload unique identifier
OBJECT_TYPE	VARCHAR2(13)		The typename of the object
AGGREGATE	VARCHAR2(3)		Indicates whether the procedure is an aggregate function (<code>YES</code>) or not (<code>NO</code>)
PIPELINED	VARCHAR2(3)		Indicates whether the procedure is a pipelined table function (<code>YES</code>) or not (<code>NO</code>)
IMPLTYPEOWNER	VARCHAR2(128)		Owner of the implementation type, if any
IMPLTYPENAME	VARCHAR2(128)		Name of the implementation type, if any
PARALLEL	VARCHAR2(3)		Indicates whether the procedure or function is parallel-enabled (<code>YES</code>) or not (<code>NO</code>)
INTERFACE	VARCHAR2(3)		<code>YES</code> , if the procedure/function is a table function implemented using the ODCI interface; otherwise <code>NO</code>
DETERMINISTIC	VARCHAR2(3)		<code>YES</code> , if the procedure/function is declared to be deterministic; otherwise <code>NO</code>
AUTHID	VARCHAR2(12)		Indicates whether the procedure/function is declared to execute as <code>DEFINER</code> or <code>CURRENT_USER</code> (invoker)
RESULT_CACHE	VARCHAR2(3)		Indicates whether the function is result-cached (<code>YES</code>) or not (<code>NO</code>)
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • <code>0</code>: This value is used for rows in non-CDBs. This value is not used for CDBs. • <code>n</code>: This value is used for rows containing data that originate in the container with container ID <code>n</code> (<code>n = 1</code> if the row originates in root)

Column	Datatype	NULL	Description
POLYMORPHIC	VARCHAR2 (5)		The type of polymorphic table function: <ul style="list-style-type: none"> • ROW • TABLE • LEAF • NULL

Note:

SQL macros for table expressions are supported starting with Oracle Database 19c, Release Update 19.7. In future releases, the ALL_, DBA_, and USER_PROCEDURES data dictionary views contain a column called SQL_MACRO, which enables you to identify the SQL macros in your database. However, this column is not available in Oracle Database 19c. Instead, refer to My Oracle Support note 2678637.1 "How To Identify the SQL Macros in Oracle Data Dictionary 19.7 Onwards" at the following URL to learn how to identify SQL macros in Oracle Database 19c:

<https://support.oracle.com/rs?type=doc&id=2678637.1>

See Also:

- "[DBA_PROCEDURES](#)"
- "[USER_PROCEDURES](#)"
- "[ALL_ARGUMENTS](#)" for information about the arguments of the functions and procedures that are accessible to the current user

3.18 ALL_PROPAGATION

ALL_PROPAGATION displays information about the propagations that have a source queue accessible to the current user.

Related View

DBA_PROPAGATION displays information about all propagations in the database.

Column	Datatype	NULL	Description
PROPAGATION_NAME	VARCHAR2 (128)	NOT NULL	Name of the propagation
SOURCE_QUEUE_OWNER	VARCHAR2 (128)		Owner of the source queue of the propagation
SOURCE_QUEUE_NAME	VARCHAR2 (128)		Name of the source queue of the propagation
DESTINATION_QUEUE_OWNER	VARCHAR2 (128)		Owner of the destination queue of the propagation
DESTINATION_QUEUE_NAME	VARCHAR2 (128)		Name of the destination queue of the propagation
DESTINATION_DBLINK	VARCHAR2 (128)		Database link to propagate events from the source queue to the destination queue
RULE_SET_OWNER	VARCHAR2 (128)		Owner of the propagation positive rule set

Column	Datatype	NULL	Description
RULE_SET_NAME	VARCHAR2(128)		Name of the propagation positive rule set
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the propagation negative rule set
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the propagation negative rule set
QUEUE_TO_QUEUE	VARCHAR2(5)		Indicates whether the propagation is a queue-to-queue propagation (TRUE) or not (FALSE). A queue-to-queue propagation always has its own exclusive propagation job to propagate messages from the source queue to the destination queue.
STATUS	VARCHAR2(8)		Status of the propagation: <ul style="list-style-type: none"> • DISABLED • ENABLED • ABORTED
ERROR_MESSAGE	VARCHAR2(4000)		Error message last encountered by propagation
ERROR_DATE	DATE		Time that propagation last encountered an error
ORIGINAL_PROPAGATION_NAME	VARCHAR2(128)		Original propagation from which the propagation is cloned
ORIGINAL_SOURCE_QUEUE_OWNER	VARCHAR2(128)		Source queue owner of the original propagation
ORIGINAL_SOURCE_QUEUE_NAME	VARCHAR2(128)		Source queue name of the original propagation
ACKED_SCN	NUMBER		Acknowledged SCN of the subscribers of captured messages in the destination queue for the propagation
AUTO_MERGE_THRESHOLD	NUMBER		Merge threshold value for merging the propagation back to the original source queue

 **See Also:**

["DBA_PROPAGATION"](#)

3.19 ALL_QUEUE_SCHEDULES

ALL_QUEUE_SCHEDULES describes the propagation schedules whose source queues are accessible to the current user.

Related Views

- DBA_QUEUE_SCHEDULES describes all propagation schedules in the database.
- USER_QUEUE_SCHEDULES describes the propagation schedules whose source queues are owned by the current user. This view does not display the SCHEMA column.

Column	Datatype	NULL	Description
SCHEMA	VARCHAR2(128)		Source queue owner
QNAME	VARCHAR2(128)		Source queue name
DESTINATION	VARCHAR2(395)		Destination name, currently limited to be a DBLINK name

Column	Datatype	NULL	Description
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Date at which to start propagation
START_TIME	VARCHAR2(8)		Time of day at which to start propagation (in HH:MI:SS format)
PROPAGATION_WINDOW	NUMBER		Duration for the propagation window (in seconds)
NEXT_TIME	VARCHAR2(4000)		Function to compute the start of the next propagation window
LATENCY	NUMBER		Maximum wait time to propagate a message during the propagation window
SCHEDULE_DISABLED	VARCHAR2(1)		Indicates whether the schedule is disabled (Y) or enabled (N). If disabled, then the schedule will not be executed.
PROCESS_NAME	VARCHAR2(4)		Name of the process executing the schedule; NULL if not currently executing
SESSION_ID	VARCHAR2(82)		Session ID and session serial number of the job executing this schedule (SID, SERIAL#); NULL if not currently executing
INSTANCE	NUMBER		Cluster database instance number executing the schedule
LAST_RUN_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the last successful execution
LAST_RUN_TIME	VARCHAR2(8)		Time of day of the last successful execution (in HH:MI:SS format)
CURRENT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Date at which the current window of this schedule was started
CURRENT_START_TIME	VARCHAR2(8)		Time of day at which the current window of this schedule was started (in HH:MI:SS format)
NEXT_RUN_DATE	TIMESTAMP(6) WITH TIME ZONE		Date at which the next window of this schedule will be started
NEXT_RUN_TIME	VARCHAR2(8)		Time of day at which the next window of this schedule will be started (in HH:MI:SS format)
TOTAL_TIME	NUMBER		Total time spent by the system in executing this schedule (in seconds)
TOTAL_NUMBER	NUMBER		Total number of messages propagated in this schedule
TOTAL_BYTES	NUMBER		Total number of bytes propagated in this schedule
MAX_NUMBER	NUMBER		Maximum number of messages propagated in a propagation window
MAX_BYTES	NUMBER		Maximum number of bytes propagated in a propagation window
AVG_NUMBER	NUMBER		Average number of messages propagated in a propagation window
AVG_SIZE	NUMBER		Average size of a propagated message (in bytes)
AVG_TIME	NUMBER		Average time to propagate a message (in seconds)
FAILURES	NUMBER		Number of consecutive times schedule execution has failed, if any. After 16 consecutive failures, a propagation job becomes disabled automatically.
LAST_ERROR_DATE	DATE		Date of the last unsuccessful execution

Column	Datatype	NULL	Description
LAST_ERROR_TIME	VARCHAR2(8)		Time of day of the last unsuccessful execution (in HH:MI:SS format)
LAST_ERROR_MSG	VARCHAR2(4000)		Error number and error message text of the last unsuccessful execution
MESSAGE_DELIVERY_MODE	VARCHAR2(10)		Message delivery mode: <ul style="list-style-type: none">• PERSISTENT• BUFFERED
ELAPSED_DEQUEUE_TIME	NUMBER		Elapsed dequeue time (in hundredths of a second)
ELAPSED_PICKLE_TIME	NUMBER		Elapsed pickle time (time taken to linearize a logical change record (LCR) into a stream of bytes that can be sent over the network) (in hundredths of a second)
JOB_NAME	VARCHAR2(128)		Name of the Scheduler job

 **See Also:**

- ["DBA_QUEUE_SCHEDULES"](#)
- ["USER_QUEUE_SCHEDULES"](#)

3.20 ALL_QUEUE_SUBSCRIBERS

`ALL_QUEUE_SUBSCRIBERS` displays the list of subscribers that the current user has privilege to dequeue from.

Related Views

- `DBA_QUEUE_SUBSCRIBERS` displays the list of subscribers on all queues in the database.
- `USER_QUEUE_SUBSCRIBERS` displays the list of subscribers on queues that are under the current user's schema. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_TABLE	VARCHAR2(128)	NOT NULL	Name of the queue table on which the queue is defined
CONSUMER_NAME	VARCHAR2(512)		Name of the subscriber
ADDRESS	VARCHAR2(1024)		Address of the subscriber
PROTOCOL	NUMBER		Protocol of the subscriber
TRANSFORMATION	VARCHAR2(61)		Transformation for the subscriber
RULE	CLOB		Rule condition for the subscriber
DELIVERY_MODE	VARCHAR2(22)		Message delivery mode for the subscriber: <ul style="list-style-type: none">• PERSISTENT• BUFFERED• PERSISTENT_OR_BUFFERED

Column	Datatype	NULL	Description
IF_NONDURABLE_SUBSCRIBER	VARCHAR2 (3)		Indicates whether the subscriber is a non-durable subscriber (YES) or not (NO)
QUEUE_TO_QUEUE	VARCHAR2 (5)		Indicates whether the subscriber is a queue-to-queue subscriber (TRUE) or not (FALSE)
SUBSCRIBER_ID	NUMBER		ID of the subscriber
POS_BITMAP	NUMBER		Position of the subscriber in the bitmap

 See Also:

- "[DBA_QUEUE_SUBSCRIBERS](#)"
- "[USER_QUEUE_SUBSCRIBERS](#)"

3.21 ALL_QUEUE_TABLES

ALL_QUEUE_TABLES describes the queues in the queue tables accessible to the current user.

Related Views

- DBA_QUEUE_TABLES describes the queues in all queue tables in the database.
- USER_QUEUE_TABLES describes the queues in the queue tables created in the current user's schema. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the queue table
QUEUE_TABLE	VARCHAR2 (128)		Name of the queue table
TYPE	VARCHAR2 (9)		Type of user data: <ul style="list-style-type: none"> • RAW - Raw type • OBJECT - User-defined object type • VARIANT - Variant type (for internal use only)
OBJECT_TYPE	VARCHAR2 (257)		Object type of the payload when TYPE is OBJECT
SORT_ORDER	VARCHAR2 (22)		User-specified sort order
RECIPIENTS	VARCHAR2 (8)		SINGLE OR MULTIPLE recipients
MESSAGE_GROUPING	VARCHAR2 (13)		NONE OR TRANSACTIONAL
REPLICATION_MODE	VARCHAR2 (22)		Indicates whether the queue tables are enabled for replication through Oracle GoldenGate. If the queue tables are replicated, these values appear in the column: <ul style="list-style-type: none"> • REPLICATED_SOURCE: This value is displayed for a source queue table. • REPLICATED_DESTINATION: This value is displayed for a destination queue table. If replication is not enabled on the queue tables, then this column is empty.

Column	Datatype	NULL	Description
COMPATIBLE	VARCHAR2 (6)		Lowest release level which the queue table is compatible with (for example, 8.0.3)
PRIMARY_INSTANCE	NUMBER		Indicates the instance number of the instance which is the primary owner of the queue table. A value of 0 indicates that there is no primary owner.
SECONDARY_INSTANCE	NUMBER		Indicates the instance number of the instance which is the secondary owner of the queue table. This instance becomes the owner of the queue table if the primary owner is not alive. A value of 0 indicates that there is no secondary owner.
OWNER_INSTANCE	NUMBER		Instance number of the instance which currently owns the queue table
USER_COMMENT	VARCHAR2 (50)		Comment supplied by the user
SECURE	VARCHAR2 (3)		Indicates whether the queue table is secure (YES) or not (NO)

See Also:

- ["DBA_QUEUE_TABLES"](#)
- ["USER_QUEUE_TABLES"](#)
- *Oracle Database Advanced Queuing User's Guide* for more information
Advanced Queuing

3.22 ALL_QUEUES

ALL_QUEUES describes all queues on which the current user has enqueue or dequeue privileges. If the user has any Advanced Queuing system privileges, like `MANAGE ANY QUEUE`, `ENQUEUE ANY QUEUE` or `DEQUEUE ANY QUEUE`, then this view describes all queues in the database.

Related Views

- `DBA_QUEUES` describes all queues in the database.
- `USER_QUEUES` describes the operational characteristics of every queue owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the queue
NAME	VARCHAR2 (128)	NOT NULL	Name of the queue
QUEUE_TABLE	VARCHAR2 (128)	NOT NULL	Name of the table the queue data resides in
QID	NUMBER	NOT NULL	Object number of the queue

Column	Datatype	NULL	Description
QUEUE_TYPE	VARCHAR2(20)		Type of the queue: <ul style="list-style-type: none">• EXCEPTION_QUEUE• NON_PERSISTENT_QUEUE• NORMAL_QUEUE
MAX_RETRIES	NUMBER		Maximum number of retries allowed when dequeuing from the queue
RETRY_DELAY	NUMBER		Time interval between retries
ENQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for enqueue (YES) or not (NO)
DEQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for dequeue (YES) or not (NO)
RETENTION	VARCHAR2(40)		Time interval (in seconds) processed messages are retained in the queue, or FOREVER
USER_COMMENT	VARCHAR2(50)		User specified comment
NETWORK_NAME	VARCHAR2(512)		Network name
SHARDED	VARCHAR2(5)		TRUE if queue is sharded, FALSE otherwise

See Also:

- "[DBA_QUEUES](#)"
- "[USER_QUEUES](#)"
- *Oracle Database Advanced Queuing User's Guide* for more information
Advanced Queuing

3.23 ALL_REFRESH

ALL_REFRESH describes all the refresh groups accessible to the current user.

Related Views

- DBA_REFRESH describes all refresh groups in the database.
- USER_REFRESH describes all refresh groups owned by the current user.

Column	Datatype	NULL	Description
ROWNER	VARCHAR2(128)	NOT NULL	Owner of the refresh group
RNAME	VARCHAR2(128)	NOT NULL	Name of the refresh group
REFGROUP	NUMBER		Internal identifier of the refresh group
IMPLICIT_DESTROY	VARCHAR2(1)		Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)
PUSH_DEFERRED_RPC	VARCHAR2(1)		Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)
REFRESH_AFTER_ERRORS	VARCHAR2(1)		Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)

Column	Datatype	NULL	Description
ROLLBACK_SEG	VARCHAR2 (128)		Name of the rollback segment to use while refreshing
JOB	NUMBER		Identifier of the job used to refresh the group automatically
NEXT_DATE	DATE		Date that this job will next be refreshed automatically, if not broken
INTERVAL	VARCHAR2 (200)		A date function used to compute the next NEXT_DATE
BROKEN	VARCHAR2 (1)		Indicates whether the job is broken and will never be run (Y) or not (N)
PURGE_OPTION	NUMBER (38)		Method for purging the transaction queue after each push (1 indicates quick purge option; 2 indicates precise purge option)
PARALLELISM	NUMBER (38)		Level of parallelism for transaction propagation
HEAP_SIZE	NUMBER (38)		Size of the heap
JOB_NAME	VARCHAR2 (128)		The name of the job used to automatically refresh the group

 See Also:

- ["DBA_REFRESH"](#)
- ["USER_REFRESH"](#)

3.24 ALL_REFRESH_CHILDREN

ALL_REFRESH_CHILDREN describes all the objects in refresh groups that are accessible to the current user.

Related Views

- DBA_REFRESH_CHILDREN describes the objects in all refresh groups in the database.
- USER_REFRESH_CHILDREN describes the objects in all refresh groups owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the object in the refresh group
NAME	VARCHAR2 (128)	NOT NULL	Name of the object in the refresh group
TYPE	VARCHAR2 (128)		Type of the object in the refresh group
ROWNER	VARCHAR2 (128)	NOT NULL	Owner of the refresh group
RNAME	VARCHAR2 (128)	NOT NULL	Name of the refresh group
REFGROUP	NUMBER		Internal identifier of the refresh group
IMPLICIT_DESTROY	VARCHAR2 (1)		Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)
PUSH_DEFERRED_RPC	VARCHAR2 (1)		Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)

Column	Datatype	NULL	Description
REFRESH_AFTER_ERRORS	VARCHAR2(1)		Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)
ROLLBACK_SEG	VARCHAR2(128)		Name of the rollback segment to use while refreshing
JOB	NUMBER		Identifier of the job used to refresh the group automatically
NEXT_DATE	DATE		Date that this job will next be refreshed automatically, if not broken
INTERVAL	VARCHAR2(200)		A date function used to compute the next NEXT_DATE
BROKEN	VARCHAR2(1)		Indicates whether the job is broken and will never be run (Y) or not (N)
PURGE_OPTION	NUMBER(38)		Method for purging the transaction queue after each push. 1 indicates quick purge option; 2 indicates precise purge option
PARALLELISM	NUMBER(38)		Level of parallelism for transaction propagation
HEAP_SIZE	NUMBER(38)		Size of the heap
JOB_NAME	VARCHAR2(128)		The name of the job used to automatically refresh the group

 See Also:

- "[DBA_REFRESH_CHILDREN](#)"
- "[USER_REFRESH_CHILDREN](#)"

3.25 ALL_REFRESH_DEPENDENCIES

ALL_REFRESH_DEPENDENCIES displays the names of the dependent detail or container tables of all the materialized views in the current schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name, unique within this schema
PARENT_OBJECT_TYPE	CHAR(17)		MATERIALIZED VIEW
OLDEST_REFRESH_SCN	NUMBER		Minimum SCN of any summary or materialized view that has TABLE_NAME as a detail table
OLDEST_REFRESH_DATE	DATE		SYSDATE when last refreshed

3.26 ALL_REFS

ALL_REFS describes the REF columns and REF attributes in object type columns accessible to the current user.

Related Views

- DBA_REFS describes all REF columns and REF attributes in the database.
- USER_REFS describes the REF columns and REF attributes in object type columns owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(4000)		Name of the REF column or attribute. If it is not a top-level attribute, the value of COLUMN_NAME should be a path name starting with the column name.
WITH_ROWID	VARCHAR2(3)		Indicates whether the REF value is stored with ROWID (YES) or not (NO)
IS_SCOPED	VARCHAR2(3)		Indicates whether the REF column is scoped (YES) or not (NO)
SCOPE_TABLE_OWNER	VARCHAR2(128)		Owner of the scope table, if it exists and is accessible by the user
SCOPE_TABLE_NAME	VARCHAR2(128)		Name of the scope table, if it exists and is accessible by the user
OBJECT_ID_TYPE	VARCHAR2(33)		Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED

See Also:

- "[DBA_REFS](#)"
- "[USER_REFS](#)"

3.27 ALL_REGISTERED_MVIEWS

ALL_REGISTERED_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) accessible to the current user.

A materialized view created with the BUILD DEFERRED option of the CREATE MATERIALIZED VIEW statement is only registered with ALL_REGISTERED_MVIEWS if that materialized view has been completely refreshed at least once.

Related Views

- DBA_REGISTERED_MVIEWS describes all registered materialized views in the database.

- `USER_REGISTERED_MVIEWS` describes all registered materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the materialized view
NAME	VARCHAR2 (128)	NOT NULL	Name of the materialized view
MVIEW_SITE	VARCHAR2 (128)	NOT NULL	Global name of the materialized view site
CAN_USE_LOG	VARCHAR2 (3)		Indicates whether the materialized view can use a materialized view log (<code>YES</code>) or the materialized view is too complex to use a log (<code>NO</code>)
UPDATABLE	VARCHAR2 (3)		Indicates whether the materialized view is updatable (<code>YES</code>) or not and the materialized view is read only (<code>NO</code>)
REFRESH_METHOD	VARCHAR2 (11)		Indicates whether the materialized view uses primary key (<code>PRIMARY KEY</code>), rowids (<code>ROWID</code>), or object identifiers (<code>OBJECT ID</code>) for fast refresh
MVIEW_ID	NUMBER (38)		Identifier for the materialized view used by the masters for fast refresh
VERSION	VARCHAR2 (26)		Oracle version of the materialized view Note: Oracle Database materialized views show ORACLE 8 MATERIALIZED VIEW.
QUERY_TXT	LONG		Query that defines the materialized view

 **See Also:**

- "[DBA_REGISTERED_MVIEWS](#)"
- "[USER_REGISTERED_MVIEWS](#)"

3.28 ALL_REGISTRY_BANNERS

`ALL_REGISTRY_BANNERS` displays the valid components loaded into the database.

Column	Datatype	NULL	Description
BANNER	VARCHAR2 (80)		Component display banner
BANNER_FULL	VARCHAR2 (80)		Component display banner with full version

3.29 ALL_REPL_DBNAME_MAPPING

`ALL_REPL_DBNAME_MAPPING` provides details about the database name mapping in replication for the current user.

Related View

`DBA_REPL_DBNAME_MAPPING` provides details about the database name mapping in replication.

Column	Datatype	NULL	Description
SOURCE_ROOT_NAME	VARCHAR2(128)		The fully qualified global name of the root in a multitenant container database (CDB) where the changes originated
SOURCE_DATABASE_NAME	VARCHAR2(128)		The fully qualified global name of the pluggable database (PDB) where the changes originated
SOURCE_CONTAINER_NAME	VARCHAR2(128)		The container name of the database where the changes originated

 See Also:["DBA_REPL_DBNAME_MAPPING"](#)

3.30 ALL_REPLICATION_PROCESS_EVENTS

ALL_REPLICATION_PROCESS_EVENTS provides information about the replication processes events accessible to the current user.

Related View

DBA_REPLICATION_PROCESS_EVENTS provides information about the replication processes events in the database.

Column	Datatype	NULL	Description
STREAMS_TYPE	VARCHAR2(10)		Streams type: <ul style="list-style-type: none"> • XStream • GoldenGate
PROCESS_TYPE	VARCHAR2(27)		Process type: <ul style="list-style-type: none"> • Capture • Capture server • Apply Coordinator • Apply Server • Apply Network Receiver • Apply Reader • Apply Hash server
STREAMS_NAME	VARCHAR2(128)	NOT NULL	Streams name
EVENT_NAME	VARCHAR2(128)		Event name: <ul style="list-style-type: none"> • START • STOP • ABORT • CREATE • DROP • PARAMETER CHANGE • HANDLER CREATE • HANDLER REMOVE • ALTER
DESCRIPTION	VARCHAR2(2000)		Event description

Column	Datatype	NULL	Description
EVENT_TIME	TIMESTAMP (6)		Time when the event occurred
ERROR_NUMBER	NUMBER		Error number (valid when event is Error)
ERROR_MESSAGE	VARCHAR2 (2000)		Error Message (valid when event is an error)

 See Also:["DBA_REPLICATION_PROCESS_EVENTS"](#)

3.31 ALL_REWRITE_EQUIVALENCES

ALL_REWRITE_EQUIVALENCES describes the rewrite equivalences accessible to the current user.

Related Views

- DBA_REWRITE_EQUIVALENCES describes all rewrite equivalences in the database.
- USER_REWRITE_EQUIVALENCES describes the rewrite equivalences owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the rewrite equivalence
NAME	VARCHAR2 (128)	NOT NULL	Name of the rewrite equivalence
SOURCE_STMT	CLOB		Source statement of the rewrite equivalence
DESTINATION_STMT	CLOB		Destination of the rewrite equivalence
REWRITE_MODE	VARCHAR2 (10)		Rewrite mode of the rewrite equivalence: <ul style="list-style-type: none"> • DISABLED • TEXT_MATCH • GENERAL • RECURSIVE

 See Also:

- ["DBA_REWRITE_EQUIVALENCES"](#)
- ["USER_REWRITE_EQUIVALENCES"](#)

3.32 ALL_RULE_SET_RULES

ALL_RULE_SET_RULES describes the rules in the rule sets accessible to the current user.

Related Views

- DBA_RULE_SET_RULES describes the rules in all rule sets in the database.

- **USER_RULE_SET_RULES** describes the rules in the rule sets owned by the current user. This view does not display the `RULE_SET_OWNER` column.

Column	Datatype	NULL	Description
<code>RULE_SET_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the rule set
<code>RULE_SET_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the rule set
<code>RULE_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the rule
<code>RULE_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the rule
<code>RULE_SET_RULE_ENABLED</code>	VARCHAR2(8)		Indicates whether the rule is enabled in the rule set (ENABLED) or not (DISABLED)
<code>RULE_SET_RULE_EVAL_CTX_Owner</code>	VARCHAR2(128)		Owner of the evaluation context specified when the rule was added to the rule set, if any
<code>RULE_SET_RULE_EVAL_CTX_Name</code>	VARCHAR2(128)		Name of the evaluation context specified when the rule was added to the rule set, if any
<code>RULE_SET_RULE_COMMENT</code>	VARCHAR2(4000)		Comment specified when the rule was added to the rule set, if any

 **See Also:**

- "[DBA_RULE_SET_RULES](#)"
- "[USER_RULE_SET_RULES](#)"

3.33 ALL_RULE_SETS

`ALL_RULE_SETS` describes the rule sets accessible to the current user.

Related Views

- `DBA_RULE_SETS` describes all rule sets in the database.
- `USER_RULE_SETS` describes the rule sets owned by the current user. This view does not display the `RULE_SET_OWNER` column.

Column	Datatype	NULL	Description
<code>RULE_SET_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the rule set
<code>RULE_SET_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the rule set
<code>RULE_SET_EVAL_CONTEXT_Owner</code>	VARCHAR2(128)		Owner of the evaluation context associated with the rule set, if any
<code>RULE_SET_EVAL_CONTEXT_Name</code>	VARCHAR2(128)		Name of the evaluation context associated with the rule set, if any
<code>RULE_SET_COMMENT</code>	VARCHAR2(4000)		Comment specified with the rule set, if any

 See Also:

- "[DBA_RULE_SETS](#)"
- "[USER_RULE_SETS](#)"

3.34 ALL_RULES

`ALL_RULES` describes the rules accessible to the current user.

Related Views

- `DBA_RULES` describes all rules in the database.
- `USER_RULES` describes the rules owned by the current user. This view does not display the `RULE_OWNER` column.

Column	Datatype	NULL	Description
<code>RULE_OWNER</code>	VARCHAR2(128)	NOT NULL	Owner of the rule
<code>RULE_NAME</code>	VARCHAR2(128)	NOT NULL	Name of the rule
<code>RULE_CONDITION</code>	CLOB		Expressions and operators that constitute the rule condition
<code>RULE_EVALUATION_CONTEXT_OWNER</code>	VARCHAR2(128)		Owner of the evaluation context associated with the rule, if any
<code>RULE_EVALUATION_CONTEXT_NAME</code>	VARCHAR2(128)		Name of the evaluation context associated with the rule, if any
<code>RULE_ACTION_CONTEXT</code>	RE\$NV_LIST		Action context associated with the rule, if any
<code>RULE_COMMENT</code>	VARCHAR2(4000)		Comment specified with the rule, if any

 See Also:

- "[DBA_RULES](#)"
- "[USER_RULES](#)"

3.35 ALL_SCHEDULER_CHAIN_RULES

`ALL_SCHEDULER_CHAIN_RULES` displays information about the rules for the chains accessible to the current user (that is, those chains that the user has `ALTER` or `EXECUTE` privileges for).

Related Views

- `DBA_SCHEDULER_CHAIN_RULES` displays information about the rules for all chains in the database.
- `USER_SCHEDULER_CHAIN_RULES` displays information about the rules for the chains owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler chain that the rule is in
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler chain that the rule is in
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)		Name of the rule
CONDITION	VARCHAR2(4000)		Boolean condition triggering the rule
ACTION	VARCHAR2(4000)		Action to be performed when the rule is triggered
COMMENTS	VARCHAR2(4000)		User-specified comments about the rule

See Also:

- "[DBA_SCHEDULER_CHAIN_RULES](#)"
- "[USER_SCHEDULER_CHAIN_RULES](#)"

3.36 ALL_SCHEDULER_CHAIN_STEPS

`ALL_SCHEDULER_CHAIN_STEPS` displays information about the defined steps of the chains accessible to the current user (that is, those chains that the user has `ALTER` or `EXECUTE` privileges for).

Related Views

- `DBA_SCHEDULER_CHAIN_STEPS` displays information about the defined steps of all chains in the database.
- `USER_SCHEDULER_CHAIN_STEPS` displays information about the defined steps of the chains owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler chain the step is in
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler chain the step is in
STEP_NAME	VARCHAR2(128)	NOT NULL	Name of the chain step
PROGRAM_OWNER	VARCHAR2(392)		Owner of the program that runs during the step
PROGRAM_NAME	VARCHAR2(392)		Name of the program that runs during the step
EVENT_SCHEDULE_OWNER	VARCHAR2(392)		Owner of the event schedule that this step waits for
EVENT_SCHEDULE_NAME	VARCHAR2(392)		Name of the event schedule that this step waits for
EVENT_QUEUE_OWNER	VARCHAR2(128)		Owner of the source queue into which the event will be raised
EVENT_QUEUE_NAME	VARCHAR2(128)		Name of the source queue into which the event will be raised
EVENT_QUEUE_AGENT	VARCHAR2(523)		Name of the AQ agent used by the user on the event source queue (for a secure queue)
EVENT_CONDITION	VARCHAR2(4000)		Boolean expression used as the subscription rule for an event on the source queue

Column	Datatype	NULL	Description
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential to be used for an external step job
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential to be used for an external step job
DESTINATION	VARCHAR2(261)		Destination host on which a remote step job will run
SKIP	VARCHAR2(5)		Indicates whether the step should be skipped (TRUE) or not (FALSE)
PAUSE	VARCHAR2(5)		Indicates whether the step should be paused after running (TRUE) or not (FALSE)
PAUSE_BEFORE	VARCHAR2(5)		Indicates whether the step should be paused before running (TRUE) or not (FALSE)
RESTART_ON_RECOVERY	VARCHAR2(5)		Indicates whether the step should be restarted on database recovery (TRUE) or not (FALSE)
RESTART_ON_FAILURE	VARCHAR2(5)		Indicates whether the step should be restarted on application failure (TRUE) or not (FALSE)
STEP_TYPE	VARCHAR2(21)		Type of the step: <ul style="list-style-type: none"> • EVENT_SCHEDULE • INLINE_EVENT • SUBCHAIN • PROGRAM
TIMEOUT	INTERVAL DAY(3) TO SECOND(0)		Timeout for waiting on an event schedule

 **See Also:**

- "[DBA_SCHEDULER_CHAIN_STEPS](#)"
- "[USER_SCHEDULER_CHAIN_STEPS](#)"

3.37 ALL_SCHEDULER_CHAINS

ALL_SCHEDULER_CHAINS displays information about the chains accessible to the current user (that is, those chains that the user has ALTER or EXECUTE privileges for).

Related Views

- DBA_SCHEDULER_CHAINS displays information about all chains in the database.
- USER_SCHEDULER_CHAINS displays information about the chains owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler chain
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler chain
RULE_SET_OWNER	VARCHAR2(128)		Owner of the rule set describing the dependencies
RULE_SET_NAME	VARCHAR2(128)		Name of the rule set describing the dependencies

Column	Datatype	NULL	Description
NUMBER_OF_RULES	NUMBER		Number of rules in the chain
NUMBER_OF_STEPS	NUMBER		Number of defined steps in the chain
ENABLED	VARCHAR2(5)		Indicates whether the chain is enabled (TRUE) or disabled (FALSE)
EVALUATION_INTERVAL	INTERVAL DAY(3) TO SECOND(0)		Periodic interval at which to reevaluate rules for the chain
USER_RULE_SET	VARCHAR2(5)		Indicates whether the chain uses a user-specified rule set (TRUE) or not (FALSE)
COMMENTS	VARCHAR2(4000)		Comments on the chain

 See Also:

- "[DBA_SCHEDULER_CHAINS](#)"
- "[USER_SCHEDULER_CHAINS](#)"

3.38 ALL_SCHEDULER_CREDENTIALS

ALL_SCHEDULER_CREDENTIALS displays information about the credentials accessible to the current user (that is, those credentials that the user has ALTER or EXECUTE privileges for).

 Note:

This view is deprecated in favor of the ALL_CREDENTIALS view. Oracle recommends that you use ALL_CREDENTIALS instead. ALL_SCHEDULER_CREDENTIALS is retained for backward compatibility only.

Related Views

- DBA_SCHEDULER_CREDENTIALS displays information about all credentials in the database.
- USER_SCHEDULER_CREDENTIALS displays information about the credentials owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler credential
CREDENTIAL_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler credential
USERNAME	VARCHAR2(128)		Name of the user that will be used to log in to the remote database or operating system
DATABASE_ROLE	VARCHAR2(9)		For a database target, the database role to use when logging in: <ul style="list-style-type: none"> • SYSDBA • SYSOPER

Column	Datatype	NULL	Description
WINDOWS_DOMAIN	VARCHAR2(30)		For a Windows target, the Windows domain to use when logging in
COMMENTS	VARCHAR2(4000)		Comments on the credential

 **See Also:**

- "[ALL_CREDENTIALS](#)"
- "[DBA_SCHEDULER_CREDENTIALS](#)"
- "[USER_SCHEDULER_CREDENTIALS](#)"

3.39 ALL_SCHEDULER_DB_DESTS

ALL_SCHEDULER_DB_DESTS displays information about the destination objects accessible to the current user pointing to remote databases.

Related Views

- DBA_SCHEDULER_DB_DESTS displays information about all destination objects in the database pointing to remote databases.
- USER_SCHEDULER_DB_DESTS displays information about the destination objects owned by the current user pointing to remote databases. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of this destination object
DESTINATION_NAME	VARCHAR2(128)	NOT NULL	Name of this destination object
CONNECT_INFO	VARCHAR2(4000)		Connect string to connect to the remote database
AGENT	VARCHAR2(128)		Name of the agent through which the connection to the remote database is being made
ENABLED	VARCHAR2(5)		Indicates whether this destination object is enabled (TRUE) or disabled (FALSE)
REFS_ENABLED	VARCHAR2(5)		Indicates whether all referenced objects are enabled (TRUE) or disabled (FALSE)
COMMENTS	VARCHAR2(4000)		Optional comment

 **See Also:**

- "[DBA_SCHEDULER_DB_DESTS](#)"
- "[USER_SCHEDULER_DB_DESTS](#)"

3.40 ALL_SCHEDULER_DESTS

`ALL_SCHEDULER_DESTS` displays information about the destination objects for jobs accessible to the current user.

Related Views

- `DBA_SCHEDULER_DESTS` displays information about all destination objects for jobs in the database.
- `USER_SCHEDULER_DESTS` displays information about the destination objects for jobs owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of this destination object
DESTINATION_NAME	VARCHAR2 (128)	NOT NULL	Name of this destination object
DESTINATION_TYPE	VARCHAR2 (8)		Type of this destination object: <ul style="list-style-type: none"> • EXTERNAL • DATABASE
ENABLED	VARCHAR2 (5)		Indicates whether this destination object is enabled (<code>TRUE</code>) or disabled (<code>FALSE</code>)
COMMENTS	VARCHAR2 (4000)		Optional comment

See Also:

- "[DBA_SCHEDULER_DESTS](#)"
- "[USER_SCHEDULER_DESTS](#)"

3.41 ALL_SCHEDULER_EXTERNAL_DESTS

`ALL_SCHEDULER_EXTERNAL_DESTS` displays information about the destination objects accessible to the current user pointing to remote agents.

Related View

`DBA_SCHEDULER_EXTERNAL_DESTS` displays information about all destination objects in the database pointing to remote agents.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of this destination object
DESTINATION_NAME	VARCHAR2 (128)	NOT NULL	Name of this destination object
HOSTNAME	VARCHAR2 (256)		Name or IP address of the host on which the agent is located
PORT	NUMBER		Port that the agent is listening on
IP_ADDRESS	VARCHAR2 (64)		IP address of the host on which the agent is located

Column	Datatype	NULL	Description
ENABLED	VARCHAR2(5)		Indicates whether this destination object is enabled (TRUE) or disabled (FALSE)
COMMENTS	VARCHAR2(4000)		Optional comment

 See Also:["DBA_SCHEDULER_EXTERNAL_DESTS"](#)

3.42 ALL_SCHEDULER_FILE_WATCHERS

ALL_SCHEDULER_FILE_WATCHERS displays information about the Scheduler file watch requests accessible to the current user.

Related Views

- DBA_SCHEDULER_FILE_WATCHERS displays information about all Scheduler file watch requests in the database.
- USER_SCHEDULER_FILE_WATCHERS displays information about the Scheduler file watch requests owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the file watch request
FILE_WATCHER_NAME	VARCHAR2(128)	NOT NULL	Name of the file watch request
ENABLED	VARCHAR2(5)		Indicates whether this file watch request is enabled (TRUE) or disabled (FALSE)
DESTINATION_OWNER	VARCHAR2(261)		Owner of the named destination object
DESTINATION	VARCHAR2(261)		Name of the destination object
DIRECTORY_PATH	VARCHAR2(4000)	NOT NULL	Name of the directory path where the file will arrive
FILE_NAME	VARCHAR2(512)	NOT NULL	Name or pattern specifying the files that need to be monitored
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential that should be used to authorize the file watch
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential that should be used to authorize the file watch
MIN_FILE_SIZE	NUMBER	NOT NULL	Minimum size of the file being monitored
STEADY_STATE_DURATION	INTERVAL DAY(3) TO SECOND(0)		Time to wait before concluding that the file has stopped growing
LAST_MODIFIED_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which this file watcher was last modified
COMMENTS	VARCHAR2(4000)		Comments on the file watch request

3.43 ALL_SCHEDULER_GLOBAL_ATTRIBUTE

`ALL_SCHEDULER_GLOBAL_ATTRIBUTE` displays the values of all scheduler attributes (for example, `DEFAULT_TIMEZONE` and `CURRENT_OPEN_WINDOW`).

Related View

`DBA_SCHEDULER_GLOBAL_ATTRIBUTE` displays the values of all scheduler attributes in the database.

Column	Datatype	NULL	Description
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler attribute
VALUE	VARCHAR2(128)		Value of the Scheduler attribute

 See Also:

- "["DBA_SCHEDULER_GLOBAL_ATTRIBUTE"](#)"

3.44 ALL_SCHEDULER_GROUP_MEMBERS

`ALL_SCHEDULER_GROUP_MEMBERS` displays information about the members of the Scheduler object groups accessible to the current user.

Related Views

- `DBA_SCHEDULER_GROUP_MEMBERS` displays information about the members of all Scheduler object groups in the database.
- `USER_SCHEDULER_GROUP_MEMBERS` displays information about the members of the Scheduler object groups owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the group
GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the group
MEMBER_NAME	VARCHAR2(523)		Name of the member of this group

 See Also:

- "[DBA_SCHEDULER_GROUP_MEMBERS](#)"
- "[USER_SCHEDULER_GROUP_MEMBERS](#)"

3.45 ALL_SCHEDULER_GROUPS

`ALL_SCHEDULER_GROUPS` displays information about the Scheduler object groups accessible to the current user.

Related Views

- `DBA_SCHEDULER_GROUPS` displays information about all Scheduler object groups in the database.
- `USER_SCHEDULER_GROUPS` displays information about the Scheduler object groups owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the group
GROUP_NAME	VARCHAR2 (128)	NOT NULL	Name of the group
GROUP_TYPE	VARCHAR2 (13)		Type of object contained in the group: <ul style="list-style-type: none"> • WINDOW • JOB • DB_DEST • EXTERNAL_DEST
ENABLED	VARCHAR2 (5)		Indicates whether the group is enabled (<code>TRUE</code>) or disabled (<code>FALSE</code>)
NUMBER_OF_MEMBERS	NUMBER		Number of members in this group
COMMENTS	VARCHAR2 (4000)		An optional comment about this group

 See Also:

- "[DBA_SCHEDULER_GROUPS](#)"
- "[USER_SCHEDULER_GROUPS](#)"

3.46 ALL_SCHEDULER_INCOMPAT_MEMBER

`ALL_SCHEDULER_INCOMPAT_MEMBER` displays all Scheduler incompatibility resource objects members accessible to the current user.

Related Views

- `DBA_SCHEDULER_INCOMPAT_MEMBER` displays all Scheduler incompatibility resource objects members in the database.

- `USER_SCHEDULER_INCOMPAT_MEMBER` displays all Scheduler incompatibility resource objects members owned by the current user.

Column	Datatype	NULL	Description
INCOMPATIBILITY_OWNER	VARCHAR2(128)	NOT NULL	Owner of the incompatibility resource object containing this member
INCOMPATIBILITY_NAME	VARCHAR2(128)	NOT NULL	Name of the incompatibility resource object containing this member
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the incompatibility resource member
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the incompatibility resource member

 **See Also:**

- "[DBA_SCHEDULER_INCOMPAT_MEMBER](#)"
- "[USER_SCHEDULER_INCOMPAT_MEMBER](#)"

3.47 ALL_SCHEDULER_INCOMPATS

`ALL_SCHEDULER_INCOMPATS` displays all Scheduler incompatibility resource objects accessible to the current user.

Related Views

- `DBA_SCHEDULER_INCOMPATS` displays all Scheduler incompatibility resource objects in the database.
- `USER_SCHEDULER_INCOMPATS` displays all Scheduler incompatibility resource objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the incompatibility resource object
INCOMPATIBILITY_NAME	VARCHAR2(128)	NOT NULL	Name of the incompatibility resource object
CONSTRAINT_LEVEL	VARCHAR2(13)		<code>JOB_LEVEL</code> or <code>PROGRAM_LEVEL</code> The default value <code>JOB_LEVEL</code> indicates that only a single job that is based on the program (or programs) mentioned in the <code>object_name</code> argument of the <code>DBMS_SCHEDULER.CREATE_INCOMPATIBILITY</code> procedure can run at one time. The value <code>PROGRAM_LEVEL</code> indicates that the programs are incompatible, but the jobs based on the same program are not incompatible.
ENABLED	VARCHAR2(5)		Indicates whether the incompatibility is enabled (<code>TRUE</code>) or not (<code>FALSE</code>)
JOBS_RUNNING_COUNT	NUMBER		Current number of running jobs using the incompatibility resource object
COMMENTS	VARCHAR2(256)		Comments for the resource incompatibility object

 **See Also:**

- "[DBA_SCHEDULER_INCOMPATS](#)"
- "[USER_SCHEDULER_INCOMPATS](#)"

3.48 ALL_SCHEDULER_JOB_ARGS

`ALL_SCHEDULER_JOB_ARGS` displays information about the arguments of the Scheduler jobs accessible to the current user.

Related Views

- `DBA_SCHEDULER_JOB_ARGS` displays information about the arguments of all Scheduler jobs in the database.
- `USER_SCHEDULER_JOB_ARGS` displays information about the arguments of the Scheduler jobs owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the job to which the argument belongs
JOB_NAME	VARCHAR2 (128)		Name of the job to which the argument belongs
ARGUMENT_NAME	VARCHAR2 (128)		Optional name of the argument
ARGUMENT_POSITION	NUMBER		Position of the argument in the argument list
ARGUMENT_TYPE	VARCHAR2 (257)		Data type of the argument
VALUE	VARCHAR2 (4000)		Value of the argument (in string format) if the argument is a string
ANYDATA_VALUE	ANYDATA		Value of the argument (in AnyData format)
OUT_ARGUMENT	VARCHAR2 (5)		Reserved for future use

 **See Also:**

- "[DBA_SCHEDULER_JOB_ARGS](#)"
- "[USER_SCHEDULER_JOB_ARGS](#)"

3.49 ALL_SCHEDULER_JOB_CLASSES

`ALL_SCHEDULER_JOB_CLASSES` displays information about the Scheduler job classes accessible to the current user.

Related View

`DBA_SCHEDULER_JOB_CLASSES` displays information about all Scheduler job classes in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler job class
JOB_CLASS_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler job class
RESOURCE_CONSUMER_GROUP	VARCHAR2(128)		Resource consumer group associated with the class
SERVICE	VARCHAR2(64)		Name of the service the class is associated with
LOGGING_LEVEL	VARCHAR2(11)		Amount of logging that will be done pertaining to the class: <ul style="list-style-type: none"> • OFF • RUNS • FAILED RUNS • FULL
LOG_HISTORY	NUMBER		History (in days) to maintain in the job log for the class
COMMENTS	VARCHAR2(4000)		Comments on the class

 **See Also:**

["DBA_SCHEDULER_JOB_CLASSES"](#)

3.50 ALL_SCHEDULER_JOB_DESTS

ALL_SCHEDULER_JOB_DESTS displays information about the state of the jobs accessible to the current user at each of their destinations.

Related Views

- DBA_SCHEDULER_JOB_DESTS displays information about the state of all jobs in the database at each of their destinations.
- USER_SCHEDULER_JOB_DESTS displays information about the state of the jobs owned by the current user at each of their destinations. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(128)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(128)		Subname of the Scheduler job
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential used for the remote destination
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential used for the remote destination
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object that points to the destination
DESTINATION	VARCHAR2(261)		Name of the destination object or the name of the destination itself
JOB_DEST_ID	NUMBER		Numerical ID assigned to the job at this destination
ENABLED	VARCHAR2(5)		Indicates whether the parent job is enabled (TRUE) or disabled (FALSE)

Column	Datatype	NULL	Description
REFS_ENABLED	VARCHAR2(5)		Indicates whether this destination and its agent are enabled (TRUE) or disabled (FALSE)
STATE	VARCHAR2(15)		State of this job at this destination: <ul style="list-style-type: none"> • DISABLED • RUNNING • CHAIN_STALLED • SCHEDULED • RETRY_SCHEDULED • READY_TO_RUN • COMPLETED • BROKEN • FAILED • SUCCEEDED • REMOTE • STOPPED
NEXT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Next start time of this job at this destination
RUN_COUNT	NUMBER		Number of times this job has run at this destination
RETRY_COUNT	NUMBER		Number of times this job has been retried at this destination
FAILURE_COUNT	NUMBER		Number of times this job has failed at this destination
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last time this job started at this destination
LAST_END_DATE	TIMESTAMP(6) WITH TIME ZONE		Last time this job ended at this destination

 **See Also:**

- "[DBA_SCHEDULER_JOB_DESTS](#)"
- "[USER_SCHEDULER_JOB_DESTS](#)"

3.51 ALL_SCHEDULER_JOB_LOG

ALL_SCHEDULER_JOB_LOG displays log information for the Scheduler jobs accessible to the current user.

Related Views

- [DBA_SCHEDULER_JOB_LOG](#) displays log information for all Scheduler jobs in the database.
- [USER_SCHEDULER_JOB_LOG](#) displays log information for the Scheduler jobs owned by the current user.

Column	Datatype	NULL	Description
LOG_ID	NUMBER	NOT NULL	Unique identifier that identifies a row

Column	Datatype	NULL	Description
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(261)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(261)		Subname of the Scheduler job (for a chain step job)
JOB_CLASS	VARCHAR2(128)		Class that the job belonged to at the time of entry
OPERATION	VARCHAR2(30)		Operation corresponding to the log entry
STATUS	VARCHAR2(30)		<p>Status of the operation, if applicable. Possible values for this column are dependent on the value in the OPERATION column. In most cases, STATUS will be NULL. Only for job run operations will it have a value.</p> <p>STATUS will be NULL when OPERATION is one of the following:</p> <ul style="list-style-type: none"> • CREATE - Job was created • UPDATE - One or more job attributes have been modified • ENABLE - Job has been enabled • DISABLE - Job has been disabled • COMPLETED - For repeating jobs only, job has reached its end date or maximum number of runs • BROKEN - Job has reached its maximum number of failures <p>STATUS can be SUCCEEDED (job run completed successfully), FAILED (job run failed), or STOPPED (job run was stopped) when OPERATION is one of the following:</p> <ul style="list-style-type: none"> • RUN - Regular job run • RETRY_RUN - Job is being retried because the previous run resulted in an error and RESTARTABLE is set to TRUE • RECOVERY_RUN - Job is being rerun because the database went down, or the job slave crashed and RESTARTABLE is set to TRUE
USER_NAME	VARCHAR2(128)		Name of the user who performed the operation, if applicable
CLIENT_ID	VARCHAR2(64)		Client identifier of the user who performed the operation, if applicable
GLOBAL_UID	VARCHAR2(32)		Global user identifier of the user who performed the operation, if applicable
CREDENTIAL_OWNER	VARCHAR2(261)		Owner of the credential used for this remote job run
CREDENTIAL_NAME	VARCHAR2(261)		Name of the credential used for this remote job run
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object used in this remote job run; NULL if no object used
DESTINATION	VARCHAR2(261)		Destination for a remote job operation
ADDITIONAL_INFO	CLOB		Additional information on the entry, if applicable

 See Also:

- "[DBA_SCHEDULER_JOB_LOG](#)"

3.52 ALL_SCHEDULER_JOB_RUN_DETAILS

`ALL_SCHEDULER_JOB_RUN_DETAILS` displays log run details for the Scheduler jobs accessible to the current user.

Related Views

- `DBA_SCHEDULER_JOB_RUN_DETAILS` displays log run details for all Scheduler jobs in the database.
- `USER_SCHEDULER_JOB_RUN_DETAILS` displays log run details for the Scheduler jobs owned by the current user.

Column	Datatype	NULL	Description
LOG_ID	NUMBER	NOT NULL	Unique identifier of the log entry (foreign key of the *_SCHEDULER_JOB_LOG views)
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(261)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(261)		Subname of the Scheduler job (for a chain step job)
STATUS	VARCHAR2(30)		Status of the job run
ERROR#	NUMBER		Error number in the case of an error
REQ_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Requested start date of the job run
ACTUAL_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Actual date on which the job was run
RUN_DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the job run
INSTANCE_ID	NUMBER		Identifier of the instance on which the job was run
SESSION_ID	VARCHAR2(128)		Session identifier of the job run
SLAVE_PID	VARCHAR2(30)		Process identifier of the slave on which the job was run
CPU_USED	INTERVAL DAY(3) TO SECOND(2)		Amount of CPU used for the job run
CREDENTIAL_OWNER	VARCHAR2(261)		Owner of the credential used for this remote job run
CREDENTIAL_NAME	VARCHAR2(261)		Name of the credential used for this remote job run
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object used in this remote job run; NULL if no object used
DESTINATION	VARCHAR2(261)		Destination for a remote job operation
ADDITIONAL_INFO	VARCHAR2(4000)		Additional information on the job run, if applicable
ERRORS	VARCHAR2(4000)		Error messages generated by this job run

Column	Datatype	NULL	Description
OUTPUT	VARCHAR2(4000)		Output messages generated by this job run
BINARY_ERRORS	BLOB		Error messages generated by this job run in a binary format
BINARY_OUTPUT	BLOB		Binary output messages generated by this job run

3.53 ALL_SCHEDULER_JOBS

`ALL_SCHEDULER_JOBS` displays information about the Scheduler jobs accessible to the current user.

Related Views

- `DBA_SCHEDULER_JOBS` displays information about all Scheduler jobs in the database.
- `USER_SCHEDULER_JOBS` displays information about the Scheduler jobs owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(128)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(128)		Subname of the Scheduler job (for a job running a chain step)
JOB_STYLE	VARCHAR2(17)		Job style: <ul style="list-style-type: none"> • REGULAR • LIGHTWEIGHT • IN_MEMORY_RUNTIME • IN_MEMORY_FULL
JOB_CREATOR	VARCHAR2(128)		Original creator of the job
CLIENT_ID	VARCHAR2(65)		Client identifier of the user creating the job
GLOBAL_UID	VARCHAR2(33)		Global user identifier of the user creating the job
PROGRAM_OWNER	VARCHAR2(4000)		Owner of the program associated with the job
PROGRAM_NAME	VARCHAR2(4000)		Name of the program associated with the job

Column	Datatype	NULL	Description
JOB_TYPE	VARCHAR2(16)		<p>Inline job action type:</p> <ul style="list-style-type: none"> • PLSQL_BLOCK • STORED PROCEDURE • EXECUTABLE • CHAIN • SQL_SCRIPT • BACKUP_SCRIPT • EXTERNAL_SCRIPT
JOB_ACTION	VARCHAR2(4000)		Inline job action
NUMBER_OF_ARGUMENTS	NUMBER		Inline number of job arguments
SCHEDULE_OWNER	VARCHAR2(4000)		Owner of the schedule that the job uses (can be a window or a window group)
SCHEDULE_NAME	VARCHAR2(4000)		Name of the schedule that the job uses (can be a window or a window group)
SCHEDULE_TYPE	VARCHAR2(12)		<p>Type of the schedule that the job uses:</p> <ul style="list-style-type: none"> • IMMEDIATE - Start date and repeat interval are NULL • ONCE - Repeat interval is NULL • PLSQL - PL/SQL expression used as schedule • CALENDAR - Oracle calendaring expression used as schedule • EVENT - Event schedule • NAMED - Named schedule • WINDOW - Window used as schedule • WINDOW_GROUP - Window group used as schedule
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Original scheduled start date of the job (for an inline schedule)
REPEAT_INTERVAL	VARCHAR2(4000)		Inline schedule PL/SQL expression or calendar string
EVENT_QUEUE_OWNER	VARCHAR2(128)		Owner of the source queue into which the event will be raised
EVENT_QUEUE_NAME	VARCHAR2(128)		Name of the source queue into which the event will be raised
EVENT_QUEUE_AGENT	VARCHAR2(523)		Name of the AQ agent used by the user on the event source queue (if it is a secure queue)
EVENT_CONDITION	VARCHAR2(4000)		Boolean expression used as the subscription rule for the event on the source queue
EVENT_RULE	VARCHAR2(261)		Name of the rule used by the coordinator to trigger the event-based job
FILE_WATCHER_OWNER	VARCHAR2(261)		Owner of the file watcher on which this job is based
FILE_WATCHER_NAME	VARCHAR2(261)		Name of the file watcher on which this job is based
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Date after which the job will no longer run (for an inline schedule)
JOB_CLASS	VARCHAR2(128)		Name of the job class associated with the job
ENABLED	VARCHAR2(5)		Indicates whether the job is enabled (TRUE) or disabled (FALSE)
AUTO_DROP	VARCHAR2(5)		Indicates whether the job will be dropped when it has completed (TRUE) or not (FALSE)

Column	Datatype	NULL	Description
RESTART_ON_RECOVERY	VARCHAR2(5)		Indicates whether the step should be restarted on database recovery (TRUE) or not (FALSE)
RESTART_ON_FAILURE	VARCHAR2(5)		Indicates whether the step should be restarted on application failure (TRUE) or not (FALSE)
STATE	VARCHAR2(20)		<p>Current state of the job:</p> <ul style="list-style-type: none"> • BLOCKED • BROKEN • CHAIN_STALLED • COMPLETED • DISABLED • FAILED • READY TO RUN • REMOTE • RESOURCE_UNAVAILABLE • RETRY_SCHEDULED • RUNNING • SCHEDULED • SOME FAILED • STOPPED • SUCCEEDED
JOB_PRIORITY	NUMBER		Priority of the job relative to other jobs in the same class
RUN_COUNT	NUMBER		Number of times the job has run
UPTIME_RUN_COUNT	NUMBER		<p>Number of runs since the database last restarted. For in-memory jobs, this column is populated, but the RUN_COUNT column is not populated.</p> <p>For all other jobs, this column is NULL.</p>
MAX_RUNS	NUMBER		Maximum number of times the job is scheduled to run
FAILURE_COUNT	NUMBER		Number of times the job has failed to run
UPTIME_FAILURE_COUNT	NUMBER		<p>Number of failures since the database last restarted. For in-memory jobs, this column is populated, but the FAILURE_COUNT column is not populated.</p> <p>For all other jobs, this column is NULL.</p>
MAX_FAILURES	NUMBER		Number of times the job will be allowed to fail before being marked broken
RETRY_COUNT	NUMBER		Number of times the job has retried, if it is retrying
LAST_START_DATE	TIMESTAMP(6) WITH TIMEZONE		Last date on which the job started running
LAST_RUN_DURATION	INTERVAL DAY(9) TO SECOND(6)		Amount of time the job took to complete during the last run
NEXT_RUN_DATE	TIMESTAMP(6) WITH TIMEZONE		Next date on which the job is scheduled to run
SCHEDULE_LIMIT	INTERVAL DAY(3) TO SECOND(0)		Time after which a job which has not run yet will be rescheduled
MAX_RUN_DURATION	INTERVAL DAY(3) TO SECOND(0)		Maximum amount of time for which the job will be allowed to run

Column	Datatype	NULL	Description
LOGGING_LEVEL	VARCHAR2(11)		<p>Amount of logging that will be done pertaining to the job:</p> <ul style="list-style-type: none"> • OFF • RUNS • FAILED RUNS • FULL
STORE_OUTPUT	VARCHAR2(5)		<p>Indicates whether all job output messages for the job are stored in the <code>OUTPUT</code> column of the <code>*_JOB_RUN_DETAILS</code> views for job runs that are logged. Possible values:</p> <ul style="list-style-type: none"> • TRUE: All job output messages for the job are stored in the <code>OUTPUT</code> column of the <code>*_JOB_RUN_DETAILS</code> views for job runs that are logged. This is the default for new jobs. A new job is a job created using Oracle Database 12c software. • FALSE: Job output messages for the job are not stored in the <code>OUTPUT</code> column of the <code>*_JOB_RUN_DETAILS</code> views. This is the default for existing jobs. An existing job is a job created using pre-Oracle Database 12c software.
STOP_ON_WINDOW_CLOSE	VARCHAR2(5)		Indicates whether the job will stop if a window associated with the job closes (TRUE) or not (FALSE)
INSTANCE_STICKINESS	VARCHAR2(5)		Indicates whether the job is sticky (TRUE) or not (FALSE)
RAISE_EVENTS	VARCHAR2(4000)		<p>List of job events to raise for the job:</p> <ul style="list-style-type: none"> • JOB_STARTED • JOB_SUCCEEDED • JOB_FAILED • JOB_BROKEN • JOB_COMPLETED • JOB_STOPPED • JOB_SCH_LIM_REACHED • JOB_DISABLED • JOB_CHAIN_STALLED • JOB_OVER_MAX_DUR
SYSTEM	VARCHAR2(5)		Indicates whether the job is a system job (TRUE) or not (FALSE)
JOB_WEIGHT	NUMBER		Weight of the job
NLS_ENV	VARCHAR2(4000)		NLS environment of the job
SOURCE	VARCHAR2(128)		Source global database identifier
NUMBER_OF_DESTINATIONS	NUMBER		Number of destinations associated with this job
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object (if used), else NULL
DESTINATION	VARCHAR2(261)		Destination that this job will run on
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential to be used for an external job
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential to be used for an external job
INSTANCE_ID	NUMBER		Instance on which the user requests the job to run
DEFERRED_DROP	VARCHAR2(5)		Indicates whether the job will be dropped when completed due to user request (TRUE) or not (FALSE)

Column	Datatype	NULL	Description
ALLOW_RUNS_IN_RESTRICTED_MODE	VARCHAR2(5)		Indicates whether the job is allowed to run in restricted session mode (TRUE) or not (FALSE)
COMMENTS	VARCHAR2(4000)		Comments on the job
FLAGS	NUMBER		This column is for internal use
RESTARTABLE	VARCHAR2(5)		Indicates whether the job can be restarted (TRUE) or not (FALSE)
HAS_CONSTRAINTS	VARCHAR2(5)		Indicates whether the job (not including the program of the job) is part of a resource constraint or incompatibility (TRUE) or not (FALSE)
CONNECT_CREDENTIAL_OWNER	VARCHAR2(128)		Owner of connect credential
CONNECT_CREDENTIAL_NAME	VARCHAR2(128)		Name of connect credential
FAIL_ON_SCRIPT_ERROR	VARCHAR2(5)		Indicates whether this job fails on script error (TRUE) or not (FALSE)

3.54 ALL_SCHEDULER_NOTIFICATIONS

ALL_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for the jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for all jobs in the database.
- USER_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for the jobs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
NOTIFICATION_OWNER	VARCHAR2(128)	NOT NULL	Owner of this notification
OWNER	VARCHAR2(128)	NOT NULL	Owner of the job this notification is for
JOB_NAME	VARCHAR2(128)	NOT NULL	Name of the job this notification is for
JOB_SUBNAME	VARCHAR2(128)		Subname of the job this notification is for
RECIPIENT	VARCHAR2(4000)	NOT NULL	E-mail address to send this E-mail notification to
SENDER	VARCHAR2(4000)		E-mail address to send this E-mail notification from
SUBJECT	VARCHAR2(4000)		Subject of the notification E-mail
BODY	VARCHAR2(4000)		Body of the notification E-mail
FILTER_CONDITION	VARCHAR2(4000)		Filter specifying which job events to send notifications for

Column	Datatype	NULL	Description
EVENT	VARCHAR2(19)		Job event to send notifications for: <ul style="list-style-type: none"> • JOB_STARTED • JOB_SUCCEEDED • JOB_FAILED • JOB_BROKEN • JOB_COMPLETED • JOB_STOPPED • JOB_SCH_LIM_REACHED • JOB_DISABLED • JOB_CHAIN_STALLED • JOB_OVER_MAX_DUR
EVENT_FLAG	NUMBER	NOT NULL	Event number of the job event to send notifications for

3.56 ALL_SCHEDULER_PROGRAMS

`ALL_SCHEDULER_PROGRAMS` displays information about the Scheduler programs accessible to the current user.

Related Views

- `DBA_SCHEDULER_PROGRAMS` displays information about all Scheduler programs in the database.
- `USER_SCHEDULER_PROGRAMS` displays information about the Scheduler programs owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler program
PROGRAM_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler program
PROGRAM_TYPE	VARCHAR2(16)		Type of the program action: <ul style="list-style-type: none"> • PLSQL_BLOCK • STORED_PROCEDURE • EXECUTABLE
PROGRAM_ACTION	VARCHAR2(4000)		String specifying the program action
NUMBER_OF_ARGUMENTS	NUMBER		Number of arguments accepted by the program
ENABLED	VARCHAR2(5)		Indicates whether the program is enabled (<code>TRUE</code>) or disabled (<code>FALSE</code>)
DETACHED	VARCHAR2(5)		This column is for internal use
SCHEDULE_LIMIT	INTERVAL DAY(3) TO SECOND(0)		Maximum delay in running the program after the scheduled start
PRIORITY	NUMBER		Priority of the program
WEIGHT	NUMBER		Weight of the program
MAX_RUNS	NUMBER		Maximum number of runs of any job based on this program
MAX_FAILURES	NUMBER		Maximum number of failures of any job based on this program

Column	Datatype	NULL	Description
MAX_RUN_DURATION	INTERVAL DAY(3) TO SECOND(0)		Maximum amount of time this program can run
HAS_CONSTRAINTS	VARCHAR2(5)		Indicates whether the job (not including the program or the job) is part of a resource constraint or incompatibility (TRUE) or not (FALSE)
NLS_ENV	VARCHAR2(4000)		NLS environment in which the program was created
COMMENTS	VARCHAR2(4000)		Comments on the program

3.57 ALL_SCHEDULER_REMOTE_DATABASES

`ALL_SCHEDULER_REMOTE_DATABASES` displays information about the remote databases accessible to the current user that have been registered as sources and destinations for remote database jobs.

Related View

`DBA_SCHEDULER_REMOTE_DATABASES` displays information about all remote databases that have been registered as sources and destinations for remote database jobs.

Column	Datatype	NULL	Description
DATABASE_NAME	VARCHAR2(512)	NOT NULL	Global name of the remote database
REGISTERED_AS	VARCHAR2(11)		Indicates whether the database is registered as a source (<code>SOURCE</code>) or as a destination (<code>DESTINATION</code>)
DATABASE_LINK	VARCHAR2(512)	NOT NULL	Name of a valid database link to the remote database

 See Also:

- "[DBA_SCHEDULER_REMOTE_DATABASES](#)"

3.58 ALL_SCHEDULER_REMOTE_JOBSTATE

`ALL_SCHEDULER_REMOTE_JOBSTATE` displays information about the state of the jobs accessible to the current user at remote databases.

Related Views

- `DBA_SCHEDULER_REMOTE_JOBSTATE` displays information about the state of all jobs at remote databases.

- **USER_SCHEDULER_REMOTE_JOBSTATE** displays information about the state of the jobs owned by the current user at remote databases. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler job
JOB_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler job
DESTINATION	VARCHAR2(512)	NOT NULL	Name of the job destination
STATE	VARCHAR2(15)		State of the job at the destination: <ul style="list-style-type: none"> • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • SUCCEEDED • STOPPED
NEXT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Next start date of the job at the destination
RUN_COUNT	NUMBER		Run count of the job at the destination
FAILURE_COUNT	NUMBER		Failure count of the job at the destination
RETRY_COUNT	NUMBER		Retry count of the job at the destination
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last start date of the job at the destination
LAST_END_DATE	TIMESTAMP(6) WITH TIME ZONE		Last end date of the job at the destination

 **See Also:**

- "[DBA_SCHEDULER_REMOTE_JOBSTATE](#)"
- "[USER_SCHEDULER_REMOTE_JOBSTATE](#)"

3.59 ALL_SCHEDULER_RESOURCES

ALL_SCHEDULER_RESOURCES displays all scheduler resource objects in the database that are accessible to the current user.

Related Views

- **DBA_SCHEDULER_RESOURCES** displays all scheduler resource objects in the database.
- **USER_SCHEDULER_RESOURCES** displays all scheduler resource objects in the database from the schema of the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the resource object
RESOURCE_NAME	VARCHAR2(128)	NOT NULL	Name of the resource object

Column	Datatype	NULL	Description
STATUS	VARCHAR2(19)		Resource status for resource object.
RESOURCE_UNITS	NUMBER		Maximum number of available units for the resource object
UNITS_USED	NUMBER		Current number of resource units in use for the resource object
JOB_RUNNING_COUNT	NUMBER		Current number of running jobs using the resource object
COMMENTS	VARCHAR2(256)		Comments for the resource object

 See Also:

- ["DBA_SCHEDULER_RESOURCES"](#)
- ["USER_SCHEDULER_RESOURCES"](#)

3.60 ALL_SCHEDULER_RSC_CONSTRAINTS

ALL_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members accessible to the current user.

Related Views

- DBA_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members in the database.
- USER_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the resource object the member is in
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the resource object the member is in
RESOURCE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the resource constraint resource member
RESOURCE_NAME	VARCHAR2(128)	NOT NULL	Name of the resource constraint resource member
UNITS_USED	NUMBER		Number of units used of the resource by this constraint resource member

 See Also:

- ["DBA_SCHEDULER_RSC_CONSTRAINTS"](#)
- ["USER_SCHEDULER_RSC_CONSTRAINTS"](#)

3.61 ALL_SCHEDULER_RUNNING_CHAINS

`ALL_SCHEDULER_RUNNING_CHAINS` displays information about the chain steps of the running chains accessible to the current user (that is, those chains that the user has `ALTER` privileges for). In the case of nested chains, this view also enables you to traverse the hierarchy of the chain with a SQL statement that contains a `CONNECT BY` clause linking up the `JOB_SUBNAME` and `STEP_JOB_SUBNAME` columns.

Related Views

- `DBA_SCHEDULER_RUNNING_CHAINS` displays information about the chain steps of all running chains in the database.
- `USER_SCHEDULER_RUNNING_CHAINS` displays information about the chain steps of the running chains owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the job which is running the chain
JOB_NAME	VARCHAR2(128)	NOT NULL	Name of the job which is running the chain
JOB_SUBNAME	VARCHAR2(128)		Subname of the job which is running the chain (for a nested chain), else NULL
CHAIN_OWNER	VARCHAR2(128)	NOT NULL	Owner of the chain being run
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the chain being run
STEP_NAME	VARCHAR2(128)	NOT NULL	Name of the step of the running chain
STATE	VARCHAR2(15)		State of the running chain step: <ul style="list-style-type: none"> • NOT_STARTED • RUNNING • SUCCEEDED • STOPPED • FAILED • SCHEDULED • RETRY_SCHEDULED • PAUSED • STALLED
ERROR_CODE	NUMBER		Error code with which the step completed (if it has completed)
COMPLETED	VARCHAR2(5)		Indicates whether the running chain step has completed (<code>TRUE</code>) or not (<code>FALSE</code>)
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Date when the running chain step started (if it has started)
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Date when the running chain step stopped (if it has stopped)
DURATION	INTERVAL DAY(9) TO SECOND(6)		Amount of time it took the chain step to complete (if it has completed)
SKIP	VARCHAR2(5)		Indicates whether the chain step should be skipped (<code>TRUE</code>) or not (<code>FALSE</code>)
PAUSE	VARCHAR2(5)		Indicates whether the chain step should be paused after running (<code>TRUE</code>) or not (<code>FALSE</code>)
PAUSE_BEFORE	VARCHAR2(5)		Indicates whether the chain step should be paused before running (<code>TRUE</code>) or not (<code>FALSE</code>)

Column	Datatype	NULL	Description
RESTART_ON_RECOVERY	VARCHAR2(5)		Indicates whether the chain step will be restarted on database recovery (TRUE) or not (FALSE)
RESTART_ON_FAILURE	VARCHAR2(5)		Indicates whether the chain step will be restarted on application failure (TRUE) or not (FALSE)
STEP_JOB_SUBNAME	VARCHAR2(128)		Subname of the job running the step
STEP_JOB_LOG_ID	NUMBER		Log ID of the job running the step

 **See Also:**

- ["DBA_SCHEDULER_RUNNING_CHAINS"](#)
- ["USER_SCHEDULER_RUNNING_CHAINS"](#)

3.62 ALL_SCHEDULER_RUNNING_JOBS

ALL_SCHEDULER_RUNNING_JOBS displays information about the running Scheduler jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_RUNNING_JOBS displays information about all running Scheduler jobs in the database.
- USER_SCHEDULER_RUNNING_JOBS displays information about the running Scheduler jobs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the running Scheduler job
JOB_NAME	VARCHAR2(128)		Name of the running Scheduler job
JOB_SUBNAME	VARCHAR2(128)		Subname of the running Scheduler job (for a job running a chain step)
JOB_STYLE	VARCHAR2(17)		Job style: <ul style="list-style-type: none"> • REGULAR • LIGHTWEIGHT • IN_MEMORY_RUNTIME • IN_MEMORY_FULL
DETACHED	VARCHAR2(5)		Indicates whether the detached attribute is set for the job (TRUE) or not (FALSE). If the detached attribute is set, then the job will remain running even after the job action has completed.
SESSION_ID	NUMBER		Identifier of the session running the Scheduler job
SLAVE_PROCESS_ID	NUMBER		Process number of the slave process running the Scheduler job
SLAVE_OS_PROCESS_ID	VARCHAR2(12)		Process number of the operating system slave process running the scheduler job

Column	Datatype	NULL	Description
RUNNING_INSTANCE	NUMBER		Database instance number of the slave process running the Scheduler job
RESOURCE_CONSUMER_GROUP	VARCHAR2(32)		Resource consumer group of the session in which the Scheduler job is running
ELAPSED_TIME	INTERVAL DAY(3) TO SECOND(2)		Elapsed time since the Scheduler job was started
CPU_USED	INTERVAL DAY(3) TO SECOND(2)		CPU time consumed by the running Scheduler job, if available
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object (if used), else NULL
DESTINATION	VARCHAR2(261)		Destination that this job is running on
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the login credential used for this running job, if any
CREDENTIAL_NAME	VARCHAR2(128)		Name of the login credential used for this running job, if any
LOG_ID	NUMBER		Log ID used for this running job. This column maps to the LOG_ID column of the *_SCHEDULER_JOB_LOG and *_SCHEDULER_JOB_RUN_DETAILS views.

 **See Also:**

- "[DBA_SCHEDULER_RUNNING_JOBS](#)"
- "[USER_SCHEDULER_RUNNING_JOBS](#)"

3.63 ALL_SCHEDULER_SCHEDULES

ALL_SCHEDULER_SCHEDULES displays information about the Scheduler schedules accessible to the current user.

Related Views

- DBA_SCHEDULER_SCHEDULES displays information about all Scheduler schedules in the database.
- USER_SCHEDULER_SCHEDULES displays information about the Scheduler schedules owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the schedule
SCHEDULE_NAME	VARCHAR2(128)	NOT NULL	Name of the schedule
SCHEDULE_TYPE	VARCHAR2(12)		Type of the schedule: <ul style="list-style-type: none"> • ONCE - Repeat interval is NULL • CALENDAR - Oracle calendaring expression used as schedule • EVENT - Event schedule

Column	Datatype	NULL	Description
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Start date for the repeat interval
REPEAT_INTERVAL	VARCHAR2(4000)		Calendar syntax expression for the schedule
EVENT_QUEUE_OWNER	VARCHAR2(128)		Owner of the source queue into which the event will be raised
EVENT_QUEUE_NAME	VARCHAR2(128)		Name of the source queue into which the event will be raised
EVENT_QUEUE_AGENT	VARCHAR2(523)		Name of the AQ agent used by the user on the event source queue (if it is a secure queue)
EVENT_CONDITION	VARCHAR2(4000)		Boolean expression used as the subscription rule for the event on the source queue
FILE_WATCHER_OWNER	VARCHAR2(261)		Owner of the file watcher on which this schedule is based
FILE_WATCHER_NAME	VARCHAR2(261)		Name of the file watcher on which this schedule is based
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Cutoff date after which the schedule will not specify any dates
COMMENTS	VARCHAR2(4000)		Comments on the schedule

 **See Also:**

- "[DBA_SCHEDULER_SCHEDULES](#)"
- "[USER_SCHEDULER_SCHEDULES](#)"

3.64 ALL_SCHEDULER_WINDOW_DETAILS

`ALL_SCHEDULER_WINDOW_DETAILS` displays log details for the Scheduler windows accessible to the current user.

Related View

`DBA_SCHEDULER_WINDOW_DETAILS` displays log details for all Scheduler windows in the database.

Column	Datatype	NULL	Description
LOG_ID	NUMBER		Unique identifier of the log entry (foreign key of the <code>*_SCHEDULER_WINDOW_LOG</code> views)
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler window
WINDOW_NAME	VARCHAR2(261)		Name of the Scheduler window
REQ_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Requested start date for the Scheduler window
ACTUAL_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Actual start date of the Scheduler window

Column	Datatype	NULL	Description
WINDOW_DURATION	INTERVAL DAY(3) TO SECOND(0)		Requested duration of the Scheduler window
ACTUAL_DURATION	INTERVAL DAY(3) TO SECOND(0)		Actual duration for which the Scheduler window lasted
INSTANCE_ID	NUMBER		Identifier of the instance on which the window was run
ADDITIONAL_INFO	VARCHAR2(4000)		Additional information on the entry, if applicable

 See Also:["DBA_SCHEDULER_WINDOW_DETAILS"](#)

3.65 ALL_SCHEDULER_WINDOW_GROUPS

ALL_SCHEDULER_WINDOW_GROUPS displays information about the Scheduler window groups accessible to the current user.

Related View

DBA_SCHEDULER_WINDOW_GROUPS displays information about all Scheduler window groups in the database.

Column	Datatype	NULL	Description
WINDOW_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the window group
ENABLED	VARCHAR2(5)		Indicates whether the window group is enabled (TRUE) or disabled (FALSE)
NUMBER_OF_WINDOWS	NUMBER		Number of members in the window group
NEXT_START_DATE	VARCHAR2(64)		If a window group is disabled, then this column will be NULL. Otherwise, it will be set to the earliest NEXT_START_DATE from the enabled windows in the group.
COMMENTS	VARCHAR2(4000)		Optional comment about the window group

 See Also:["DBA_SCHEDULER_WINDOW_GROUPS"](#)

3.66 ALL_SCHEDULER_WINDOW_LOG

`ALL_SCHEDULER_WINDOW_LOG` displays log information for the Scheduler windows accessible to the current user.

Related View

`DBA_SCHEDULER_WINDOW_LOG` displays log information for all Scheduler windows in the database.

Column	Datatype	NULL	Description
LOG_ID	NUMBER	NOT NULL	Unique identifier of the log entry
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler window
WINDOW_NAME	VARCHAR2(261)		Name of the Scheduler window
OPERATION	VARCHAR2(30)		Operation corresponding to the log entry
STATUS	VARCHAR2(30)		Status of the operation, if applicable
USER_NAME	VARCHAR2(128)		Name of the user who performed the operation, if applicable
CLIENT_ID	VARCHAR2(64)		Client identifier of the user who performed the operation, if applicable
GLOBAL_UID	VARCHAR2(32)		Global user identifier of the user who performed the operation, if applicable
ADDITIONAL_INFO	CLOB		Additional information on the entry, if applicable

 **See Also:**

["DBA_SCHEDULER_WINDOW_LOG"](#)

3.67 ALL_SCHEDULER_WINDOWS

`ALL_SCHEDULER_WINDOWS` displays information about the Scheduler windows accessible to the current user.

Related View

`DBA_SCHEDULER_WINDOWS` displays information about all Scheduler windows in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler window
WINDOW_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler window
RESOURCE_PLAN	VARCHAR2(128)		Resource plan associated with the window
SCHEDULE_OWNER	VARCHAR2(4000)		Owner of the schedule of the window
SCHEDULE_NAME	VARCHAR2(4000)		Name of the schedule of the window

Column	Datatype	NULL	Description
SCHEDULE_TYPE	VARCHAR2(8)		Type of the schedule of the window: <ul style="list-style-type: none"> ONCE - Repeat interval is NULL NAMED - Named schedule CALENDAR - Oracle calendaring expression used as schedule
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Start date of the window (for an inline schedule)
REPEAT_INTERVAL	VARCHAR2(4000)		Calendar string for the window (for an inline schedule)
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Date after which the window will no longer open (for an inline schedule)
DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the window
WINDOW_PRIORITY	VARCHAR2(4)		Priority of the job relative to other windows: <ul style="list-style-type: none"> HIGH LOW
NEXT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Next date on which the window is scheduled to start
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last date on which the window opened
ENABLED	VARCHAR2(5)		Indicates whether the window is enabled (TRUE) or disabled (FALSE)
ACTIVE	VARCHAR2(5)		Indicates whether the window is open (TRUE) or not (FALSE)
MANUAL_OPEN_TIME	TIMESTAMP(6) WITH TIME ZONE		Open time of the window if it was manually opened, else NULL
MANUAL_DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the window if it was manually opened, else NULL
COMMENTS	VARCHAR2(4000)		Comments on the window

 See Also:["DBA_SCHEDULER_WINDOWS"](#)

3.68 ALL_SCHEDULER_WINGROUP_MEMBERS

ALL_SCHEDULER_WINGROUP_MEMBERS displays the members of the Scheduler window groups accessible to the current user.

Related View

DBA_SCHEDULER_WINGROUP_MEMBERS displays the members of all Scheduler window groups in the database.

Column	Datatype	NULL	Description
WINDOW_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the window group

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2 (128)	NOT NULL	Name of the window member of the window group

 See Also:["DBA_SCHEDULER_WINGROUP_MEMBERS"](#)

3.69 ALL_SEC_RELEVANT_COLS

ALL_SEC_RELEVANT_COLS describes the security relevant columns of the security policies for the tables and views accessible to the current user.

Related Views

- DBA_SEC_RELEVANT_COLS describes the security relevant columns of all security policies in the database.
- USER_SEC_RELEVANT_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. This view does not display the OBJECT_OWNER column.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2 (128)		Owner of the table or view
OBJECT_NAME	VARCHAR2 (128)		Name of the table or view
POLICY_GROUP	VARCHAR2 (128)		Name of the policy group
POLICY_NAME	VARCHAR2 (128)		Name of the policy
SEC_REL_COLUMN	VARCHAR2 (128)		Name of the security relevant column
COLUMN_OPTION	VARCHAR2 (8)		Option of the security relevant column: <ul style="list-style-type: none"> • NONE • ALL_ROWS
COMMON	VARCHAR2 (3)		Indicates whether the policy security relevant column is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2 (3)		Indicates whether the policy security relevant column is inherited from the root (YES) or not (NO)

 See Also:

- ["DBA_SEC_RELEVANT_COLS"](#)
- ["USER_SEC_RELEVANT_COLS"](#)

3.70 ALL_SECONDARY_OBJECTS

`ALL_SECONDARY_OBJECTS` provides information about secondary objects associated with domain indexes accessible to the user.

This view is only relevant for domain indexes. And currently, the secondary objects can only be tables.

Related Views

- `DBA_SECONDARY_OBJECTS` provides information about all secondary objects that are associated with domain indexes in the database.
- `USER_SECONDARY_OBJECTS` provides information about secondary objects associated with domain indexes owned by the current user.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the domain index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the domain index
SECONDARY_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the secondary object created by the domain index
SECONDARY_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the secondary object created by the domain index
SECONDARY_OBJDATA_TYPE	VARCHAR2(20)		Type of the secondary object created by the domain index

See Also:

- "[DBA_SECONDARY_OBJECTS](#)"
- "[USER_SECONDARY_OBJECTS](#)"

3.71 ALLSEQUENCES

`ALLSEQUENCES` describes all sequences accessible to the current user.

Related Views

- `DBASEQUENCES` describes all sequences in the database.
- `USERSEQUENCES` describes all sequences owned by the current user. This view does not display the `SEQUENCE_OWNER` column.

Column	Datatype	NULL	Description
SEQUENCE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the sequence
SEQUENCE_NAME	VARCHAR2(128)	NOT NULL	Sequence name
MIN_VALUE	NUMBER		Minimum value of the sequence
MAX_VALUE	NUMBER		Maximum value of the sequence

Column	Datatype	NULL	Description
INCREMENT_BY	NUMBER	NOT NULL	Value by which sequence is incremented
CYCLE_FLAG	VARCHAR2 (1)		Indicates whether the sequence wraps around on reaching the limit (Y) or not (N)
ORDER_FLAG	VARCHAR2 (1)		Indicates whether sequence numbers are generated in order (Y) or not (N)
CACHE_SIZE	NUMBER	NOT NULL	Number of sequence numbers to cache
LAST_NUMBER	NUMBER	NOT NULL	Last sequence number written to disk. If a sequence uses caching, the number written to disk is the last number placed in the sequence cache. This number is likely to be greater than the last sequence number that was used. For session sequences, the value in this column should be ignored.
SCALE_FLAG	VARCHAR2 (1)		Indicates whether this is a scalable sequence (Y) or not (N)
EXTEND_FLAG	VARCHAR2 (1)		Indicates whether this scalable sequence's generated values extend beyond MAX_VALUE or MIN_VALUE (Y) or not (N)
SHARDED_FLAG ¹	VARCHAR2 (1)		Indicates whether this is a sharded sequence (Y) or not (N)
SESSION_FLAG	VARCHAR2 (1)		Indicates whether sequence values are session private (Y) or not (N)
KEEP_VALUE	VARCHAR2 (1)		Indicates whether sequence values are kept during replay after a failure (Y) or not (N)

¹ This column is available starting with Oracle Database 19c.

- ["DBA_SEQUENCES"](#)
- ["USER_SEQUENCES"](#)

3.72 ALL_SERVICES

ALL_SERVICES displays all services in the database. The view excludes rows marked for deletion.

Related View

DBA_SERVICES displays all services in the database. The view excludes rows marked for deletion.

Column	Datatype	NULL	Description
SERVICE_ID	NUMBER		Unique ID for the service
NAME	VARCHAR2 (64)		Name describing the workload

Column	Datatype	NULL	Description
NAME_HASH	NUMBER		Hash of the short name for the service
NETWORK_NAME	VARCHAR2 (512)		Network name used to connect to the service
CREATION_DATE	DATE		Date the service was created
CREATION_DATE_HASH	NUMBER		Hash of the creation date
FAILOVER_METHOD	VARCHAR2 (64)		TAF only for compatibility - BASIC or NONE
FAILOVER_TYPE	VARCHAR2 (64)		For Application Continuity for Java, TRANSACTION. For TAF, SESSION or SELECT.
FAILOVER_RETRIES	NUMBER (10)		For Application Continuity and TAF, when reconnecting after a failure, number of attempts to re-connect per incident
FAILOVER_DELAY	NUMBER (10)		For Application Continuity and TAF, when reconnecting after a failure, delay between each connection retry (in seconds)
MIN_CARDINALITY	NUMBER		Reserved for internal use
MAX_CARDINALITY	NUMBER		Reserved for internal use
GOAL	VARCHAR2 (12)		Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: <ul style="list-style-type: none"> • NONE • SERVICE_TIME - Connections are balanced by response time • THROUGHPUT - Connections are balanced by throughput
DTP	VARCHAR2 (1)		DTP (distributed transaction processing) enforces all sessions for a service at one instance. This is a requirement for XA before 11g, and is a requirement if resuming and suspending the same XA branch.
ENABLED	VARCHAR2 (3)		Reserved for internal use
AQ_HA_NOTIFICATIONS	VARCHAR2 (3)		To enable FAN for OCI connections, set AQ HA Notifications to True. For Oracle Database 12c, FAN uses ONS (Oracle Notification Service)
CLB_GOAL	VARCHAR2 (5)		Connection load balancing goal. When using run-time load balancing, GOAL=SERVICE_TIME or THROUGHPUT, set to SHORT. For a session count per service only, use LONG.
EDITION	VARCHAR2 (128)		A non-NULL value specifies the initial session edition for subsequent database connections that use the service and do not specify an edition. A NULL value has no effect.

Column	Datatype	NULL	Description
COMMIT_OUTCOME	VARCHAR2(3)		<p>For Transaction Guard, indicates whether the database service associated with the user session has the COMMIT_OUTCOME service attribute enabled (YES) or not (NO). This attribute applies on a per session basis and is set at connect time.</p> <p>When COMMIT_OUTCOME = YES:</p> <ul style="list-style-type: none"> • Transaction Guard manages the commit status for all supported transaction types. The outcome of a COMMIT transaction is known. If there is an outage, the application can use DBMS_APP_CONT.GET_LTXID_OUTCOME to return a reliable status for the last in-flight work. • A logical transaction ID (LTXID) is set for each user session at login and at each successful commit. <p>See Also: For information about preserving the commit outcome, see <i>Oracle Database Development Guide</i>. For information about logical transaction IDs, see <i>Oracle Database Development Guide</i>.</p>
RETENTION_TIMEOUT	NUMBER		<p>For Transaction Guard, when COMMIT_OUTCOME = YES, this value indicates the amount of time (in seconds) that the commit outcome is retained in the database.</p>
REPLAY_INITIATION_TIMEOUT	NUMBER	T	<p>For Application Continuity, indicates a time period (in seconds) after which the request will not be replayed. The time period starts at the first request submission. The default value is 300 seconds, which is 5 minutes.</p>
SESSION_STATE_CONSISTENCY	VARCHAR2(128)	Y	<p>Describes how non-transactional is changed during a request. This parameter is considered only if failover_type is set to TRANSACTION for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs and result cache. If non-transactional values change after the request starts, the default value of DYNAMIC should be set. Almost all applications should use DYNAMIC mode. If you are unsure, use DYNAMIC mode.</p>
GLOBAL_SERVICE	VARCHAR2(3)		<p>Indicates whether the service is global. A global service is managed by Global Data Services (GDS) and can be provided by multiple databases that contain replicated data. Possible values:</p> <ul style="list-style-type: none"> • YES: Indicates the service is global • NO: Indicates the service is not global <p>This attribute is set when using GDS. It cannot be set by a user.</p>

Column	Datatype	NULL	Description
PDB	VARCHAR2 (128)		Name of a PDB associated with a given service. Will contain NULL for a non-CDB or if the service is not associated with a PDB (that is, connecting to a CDB using this service will cause a user to connect to the root.)
SQL_TRANSLATION_PROFILE	VARCHAR2 (261)		When managing services for a PDB, use SRVCTL for Oracle RAC and Oracle RAC One Node databases, or connect to that PDB if it is a single instance (not RAC). The PDB attribute shows which PDB has the service. It cannot be set or modified explicitly.
MAX_LAG_TIME	VARCHAR2 (128)		A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.
GSM_FLAGS	NUMBER		The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services using the Global Data Services (GDS) interfaces. It is not supported to change this value at local databases.
PQ_SVC	VARCHAR2 (64)		Flags specific to Global Data Services (GDS). Can only be specified for global services using the GDS interfaces. It is not supported to change these values at local databases.
STOP_OPTION	VARCHAR2 (13)		Name of the associated parallel query rim service
FAILOVER_RESTORE	VARCHAR2 (6)		Stop option for sessions of this service for planned maintenance
FAILOVER_RESTORE	VARCHAR2 (6)		Indicates whether sessions recover their commonly used session state (like NLS, schema) when they are failed over with TAF
DRAIN_TIMEOUT	NUMBER		Number of seconds to wait for sessions to be drained
TABLE_FAMILY_ID	NUMBER		Sharded table family ID associated with the service
PLACEMENT_POLICY	NUMBER		Placement policy for the service. Possible values: <ul style="list-style-type: none"> • 0: PDB-NONE • 1: PDB-SINGLETON • 2: PDB-UNIFORM Note: Values other than 0 are applicable only in the ATP-Dedicated Cloud in an Oracle RAC environment.
RESET_STATE	VARCHAR2 (6)		Reset state for the service. Possible values: <ul style="list-style-type: none"> • LEVEL1 • NONE
VCSPARE1	VARCHAR2 (1024)		Reserved for internal use
NSPARE1	NUMBER		Reserved for internal use

3.73 ALL_SOURCE

`ALL_SOURCE` describes the text source of the stored objects accessible to the current user.

Related Views

- `DBA_SOURCE` describes the text source of all stored objects in the database.
- `USER_SOURCE` describes the text source of the stored objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(12)		Type of object: FUNCTION, JAVA SOURCE, PACKAGE, PACKAGE BODY, PROCEDURE, TRIGGER, TYPE, TYPE BODY
LINE	NUMBER	NOT NULL	Line number of this line of source
TEXT	VARCHAR2(4000)		Text source of the stored object
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)

 See Also:

- "[DBA_SOURCE](#)"
- "[USER_SOURCE](#)"

3.74 ALL_SOURCE_AE

`ALL_SOURCE_AE` describes the text source of the stored objects (across all editions) accessible to the current user.

Related Views

- `DBA_SOURCE_AE` describes the text source of all stored objects (across all editions) in the database.

- `USER_SOURCE_AE` describes the text source of the stored objects (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the object
NAME	VARCHAR2 (128)		Name of the object
TYPE	VARCHAR2 (12)		Type of the object: <ul style="list-style-type: none"> • TYPE • TYPE BODY • PROCEDURE • FUNCTION • PACKAGE • PACKAGE BODY • LIBRARY • JAVA SOURCE
LINE	NUMBER		Line number of this line of source
TEXT	VARCHAR2 (4000)		Source text
EDITION_NAME	VARCHAR2 (128)		Name of the Edition
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)

3.75 ALL_SQL_TRANSLATION_PROFILES

`ALL_SQL_TRANSLATION_PROFILES` describes all SQL translation profiles accessible to the user.

Related Views

- `DBA_SQL_TRANSLATION_PROFILES` describes all SQL translation profiles in the database.
- `USER_SQL_TRANSLATION_PROFILES` describes all SQL translation profiles owned by the user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the SQL translation profile
PROFILE_NAME	VARCHAR2 (128)	NOT NULL	Name of the SQL translation profile
TRANSLATOR	VARCHAR2 (261)		The translator package

Column	Datatype	NULL	Description
FOREIGN_SQL_SYNTAX	VARCHAR2 (5)		Indicates whether the SQL syntax is foreign. Possible values: <ul style="list-style-type: none">• TRUE• FALSE
TRANSLATE_NEW_SQL	VARCHAR2 (5)		Indicates whether to translate new SQL statements and errors using the translator. Possible values: <ul style="list-style-type: none">• TRUE• FALSE
RAISE_TRANSLATION_ERROR	VARCHAR2 (5)		Indicates whether to raise translation error. Possible values: <ul style="list-style-type: none">• TRUE• FALSE
LOG_TRANSLATION_ERROR	VARCHAR2 (5)		Indicates whether to log translation error. Possible values: <ul style="list-style-type: none">• TRUE• FALSE
TRACE_TRANSLATION	VARCHAR2 (5)		Indicates whether to trace translation. Possible values: <ul style="list-style-type: none">• TRUE• FALSE
LOG_ERRORS	VARCHAR2 (5)		Indicates whether there are log errors (TRUE) or not (FALSE)

3.76 ALL_SQL_TRANSLATIONS

ALL_SQL_TRANSLATIONS describes all SQL translations accessible to the user.

Related Views

- DBA_SQL_TRANSLATIONS describes all SQL translations in the database.
- USER_SQL_TRANSLATIONS describes all SQL translations owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the SQL translation profile
PROFILE_NAME	VARCHAR2 (128)	NOT NULL	Name of the SQL translation profile
SQL_TEXT	CLOB	NOT NULL	The SQL statement
TRANSLATED_TEXT	CLOB		The translated SQL statement

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the SQL statement
HASH_VALUE	NUMBER	NOT NULL	Hash value of the SQL statement
ENABLED	VARCHAR2(5)		Displays whether the translation is enabled. Possible values: <ul style="list-style-type: none">• TRUE• FALSE
REGISTRATION_TIME	TIMESTAMP(6)		Time the translation was registered
CLIENT_INFO	VARCHAR2(64)		Client information when the SQL was parsed and the translation was registered
MODULE	VARCHAR2(64)		Module when the SQL was parsed and the translation was registered
ACTION	VARCHAR2(64)		Action when the SQL was parsed and the translation was registered
PARSING_USER_ID	NUMBER		Current user ID when the SQL was parsed and the translation was registered
PARSING_SCHEMA_ID	NUMBER		Current schema ID when the SQL was parsed and the translation was registered
COMMENTS	VARCHAR2(4000)		Comment on the translation
ERROR_CODE	NUMBER		Last error code when the SQL was run
ERROR_SOURCE	VARCHAR2(9)		Source of the last error
TRANSLATION_METHOD	VARCHAR2(10)		Method used to translate the SQL during the last error
DICTIONARY_SQL_ID	VARCHAR2(13)		SQL identifier of the SQL text in the translation dictionary used to translate the SQL during the last error

3.77 ALL_SQLJ_TYPE_ATTRS

ALL_SQLJ_TYPE_ATTRS describes the attributes of the SQLJ object types accessible to the current user.

Related Views

- DBA_SQLJ_TYPE_ATTRS describes the attributes of all SQLJ object types in the database.
- USER_SQLJ_TYPE_ATTRS describes the attributes of the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type

Column	Datatype	NULL	Description
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
ATTR_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute
EXTERNAL_ATTR_NAME	VARCHAR2(4000)		External name of the attribute
ATTR_TYPE_MOD	VARCHAR2(7)		Type modifier of the attribute: <ul style="list-style-type: none">• REF• POINTER
ATTR_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the attribute
ATTR_TYPE_NAME	VARCHAR2(128)		Name of the type of the attribute
LENGTH	NUMBER		Length of the CHAR attribute, or maximum length of the VARCHAR or VARCHAR2 attribute.
PRECISION	NUMBER		Decimal precision of the NUMBER or DECIMAL attribute, or binary precision of the FLOAT attribute.
SCALE	NUMBER		Scale of the NUMBER or DECIMAL attribute
CHARACTER_SET_NAME	VARCHAR2(44)		Character set name of the attribute (CHAR_CS or NCHAR_CS)
ATTR_NO	NUMBER	NOT NULL	Syntactical order number or position of the attribute as specified in the type specification or CREATE TYPE statement (not to be used as an ID number)
INHERITED	VARCHAR2(3)		Indicates whether the attribute is inherited from a supertype (YES) or not (NO)

3.78 ALL_SQLJ_TYPE_METHODS

ALL_SQLJ_TYPE_METHODS describes the methods of the SQLJ object types accessible to the current user.

Related Views

- DBA_SQLJ_TYPE_METHODS describes the methods of all SQLJ object types in the database.
- USER_SQLJ_TYPE_METHODS describes the methods of the SQLJ object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
EXTERNAL_VAR_NAME	VARCHAR2(4000)		Name of the external variable

Column	Datatype	NULL	Description
METHOD_NO	NUMBER	NOT NULL	Method number that distinguishes overloaded methods (not to be used as an ID number)
METHOD_TYPE	VARCHAR2 (6)		Type of the method: <ul style="list-style-type: none"> • MAP • ORDER • PUBLIC
PARAMETERS	NUMBER	NOT NULL	Number of parameters to the method
RESULTS	NUMBER	NOT NULL	Number of results returned by the method
FINAL	VARCHAR2 (3)		Indicates whether the method is final (YES) or not (NO)
INSTANTIABLE	VARCHAR2 (3)		Indicates whether the method is instantiable (YES) or not (NO)
OVERRIDING	VARCHAR2 (3)		Indicates whether the method is overriding a supertype method (YES) or not (NO)
INHERITED	VARCHAR2 (3)		Indicates whether the method is inherited from a supertype (YES) or not (NO)

 See Also:

- "[DBA_SQLJ_TYPE_METHODS](#)"
- "[USER_SQLJ_TYPE_METHODS](#)"

3.79 ALL_SQLJ_TYPES

ALL_SQLJ_TYPES describes the SQLJ object types accessible to the current user.

Related Views

- DBA_SQLJ_TYPES describes all SQLJ object types in the database.
- USER_SQLJ_TYPES describes the SQLJ object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the type
TYPE_NAME	VARCHAR2 (128)	NOT NULL	Name of the type
TYPE_OID	RAW (16)	NOT NULL	Object identifier (OID) of the type
EXTERNAL_NAME	VARCHAR2 (4000)		External class name of the type
USING	VARCHAR2 (21)		Representation of the type: <ul style="list-style-type: none"> • SQLData • CustomDatum • Serializable • Serializable Internal • ORAData
TYPECODE	VARCHAR2 (128)		Typecode of the type

Column	Datatype	NULL	Description
ATTRIBUTES	NUMBER		Number of attributes (if any) in the type
METHODS	NUMBER		Number of methods (if any) in the type
PREDEFINED	VARCHAR2 (3)		Indicates whether the type is a predefined type (YES) or not (NO)
INCOMPLETE	VARCHAR2 (3)		Indicates whether the type is an incomplete type (YES) or not (NO)
FINAL	VARCHAR2 (3)		Indicates whether the type is a final type (YES) or not (NO)
INSTANTIABLE	VARCHAR2 (3)		Indicates whether the type is an instantiable type (YES) or not (NO)
SUPERTYPE_OWNER	VARCHAR2 (128)		Owner of the supertype (NULL if type is not a subtype)
SUPERTYPE_NAME	VARCHAR2 (128)		Name of the supertype (NULL if type is not a subtype)
LOCAL_ATTRIBUTES	NUMBER		Number of local (not inherited) attributes (if any) in the subtype
LOCAL_METHODS	NUMBER		Number of local (not inherited) methods (if any) in the subtype

 **See Also:**

- "[DBA_SQLJ_TYPES](#)"
- "[USER_SQLJ_TYPES](#)"

3.80 ALL_SQLSET

`ALL_SQLSET` displays information about all SQL tuning sets accessible to the current user.

Related Views

- `DBA_SQLSET` displays information about all SQL tuning sets in the database.
- `USER_SQLSET` displays information about the SQL tuning sets owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
NAME	VARCHAR2 (128)	NOT NULL	Name of the SQL tuning set
ID	NUMBER	NOT NULL	SQL tuning set identifier
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB
OWNER	VARCHAR2 (128)		Owner of the SQL tuning set
DESCRIPTION	VARCHAR2 (256)		Description of the SQL tuning set
CREATED	DATE		Date the SQL tuning set was created
LAST_MODIFIED	DATE		Date the SQL tuning set was last modified
STATEMENT_COUNT	NUMBER		Number of statements in the SQL tuning set

 See Also:

- ["DBA_SQLSET"](#)
- ["USER_SQLSET"](#)

3.81 ALL_SQLSET_BINDS

ALL_SQLSET_BINDS displays the bind values associated with all SQL tuning sets accessible to the current user.

Related Views

- DBA_SQLSET_BINDS displays the bind values associated with all SQL tuning sets in the database.
- USER_SQLSET_BINDS displays the bind values associated with the SQL tuning sets owned by the current user. This view does not display the SQLSET_OWNER column.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)		Name of the SQL tuning set for the statement
SQLSET_OWNER	VARCHAR2(128)		User name of the SQL tuning set owner
SQLSET_ID	NUMBER		ID of the SQL tuning set for the statement
CON_DBID	NUMBER		The database ID of the PDB
SQL_ID	VARCHAR2(13)		SQL identifier of the parent cursor in the library cache
FORCE_MATCHING_SIGNATURE	NUMBER		The signature used when the CURSOR_SHARING parameter is set to FORCE
PLAN_HASH_VALUE	NUMBER		Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).
POSITION	NUMBER		Bind position
VALUE	ANYDATA		Bind value. This column is NULL for PL/SQL bind types.
CAPTURED	CHAR(1)		Binds captured
SQL_SEQ	NUMBER		SQL sequence

 See Also:

- ["DBA_SQLSET_BINDS"](#)
- ["USER_SQLSET_BINDS"](#)

3.82 ALL_SQLSET_PLANS

ALL_SQLSET_PLANS describes captured plans for statements in the SQL tuning sets accessible to the current user.

Related Views

- DBA_SQLSET_PLANS describes captured plans in the SQL tuning sets in the database.
- USER_SQLSET_PLANS describes captured plans for statements in the SQL tuning sets owned by the current user. This view does not display the SQLSET_OWNER column.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)	NOT NULL	Name of SQL tuning set for the statement
SQLSET_OWNER	VARCHAR2(128)		User name of SQL tuning set owner
SQLSET_ID	NUMBER	NOT NULL	ID of SQL tuning set for the statement
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
FORCE_MATCHING_SIGNATURE	NUMBER	NOT NULL	The signature used when the CURSOR_SHARING parameter is set to FORCE
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).
SQL_SEQ	NUMBER	NOT NULL	SQL sequence
STATEMENT_ID	VARCHAR2(128)		Statement ID
PLAN_ID	NUMBER		Plan ID
TIMESTAMP	DATE		Date and time timestamp
REMARKS	VARCHAR2(4000)		Remarks
OPERATION	VARCHAR2(128)		Name of the internal operation performed in this step (for example, TABLE ACCESS)
OPTIONS	VARCHAR2(255)		A variation on the operation described in the OPERATION column (for example, FULL)
OBJECT_NODE	VARCHAR2(128)		Name of the database link used to reference the object (a table name or view name). For local queries that use parallel execution, this column describes the order in which output from operations is consumed.
OBJECT_OWNER	VARCHAR2(128)		Name of the user who owns the schema containing the table or index
OBJECT_NAME	VARCHAR2(128)		Name of the table or index
OBJECT_ALIAS	VARCHAR2(261)		Alias for the object
OBJECT_INSTANCE	NUMBER(38)		Instance number for the object
OBJECT_TYPE	VARCHAR2(128)		Type of the object
OPTIMIZER	VARCHAR2(255)		Current mode of the optimizer for the first row in the plan (statement line), for example, CHOOSE. When the operation is a database access (for example, TABLE ACCESS), this column indicates whether or not the object is analyzed.

Column	Datatype	NULL	Description
SEARCH_COLUMNS	NUMBER		Number of index columns with start and stop keys (that is, the number of columns with matching predicates)
ID	NUMBER (38)	NOT NULL	A number assigned to each step in the execution plan
PARENT_ID	NUMBER (38)		ID of the next execution step that operates on the output of the current step
DEPTH	NUMBER (38)		Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0.
POSITION	NUMBER (38)		Order of processing for all operations that have the same PARENT_ID.
COST	NUMBER (38)		Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
CARDINALITY	NUMBER (38)		Estimate, made by the cost-based optimizer, of the number of rows produced by the operation
BYTES	NUMBER (38)		Estimate, made by the cost-based optimizer, of the number of bytes produced by the operation
OTHER_TAG	VARCHAR2 (255)		Describes the contents of the OTHER column. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .
PARTITION_START	VARCHAR2 (255)		Start partition of a range of accessed partitions
PARTITION_STOP	VARCHAR2 (255)		Stop partition of a range of accessed partitions
PARTITION_ID	NUMBER (38)		Step that computes the pair of values of the PARTITION_START and PARTITION_STOP columns
OTHER	LONG		Other information specific to the execution step that users may find useful. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .
DISTRIBUTION	VARCHAR2 (128)		Stores the method used to distribute rows from producer query servers to consumer query servers
CPU_COST	NUMBER (38)		CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
IO_COST	NUMBER (38)		I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
TEMP_SPACE	NUMBER (38)		Temporary space usage of the operation (sort or hash join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
ACCESS_PREDICATES	VARCHAR2 (4000)		Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.
FILTER_PREDICATES	VARCHAR2 (4000)		Predicates used to filter rows before producing them
PROJECTION	VARCHAR2 (4000)		Expressions produced by the operation

Column	Datatype	NULL	Description
TIME	NUMBER (38)		Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
QBLOCK_NAME	VARCHAR2 (128)		Name of the query block
OTHER_XML	CLOB		Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML since multiple pieces of information can be stored there. This includes: <ul style="list-style-type: none"> • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan For further information about values, see <i>Oracle Database SQL Tuning Guide</i> .
EXECUTIONS	NUMBER		Number of times the plan has been executed
STARTS	NUMBER		Number of times this operation has been started, accumulated over the past executions
OUTPUT_ROWS	NUMBER		Number of rows produced by the row source, accumulated over the past executions
CR_BUFFER_GETS	NUMBER		Number of buffers received in consistent mode, accumulated over the past executions. Buffers are usually retrieved in consistent mode for queries.
CU_BUFFER_GETS	NUMBER		Number of buffers retrieved in current mode, accumulated over the past executions. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.
DISK_READS	NUMBER		Number of physical disk reads performed by the operation, accumulated over the past executions
DISK_WRITES	NUMBER		Number of physical disk writes performed by the operation, accumulated over the past executions
ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) corresponding to this operation, accumulated over the past executions
LAST_STARTS	NUMBER		Number of times this operation has been started, during the last execution
LAST_OUTPUT_ROWS	NUMBER		Number of rows produced by the row source, during the last execution
LAST_CR_BUFFER_GETS	NUMBER		Number of buffers retrieved in consistent mode, during the last execution. Buffers are usually retrieved in consistent mode for queries.
LAST_CU_BUFFER_GETS	NUMBER		Number of buffers retrieved in current mode, during the last execution. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.

Column	Datatype	NULL	Description
LAST_DISK_READS	NUMBER		Number of physical disk reads performed by the operation, during the last execution
LAST_DISK_WRITES	NUMBER		Number of physical disk writes performed by the operation, during the last execution
LAST_ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) corresponding to this operation, during the last execution
POLICY	VARCHAR2 (10)		Sizing policy for this work area: <ul style="list-style-type: none"> • MANUAL • AUTO
ESTIMATED_OPTIMAL_SIZE	NUMBER		Estimated size (in KB) required by this work area to execute the operation completely in memory (optimal execution). This is either derived from optimizer statistics or from previous executions.
ESTIMATED_ONEPASS_SIZE	NUMBER		Estimated size (in KB) required by this work area to execute the operation in a single pass. This is either derived from optimizer statistics or from previous executions.
LAST_MEMORY_USED	NUMBER		Memory size (in KB) used by this work area during the last execution of the cursor
LAST_EXECUTION	VARCHAR2 (10)		Indicates whether this work area ran using OPTIMAL, ONE PASS, or under ONE PASS memory requirement (MULTI-PASS), during the last execution of the cursor
LAST_DEGREE	NUMBER		Degree of parallelism used, during the last execution of the cursor
TOTAL_EXECUTIONS	NUMBER		Number of times this work area was active
OPTIMAL_EXECUTIONS	NUMBER		Number of times this work area ran in optimal mode
ONEPASS_EXECUTIONS	NUMBER		Number of times this work area ran in one pass mode
MULTIPASSES_EXECUTIONS	NUMBER		Number of times this work area ran below the one pass memory requirement
ACTIVE_TIME	NUMBER		Average time this work area is active (in hundredths of a second)
MAX_TEMPSEG_SIZE	NUMBER		Maximum temporary segment size (in bytes) created by an instantiation of this work area. This column is null if this work area has never spilled to disk.
LAST_TEMPSEG_SIZE	NUMBER		Temporary segment size (in bytes) created in the last instantiation of this work area. This column is null if the last instantiation of this work area did not spill to disk.

3.83 ALL_SQLSET_REFERENCES

ALL_SQLSET_REFERENCES describes whether or not the SQL tuning sets accessible to the current user are active.

Related Views

- DBA_SQLSET_REFERENCES describes whether or not all SQL tuning sets in the database are active. A SQL tuning set cannot be dropped if it is referenced.
- USER_SQLSET_REFERENCES describes whether or not the SQL tuning sets owned by the current user are active.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL tuning set
SQLSET_OWNER	VARCHAR2(128)		User name of SQL tuning set owner
SQLSET_ID	NUMBER	NOT NULL	Identifier of the SQL tuning set
ID	NUMBER	NOT NULL	Reference identifier
OWNER	VARCHAR2(128)		User who registered to use the SQL tuning set
DESCRIPTION	VARCHAR2(256)		Description of the usage of the SQL tuning set
CREATED	DATE		Date the reference was created

See Also:

- "DBA_SQLSET_REFERENCES"
- "USER_SQLSET_REFERENCES"

3.84 ALL_SQLSET_STATEMENTS

ALL_SQLSET_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets accessible to the current user.

Related Views

- DBA_SQLSET_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets in the database.
- USER_SQLSET_STATEMENTS displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. This view does not display the SQLSET_OWNER column.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL tuning set for the statement
SQLSET_OWNER	VARCHAR2(128)		User name of the SQL tuning set owner
SQLSET_ID	NUMBER	NOT NULL	ID of the SQL tuning set for the statement
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
FORCE_MATCHING_SIGNATURE	NUMBER	NOT NULL	The signature used when the CURSOR_SHARING parameter is set to FORCE
SQL_TEXT	CLOB		Full text for the SQL statement exposed as a CLOB column.
PARSING_SCHEMA_NAME	VARCHAR2(128)		Name of the user in whose schema the statement was parsed
PLAN_HASH_VALUE	NUMBER	NOT NULL	Hash value for the plan corresponding to statistics in this record
BIND_DATA	RAW(2000)		Bind data
BINDS_CAPTURED	CHAR(1)		Binds captured
MODULE	VARCHAR2(64)		Contains the name of the module that was executing when the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_MODULE
ACTION	VARCHAR2(64)		Contains the name of the action that was executing when the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_ACTION
ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) used by this cursor for parsing, executing, and fetching
CPU_TIME	NUMBER		CPU time (in microseconds) used by this cursor for parsing, executing, and fetching
BUFFER_GETS	NUMBER		Number of buffer gets for this child cursor
DISK_READS	NUMBER		Number of disk reads for this child cursor
DIRECT_WRITES	NUMBER		Number of direct writes for this child cursor
ROWS_PROCESSED	NUMBER		Total number of rows that the parsed SQL statement returns
FETCHES	NUMBER		Number of fetches associated with the SQL statement
EXECUTIONS	NUMBER		Number of executions that took place on this object since it was brought into the library cache
END_OF_FETCH_COUNT	NUMBER		Number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic is not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the END_OF_FETCH_COUNT column should be less than, or equal to, the value of the EXECUTIONS column.
OPTIMIZER_COST	NUMBER		Cost of this query, given by the optimizer
OPTIMIZER_ENV	RAW(2000)		Optimizer environment
PRIORITY	NUMBER		User-defined priority
COMMAND_TYPE	NUMBER		Oracle command type definition
FIRST_LOAD_TIME	VARCHAR2(19)		Timestamp of the parent creation time
STAT_PERIOD	NUMBER		Time (in seconds) during which the statistics of the SQL statement were collected
ACTIVE_STAT_PERIOD	NUMBER		Effective time (in seconds) during which the SQL statement was active

Column	Datatype	NULL	Description
OTHER	CLOB		Client data, specified by the user, for this statement
PLAN_TIMESTAMP	DATE		Timestamp for the plan corresponding to the statistics in this record
SQL_SEQ	NUMBER	NOT NULL	SQL sequence
LAST_EXEC_START_TIME	VARCHAR2(19)		For SQLs captured from the cursor cache, this is the time when the most recent execution of this SQL started

3.85 ALL_STAT_EXTENSIONS

`ALL_STAT_EXTENSIONS` displays information about the optimizer statistics extensions accessible to the current user.

Related Views

- `DBA_STAT_EXTENSIONS` displays information about all optimizer statistics extensions in the database.
- `USER_STAT_EXTENSIONS` displays information about the optimizer statistics extensions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the extension
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table to which the extension belongs
EXTENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the statistics extension
EXTENSION	CLOB		Extension (the expression or column group)
CREATOR	VARCHAR2(6)		Creator of the extension: <ul style="list-style-type: none"> • USER • SYSTEM
DROPPABLE	VARCHAR2(3)		Indicates whether the extension is droppable using <code>DBMS_STATS.DROP_EXTENDED_STATS</code> (YES) or not (NO)

 See Also:

- "[DBA_STAT_EXTENSIONS](#)"
- "[USER_STAT_EXTENSIONS](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_STATS.DROP_EXTENDED_STATS` procedure

3.86 ALL_STATEMENTS

`ALL_STATEMENTS` describes all SQL statements in stored PL/SQL objects accessible to the user.

Related Views

- `DBA_STATEMENTS` describes SQL statements in stored PL/SQL objects accessible to `SYS`.
- `USER_STATEMENTS` describes SQL statements in stored PL/SQL objects accessible to the user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the statement
SIGNATURE	VARCHAR2 (32)		Signature of the statement. Every statement type has a unique PL/Scope signature that identifies that instance of the statement.
TYPE	VARCHAR2 (17)		Type of the statement. Statement types correspond to statements that can be used in PL/SQL to execute or otherwise interact with SQL: <ul style="list-style-type: none"> • SELECT • UPDATE • INSERT • DELETE • MERGE • CLOSE • FETCH • OPEN • SAVEPOINT • COMMIT • SET_TRANSACTION • ROLLBACK • LOCK_TABLE • EXECUTE_IMMEDIATE
OBJECT_NAME	VARCHAR2 (128)	NOT NULL	Name of the object where the statement usage occurred
OBJECT_TYPE	VARCHAR2 (12)		Type of the object where the statement usage occurred
USAGE_ID	NUMBER		Unique key for a statement usage within the object
LINE	NUMBER		Line number of the statement usage
COL	NUMBER		Column number of the statement usage
USAGE_CONTEXT_ID	NUMBER		Context USAGE_ID of a statement usage

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)		SQL ID of the SQL statement. The value of this column is null for statements that do not have a SQL ID.
HAS_HINT	VARCHAR2(3)		YES if the SQL statement contains a hint, NO otherwise. If a hint appears inside of a subquery, then HAS_HINT will be YES for the containing statement or statements of the subquery as well as for the subquery itself.
HAS_INTO_BULK	VARCHAR2(3)		Indicates whether the statement contains a BULK_COLLECT clause (YES) or not (NO)
HAS_INTO_RETURNING	VARCHAR2(3)		Indicates whether the statement contains a RETURNING INTO clause (YES) or not (NO)
HAS_INTO_RECORD	VARCHAR2(3)		Indicates whether the statement returns results into a PL/SQL record (YES) or not (NO)
HAS_CURRENT_OF	VARCHAR2(3)		Indicates whether the statement contains a HAS_CURRENT_OF clause (YES) or not (NO)
HAS_FOR_UPDATE	VARCHAR2(3)		Indicates whether the statement contains a HAS_FOR_UPDATE clause (YES) or not (NO)
HAS_IN_BINDS	VARCHAR2(3)		Indicates whether the statement contains an IN_BINDS clause (YES) or not (NO)
TEXT	VARCHAR2(4000)		The normalized form of the statement, when the statement has a normalized form. These are typically the same statements that have a SQL ID. The column value is null when the statement does not have a normalized form.
FULL_TEXT	CLOB		Clob text of the SQL statement
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root)

3.87 ALL_STORED_SETTINGS

ALL_STORED_SETTINGS provides information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges.

Related Views

- DBA_STORED_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges. It also returns parameter information for all objects in the database and is accessible only to users with the SELECT_CATALOG_ROLE privilege.
- USER_STORED_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Name of the database user owning the stored PL/SQL unit
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the PL/SQL unit
OBJECT_ID	NUMBER	NOT NULL	Object number of the PL/SQL unit
OBJECT_TYPE	VARCHAR2(12)		The type of PL/SQL unit: PROCEDURE, FUNCTION, PACKAGE, PACKAGE BODY, TRIGGER, TYPE, or TYPE BODY
PARAM_NAME	VARCHAR2(128)	NOT NULL	The name of the parameter stored persistently with the PL/SQL unit
PARAM_VALUE	VARCHAR2(4000)		The TO_CHAR() representation of the value of the persistently stored parameter. The width of this column is operating system dependent; however, it is never less than 255.
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> 0: This value is used for rows in non-CDBs. This value is not used for CDBs. n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root)

Note:

This view is deprecated in favor of the ALL_PLSQL_OBJECT_SETTINGS view. Oracle recommends that you use ALL_PLSQL_OBJECT_SETTINGS instead.

ALL_STORED_SETTINGS is retained for backward compatibility only.

["ALL_PLSQL_OBJECT_SETTINGS"](#)

3.88 ALL_STREAMS_GLOBAL_RULES

`ALL_STREAMS_GLOBAL_RULES` displays information about rules.

`ALL_STREAMS_GLOBAL_RULES` displays information about the following types of rules:

- Global rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Global rules created for the propagations that have a source queue accessible to the current user
- Global rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the `DBMS_RULE_ADMIN` package.

Related View

`DBA_STREAMS_GLOBAL_RULES` displays information about the global rules created for all capture processes, propagations, and apply processes in the database.

Column	Datatype	NULL	Description
<code>STREAMS_NAME</code>	<code>VARCHAR2(128)</code>		Name of the Replication process or propagation
<code>STREAMS_TYPE</code>	<code>VARCHAR2(11)</code>		Type of the Replication process or propagation: <ul style="list-style-type: none"> • CAPTURE • PROPAGATION • APPLY
<code>RULE_TYPE</code>	<code>VARCHAR2(9)</code>		Type of the rule: <ul style="list-style-type: none"> • DML • DDL
<code>INCLUDE_TAGGED_LCR</code>	<code>VARCHAR2(3)</code>		Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)
<code>SOURCE_DATABASE</code>	<code>VARCHAR2(128)</code>		Source database in the rule condition. The rule evaluates to <code>true</code> for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database.
<code>RULE_NAME</code>	<code>VARCHAR2(128)</code>	NOT NULL	Name of the rule
<code>RULE_OWNER</code>	<code>VARCHAR2(128)</code>	NOT NULL	Owner of the rule
<code>RULE_CONDITION</code>	<code>VARCHAR2(4000)</code>		First 4000 bytes of the system-generated rule condition evaluated by the rules engine

See Also:

- "[DBA_STREAMS_GLOBAL_RULES](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_RULE_ADMIN` package

3.89 ALL_STREAMS_MESSAGE_CONSUMERS

ALL_STREAMS_MESSAGE_CONSUMERS displays information about the Replication messaging clients accessible to the current user.

Related View

DBA_STREAMS_MESSAGE_CONSUMERS displays information about all Replication messaging clients in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)	NOT NULL	Name of the messaging client
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue
RULE_SET_NAME	VARCHAR2(128)		Name of the positive rule set
RULE_SET_OWNER	VARCHAR2(128)		Owner of the positive rule set
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the negative rule set
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the negative rule set
NOTIFICATION_TYPE	VARCHAR2(9)		Type of the notification action: <ul style="list-style-type: none"> • PROCEDURE • MAIL • HTTP
NOTIFICATION_ACTION	VARCHAR2(256)		Notification action
NOTIFICATION_CONTEXT	ANYDATA		Context for the notification action

See Also:

"DBA_STREAMS_MESSAGE_CONSUMERS"

3.90 ALL_STREAMS_NEWLY_SUPPORTED

ALL_STREAMS_NEWLY_SUPPORTED displays information about the tables accessible to the current user that are newly supported by capture processes.

Related View

DBA_STREAMS_NEWLY_SUPPORTED displays information about all tables in the database that are newly supported by capture processes.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table

Column	Datatype	NULL	Description
REASON	VARCHAR2 (39)		<p>Reason why the table was not supported in a previous release:</p> <ul style="list-style-type: none"> • IOT • column with user-defined type • unsupported column exists • object table • AQ queue table • temporary table • sub object • external table • materialized view • FILE column exists • materialized view log • materialized view container table • streams unsupported object • domain index
COMPATIBLE	CHAR (4)		Minimum database compatibility for capture processes to support the database object

 See Also:["DBA_STREAMS_NEWLY_SUPPORTED"](#)

3.91 ALL_STREAMS_SCHEMA_RULES

ALL_STREAMS_SCHEMA_RULES displays information about several types of schema rules.

ALL_STREAMS_SCHEMA_RULES displays information about these types of schema rules:

- Schema rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Schema rules created for the propagations that have a source queue accessible to the current user
- Schema rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS_RULE_ADMIN package.

Related View

DBA_STREAMS_SCHEMA_RULES displays information about the schema rules created for all capture processes, propagations, and apply processes in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2 (128)		Name of the Replication process or propagation

Column	Datatype	NULL	Description
STREAMS_TYPE	VARCHAR2(11)		Type of the Replication process or propagation: <ul style="list-style-type: none">• CAPTURE• PROPAGATION• APPLY
SCHEMA_NAME	VARCHAR2(128)		Schema name in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this schema name.
RULE_TYPE	VARCHAR2(7)		Type of the rule: <ul style="list-style-type: none">• DML• DDL
INCLUDE_TAGGED_LCR	VARCHAR2(3)		Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)
SOURCE_DATABASE	VARCHAR2(128)		Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database.
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_CONDITION	VARCHAR2(4000)		First 4000 bytes of the system-generated rule condition evaluated by the rules engine

See Also:

- "[DBA_STREAMS_SCHEMA_RULES](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_RULE_ADMIN` package

3.92 ALL_STREAMS_TABLE_RULES

`ALL_STREAMS_TABLE_RULES` displays information about several types of rules.

`ALL_STREAMS_TABLE_RULES` displays information about these types of table and subset rules:

- Table rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Table rules created for the propagations that have a source queue accessible to the current user
- Table rules created for the apply processes that dequeue events from queues accessible to the current user
- Subset rules created for the apply processes that have a source queue accessible to the current user

This view does not contain information about rules created using the `DBMS_RULE_ADMIN` package.

Related View

DBA_STREAMS_TABLE_RULES displays information about the table rules created for all capture processes, propagations, and apply processes in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)		Name of the Replication process or propagation
STREAMS_TYPE	VARCHAR2(12)		Type of the Replication process or propagation: <ul style="list-style-type: none">• CAPTURE• PROPAGATION• APPLY• DEQUEUE
TABLE_OWNER	VARCHAR2(128)		Table owner in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table owner.
TABLE_NAME	VARCHAR2(128)		Table name in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table name.
RULE_TYPE	VARCHAR2(7)		Type of the rule: <ul style="list-style-type: none">• DML• DDL
DML_CONDITION	VARCHAR2(4000)		Row subsetting condition, if the rule is a subset rule
SUBSETTING_OPERATION	VARCHAR2(6)		DML operation for row subsetting in the rule condition, if the rule is a subset rule: <ul style="list-style-type: none">• INSERT• UPDATE• DELETE
INCLUDE_TAGGED_LCR	VARCHAR2(3)		The rule evaluates to true for a logical change record (LCR) only if the LCR contains this command type after internal transformation.
SOURCE_DATABASE	VARCHAR2(128)		Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_CONDITION	VARCHAR2(4000)		First 4000 bytes of the system-generated rule condition evaluated by the rules engine

See Also:

- "[DBA_STREAMS_TABLE_RULES](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_RULE_ADMIN package

3.93 ALL_STREAMS_TRANSFORM_FUNCTION

`ALL_STREAMS_TRANSFORM_FUNCTION` displays information about the rule-based transformation functions accessible to the current user.

Related View

`DBA_STREAMS_TRANSFORM_FUNCTION` displays information about all rule-based transformation functions in the database.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2 (128)	NOT NULL	Owner of the rule associated with the transformation function
RULE_NAME	VARCHAR2 (128)	NOT NULL	Name of the rule associated with the transformation function
VALUE_TYPE	VARCHAR2 (4000)		Type of the transformation function name. This type must be <code>VARCHAR2</code> for a rule-based transformation to work properly.
TRANSFORM_FUNCTION_NAME	VARCHAR2 (4000)		Name of the transformation function (NULL if <code>VALUE_TYPE</code> is not <code>VARCHAR2</code>)
CUSTOM_TYPE	VARCHAR2 (11)		Type of the transformation function: <ul style="list-style-type: none"> • ONE TO ONE - One-to-one transformations • ONE TO MANY - One-to-many transformations

See Also:

["DBA_STREAMS_TRANSFORM_FUNCTION"](#)

3.94 ALL_SUBPART_COL_STATISTICS

`ALL_SUBPART_COL_STATISTICS` describes column statistics and histogram information for subpartitions of partitioned objects accessible to the current user.

Related Views

- `DBA_SUBPART_COL_STATISTICS` provides this information for all subpartitions in the database.
- `USER_SUBPART_COL_STATISTICS` provides this information for subpartitions of all partitioned objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table
SUBPARTITION_NAME	VARCHAR2 (128)		Table subpartition name
COLUMN_NAME	VARCHAR2 (4000)		Column name
NUM_DISTINCT	NUMBER		Number of distinct values in the column

Column	Datatype	NULL	Description
LOW_VALUE	RAW(1000)		Low value in the column
HIGH_VALUE	RAW(1000)		High value in the column
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.
			If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in histogram for the column
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
NOTES	VARCHAR2(41)		Describes some additional properties of the statistics. For example, if the value is INCREMENTAL, the global statistics are derived from synopses, that is, the global statistics are incrementally maintained.
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: <ul style="list-style-type: none">• NONE• FREQUENCY• HEIGHT BALANCED• HYBRID• TOP-FREQUENCY

 **See Also:**

- "[DBA_SUBPART_COL_STATISTICS](#)"
- "[USER_SUBPART_COL_STATISTICS](#)"

3.95 ALL_SUBPART_HISTOGRAMS

ALL_SUBPART_HISTOGRAMS displays the actual histogram data (end-points per histogram) for histograms on table subpartitions accessible to the current user.

Related Views

- DBA_SUBPART_HISTOGRAMS displays this information for all subpartitions in the database.
- USER_SUBPART_HISTOGRAMS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

 Note:

These views are populated only if you collect statistics on the index using the DBMS_STATS package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the table
TABLE_NAME	VARCHAR2 (128)		Name of the table
SUBPARTITION_NAME	VARCHAR2 (128)		Table subpartition name
COLUMN_NAME	VARCHAR2 (4000)		Column name
BUCKET_NUMBER	NUMBER		Bucket number
ENDPOINT_VALUE	NUMBER		Normalized endpoint values for this bucket
ENDPOINT_ACTUAL_VALUE	VARCHAR2 (4000)		Actual (not normalized) string value of the endpoint for this bucket
ENDPOINT_ACTUAL_VALUE_RA_W	RAW(1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)

 See Also:

- ["DBA_SUBPART_HISTOGRAMS"](#)
- ["USER_SUBPART_HISTOGRAMS"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS package

3.96 ALL_SUBPART_KEY_COLUMNS

ALL_SUBPART_KEY_COLUMNS displays subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) accessible to the current user.

Related Views

- DBA_SUBPART_KEY_COLUMNS displays this information for all subpartitions in the database.
- USER_SUBPART_KEY_COLUMNS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the partitioned table or index
NAME	VARCHAR2 (128)		Name of the partitioned table or index
OBJECT_TYPE	CHAR (5)		Object type: <ul style="list-style-type: none"> • TABLE • INDEX

Column	Datatype	NULL	Description
COLUMN_NAME	VARCHAR2(4000)		Column name
COLUMN_POSITION	NUMBER		Position of the column within the subpartitioning key
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of the column for which this column provides linguistic ordering

 See Also:

- "[DBA_SUBPART_KEY_COLUMNS](#)"
- "[USER_SUBPART_KEY_COLUMNS](#)"

3.97 ALL_SUBPARTITION_TEMPLATES

`ALL_SUBPARTITION_TEMPLATES` describes the subpartition templates accessible to the current user.

Related Views

- `DBA_SUBPARTITION_TEMPLATES` describes all subpartition templates in the database.
- `USER_SUBPARTITION_TEMPLATES` describes the subpartition templates owned by the current user. This view does not display the `USER_NAME` column.

Column	Datatype	NULL	Description
USER_NAME	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
SUBPARTITION_NAME	VARCHAR2(132)	NOT NULL	Name of the subpartition
SUBPARTITION_POSITION	NUMBER		Position of the subpartition
TABLESPACE_NAME	VARCHAR2(30)		Tablespace name of the subpartition
HIGH_BOUND	LONG		Literal list values of the subpartition
COMPRESSION	VARCHAR2(4)		Compression values of <code>COMPRESSION</code> or <code>NOCOMPRESSION</code> can be specified in a subpartition template. The value in this column indicates whether the subpartition template specifies that for each new added composite partition, its subpartition data will be stored in compressed format (<code>YES</code>) or not (<code>NO</code>). If compression is not specified in the subpartition template, then the default is that data stored in newly-added subpartitions will not be stored in compressed format (<code>NO</code>).

Column	Datatype	NULL	Description
INDEXING	VARCHAR2 (4)		<p>Indexing values of INDEXING ON or INDEXING OFF can be specified in a subpartition template.</p> <p>The value in this column indicates whether the subpartition template specifies that for each new added composite partition, its subpartition data will be considered for a partial index (ON) or not (OFF).</p> <p>If indexing is not specified in the subpartition template, then the default is that data stored in newly-added subpartitions will be considered for a partial index (ON).</p>
READ_ONLY	VARCHAR2 (4)		<p>Values of READ ONLY or READ WRITE can be specified in a subpartition template.</p> <p>The value in this column indicates whether the subpartition template specifies that for each new added composite partition, its subpartition data will be read only (YES) or not (NO).</p> <p>If the read clause is not specified in the subpartition template, then the default is that data stored in newly-added subpartitions will be read/write (NO).</p>

See Also:

- "[DBA_SUBPARTITION_TEMPLATES](#)"
- "[USER_SUBPARTITION_TEMPLATES](#)"

3.98 ALL_SUMDELTA

ALL_SUMDELTA lists direct path load entries accessible to the current user.

Column	Datatype	NULL	Description
TABLEOBJ#	NUMBER	NOT NULL	Object number of the table
PARTITIONOBJ#	NUMBER	NOT NULL	Object number of table partitions (if the table is partitioned)
DMLOPERATION	VARCHAR2 (1)		Type of DML operation applied to the table
SCN	NUMBER	NOT NULL	SCN when the bulk DML occurred
TIMESTAMP	DATE	NOT NULL	Timestamp of the log entry
LOWROWID	ROWID	NOT NULL	Start ROWID in the loaded rowid range
HIGHROWID	ROWID	NOT NULL	End ROWID in the loaded rowid range
SEQUENCE	NUMBER		Sequence number of the direct load
XID	NUMBER		Transaction ID

3.99 ALL_SYNC_CAPTURE

`ALL_SYNC_CAPTURE` displays information about the synchronous capture processes that store the captured changes in queues accessible to the current user.

Related View

`DBA_SYNC_CAPTURE` displays information about all synchronous capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue used for holding captured changes
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue used for holding captured changes
RULE_SET_NAME	VARCHAR2(128)		Rule set used by the capture process
RULE_SET_OWNER	VARCHAR2(128)		Owner of the rule set
CAPTURE_USER	VARCHAR2(128)		Current user who is enqueueing captured messages

 **See Also:**

["DBA_SYNC_CAPTURE"](#)

3.100 ALL_SYNC_CAPTURE_PREPARED_TABS

`ALL_SYNC_CAPTURE_PREPARED_TABS` displays information about the tables accessible to the current user that are prepared for synchronous capture instantiation.

Related View

`DBA_SYNC_CAPTURE_PREPARED_TABS` displays information about all tables in the database that are prepared for synchronous capture instantiation.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table prepared for synchronous capture instantiation
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table prepared for synchronous capture instantiation
SCN	NUMBER	NOT NULL	SCN from which changes can be captured
TIMESTAMP	DATE		Time at which the table was ready to be instantiated

 **See Also:**

["DBA_SYNC_CAPTURE_PREPARED_TABS"](#)

3.101 ALL_SYNC_CAPTURE_TABLES

ALL_SYNC_CAPTURE_TABLES displays information about the tables accessible to the current user that are captured by synchronous captures.

Related View

DBA_SYNC_CAPTURE_TABLES displays information about all tables in the database that are captured by synchronous captures.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2 (128)		Owner of the synchronous capture table
TABLE_NAME	VARCHAR2 (128)		Name of the synchronous capture table
ENABLED	VARCHAR2 (3)		Indicates whether synchronous capture is enabled for the table (YES) or not (NO)

 **See Also:**

["DBA_SYNC_CAPTURE_TABLES"](#)

3.102 ALL_SYNONYMS

ALL_SYNONYMS describes the synonyms accessible to the current user.

The following criteria determine the list of synonyms that ALL_SYNONYMS shows:

- All private synonyms owned by the logged-in user, even if the base object pointed to is not accessible.
- All public synonyms, even if the base object pointed to is not accessible.
- All private synonyms owned by a different user, where the ultimate base object pointed to by that synonym or by any chain of nested synonyms, is known to be accessible because of a grant to the logged-in user, or a grant to a role in effect for this session.
- If the current session has any of the following privileges, then all synonyms that point directly to local objects are shown because it is assumed that the session can access those objects:
 - LOCK ANY TABLE
 - READ ANY TABLE
 - SELECT ANY TABLE
 - INSERT ANY TABLE
 - UPDATE ANY TABLE
 - DELETE ANY TABLE

Synonyms that point to remote objects are excluded because the system privileges just listed do not automatically convey access to those remote objects. Also, if the synonyms point to objects other than tables and views (such as sequences, PL/SQL procedures, and

so on) then this rule may show synonyms that ultimately resolve to objects that this session cannot access.

- All private synonyms owned by a different user, where the synonym is via a database link, are excluded.

Related Views

- DBA_SYNONYMS describes all synonyms in the database.
- USER_SYNONYMS describes the synonyms owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the synonym
SYNONYM_NAME	VARCHAR2(128)		Name of the synonym
TABLE_OWNER	VARCHAR2(128)		Owner of the object referenced by the synonym, or creator of the referring synonym if the target is a public synonym (that is, the object referred to by TABLE_NAME). Although the column is called TABLE_OWNER, the object owned is not necessarily a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.
TABLE_NAME	VARCHAR2(128)		Name of the object referenced by the synonym. Although the column is called TABLE_NAME, the object does not necessarily have to be a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.
DB_LINK	VARCHAR2(128)		Name of the database link referenced, if any
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)

- "[DBA_SYNONYMS](#)"
- "[USER_SYNONYMS](#)"

3.103 ALL_TAB_COL_STATISTICS

ALL_TAB_COL_STATISTICS displays column statistics and histogram information extracted from ALL_TAB_COLUMNS.

Related Views

- DBA_TAB_COL_STATISTICS displays such information extracted from "DBA_TAB_COLUMNS".
- USER_TAB_COL_STATISTICS displays such information extracted from "USER_TAB_COLUMNS". This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
COLUMN_NAME	VARCHAR2(128)		Column name
NUM_DISTINCT	NUMBER		Number of distinct values in the column
LOW_VALUE	RAW(1000)		Low value in the column
HIGH_VALUE	RAW(1000)		High value in the column
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in histogram for the column
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
NOTES	VARCHAR2(99)		Describes some additional properties of the statistics. For example:
AVG_COL_LEN	NUMBER		<ul style="list-style-type: none"> A value of INCREMENTAL indicates that the global statistics are derived from synopses, that is, the global statistics are incrementally maintained. A value of STATS_ON_CONVENTIONAL_LOAD indicates that the statistics are obtained by online statistics gathering for conventional DML.¹

Column	Datatype	NULL	Description
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: <ul style="list-style-type: none">• NONE• FREQUENCY• HEIGHT BALANCED• HYBRID• TOP-FREQUENCY
SCOPE	VARCHAR2(7)		The value is SHARED for statistics gathered on any table other than global temporary tables. For a global temporary table, the possible values are: <ul style="list-style-type: none">• SESSION - Indicates that the statistics are session-specific• SHARED - Indicates that the statistics are shared across all sessions See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.

¹ The STATS_ON_CONVENTIONAL_LOAD value is available starting with Oracle Database 19c.

- "[ALL_TAB_COLUMNS](#)"

3.104 ALL_TAB_COLS

ALL_TAB_COLS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the DBMS_STATS package.

This view differs from ALL_TAB_COLUMNS in that system-generated hidden columns are not filtered out.

Related Views

- DBA_TAB_COLS describes the columns of all tables, views, and clusters in the database.
- USER_TAB_COLS describes the columns of the tables, views, and clusters owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table, view, or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table, view, or cluster

Column	Datatype	NULL	Description
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
DATA_TYPE	VARCHAR2(128)		Data type of the column
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER datatype; binary precision for FLOAT datatype; NULL for all other datatypes
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY.
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
NUM_DISTINCT	NUMBER		Number of distinct values in the column.
LOW_VALUE	RAW(1000)		This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.
HIGH_VALUE	RAW(1000)		Low value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.
DENSITY	NUMBER		High value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.
NUM_NULLS	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.
NUM_BUCKETS	NUMBER		If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT. This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.
			Number of NULLs in the column Number of buckets in the histogram for the column Note: The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.

Column	Datatype	NULL	Description
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: <ul style="list-style-type: none">• CHAR_CS• NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following datatypes: <ul style="list-style-type: none">• CHAR• VARCHAR2• NCHAR• NVARCHAR2
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none">• CHAR• VARCHAR2• NCHAR• NVARCHAR2
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HIDDEN_COLUMN	VARCHAR2(3)		Indicates whether the column is a hidden column (YES) or not (NO)
VIRTUAL_COLUMN	VARCHAR2(3)		Indicates whether the column is a virtual column (YES) or not (NO)
SEGMENT_COLUMN_ID	NUMBER		Sequence number of the column in the segment
INTERNAL_COLUMN_ID	NUMBER	NOT NULL	Internal sequence number of the column
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: <ul style="list-style-type: none">• NONE• FREQUENCY• TOP-FREQUENCY• HEIGHT BALANCED• HYBRID
QUALIFIED_COL_NAME	VARCHAR2(4000)		Qualified column name
USER_GENERATED	VARCHAR2(3)		Indicates whether the column is a user-generated column (YES) or a system-generated column (NO).
			Invisible columns are hidden columns that are also user-generated columns.
DEFAULT_ON_NULL	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL semantics (YES) or not (NO)

Column	Datatype	NULL	Description
IDENTITY_COLUMN	VARCHAR2(3)		Indicates whether this is an identity column (YES) or not (NO)
EVALUATION_EDITION	VARCHAR2(128)		Name of the edition in which editioned objects referenced in an expression column are resolved
UNUSABLE_BEFORE	VARCHAR2(128)		Name of the oldest edition in which the column is usable
UNUSABLE_BEGINNING	VARCHAR2(128)		Name of the oldest edition in which the column becomes perpetually unusable
COLLATION	VARCHAR2(100)		Collation for the column. Only applies to columns with character data types.
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of a column, for which this virtual column generates a collation key.

3.105 ALL_TAB_COLUMNS

ALL_TAB_COLUMNS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the `DBMS_STATS` package.

This view filters out system-generated hidden columns. The `ALL_TAB_COLS` view does not filter out system-generated hidden columns.

Related Views

- `DBA_TAB_COLUMNS` describes the columns of all tables, views, and clusters in the database.
- `USER_TAB_COLUMNS` describes the columns of the tables, views, and clusters owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table, view, or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table, view, or cluster
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
DATA_TYPE	VARCHAR2(128)		Data type of the column
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column

Column	Datatype	NULL	Description
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY. The constraint should be in an ENABLE VALIDATE state.
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
NUM_DISTINCT	NUMBER		Number of distinct values in the column.
			This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART} _COL_STATISTICS views.
LOW_VALUE	RAW(1000)		Low value in the column.
			This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART} _COL_STATISTICS views.
HIGH_VALUE	RAW(1000)		High value in the column.
			This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART} _COL_STATISTICS views.
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.
			If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
			This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART} _COL_STATISTICS views.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in the histogram for the column
			Note: The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column

Column	Datatype	NULL	Description
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: <ul style="list-style-type: none">• CHAR_CS• NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following datatypes: <ul style="list-style-type: none">• CHAR• VARCHAR2• NCHAR• NVARCHAR2
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none">• CHAR• VARCHAR2• NCHAR• NVARCHAR2
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: <ul style="list-style-type: none">• NONE• FREQUENCY• TOP-FREQUENCY• HEIGHT BALANCED• HYBRID
DEFAULT_ON_NULL	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL semantics (YES) or not (NO)
IDENTITY_COLUMN	VARCHAR2(3)		Indicates whether this is an identity column (YES) or not (NO)
EVALUATION_EDITION	VARCHAR2(128)		Name of the edition in which editioned objects referenced in an expression column are resolved
UNUSABLE_BEFORE	VARCHAR2(128)		Name of the oldest edition in which the column is usable
UNUSABLE_BEGINNING	VARCHAR2(128)		Name of the oldest edition in which the column becomes perpetually unusable
COLLATION	VARCHAR2(100)		Collation for the column. Only applies to columns with character data types.

3.106 ALL_TAB_COMMENTS

`ALL_TAB_COMMENTS` displays comments on the tables and views accessible to the current user.

Related Views

- `DBA_TAB_COMMENTS` displays comments on all tables and views in the database.
- `USER_TAB_COMMENTS` displays comments on the tables and views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the object
TABLE_TYPE	VARCHAR2(11)		Type of the object
COMMENTS	VARCHAR2(4000)		Comment on the object
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows in non-CDBs. This value is not used for CDBs• <i>n</i>: This value is used for rows containing data that originate in the container with the ID <i>n</i> (<i>n</i>=1 if the data originates in root)

 See Also:

- "[DBA_TAB_COMMENTS](#)"
- "[USER_TAB_COMMENTS](#)"

3.107 ALL_TAB_HISTGRM_PENDING_STATS

ALL_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions accessible to the current user.

Related Views

- DBA_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions in the database.
- USER_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
COLUMN_NAME	VARCHAR2(128)		Name of the column
ENDPOINT_NUMBER	NUMBER		Endpoint number
ENDPOINT_VALUE	NUMBER		Normalized endpoint value
ENDPOINT_ACTUAL_VALUE	VARCHAR2(4000)		Actual endpoint value
ENDPOINT_ACTUAL_VALUE_RA_W	RAW(1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)

See Also:

- "DBA_TAB_HISTGRM_PENDING_STATS"
- "USER_TAB_HISTGRM_PENDING_STATS"

3.108 ALL_TAB_HISTOGRAMS

ALL_TAB_HISTOGRAMS describes histograms on tables and views accessible to the current user.

The ALL_TAB_HISTOGRAMS view may contain a one-bucket histogram, which in fact signifies "No histogram" to the Oracle Database software. Therefore, it should not be queried to indicate the presence or absence of a histogram on a particular column. Instead, query the value of column HISTOGRAM in the ALL_TAB_COL_STATISTICS view.

Related Views

- DBA_TAB_HISTOGRAMS describes histograms on all tables and views in the database.
- USER_TAB_HISTOGRAMS describes histograms on all tables and views owned by the current user. This view does not display the OWNER column.

 **Note:**

These views are populated only if you collect statistics on the table using the DBMS_STATS package. For more information, see *Oracle Database PL/SQL Packages and Types Reference*.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the table
TABLE_NAME	VARCHAR2 (128)		Name of the table
COLUMN_NAME	VARCHAR2 (4000)		Column name or attribute of the object type column
ENDPOINT_NUMBER	NUMBER		Histogram bucket number
ENDPOINT_VALUE	NUMBER		Normalized endpoint value for this bucket
ENDPOINT_ACTUAL_VALUE	VARCHAR2 (4000)		Actual (not normalized) string value of the endpoint for this bucket
ENDPOINT_ACTUAL_VALUE_RA_W	RAW(1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)
SCOPE	VARCHAR2 (7)		The value is SHARED for statistics gathered on any table other than global temporary tables. For a global temporary table, the possible values are: <ul style="list-style-type: none">• SESSION - Indicates that the statistics are session-specific• SHARED - Indicates that the statistics are shared across all sessions See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.

 **See Also:**

- "[USER_TAB_HISTOGRAMS](#)"
- "[ALL_TAB_COL_STATISTICS](#)"

3.109 ALL_TAB_IDENTITY_COLS

ALL_TAB_IDENTITY_COLS describes all table identity columns.

Related Views

- DBA_TAB_IDENTITY_COLS describes all table identity columns.

- `USER_TAB_IDENTITY_COLS` describes all table identity columns. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the identity column
GENERATION_TYPE	VARCHAR2(10)		Generation type of the identity column. Possible values are <code>ALWAYS</code> or <code>BY DEFAULT</code> .
SEQUENCE_NAME	VARCHAR2(128)	NOT NULL	Name of the sequence associated with the identity column
IDENTITY_OPTIONS	VARCHAR2(298)		Options for the identity column sequence generator

 **See Also:**

- "[DBA_TAB_IDENTITY_COLS](#)"
- "[USER_TAB_IDENTITY_COLS](#)"

 **See Also:**

- The `ALTER TABLE` statement in *Oracle Database SQL Language Reference* for more information about creating an identity column
- The `CREATE TABLE` statements in *Oracle Database SQL Language Reference* for more information about creating an identity column

3.110 ALL_TAB_MODIFICATIONS

`ALL_TAB_MODIFICATIONS` describes tables accessible to the current user that have been modified since the last time statistics were gathered on the tables.

Related Views

- `DBA_TAB_MODIFICATIONS` describes such information for all tables in the database.
- `USER_TAB_MODIFICATIONS` describes such information for tables owned by the current user. This view does not display the `TABLE_OWNER` column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the modified table
TABLE_NAME	VARCHAR2(128)		Name of the modified table
PARTITION_NAME	VARCHAR2(128)		Name of the modified partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the modified subpartition
INSERTS	NUMBER		Approximate number of inserts since the last time statistics were gathered

Column	Datatype	NULL	Description
UPDATES	NUMBER		Approximate number of updates since the last time statistics were gathered
DELETES	NUMBER		Approximate number of deletes since the last time statistics were gathered
TIMESTAMP	DATE		Indicates the last time the table was modified
TRUNCATED	VARCHAR2 (3)		Indicates whether the table has been truncated since the last analyze (YES) or not (NO)
DROP_SEGMENTS	NUMBER		Number of partition and subpartition segments dropped since the last analyze

See Also:

- ["DBA_TAB_MODIFICATIONS"](#)
- ["USER_TAB_MODIFICATIONS"](#)

3.111 ALL_TAB_PARTITIONS

ALL_TAB_PARTITIONS displays partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS_STATS package for the partitions accessible to the current user.

Related Views

- DBA_TAB_PARTITIONS displays such information for all partitions in the database.
- USER_TAB_PARTITIONS displays such information for the partitions of all partitioned objects owned by the current user. This view does not display the TABLE_OWNER column.

Note:

Columns marked with an asterisk (*) are populated only if you collect statistics on the table with the DBMS_STATS package.

Note:

The following is true for the columns below that include double asterisks (**) in the column description:

The column can display information about segment-level attributes (for simple partitioned tables) or metadata (for composite partitioned tables). In a simple partitioned table, the partition physically contains the data (the segment) in the database. In a composite partitioned table, the partition is metadata and the data itself is stored in the subpartitions.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
COMPOSITE	VARCHAR2(3)		Indicates whether the table is composite-partitioned (YES) or not (NO)
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_COUNT	NUMBER		If this is a composite partitioned table, the number of subpartitions in the partition
HIGH_VALUE	LONG		Partition bound value expression
HIGH_VALUE_LENGTH	NUMBER		Length of the partition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the partition**
PCT_FREE	NUMBER		Minimum percentage of free space in a block**
PCT_USED	NUMBER		Minimum percentage of used space in a block**
INI_TRANS	NUMBER		Initial number of transactions**
MAX_TRANS	NUMBER		Maximum number of transactions**
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes (for a range partition); size of the initial extent in blocks (for a composite partition)**
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes (for a range partition); size of secondary extents in blocks (for a composite partition)**
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment**
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment**
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment**
PCT_INCREASE	NUMBER		Percentage increase in extent size**
FREELISTS	NUMBER		Number of process freelists allocated in this segment**
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated in this segment**
LOGGING	VARCHAR2(7)		Indicates whether or not changes to the table are logged:** <ul style="list-style-type: none">• NONE - Not specified See Also: the *_TAB_SUBPARTITIONS view• YES• NO
COMPRESSION	VARCHAR2(8)		Indicates the actual compression property for a partition of a simple partitioned table, or the default (if specified) for subpartitions for composite partitioned tables, otherwise NONE.** <ul style="list-style-type: none">• NONE - The partition is composite, and a default setting is not specified for compression. See Also: the *_TAB_SUBPARTITIONS view• ENABLED - The setting for compression is enabled.• DISABLED - The setting for compression is disabled.

Column	Datatype	NULL	Description
COMPRESS_FOR	VARCHAR2(30)		<p>Default compression for what kind of operations:**</p> <ul style="list-style-type: none"> • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL <p>The QUERY_LOW, QUERY_HIGH, ARCHIVE_LOW, and ARCHIVE_HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information.</p>
NUM_ROWS*	NUMBER		Number of rows in the partition
BLOCKS*	NUMBER		Number of used data blocks in the partition
EMPTY_BLOCKS	NUMBER		Number of empty (never used) data blocks in the partition. This column is populated only if you collect statistics on the table using the DBMS_STATS package.
AVG_SPACE*	NUMBER		Average amount of free space, in bytes, in a data block allocated to the partition
CHAIN_CNT*	NUMBER		Number of rows in the partition that are chained from one data block to another, or which have migrated to a new block, requiring a link to preserve the old ROWID
AVG_ROW_LEN*	NUMBER		Average length of a row in the partition (in bytes)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this partition
LAST_ANALYZED	DATE		Date on which this partition was most recently analyzed
BUFFER_POOL	VARCHAR2(7)		<p>Buffer pool to be used for the partition blocks:**</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		<p>Database Smart Flash Cache hint to be used for partition blocks:**</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>Solaris and Oracle Linux functionality only.</p>
CELL_FLASH_CACHE	VARCHAR2(7)		<p>Cell flash cache hint to be used for partition blocks:**</p> <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have been aggregated from subpartitions or have not been gathered

Column	Datatype	NULL	Description
USER_STATS	VARCHAR2 (3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
IS_NESTED	VARCHAR2 (3)		Indicates whether this is a nested table partition (YES) or not (NO) See Also: the *_NESTED_TABLES view for the parent table name/column
PARENT_TABLE_PARTITION	VARCHAR2 (128)		Parent table's corresponding partition See Also: the *_NESTED_TABLES view for the parent table name/column
INTERVAL	VARCHAR2 (3)		Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)
SEGMENT_CREATED	VARCHAR2 (4)		Indicates the actual segment creation property for a partition of a simple partitioned table, or the default (if specified) for subpartitions for composite partitioned tables, otherwise NONE.** For a simple partitioned table, this column indicates whether a segment was created (YES) or not (NO). For composite partitioned tables, this column indicates whether or not a default segment creation property was explicitly specified. Possible values: <ul style="list-style-type: none">• NONE - No default segment creation property was specified at the partition level. This value appears only for composite partitions, and is treated as an unspecified value.• YES - Immediate segment creation was explicitly specified at the partition level and will be used as the default for all of its subpartitions.• NO - Deferred segment creation was explicitly specified at the partition level and will be used as the default for all of its subpartitions.
INDEXING	VARCHAR2 (4)		Indicates the actual indexing property for a partition of a simple partitioned table, or the default (if specified) for subpartitions for composite partitioned tables, otherwise NONE.** Possible values: <ul style="list-style-type: none">• NONE - The partition is composite, and a default setting is not specified for indexing. This value appears only for composite partitions, and is treated as an unspecified value. When a user adds a subpartition to a table, since the defaults for the partition are unspecified, the ALL_PART_TABLES.DEF_INDEXING value is used for the newly created subpartition.• ON - INDEXING is on.• OFF - INDEXING is off.

Column	Datatype	NULL	Description
READ_ONLY	VARCHAR2 (4)		<p>Indicates the default setting for the partition:</p> <ul style="list-style-type: none"> YES: The default setting for the partition is read-only. NO: The default setting for the partition is read/write. NONE: No default setting is specified for the partition.
INMEMORY	VARCHAR2 (8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this partition
INMEMORY_PRIORITY	VARCHAR2 (8)		<p>Indicates the priority for In-Memory Column Store (IM column store) population. Possible values:</p> <ul style="list-style-type: none"> LOW MEDIUM HIGH CRITICAL NONE NULL
INMEMORY_DISTRIBUTE	VARCHAR2 (15)		<p>Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment:</p> <ul style="list-style-type: none"> AUTO BY ROWID RANGE BY PARTITION BY SUBPARTITION
INMEMORY_COMPRESSION	VARCHAR2 (17)		<p>Indicates the compression level for the IM column store:</p> <ul style="list-style-type: none"> NO MEMCOMPRESS FOR DML FOR QUERY [LOW HIGH] FOR CAPACITY [LOW HIGH] NULL
			This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NUL for ALL_TAB_PARTITIONS.
INMEMORY_DUPLICATE	VARCHAR2 (13)		<p>Indicates the duplicate setting for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"> NO DUPLICATE DUPLICATE DUPLICATE ALL

Column	Datatype	NULL	Description
CELLMEMORY	VARCHAR2 (24)		<p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format <p>This column is intended for use with Oracle Exadata.</p>
INMEMORY_SERVICE	VARCHAR2 (12)		<p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2 (100)		<p>Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.</p>
MEMOPTIMIZE_READ	VARCHAR2 (8)		<p>Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)</p>
MEMOPTIMIZE_WRITE	VARCHAR2 (8)		<p>For internal use only</p>

3.112 ALL_TAB_PENDING_STATS

`ALL_TAB_PENDING_STATS` describes pending statistics for tables, partitions, and subpartitions accessible to the current user.

Related Views

- `DBA_TAB_PENDING_STATS` describes pending statistics for tables, partitions, and subpartitions in the database.
- `USER_TAB_PENDING_STATS` describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the table
TABLE_NAME	VARCHAR2 (128)		Name of the table
PARTITION_NAME	VARCHAR2 (128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2 (128)		Name of the subpartition
NUM_ROWS	NUMBER		Number of rows
BLOCKS	NUMBER		Number of blocks
AVG_ROW_LEN	NUMBER		Average row length
IM_IMCU_COUNT	NUMBER		Number of In-Memory Compression Units (IMCUs) in the table.
IM_BLOCK_COUNT	NUMBER		Number of In-Memory blocks in the table.
SCAN_RATE	NUMBER		Scan rate for the table in megabytes per second. This statistic is only relevant or meaningful for external tables.
SAMPLE_SIZE	NUMBER		Sample size
LAST_ANALYZED	DATE		Time of last analyze operation

See Also:

- "[DBA_TAB_PENDING_STATS](#)"
- "[USER_TAB_PENDING_STATS](#)"

3.113 ALL_TAB_PRIVS

`ALL_TAB_PRIVS` describes grants.

`ALL_TAB_PRIVS` describes the following types of grants:

- Object grants for which the current user is the object owner, grantor, or grantee
- Object grants for which an enabled role or `PUBLIC` is the grantee

Related Views

- `DBA_TAB_PRIVS` describes all object grants in the database.

- **USER_TAB_PRIVS** describes the object grants for which the current user is the object owner, grantor, or grantee.

Column	Datatype	NULL	Description
GRANTOR	VARCHAR2 (128)		Name of the user who performed the grant
GRANTEE	VARCHAR2 (128)		Name of the user or role to whom access was granted
TABLE_SCHEMA	VARCHAR2 (128)		Schema of the object
TABLE_NAME	VARCHAR2 (128)		Name of the object
PRIVILEGE	VARCHAR2 (40)		Privilege on the object
GRANTABLE	VARCHAR2 (3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
HIERARCHY	VARCHAR2 (3)		Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)
COMMON	VARCHAR2 (3)		Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
TYPE	VARCHAR2 (24)		Type of the object
INHERITED	VARCHAR2 (3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

3.114 ALL_TAB_PRIVS_MADE

ALL_TAB_PRIVS_MADE describes the object grants for which the current user is the object owner or grantor.

Related View

USER_TAB_PRIVS_MADE describes the object grants for which the current user is the object owner. This view does not display the OWNER column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2 (128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2 (128)		Owner of the object
TABLE_NAME	VARCHAR2 (128)		Name of the object
GRANTOR	VARCHAR2 (128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2 (40)		Privilege on the object
GRANTABLE	VARCHAR2 (3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)

Column	Datatype	NULL	Description
HIERARCHY	VARCHAR2 (3)		Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)
COMMON	VARCHAR2 (3)		Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
TYPE	VARCHAR2 (24)		Type of the object
INHERITED	VARCHAR2 (3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

 **See Also:**

["USER_TAB_PRIVS_MADE"](#)

3.115 ALL_TAB_PRIVS_RECD

ALL_TAB_PRIVS_RECD describes object grants.

ALL_TAB_PRIVS_RECD describes the following types of grants:

- Object grants for which the current user is the grantee
- Object grants for which an enabled role or PUBLIC is the grantee

Related View

USER_TAB_PRIVS_RECD describes the object grants for which the current user is the grantee. This view does not display the GRANTEE column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2 (128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2 (128)		Owner of the object
TABLE_NAME	VARCHAR2 (128)		Name of the object
GRANTOR	VARCHAR2 (128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2 (40)		Privilege on the object
GRANTABLE	VARCHAR2 (3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
HIERARCHY	VARCHAR2 (3)		Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)
COMMON	VARCHAR2 (3)		Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
TYPE	VARCHAR2 (24)		Type of the object

Column	Datatype	NULL	Description
INHERITED	VARCHAR2 (3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

 **See Also:**["USER_TAB_PRIVS_RECV"](#)

3.116 ALL_TAB_STAT_PREFS

`ALL_TAB_STAT_PREFS` displays information about statistics preferences for the tables accessible to the current user.

Related Views

- `DBA_TAB_STAT_PREFS` displays information about statistics preferences for all tables in the database.
- `USER_TAB_STAT_PREFS` displays information about statistics preferences for the tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table
PREFERENCE_NAME	VARCHAR2 (30)		Name of the preference
PREFERENCE_VALUE	VARCHAR2 (4000)		Value of the preference

 **See Also:**

- ["DBA_TAB_STAT_PREFS"](#)
- ["USER_TAB_STAT_PREFS"](#)

3.117 ALL_TAB_STATISTICS

`ALL_TAB_STATISTICS` displays optimizer statistics for the tables accessible to the current user.

Related Views

- `DBA_TAB_STATISTICS` displays optimizer statistics for all tables in the database.
- `USER_TAB_STATISTICS` displays optimizer statistics for the tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the object
TABLE_NAME	VARCHAR2 (128)		Name of the table
PARTITION_NAME	VARCHAR2 (128)		Name of the partition
PARTITION_POSITION	NUMBER		Position of the partition within the table
SUBPARTITION_NAME	VARCHAR2 (128)		Name of the subpartition
SUBPARTITION_POSITION	NUMBER		Position of the subpartition within the partition
OBJECT_TYPE	VARCHAR2 (12)		Type of the object: <ul style="list-style-type: none">• TABLE• PARTITION• SUBPARTITION
NUM_ROWS	NUMBER		Number of rows in the object
BLOCKS	NUMBER		Number of used blocks in the object
EMPTY_BLOCKS	NUMBER		Number of empty blocks in the object
AVG_SPACE	NUMBER		Average available free space in the object
CHAIN_CNT	NUMBER		Number of chained rows in the object
AVG_ROW_LEN	NUMBER		Average row length, including row overhead
AVG_SPACE_FREELIST_BLOCK_S	NUMBER		Average freespace of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist
AVG_CACHED_BLOCKS	NUMBER		Average number of blocks in the buffer cache
AVG_CACHE_HIT_RATIO	NUMBER		Average cache hit ratio for the object
IM_IMCU_COUNT	NUMBER		Number of In-Memory Compression Units (IMCUs) in the table
IM_BLOCK_COUNT	NUMBER		Number of In-Memory blocks in the table
IM_STAT_UPDATE_TIME	TIMESTAMP (9)		The timestamp of the most recent update to the In-Memory statistics
SCAN_RATE	NUMBER		Scan rate for the object in megabytes per second. This statistic is only relevant or meaningful for external tables.
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the table
LAST_ANALYZED	DATE		Date of the most recent time the table was analyzed
GLOBAL_STATS	VARCHAR2 (3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2 (3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
STATTYPE_LOCKED	VARCHAR2 (5)		Type of statistics lock: <ul style="list-style-type: none">• DATA• CACHE• ALL
STALE_STATS	VARCHAR2 (7)		Indicates whether statistics for the object are stale (YES) or not (NO)
NOTES ¹	VARCHAR2 (25)		Describes some additional properties of the statistics. For example, a value of STATS_ON_CONVENTIONAL_LOAD indicates that the statistics are obtained by online statistics gathering for conventional DML.

Column	Datatype	NULL	Description
SCOPE	VARCHAR2 (7)		<p>The value is SHARED for statistics gathered on any table other than global temporary tables.</p> <p>For a global temporary table, the possible values are:</p> <ul style="list-style-type: none"> SESSION - Indicates that the statistics are session-specific SHARED - Indicates that the statistics are shared across all sessions <p>See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.</p>

¹ This column is available starting with Oracle Database 19c.

3.118 ALL_TAB_STATS_HISTORY

ALL_TAB_STATS_HISTORY provides a history of table statistics modifications for all tables accessible to the current user.

Related Views

- DBA_TAB_STATS_HISTORY provides a history of table statistics modifications for all tables in the database.
- USER_TAB_STATS_HISTORY provides a history of table statistics modifications for all tables owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the object
TABLE_NAME	VARCHAR2 (128)		Name of the table
PARTITION_NAME	VARCHAR2 (128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2 (128)		Name of the subpartition
STATS_UPDATE_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the statistics were updated

 See Also:

- "[DBA_TAB_STATS_HISTORY](#)"
- "[USER_TAB_STATS_HISTORY](#)"

3.119 ALL_TAB_SUBPARTITIONS

`ALL_TAB_SUBPARTITIONS` displays, for each table subpartition accessible to the current user, the subpartition name, name of the table and partition to which it belongs, its storage attributes, and statistics generated by the `DBMS_STATS` package.

Related Views

- `DBA_TAB_SUBPARTITIONS` displays such information for all subpartitions in the database.
- `USER_TAB_SUBPARTITIONS` displays such information for subpartitions of all partitioned objects owned by the current user. This view does not display the `TABLE_OWNER` column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
HIGH_VALUE	LONG		Subpartition bound value expression
HIGH_VALUE_LENGTH	NUMBER	NOT NULL	Length of the subpartition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the table
SUBPARTITION_POSITION	NUMBER		Position of the subpartition within the partition
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace containing the subpartition
PCT_FREE	NUMBER	NOT NULL	Minimum percentage of free space in a block
PCT_USED	NUMBER		Minimum percentage of used space in a block
INI_TRANS	NUMBER	NOT NULL	Initial number of transactions
MAX_TRANS	NUMBER	NOT NULL	Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes (for a range partition); size of the initial extent in blocks (for a composite partition)
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes (for a range partition); size of secondary extents in blocks (for a composite partition)
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
FREELISTS	NUMBER		Number of freelist groups allocated in this segment
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated in this segment

Column	Datatype	NULL	Description
LOGGING	VARCHAR2 (3)		Indicates whether or not changes to the table are logged: <ul style="list-style-type: none"> • YES • NO
COMPRESSION	VARCHAR2 (8)		Indicates whether this subpartition is compressed (ENABLED) or not (DISABLED)
COMPRESS_FOR	VARCHAR2 (30)		Default compression for what kind of operations: <ul style="list-style-type: none"> • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL <p>The QUERY_LOW, QUERY_HIGH, ARCHIVE_LOW, and ARCHIVE_HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information.</p>
NUM_ROWS	NUMBER		Number of rows in the subpartition
BLOCKS	NUMBER		Number of blocks in the subpartition
EMPTY_BLOCKS	NUMBER		Number of empty blocks in the subpartition
AVG_SPACE	NUMBER		Average space in the subpartition
CHAIN_CNT	NUMBER		Chain count
AVG_ROW_LEN	NUMBER		Average row length
SAMPLE_SIZE	NUMBER		Sample size
LAST_ANALYZED	DATE		Date on which this table was most recently analyzed
BUFFER_POOL	VARCHAR2 (7)		Buffer pool for this subpartition: <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2 (7)		Database Smart Flash Cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>Solaris and Oracle Linux functionality only.</p>
CELL_FLASH_CACHE	VARCHAR2 (7)		Cell flash cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE <p>See Also: Oracle Exadata Storage Server Software documentation for more information</p>
GLOBAL_STATS	VARCHAR2 (3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered

Column	Datatype	NULL	Description
USER_STATS	VARCHAR2 (3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
INTERVAL	VARCHAR2 (3)		Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)
SEGMENT_CREATED	VARCHAR2 (3)		Indicates whether the table subpartition segment has been created (YES) or not (NO); N/A indicates that this table is not subpartitioned
INDEXING	VARCHAR2 (3)		Indicates the indexing property. Possible values: <ul style="list-style-type: none">• ON - Indexing is on for this subpartition• OFF - Indexing is off for this subpartition
READ_ONLY	VARCHAR2 (3)		Indicates whether a subpartition is read-only or read/write: <ul style="list-style-type: none">• YES: The default setting for the subpartition is read-only.• NO: The default setting for the subpartition is read/write.
INMEMORY	VARCHAR2 (8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this subpartition
INMEMORY_PRIORITY	VARCHAR2 (8)		Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none">• LOW• MEDIUM• HIGH• CRITICAL• NONE• NULL
INMEMORY_DISTRIBUTE	VARCHAR2 (15)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none">• AUTO• BY ROWID RANGE• DBY PARTITION• BY SUBPARTITION
INMEMORY_COMPRESSION	VARCHAR2 (17)		Indicates the compression level for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none">• NO MEMCOMPRESS• FOR DML• FOR QUERY [LOW HIGH]• FOR CAPACITY [LOW HIGH]• NULL
			This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_SUBPARTITIONS.

Column	Datatype	NULL	Description
INMEMORY_DUPLICATE			Indicates the duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none">• DUPLICATE• NO DUPLICATE• DUPLICATE ALL
INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances. The possible values are: <ul style="list-style-type: none">• DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.• NONE: Data is not populated on any instance.• ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.• USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(1000)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
CELLMEMORY	VARCHAR2(24)		The value for columnar compression in the storage cell flash cache. Possible values: <ul style="list-style-type: none">• ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form• DISABLED: Oracle Exadata Storage is prevented from caching in columnar form• NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)• FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format• FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format
MEMOPTIMIZE_READ	VARCHAR2(8)		This column is intended for use with Oracle Exadata.
MEMOPTIMIZE_WRITE	VARCHAR2(8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
			For internal use only

3.120 ALL_TABLES

`ALL_TABLES` describes the relational tables accessible to the current user. To gather statistics for this view, use the `DBMS_STATS` package.

Related Views

- `DBA_TABLES` describes all relational tables in the database.
- `USER_TABLES` describes the relational tables owned by the current user. This view does not display the `OWNER` column.

Note:

Columns marked with an asterisk (*) are populated only if you collect statistics on the table with the `DBMS_STATS` package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables
CLUSTER_NAME	VARCHAR2(128)		Name of the cluster, if any, to which the table belongs
IOT_NAME	VARCHAR2(128)		Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the <code>IOT_TYPE</code> column is not NULL, then this column contains the base table name.
STATUS	VARCHAR2(8)		If a previous <code>DROP TABLE</code> operation failed, indicates whether the table is unusable (<code>UNUSABLE</code>) or valid (<code>VALID</code>)
PCT_FREE	NUMBER		Minimum percentage of free space in a block; NULL for partitioned tables
PCT_USED	NUMBER		Minimum percentage of used space in a block; NULL for partitioned tables
INI_TRANS	NUMBER		Initial number of transactions; NULL for partitioned tables
MAX_TRANS	NUMBER		Maximum number of transactions; NULL for partitioned tables

Column	Datatype	NULL	Description
INITIAL_EXTENT	NUMBER		Size of the initial extent (in bytes); NULL for partitioned tables
NEXT_EXTENT	NUMBER		Size of secondary extents (in bytes); NULL for partitioned tables
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment; NULL for partitioned tables
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment; NULL for partitioned tables
PCT_INCREASE	NUMBER		Percentage increase in extent size; NULL for partitioned tables
FREELISTS	NUMBER		Number of process freelists allocated to the segment; NULL for partitioned tables
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to the segment; NULL for partitioned tables
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the table are logged; NULL for partitioned tables: <ul style="list-style-type: none">• YES• NO
BACKED_UP	VARCHAR2(1)		Indicates whether the table has been backed up since the last modification (Y) or not (N)
NUM_ROWS*	NUMBER		Number of rows in the table
BLOCKS*	NUMBER		Number of used data blocks in the table
EMPTY_BLOCKS	NUMBER		Number of empty (never used) data blocks in the table. This column is populated only if you collect statistics on the table using the DBMS_STATS package.
AVG_SPACE*	NUMBER		Average amount of free space, in bytes, in a data block allocated to the table
CHAIN_CNT*	NUMBER		Number of rows in the table that are chained from one data block to another, or which have migrated to a new block, requiring a link to preserve the old ROWID
AVG_ROW_LEN*	NUMBER		Average length of a row in the table (in bytes)
AVG_SPACE_FREELIST_BLOCK_S	NUMBER		Average freespace of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist
DEGREE	VARCHAR2(10)		Number of threads per instance for scanning the table, or DEFAULT
INSTANCES	VARCHAR2(10)		Number of instances across which the table is to be scanned, or DEFAULT
CACHE	VARCHAR2(5)		Indicates whether the table is to be cached in the buffer cache (Y) or not (N)
TABLE_LOCK	VARCHAR2(8)		Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the table
LAST_ANALYZED	DATE		Date on which the table was most recently analyzed
PARTITIONED	VARCHAR2(3)		Indicates whether the table is partitioned (YES) or not (NO)

Column	Datatype	NULL	Description
IOT_TYPE	VARCHAR2(12)		If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.
TEMPORARY	VARCHAR2(1)		Indicates whether the table is temporary (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether the table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NESTED	VARCHAR2(3)		Indicates whether the table is a nested table (YES) or not (NO)
BUFFER_POOL	VARCHAR2(7)		Buffer pool for the table; NULL for partitioned tables: <ul style="list-style-type: none"> • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none"> • DEFAULT • KEEP • NONE See Also: Oracle Exadata Storage Server Software documentation for more information
ROW_MOVEMENT	VARCHAR2(8)		Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2(15)		Indicates the duration of a temporary table: <ul style="list-style-type: none"> • SYS\$SESSION - Rows are preserved for the duration of the session • SYS\$TRANSACTION - Rows are deleted after COMMIT • Null - Permanent table
SKIP_CORRUPT	VARCHAR2(8)		Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.
MONITORING	VARCHAR2(3)		This column is obsolete
CLUSTER_OWNER	VARCHAR2(128)		Owner of the cluster, if any, to which the table belongs
DEPENDENCIES	VARCHAR2(8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)
COMPRESSION	VARCHAR2(8)		Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables

Column	Datatype	NULL	Description
COMPRESS_FOR	VARCHAR2 (30)		<p>Default compression for what kind of operations:</p> <ul style="list-style-type: none"> • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • QUERY LOW ROW LEVEL LOCKING • QUERY HIGH ROW LEVEL LOCKING • ARCHIVE LOW ROW LEVEL LOCKING • ARCHIVE HIGH ROW LEVEL LOCKING • NO ROW LEVEL LOCKING • NULL <p>The QUERY LOW, QUERY HIGH, ARCHIVE LOW, ARCHIVE HIGH, QUERY LOW ROW LEVEL LOCKING, QUERY HIGH ROW LEVEL LOCKING, ARCHIVE LOW ROW LEVEL LOCKING, ARCHIVE HIGH ROW LEVEL LOCKING, and NO ROW LEVEL LOCKING values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information.</p>
DROPPED	VARCHAR2 (3)		<p>Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables</p> <p>This view does not return the names of tables that have been dropped.</p>
READ_ONLY	VARCHAR2 (3)		<p>Indicates whether the table segment is READ-ONLY or not. Possible values:</p> <ul style="list-style-type: none"> • YES - The table segment is READ-ONLY • NO - The table segment is not READ-ONLY • N/A - Not applicable. This value appears in a partitioned table, where there is no segment that relates to the logical table object.
SEGMENT_CREATED	VARCHAR2 (3)		<p>Indicates whether the table segment is created. Possible values:</p> <ul style="list-style-type: none"> • YES - The table segment is created. • NO - The table segment is not created. • N/A - Not applicable. This value appears in a partitioned table, where there is no segment that relates to the logical table object.
RESULT_CACHE	VARCHAR2 (7)		<p>Result cache mode annotation for the table:</p> <ul style="list-style-type: none"> • DEFAULT - Table has not been annotated • FORCE • MANUAL
CLUSTERING	VARCHAR2 (3)		<p>Indicates whether the table has the attribute clustering clause (YES) or not (NO)</p>
ACTIVITY_TRACKING	VARCHAR2 (23)		<p>Indicates whether Heat Map tracking is enabled on the table</p>
DML_TIMESTAMP	VARCHAR2 (25)		<p>Modification time, creation time, or both for Automatic Data Optimization</p>

Column	Datatype	NULL	Description
HAS_IDENTITY	VARCHAR2 (3)		Indicates whether the table has an identity column (YES) or not (NO)
CONTAINER_DATA	VARCHAR2 (3)		Indicates whether the table contains container-specific data. Possible values: <ul style="list-style-type: none"> YES if the table was created with the CONTAINER_DATA clause NO otherwise
INMEMORY	VARCHAR2 (8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for the table
INMEMORY_PRIORITY	VARCHAR2 (8)		Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none"> LOW MEDIUM HIGH CRITICAL NONE NULL
INMEMORY_DISTRIBUTE	VARCHAR2 (15)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> AUTO BY ROWID RANGE DUPLICATE NONE NULL
INMEMORY_COMPRESSION	VARCHAR2 (17)		Indicates the compression level for the IM column store: <ul style="list-style-type: none"> BASIC FOR CAPACITY [HIGH LOW] FOR QUERY [HIGH LOW] NULL
			This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.
INMEMORY_DUPLICATE	VARCHAR2 (13)		Indicates the duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none"> NO DUPLICATE DUPLICATE DUPLICATE ALL
DEFAULT_COLLATION	VARCHAR2 (100)		Default collation for the table
DUPLICATED	VARCHAR2 (1)		Indicates whether the table is duplicated on this shard (Y) or not (N)
SHARDED	VARCHAR2 (1)		Indicates whether the table is sharded (Y) or not (N)
EXTERNAL	VARCHAR2 (3)		Indicates whether the table is an external table (YES) or not (NO)

Column	Datatype	NULL	Description
HYBRID ¹	VARCHAR2 (3)		Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.
CELLMEMORY	VARCHAR2 (24)		The value for columnar compression in the storage cell flash cache. Possible values: <ul style="list-style-type: none"> • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format
			This column is intended for use with Oracle Exadata.
CONTAINERS_DEFAULT	VARCHAR2 (3)		Indicates whether the table is enabled for CONTAINERS() by default (YES) or not (NO)
CONTAINER_MAP	VARCHAR2 (3)		Indicates whether the table is enabled for use with the container_map database property (YES) or not (NO)
EXTENDED_DATA_LINK	VARCHAR2 (3)		Indicates whether the table is enabled for fetching an extended data link from the root (YES) or not (NO)
EXTENDED_DATA_LINK_MAP	VARCHAR2 (3)		For internal use only
INMEMORY_SERVICE	VARCHAR2 (12)		Indicates how the IM column store is populated on various instances. The possible values are: <ul style="list-style-type: none"> • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2 (1000)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
CONTAINER_MAP_OBJECT	VARCHAR2 (3)		Indicates whether the table is used as the value of the container_map database property (YES) or not (NO)
MEMOPTIMIZE_READ	VARCHAR2 (8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2 (8)		For internal use only

Column	Datatype	NULL	Description
HAS_SENSITIVE_COLUMN	VARCHAR2 (3)		Indicates whether the table has one or more sensitive columns (YES) or not (NO)
ADMIT_NULL ¹	VARCHAR2 (3)		Indicates whether the table admits null CON_ID data (YES) or not (NO)
DATA_LINK_DML_ENABLED ¹	VARCHAR2 (3)		Indicates whether DML is permitted on the Data Link table (YES) or not (NO)
LOGICAL_REPLICATION ¹	VARCHAR2 (8)		Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.

¹ This column is available starting with Oracle Database 19c.

Examples

This SQL query returns the names of the tables in the EXAMPLES tablespace:

```
SELECT table_name FROM all_tables
WHERE tablespace_name = 'EXAMPLE' ORDER BY table_name;
```

This SQL query returns the name of the tablespace that contains the HR schema:

```
SELECT DISTINCT tablespace_name FROM all_tables WHERE owner='HR';
```

3.121 ALL_TRANSFORMATIONS

`ALL_TRANSFORMATIONS` displays information about all transformations accessible to the current user.

These transformations can be specified with Advanced Queuing operations such as enqueue, dequeue, and subscribe to automatically integrate transformations in AQ messaging.

Related Views

- `DBA_TRANSFORMATIONS` displays information about all transformations in the database.
- `USER_TRANSFORMATIONS` displays information about transformations owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
TRANSFORMATION_ID	NUMBER	NOT NULL	Unique identifier for the transformation
OWNER	VARCHAR2(128)	NOT NULL	Owning user of the transformation
NAME	VARCHAR2(128)	NOT NULL	Transformation name
FROM_TYPE	VARCHAR2(128)		Source type name
TO_TYPE	VARCHAR2(256)		Target type name

 **See Also:**

- ["DBA_TRANSFORMATIONS"](#)
- ["USER_TRANSFORMATIONS"](#)

3.122 ALL_TRIGGER_COLS

`ALL_TRIGGER_COLS` describes the use of columns in the triggers accessible to the current user and in triggers on tables accessible to the current user.

If the user has the `CREATE ANY TRIGGER` privilege, then this view describes the use of columns in all triggers in the database.

Related Views

- `DBA_TRIGGER_COLS` describes the use of columns in all triggers in the database.
- `USER_TRIGGER_COLS` describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user.

Column	Datatype	NULL	Description
TRIGGER_OWNER	VARCHAR2(128)		Owner of the trigger
TRIGGER_NAME	VARCHAR2(128)		Name of the trigger
TABLE_OWNER	VARCHAR2(128)		Owner of the table on which the trigger is defined
TABLE_NAME	VARCHAR2(128)		Table on which the trigger is defined
COLUMN_NAME	VARCHAR2(4000)		Name of the column used in the trigger
COLUMN_LIST	VARCHAR2(3)		Indicates whether the column is specified in the <code>UPDATE</code> clause (YES) or not (NO)
COLUMN_USAGE	VARCHAR2(17)		How the column is used in the trigger: <ul style="list-style-type: none"> • NEW IN • OLD IN • NEW IN OLD IN • NEW OUT • NEW IN OUT • NEW OUT OLD IN • NEW IN OUT OLD IN • PARENT IN

 See Also:

- "[DBA_TRIGGER_COLS](#)"
- "[USER_TRIGGER_COLS](#)"

3.123 ALL_TRIGGER_ORDERING

`ALL_TRIGGER_ORDERING` describes the triggers accessible to the current user that have `FOLLOWS` or `PRECEDES` ordering.

Related Views

- `DBA_TRIGGER_ORDERING` describes all triggers in the database that have `FOLLOWS` or `PRECEDES` ordering.
- `USER_TRIGGER_ORDERING` describes the triggers owned by the current user that have `FOLLOWS` or `PRECEDES` ordering. This view does not display the `TRIGGER_OWNER` column.

Column	Datatype	NULL	Description
<code>TRIGGER_OWNER</code>	<code>VARCHAR2(128)</code>	NOT NULL	Owner of the trigger
<code>TRIGGER_NAME</code>	<code>VARCHAR2(128)</code>	NOT NULL	Name of the trigger
<code>REFERENCED_TRIGGER_OWNER</code>	<code>VARCHAR2(128)</code>		Owner of the referenced trigger
<code>REFERENCED_TRIGGER_NAME</code>	<code>VARCHAR2(128)</code>		Name of the referenced trigger
<code>ORDERING_TYPE</code>	<code>VARCHAR2(8)</code>		Type of the ordering between the trigger and the referenced trigger: <ul style="list-style-type: none"> • <code>FOLLOWS</code> • <code>PRECEDES</code>

 See Also:

- "[DBA_TRIGGER_ORDERING](#)"
- "[USER_TRIGGER_ORDERING](#)"

3.124 ALL_TRIGGERS

`ALL_TRIGGERS` describes the triggers on tables accessible to the current user.

If the user has the `CREATE ANY TRIGGER` privilege, then this view describes all triggers in the database.

Related Views

- `DBA_TRIGGERS` describes all triggers in the database.
- `USER_TRIGGERS` describes the triggers owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the trigger
TRIGGER_NAME	VARCHAR2(128)		Name of the trigger
TRIGGER_TYPE	VARCHAR2(16)		When the trigger fires: <ul style="list-style-type: none"> • BEFORE STATEMENT • BEFORE EACH ROW • AFTER STATEMENT • AFTER EACH ROW • INSTEAD OF • COMPOUND
TRIGGERING_EVENT	VARCHAR2(246)		DML, DDL, or database event that fires the trigger See Also: Oracle Database PL/SQL Language Reference for additional information about triggers and triggering events.
TABLE_OWNER	VARCHAR2(128)		Owner of the table on which the trigger is defined
BASE_OBJECT_TYPE	VARCHAR2(18)		Base object on which the trigger is defined: <ul style="list-style-type: none"> • TABLE • VIEW • SCHEMA • DATABASE
TABLE_NAME	VARCHAR2(128)		If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined
COLUMN_NAME	VARCHAR2(4000)		Name of the nested table column (if a nested table trigger), else NULL
REFERENCING_NAMES	VARCHAR2(422)		Names used for referencing OLD and NEW column values from within the trigger
WHEN_CLAUSE	VARCHAR2(4000)		Must evaluate to TRUE for TRIGGER_BODY to execute
STATUS	VARCHAR2(8)		Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire
DESCRIPTION	VARCHAR2(4000)		Trigger description; useful for re-creating a trigger creation statement
ACTION_TYPE	VARCHAR2(11)		Action type of the trigger body: <ul style="list-style-type: none"> • CALL • PL/SQL
TRIGGER_BODY	LONG		Statements executed by the trigger when it fires
CROSSEDITION	VARCHAR2(7)		Type of crosedition trigger: <ul style="list-style-type: none"> • FORWARD • REVERSE • NO
BEFORE_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)
BEFORE_ROW	VARCHAR2(3)		Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)
AFTER_ROW	VARCHAR2(3)		Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)

Column	Datatype	NULL	Description
AFTER_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)
INSTEAD_OF_ROW	VARCHAR2(3)		Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)
FIRE_ONCE	VARCHAR2(3)		Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)
APPLY_SERVER_ONLY	VARCHAR2(3)		Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter.
			See Also: the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure

 **See Also:**

- "[DBA_TRIGGERS](#)"
- "[USER_TRIGGERS](#)"

3.125 ALL_TRIGGER_AE

ALL_TRIGGER_AE describes the triggers on tables (across all editions) accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers (across all editions) in the database.

Related Views

- DBA_TRIGGER_AE describes all triggers (across all editions) in the database.
- USER_TRIGGER_AE describes the triggers (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the trigger
TRIGGER_NAME	VARCHAR2(128)		Name of the trigger

Column	Datatype	NULL	Description
TRIGGER_TYPE	VARCHAR2(16)		<p>When the trigger fires:</p> <ul style="list-style-type: none"> • BEFORE STATEMENT • BEFORE EACH ROW • AFTER STATEMENT • AFTER EACH ROW • INSTEAD OF • COMPOUND
TRIGGERING_EVENT	VARCHAR2(246)		<p>DML, DDL, or database event that fires the trigger</p> <p>See Also: <i>Oracle Database PL/SQL Language Reference</i> for additional information about triggers and triggering events.</p>
TABLE_OWNER	VARCHAR2(128)		Owner of the table on which the trigger is defined
BASE_OBJECT_TYPE	VARCHAR2(18)		Base object on which the trigger is defined: <ul style="list-style-type: none"> • TABLE • VIEW • SCHEMA • DATABASE
TABLE_NAME	VARCHAR2(128)		If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined
COLUMN_NAME	VARCHAR2(4000)		Name of the nested table column (if a nested table trigger), else NULL
REFERENCING_NAMES	VARCHAR2(422)		Names used for referencing OLD and NEW column values from within the trigger
WHEN_CLAUSE	VARCHAR2(4000)		Must evaluate to TRUE for TRIGGER_BODY to execute
STATUS	VARCHAR2(8)		Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire
DESCRIPTION	VARCHAR2(4000)		Trigger description; useful for re-creating a trigger creation statement
ACTION_TYPE	VARCHAR2(11)		Action type of the trigger body: <ul style="list-style-type: none"> • CALL • PL/SQL
TRIGGER_BODY	LONG		Statements executed by the trigger when it fires
CROSSEDITION	VARCHAR2(7)		Type of crosedition trigger: <ul style="list-style-type: none"> • FORWARD • REVERSE • NO
BEFORE_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)
BEFORE_ROW	VARCHAR2(3)		Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)
AFTER_ROW	VARCHAR2(3)		Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)
AFTER_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)

Column	Datatype	NULL	Description
INSTEAD_OF_ROW	VARCHAR2 (3)		Indicates whether the trigger has an <code>INSTEAD OF</code> section (<code>YES</code>) or not (<code>NO</code>)
FIRE_ONCE	VARCHAR2 (3)		Indicates whether the trigger will fire only for user processes making changes (<code>YES</code>) or whether the trigger will also fire for Replication Apply or SQL Apply processes (<code>NO</code>)
APPLY_SERVER_ONLY	VARCHAR2 (3)		Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (<code>YES</code>) or not (<code>NO</code>). If set to <code>YES</code> , then the setting of <code>FIRE_ONCE</code> does not matter.
EDITION_NAME	VARCHAR2 (128)		See Also: the <code>DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY</code> procedure Name of the application edition where the trigger is defined

Note:

This view is available starting with Oracle Database 19c.

See Also:

- "[DBA_TRIGGERS_AE](#)"
- "[USER_TRIGGERS_AE](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY` procedure

3.126 ALL_TSTZ_TAB_COLS

`ALL_TSTZ_TAB_COLS` displays information about the columns of the tables accessible to the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

Related Views

- `DBA_TSTZ_TAB_COLS` displays information about the columns of all tables in the database, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.
- `USER_TSTZ_TAB_COLS` displays information about the columns of the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `OWNER`, `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
QUALIFIED_COL_NAME	VARCHAR2(4000)		Qualified column name
NESTED	NUMBER		Indicates whether the column is a nested table (1) or not (0)
VIRTUAL_COLUMN	NUMBER		Indicates whether the column is a virtual column (1) or not (0)
SCALAR_COLUMN	NUMBER		Indicates whether the column is a scalar column (1) or not (0)
UNUSED_COLUMN	NUMBER		Indicates whether the column is an unused column (1) or not (0)

 See Also:

- "[DBA_TSTZ_TAB_COLS](#)"
- "[USER_TSTZ_TAB_COLS](#)"

3.127 ALL_TSTZ_TABLES

ALL_TSTZ_TABLES displays information about the tables accessible to the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.

Related Views

- DBA_TSTZ_TABLES displays information about all tables in the database, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.
- USER_TSTZ_TABLES displays information about the tables owned by the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
UPGRADE_IN_PROGRESS	VARCHAR2(3)		Indicates whether a table upgrade is in progress (YES) or not (NO)

 See Also:

- "[DBA_TSTZ_TABLES](#)"
- "[USER_TSTZ_TABLES](#)"

3.128 ALL_TYPE_ATTRS

`ALL_TYPE_ATTRS` describes the attributes of the object types accessible to the current user.

Related Views

- `DBA_TYPE_ATTRS` describes the attributes of all object types in the database. This view does not include the `CHAR_USED` column.
- `USER_TYPE_ATTRS` describes the attributes of the object types owned by the current user. This view does not display the `OWNER` or `CHAR_USED` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)		Name of the type
ATTR_NAME	VARCHAR2(128)		Name of the attribute
ATTR_TYPE_MOD	VARCHAR2(7)		Type modifier of the attribute: <ul style="list-style-type: none"> • REF • POINTER
ATTR_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the attribute
ATTR_TYPE_NAME	VARCHAR2(128)		Name of the type of the attribute
LENGTH	NUMBER		Length of the <code>CHAR</code> attribute, or maximum length of the <code>VARCHAR</code> or <code>VARCHAR2</code> attribute.
PRECISION	NUMBER		Decimal precision of the <code>NUMBER</code> or <code>DECIMAL</code> attribute, or binary precision of the <code>FLOAT</code> attribute.
SCALE	NUMBER		Scale of the <code>NUMBER</code> or <code>DECIMAL</code> attribute
CHARACTER_SET_NAME	VARCHAR2(44)		Character set name of the attribute (<code>CHAR_CS</code> or <code>NCHAR_CS</code>)
ATTR_NO	NUMBER		Syntactical order number or position of the attribute as specified in the type specification or <code>CREATE TYPE</code> statement (not to be used as an ID number)
INHERITED	VARCHAR2(3)		Indicates whether the attribute is inherited from a supertype (YES) or not (NO)
CHAR_USED	VARCHAR2(1)		Indicates whether the attribute uses <code>BYTE</code> length semantics (B) or <code>CHAR</code> length semantics (C). For <code>NCHAR</code> and <code>NVARCHAR2</code> attribute types, this value is always C.

 See Also:

- "[DBA_TYPE_ATTRS](#)"
- "[USER_TYPE_ATTRS](#)"

3.129 ALL_TYPE_METHODS

`ALL_TYPE_METHODS` describes the methods of the object types accessible to the current user.

Related Views

- `DBA_TYPE_METHODS` describes the methods of all object types in the database.
- `USER_TYPE_METHODS` describes the methods of the object types owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
METHOD_NO	NUMBER	NOT NULL	Method number for distinguishing overloaded methods (not to be used as ID number)
METHOD_TYPE	VARCHAR2(6)		Type of the method: <ul style="list-style-type: none"> • MAP • ORDER • PUBLIC
PARAMETERS	NUMBER	NOT NULL	Number of parameters to the method
RESULTS	NUMBER	NOT NULL	Number of results returned by the method
FINAL	VARCHAR2(3)		Indicates whether the method is final (YES) or not (NO)
INSTANTIABLE	VARCHAR2(3)		Indicates whether the method is instantiable (YES) or not (NO)
OVERRIDING	VARCHAR2(3)		Indicates whether the method is overriding a supertype method (YES) or not (NO)
INHERITED	VARCHAR2(3)		Indicates whether the method is inherited from a supertype (YES) or not (NO)

 See Also:

- "[DBA_TYPE_METHODS](#)"
- "[USER_TYPE_METHODS](#)"

3.130 ALL_TYPE VERSIONS

ALL_TYPE VERSIONS describes the versions of the object types accessible to the current user.

Related Views

- DBA_TYPE VERSIONS describes the versions of all object types in the database.
- USER_TYPE VERSIONS describes the versions of the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
VERSION#	NUMBER	NOT NULL	Internal version number of the type
TYPECODE	VARCHAR2(128)		Typecode of the type
STATUS	VARCHAR2(7)		Status of the type: <ul style="list-style-type: none"> N/A VALID INVALID
LINE	NUMBER	NOT NULL	Line number of the type's spec
TEXT	VARCHAR2(4000)		Text of the type's spec
HASHCODE	RAW(17)		Hashcode of the type

See Also:

- "DBA_TYPE VERSIONS"
- "USER_TYPE VERSIONS"

3.131 ALL_TYPES

ALL_TYPES describes the object types accessible to the current user.

Related Views

- DBA_TYPES describes all object types in the database.
- USER_TYPES describes the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)		Name of the type
TYPE_OID	RAW(16)		Object identifier (OID) of the type
TYPECODE	VARCHAR2(128)		Typecode of the type

Column	Datatype	NULL	Description
ATTRIBUTES	NUMBER		Number of attributes (if any) in the type
METHODS	NUMBER		Number of methods (if any) in the type
PREDEFINED	VARCHAR2 (3)		Indicates whether the type is a predefined type (YES) or not (NO)
INCOMPLETE	VARCHAR2 (3)		Indicates whether the type is an incomplete type (YES) or not (NO)
FINAL	VARCHAR2 (3)		Indicates whether the type is a final type (YES) or not (NO)
INSTANTIABLE	VARCHAR2 (3)		Indicates whether the type is an instantiable type (YES) or not (NO)
PERSISTABLE	VARCHAR2 (3)		Indicates whether the type is a persistable type (YES) or not (NO)
SUPERTYPE_OWNER	VARCHAR2 (128)		Owner of the supertype (NULL if type is not a subtype)
SUPERTYPE_NAME	VARCHAR2 (128)		Name of the supertype (NULL if type is not a subtype)
LOCAL_ATTRIBUTES	NUMBER		Number of local (not inherited) attributes (if any) in the subtype
LOCAL_METHODS	NUMBER		Number of local (not inherited) methods (if any) in the subtype
TYPEID	RAW(16)		Type ID value of the type

 **See Also:**

- ["DBA_TYPES"](#)
- ["USER_TYPES"](#)

3.132 ALL_UNIFIED_AUDIT_ACTIONS

ALL_UNIFIED_AUDIT_ACTIONS describes unified audit trail actions.

The actions described in this view are valid for audit trail records from the UNIFIED_AUDIT_TRAIL view. Such records are generated only when unified auditing is enabled.

 **See Also:**

- *Oracle Database Security Guide* for more information about unified auditing.
- *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
TYPE	NUMBER	NOT NULL	Numeric component type for system wide actions
COMPONENT	VARCHAR2 (64)	NOT NULL	Name of component for system wide actions

Column	Datatype	NULL	Description
ACTION	NUMBER	NOT NULL	Numeric auditable action code for system wide actions Note: The action code values have changed from Oracle Database release 12.2 to the current release. If your applications have queries that include the ACTION column, and if these queries were written in release 12.2, then be aware that the output may be different if you are running these queries in the current release.
NAME	VARCHAR2 (64)	NOT NULL	Name of auditable action

 See Also:["UNIFIED_AUDIT_TRAIL"](#)

3.133 ALL_UNUSED_COL_TABS

`ALL_UNUSED_COL_TABS` describes the tables accessible to the current user that contain unused columns.

Related Views

- `DBA_UNUSED_COL_TABS` describes all tables in the database that contain unused columns.
- `USER_UNUSED_COL_TABS` describes the tables owned by the current user that contain unused columns. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table
COUNT	NUMBER		Number of unused columns

 See Also:

- ["DBA_UNUSED_COL_TABS"](#)
- ["USER_UNUSED_COL_TABS"](#)

3.134 ALL_UPDATABLE_COLUMNS

`ALL_UPDATABLE_COLUMNS` describes all columns in a join view that are updatable by the current user, subject to appropriate privileges.

Related Views

- `DBA_UPDATABLE_COLUMNS` describes all columns in a join view that are updatable by the database administrator, subject to appropriate privileges.

- `USER_UPDATABLE_COLUMNS` describes all columns owned by the current user that are in a join view and are updatable by the current user, subject to appropriate privileges.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2 (128)	NOT NULL	Column name
UPDATABLE	VARCHAR2 (3)		Indicates whether the column is updatable (YES) or not (NO)
INSERTABLE	VARCHAR2 (3)		Indicates whether the column is insertable (YES) or not (NO)
DELETABLE	VARCHAR2 (3)		Indicates whether the column is deletable (YES) or not (NO)

 **Note:**

The values shown in the `UPDATABLE`, `INSERTABLE`, and `DELETABLE` columns are not instantly updated when a DDL operation that would affect these attributes occurs on one of the tables referenced in the `FROM` clause of the view definition. For example, these columns are not instantly updated when a primary key or unique constraint is added to or removed from the non-key-preserved table. To remedy this situation, recompile the view using the `ALTER VIEW COMPILE` statement to ensure that the latest information is displayed.

 **See Also:**

- "[DBA_UPDATABLE_COLUMNS](#)"
- "[USER_UPDATABLE_COLUMNS](#)"
- [Oracle Database Concepts](#) for information on updatable join views

3.135 ALL_USERS

`ALL_USERS` lists all users of the database visible to the current user.

This view does not describe the users (see the related views).

Related Views

- `DBA_USERS` describes all users of the database, and contains more columns than `ALL_USERS`.
- `USER_USERS` describes the current user, and contains more columns than `ALL_USERS`.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (128)	NOT NULL	Name of the user

Column	Datatype	NULL	Description
USER_ID	NUMBER	NOT NULL	ID number of the user
CREATED	DATE	NOT NULL	User creation date
COMMON	VARCHAR2 (3)		Indicates whether a given user is common. Possible values: <ul style="list-style-type: none">• YES if a user is common• NO if a user is local (not common)
ORACLE_MAINTAINED	VARCHAR2 (1)		Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
INHERITED	VARCHAR2 (3)		Indicates whether the user definition was inherited from another container (YES) or not (NO)
DEFAULT_COLLATION	VARCHAR2 (100)		Default collation for the user's schema
IMPLICIT	VARCHAR2 (3)		Indicates whether this user is a common user created by an implicit application (YES) or not (NO)
ALL_SHARD	VARCHAR2 (3)		In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are: <ul style="list-style-type: none">• YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.• NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created. In a non-sharded database, the value in this column is always NO.

See Also:

- "[DBA_USERS](#)"
- "[USER_USERS](#)"
- *Using Oracle Sharding* for more information about sharded database management

3.136 ALL_USTATS

ALL_USTATS describes the user-defined statistics collected on the tables and indexes accessible to the current user.

Related Views

- DBA_USTATS describes the user-defined statistics collected on all tables and indexes in the database.
- USER_USTATS describes the user-defined statistics collected on the tables and indexes owned by the current user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the table or index for which the statistics have been collected
OBJECT_NAME	VARCHAR2(128)		Name of the table or index for which the statistics have been collected
PARTITION_NAME	VARCHAR2(128)		Partition name of a table; NULL if the table is either nonpartitioned or the entry corresponds to the aggregate statistics for the table
OBJECT_TYPE	VARCHAR2(6)		Type of the object for which statistics have been collected: <ul style="list-style-type: none"> • INDEX • COLUMN
ASSOCIATION	VARCHAR2(8)		Statistics type association: <ul style="list-style-type: none"> • DIRECT Direct association with the object for which the statistics have been collected • IMPLICIT - Association for which the statistics have been collected is with the column type or index type, and the object is an instance of that column type or index type
COLUMN_NAME	VARCHAR2(128)		Column name, if OBJECT_TYPE is COLUMN, for which statistics have been collected
STATSTYPE_SCHEMA	VARCHAR2(128)		Schema of the statistics type which was used to collect the statistics
STATSTYPE_NAME	VARCHAR2(128)		Name of the statistics type which was used to collect statistics
STATISTICS	RAW(2000)		User-collected statistics for the object

 **See Also:**

- "[DBA_USTATS](#)"
- "[USER_USTATS](#)"

3.137 ALL_VARRAYS

ALL_VARRAYS describes the varrays accessible to the current user.

Related Views

- DBA_VARRAYS describes all varrays in the database.
- USER_VARRAYS describes the varrays owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table containing the varray
PARENT_TABLE_NAME	VARCHAR2(128)		Name of the containing table
PARENT_TABLE_COLUMN	VARCHAR2(4000)		Name of the varray column or attribute

Column	Datatype	NULL	Description
TYPE_OWNER	VARCHAR2(128)		Owner of the varray type
TYPE_NAME	VARCHAR2(128)		Name of the varray type
LOB_NAME	VARCHAR2(128)		Name of the LOB if the varray is stored in a LOB
STORAGE_SPEC	VARCHAR2(30)		Indicates whether the storage was defaulted (DEFAULT) or user-specified (USER_SPECIFIED)
RETURN_TYPE	VARCHAR2(20)		Return type of the column: <ul style="list-style-type: none"> • LOCATOR • VALUE
ELEMENT_SUBSTITUTABLE	VARCHAR2(25)		Indicates whether the varray element is substitutable (Y) or not (N)

 **See Also:**

- "[DBA_VARRAYS](#)"
- "[USER_VARRAYS](#)"

3.138 ALL_VIEWS

`ALL_VIEWS` describes the views accessible to the current user.

Related Views

- `DBA_VIEWS` describes all views in the database.
- `USER_VIEWS` describes the views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the view
TEXT_LENGTH	NUMBER		Length of the view text
TEXT	LONG		View text. This column returns the correct value only when the row originates from the current container. The BEQUEATH clause will not appear as part of the <code>TEXT</code> column in this view.
TEXT_VC	VARCHAR2(4000)		View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the <code>TEXT_VC</code> column in this view.
TYPE_TEXT_LENGTH	NUMBER		Length of the type clause of the typed view
TYPE_TEXT	VARCHAR2(4000)		Type clause of the typed view
OID_TEXT_LENGTH	NUMBER		Length of the WITH OID clause of the typed view
OID_TEXT	VARCHAR2(4000)		WITH OID clause of the typed view
VIEW_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the view if the view is a typed view

Column	Datatype	NULL	Description
VIEW_TYPE	VARCHAR2(128)		Type of the view if the view is a typed view
SUPERVIEW_NAME	VARCHAR2(128)		Name of the superview
EDITIONING_VIEW	VARCHAR2(1)		Reserved for future use
READ_ONLY	VARCHAR2(1)		Indicates whether the view is read-only (Y) or not (N)
CONTAINER_DATA	VARCHAR2(1)		Indicates whether the view contains container-specific data. Possible values: <ul style="list-style-type: none"> • Y if the view was created with the CONTAINER_DATA clause • N otherwise
BEQUEATH	VARCHAR2(12)		Possible values: <ul style="list-style-type: none"> • CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view • DEFINER: When the view is a BEQUEATH DEFINER view For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see <i>Oracle Database SQL Language Reference</i> .
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the view
CONTAINERS_DEFAULT	VARCHAR2(3)		Indicates whether the view is enabled for CONTAINERS() by default (YES) or not (NO)
CONTAINER_MAP	VARCHAR2(3)		Indicates whether the view is enabled for use with the container_map database property (YES) or not (NO)
EXTENDED_DATA_LINK	VARCHAR2(3)		Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)
EXTENDED_DATA_LINK_MAP	VARCHAR2(3)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether the view has one or more sensitive columns (YES) or not (NO)
ADMIT_NULL ¹	VARCHAR2(3)		Indicates whether the view admits null CON_ID data (YES) or not (NO)
PDB_LOCAL_ONLY ¹	VARCHAR2(3)		For internal use only

¹ This column is available starting with Oracle Database 19c.

3.139 ALL_VIEWS_AE

ALL_VIEWS_AE describes the views (across all editions) accessible to the current user.

Related Views

- DBA_VIEWS_AE describes all views (across all editions) in the database.
- USER_VIEWS_AE describes the views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the view
TEXT_LENGTH	NUMBER		Length of the view text
TEXT	LONG		View text. The BEQUEATH clause will not appear as part of the TEXT column in this view.
TEXT_VC	VARCHAR2(4000)		View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the TEXT_VC column in this view.
TYPE_TEXT_LENGTH	NUMBER		Length of the type clause of the typed view
TYPE_TEXT	VARCHAR2(4000)		Type clause of the typed view
OID_TEXT_LENGTH	NUMBER		Length of the WITH OID clause of the typed view
OID_TEXT	VARCHAR2(4000)		WITH OID clause of the typed view
VIEW_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the view if the view is an typed view
VIEW_TYPE	VARCHAR2(128)		Type of the view if the view is a typed view
SUPERVIEW_NAME	VARCHAR2(128)		Name of the superview, if the view is a subview
EDITIONING_VIEW	VARCHAR2(1)		Indicates whether the view is an editioning view (Y) or not (N)
READ_ONLY	VARCHAR2(1)		Indicates whether the view is read-only (Y) or not (N)
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the object is defined
CONTAINER_DATA	VARCHAR2(1)		Indicates whether the view contains container-specific data. Possible values: <ul style="list-style-type: none"> Y if the view was created with the CONTAINER_DATA clause N otherwise
BEQUEATH	VARCHAR2(12)		Possible values: <ul style="list-style-type: none"> CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view DEFINER: When the view is a BEQUEATH DEFINER view For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see <i>Oracle Database SQL Language Reference</i> .

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • n: This value is used for rows containing data that originate in the container with container ID n ($n = 1$ if the row originates in root)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the view
CONTAINERS_DEFAULT	VARCHAR2(3)		Indicates whether the view is enabled for CONTAINERS() by default (YES) or not (NO)
CONTAINER_MAP	VARCHAR2(3)		Indicates whether the view is enabled for use with the container_map database property (YES) or not (NO)
EXTENDED_DATA_LINK	VARCHAR2(3)		Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)
EXTENDED_DATA_LINK_MAP	VARCHAR2(3)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether the view has one or more sensitive columns (YES) or not (NO)
ADMIT_NULL ¹	VARCHAR2(3)		Indicates whether the view admits null CON_ID data (YES) or not (NO)
PDB_LOCAL_ONLY ¹	VARCHAR2(3)		For internal use only

¹ This column is available starting with Oracle Database 19c.

3.140 ALL_WARNING_SETTINGS

ALL_WARNING_SETTINGS displays information about the warning parameter settings for the objects accessible to the current user.

Related Views

- DBA_WARNING_SETTINGS displays information about the warning parameter settings for all objects in the database.
- USER_WARNING_SETTINGS displays information about the warning parameter settings for the objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
OBJECT_ID	NUMBER	NOT NULL	Object number of the object

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(12)		Type of the object: <ul style="list-style-type: none"> • PROCEDURE • FUNCTION • PACKAGE • PACKAGE BODY • TRIGGER • TYPE • TYPE BODY
WARNING	VARCHAR2(40)		Warning number or category: <ul style="list-style-type: none"> • INFORMATIONAL • PERFORMANCE • SEVERE • ALL
SETTING	VARCHAR2(7)		Value of the warning setting: <ul style="list-style-type: none"> • DISABLE • ENABLE • ERROR

 **See Also:**

- "[DBA_WARNING_SETTINGS](#)"
- "[USER_WARNING_SETTINGS](#)"

3.141 ALL_XML_INDEXES

ALL_XML_INDEXES describes the XML indexes accessible to the current user.

Related Views

- DBA_XML_INDEXES describes all XML indexes in the database.
- USER_XML_INDEXES describes the XML indexes owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the XML index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the XML index
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the indexed object
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the indexed object
TYPE	VARCHAR2(10)		Type of the indexed column: <ul style="list-style-type: none"> • REPOSITORY • BINARY • CLOB in OR • CLOB

Column	Datatype	NULL	Description
INDEX_TYPE	VARCHAR2(27)		Type of the index: <ul style="list-style-type: none"> STRUCTURED STRUCTURED and UNSTRUCTURED UNSTRUCTURED
PATH_TABLE_NAME	VARCHAR2(128)		Name of the path table
PARAMETERS	XMLTYPE		Indexed paths and Scheduler job information
ASYNC	VARCHAR2(9)		Asynchronous index type: <ul style="list-style-type: none"> ON-COMMIT MANUAL EVERY ALWAYS
STALE	VARCHAR2(5)		Indicates whether the index type is stale (TRUE) or not (FALSE)
PEND_TABLE_NAME	VARCHAR2(128)		Name of the pending table
EX_OR_INCLUDE	VARCHAR2(8)		Path subsetting: <ul style="list-style-type: none"> INCLUDE EXCLUDE FULLY IX

 See Also:

- ["DBA_XML_INDEXES"](#)
- ["USER_XML_INDEXES"](#)

3.142 ALL_XML_NESTED_TABLES

ALL_XML_NESTED_TABLES describes all the tables and their corresponding nested tables accessible to the current user.

Related Views

- DBA_XML_NESTED_TABLES describes all the tables and their corresponding nested tables in the database.
- USER_XML_NESTED_TABLES describes all the tables and their corresponding nested tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
NESTED_TABLE_NAME	VARCHAR2(128)		Name of the nested table
PARENT_COLUMN_NAME	VARCHAR2(4000)		Name of the parent XML column

 **See Also:**

- "[DBA_XML_NESTED_TABLES](#)"
- "[USER_XML_NESTED_TABLES](#)"

3.143 ALL_XML_OUT_OF_LINE_TABLES

`ALL_XML_OUT_OF_LINE_TABLES` describes all the out of line tables connected to a given root table for the same schema accessible to the current user.

Related Views

- `DBA_XML_OUT_OF_LINE_TABLES` describes all the out of line tables connected to a given root table for the same schema in the database.
- `USER_XML_OUT_OF_LINE_TABLES` describes all the out of line tables connected to a given root table for the same schema owned by the current user. This view does not display the `TABLE_OWNER` column.

Column	Datatype	NULL	Description
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the out of line table is defined Refer to the See Also note below for links to more information about the schemaurl attribute for an XML schema.
SCHEMA_OWNER	VARCHAR2(128)		Owner of the schema
TABLE_NAME	VARCHAR2(128)		Name of the out of line table
TABLE_OWNER	VARCHAR2(128)		Owner of the out of line table

 **See Also:**

- "[DBA_XML_OUT_OF_LINE_TABLES](#)"
- "[USER_XML_OUT_OF_LINE_TABLES](#)"
- *Oracle XML DB Developer's Guide* for information about registering an XML schema with Oracle XML DB

3.144 ALL_XML_SCHEMA_ATTRIBUTES

`ALL_XML_SCHEMA_ATTRIBUTES` describes all the attributes and their properties accessible to the current user.

Related Views

- `DBA_XML_SCHEMA_ATTRIBUTES` describes all the attributes and their properties accessible to the current user in the database.
- `USER_XML_SCHEMA_ATTRIBUTES` describes all the attributes and their properties owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the attribute
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the attribute is defined
			Refer to the See Also note below for links to more information about the schemaurl attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the attribute
ATTRIBUTE_NAME	VARCHAR2(2000)		Name of the attribute
IS_REF	NUMBER		Indicates whether an attribute was defined using a reference in the XML schema (1) or not (0)
TYPE_NAME	VARCHAR2(2000)		Name of the type of the attribute
GLOBAL	RAW(1)		Indicates whether the attribute is global (1) or not (0)
ATTRIBUTE	XMLTYPE		Actual XMLType for the attribute
ELEMENT_ID	RAW(20)		Element ID of the element to which the attribute belongs
SQL_TYPE	VARCHAR2(128)		XDB annotation for sqlType
SQL_NAME	VARCHAR2(128)		XDB annotation value for sqlName

See Also:

- "[DBA_XML_SCHEMA_ATTRIBUTES](#)"
- "[USER_XML_SCHEMA_ATTRIBUTES](#)"
- *Oracle XML DB Developer's Guide* for information about registering an XML schema with Oracle XML DB
- *Oracle XML DB Developer's Guide* for information about restrictions for an XML schema URL

3.145 ALL_XML_SCHEMA_COMPLEX_TYPES

`ALL_XML_SCHEMA_COMPLEX_TYPES` describes all complex types accessible to the current user.

Related Views

- `DBA_XML_SCHEMA_COMPLEX_TYPES` describes all complex types in the database.
- `USER_XML_SCHEMA_COMPLEX_TYPES` describes all complex types owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the type
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the type is defined
			Refer to the See Also note below for links to more information about the <code>schemaurl</code> attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the type
COMPLEX_TYPE_NAME	VARCHAR2(256)		Name of the complex type
COMPLEX_TYPE	XMLTYPE(XMLSchema "http:// xmlns.oracle.com/ xdb/ XDBSchema.xsd" Element "complexType")		The actual XMLType of the type
BASE_NAME	VARCHAR2(256)		Name of the base type to which the complex type refers
BASE_SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the complex type is defined
BASE_TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the type
MAINTAIN_DOM	RAW(1)		XDB annotation for maintainDOM
SQL_TYPE	VARCHAR2(128)		XDB annotation for sqlType
SQL_SCHEMA	VARCHAR2(128)		XDB annotation for sqlSchema

See Also:

- "[DBA_XML_SCHEMA_COMPLEX_TYPES](#)"
- "[USER_XML_SCHEMA_COMPLEX_TYPES](#)"
- *Oracle XML DB Developer's Guide* for information about registering an XML schema with Oracle XML DB

3.146 ALL_XML_SCHEMA_ELEMENTS

ALL_XML_SCHEMA_ELEMENTS describes all the elements and their properties accessible to the current user.

Related Views

- DBA_XML_SCHEMA_ELEMENTS describes all the elements and their properties.
- USER_XML_SCHEMA_ELEMENTS describes all the elements and their properties owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the element
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the element is defined
TARGET_NAMESPACE	VARCHAR2(2000)		Refer to the See Also note below for links to more information about the schemaurl attribute for an XML schema.
ELEMENT_NAME	VARCHAR2(2000)		The namespace of the element
IS_REF	NUMBER		Name of the element
TYPE_NAME	VARCHAR2(2000)		Indicates whether an attribute was defined using a reference in the XML schema (1) or not (0)
GLOBAL	RAW(1)		Name of the type of the element
ELEMENT	XMLTYPE		Indicates whether the attribute is global (1) or not (0)
SQL_INLINE	RAW(1)		The actual XML fragment of the element
SQL_TYPE	VARCHAR2(128)		XDB annotation for sqlInline
SQL_SCHEMA	VARCHAR2(128)		XDB annotation value for sqlType
DEFAULT_TABLE	VARCHAR2(128)		XDB annotation value for sqlSchema
SQL_NAME	VARCHAR2(128)		XDB annotation value for default table
SQL_COL_TYPE	VARCHAR2(128)		XDB annotation value for sqlName
MAINTAIN_DOM	RAW(1)		XDB annotation value for sqlColType
MAINTAIN_ORDER	RAW(1)		XDB annotation for maintainDOM
ELEMENT_ID	RAW(20)		XDB annotation for maintainOrder
PARENT_ELEMENT_ID	RAW(20)		Unique identifier for the element
			Identifies the parent of the element

 **See Also:**

- "[DBA_XML_SCHEMA_ELEMENTS](#)"
- "[USER_XML_SCHEMA_ELEMENTS](#)"
- *Oracle XML DB Developer's Guide* for information about registering an XML schema with Oracle XML DB
- *Oracle XML DB Developer's Guide* for information about restrictions for an XML schema URL

3.147 ALL_XML_SCHEMA_NAMESPACES

`ALL_XML_SCHEMA_NAMESPACES` describes all the available namespaces accessible to the current user.

Related Views

- `DBA_XML_SCHEMA_NAMESPACES` describes all the available namespaces.
- `USER_XML_SCHEMA_NAMESPACES` describes all the available namespaces owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		User who owns the namespace
TARGET_NAMESPACE	VARCHAR2(2000)		The target namespace
SCHEMA_URL	VARCHAR2(700)		The URL of the schema Refer to the See Also note below for links to more information about the <code>schemaurl</code> attribute for an XML schema.

 **See Also:**

- "[DBA_XML_SCHEMA_NAMESPACES](#)"
- "[USER_XML_SCHEMA_NAMESPACES](#)"
- *Oracle XML DB Developer's Guide* for information about registering an XML schema with Oracle XML DB
- *Oracle XML DB Developer's Guide* for information about restrictions for an XML schema URL

3.148 ALL_XML_SCHEMA_SIMPLE_TYPES

`ALL_XML_SCHEMA_SIMPLE_TYPES` describes all simple types accessible to the current user.

Related Views

- `DBA_XML_SCHEMA_SIMPLE_TYPES` describes all simple types.

- `USER_XML_SCHEMA_SIMPLE_TYPES` describes all simple types owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		The user who owns the type
SCHEMA_URL	VARCHAR2 (700)		The URL of the schema within which the type is defined
			Refer to the See Also note below for links to more information about the <code>schemaurl</code> attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2 (2000)		The namespace of the type
SIMPLE_TYPE_NAME	VARCHAR2 (256)		Name of the simple type
SIMPLE_TYPE	XMLTYPE (XMLSchem "http:// xmlns.oracle.com/ xdb/ XDBSchema.xsd" Element "simpleType")		The actual XMLType of the type

 **See Also:**

- "[DBA_XML_SCHEMA_SIMPLE_TYPES](#)"
- "[USER_XML_SCHEMA_SIMPLE_TYPES](#)"
- *Oracle XML DB Developer's Guide* for information about registering an XML schema with Oracle XML DB
- *Oracle XML DB Developer's Guide* for information about restrictions for an XML schema URL

3.149 ALL_XML_SCHEMA_SUBSTGRP_HEAD

`ALL_XML_SCHEMA_SUBSTGRP_HEAD` describes the heads of substitution groups accessible to the current user.

Related Views

- `DBA_XML_SCHEMA_SUBSTGRP_HEAD` describes the heads of substitution groups.
- `USER_XML_SCHEMA_SUBSTGRP_HEAD` describes the heads of substitution groups owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		The user who owns the element
SCHEMA_URL	VARCHAR2 (700)		The URL of the schema within which the element is defined
			Refer to the See Also note below for links to more information about the <code>schemaurl</code> attribute for an XML schema.

Column	Datatype	NULL	Description
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the element
ELEMENT_NAME	VARCHAR2(256)		Name of the element
ELEMENT	XMLTYPE (XMLElement "http:// xmlns.oracle.com/ xdb/ XDBSchema.xsd" Element "element")		The actual XML fragment of the element

 See Also:

- ["DBA_XML_SCHEMA_SUBSTGRP_HEAD"](#)
- ["USER_XML_SCHEMA_SUBSTGRP_HEAD"](#)

3.150 ALL_XML_SCHEMA_SUBSTGRP_MBRs

ALL_XML_SCHEMA_SUBSTGRP_MBRs describes all members of substitution groups accessible to the current user.

Related Views

- DBA_XML_SCHEMA_SUBSTGRP_MBRs describes all members of substitution groups.
- USER_XML_SCHEMA_SUBSTGRP_MBRs describes all members of substitution groups owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the element
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the element is defined
			Refer to the See Also note below for links to more information about the schemaurl attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the element
ELEMENT_NAME	VARCHAR2(256)		Name of the element
ELEMENT	XMLTYPE (XMLElement "http:// xmlns.oracle.com/ xdb/ XDBSchema.xsd" Element "element")		The actual XML fragment of the element

Column	Datatype	NULL	Description
HEAD_OWNER	VARCHAR2(128)		The user who owns the head element for the current element
HEAD_SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the head element exists
HEAD_TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the head element
HEAD_ELEMENT_NAME	VARCHAR2(256)		Name of the head element
HEAD_ELEMENT	XMLTYPE (XMLElement "http:// xmlns.oracle.com/ xdb/ XDBSchema.xsd" Element "element")		The actual XMLType of the head element

3.151 ALL_XML_SCHEMAS

ALL_XML_SCHEMAS describes the registered XML schemas accessible to the current user.

Related Views

- **DBA_XML_SCHEMAS** describes all registered XML schemas in the database.
- **USER_XML_SCHEMAS** describes the registered XML schemas owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the XML schema
SCHEMA_URL	VARCHAR2(700)		Schema URL of the XML schema
			Refer to the See Also note below for links to more information about the schemaurl attribute for an XML schema.
LOCAL	VARCHAR2(3)		Indicates whether the XML schema is local (YES) or global (NO)
SCHEMA	XMLTYPE		XML schema document
INT_OBJNAME	VARCHAR2(4000)		Internal database object name for the schema
QUAL_SCHEMA_URL	VARCHAR2(865)		Fully qualified schema URL

Column	Datatype	NULL	Description
HIER_TYPE	VARCHAR2(11)		Type of hierarchy for which the schema is enabled: <ul style="list-style-type: none"> • NONE • RESMETADATA • CONTENTS
BINARY	VARCHAR2(3)		Indicates whether the XML Schema is registered for binary encoding usage (YES) or not (NO)
SCHEMA_ID	RAW(16)		Opaque schema identifier (16 bytes)
HIDDEN	VARCHAR2(3)		Indicates whether the XML Schema has been deleted in hidden mode (YES) or not (NO)

 **See Also:**

- "[DBA_XML_SCHEMAS](#)"
- "[USER_XML_SCHEMAS](#)"
- *Oracle XML DB Developer's Guide* for information about registering an XML schema with Oracle XML DB

3.152 ALL_XML_TAB_COLS

`ALL_XML_TAB_COLS` describes the columns of the XML tables accessible to the current user.

Related Views

- `DBA_XML_TAB_COLS` describes the columns of all XML tables in the database.
- `USER_XML_TAB_COLS` describes the columns of the XML tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the XML table
TABLE_NAME	VARCHAR2(128)		Name of the XML table
COLUMN_NAME	VARCHAR2(4000)		Name of the XML table column
XMLSHEMA	VARCHAR2(700)		Name of the XML Schema that is used for the table definition
SCHEMA_OWNER	VARCHAR2(128)		Owner of the XML Schema that is used for the table definition
ELEMENT_NAME	VARCHAR2(2000)		Name of the XML Schema element that is used for the table

Column	Datatype	NULL	Description
STORAGE_TYPE	VARCHAR2(17)		<p>Storage option for the XMLType data:</p> <ul style="list-style-type: none"> • OBJECT-RELATIONAL • BINARY • CLOB <p>Note: The CLOB storage option for XMLType data is deprecated in Oracle Database 12c Release 1 (12.1). Oracle recommends using the BINARY storage option, instead.</p>
ANYSCHEMA	VARCHAR2(3)		If storage is BINARY, indicates whether the column allows ANYSCHEMA (YES) or not (NO), else NULL
NONSCHEMA	VARCHAR2(3)		If storage is BINARY, indicates whether the column allows NONSCHEMA (YES) or not (NO), else NULL
TOKENSETS	VARCHAR2(4000)		This column is for internal use only.

See Also:

- "[DBA_XML_TAB_COLS](#)"
- "[USER_XML_TAB_COLS](#)"

3.153 ALL_XML_TABLES

ALL_XML_TABLES describes the XML tables accessible to the current user.

Related Views

- DBA_XML_TABLES describes all XML tables in the database.
- USER_XML_TABLES describes the XML tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the XML table
TABLE_NAME	VARCHAR2(128)		Name of the XML table
XMLSCHEMA	VARCHAR2(700)		Name of the XML Schema that is used for the table definition
SCHEMA_OWNER	VARCHAR2(128)		Owner of the XML Schema that is used for the table definition
ELEMENT_NAME	VARCHAR2(2000)		Name of the XML Schema element that is used for the table

Column	Datatype	NULL	Description
STORAGE_TYPE	VARCHAR2(17)		<p>Storage option for the XMLType data:</p> <ul style="list-style-type: none"> • OBJECT-RELATIONAL • BINARY • CLOB <p>Note: The CLOB storage option for XMLType data is deprecated in Oracle Database 12c Release 1 (12.1). Oracle recommends using the BINARY storage option, instead.</p>
ANYSCHEMA	VARCHAR2(3)		If storage is BINARY, indicates whether the column allows ANYSCHEMA (YES) or not (NO), else NULL
NONSCHEMA	VARCHAR2(3)		If storage is BINARY, indicates whether the column allows NONSCHEMA (YES) or not (NO), else NULL
TOKENSETS	VARCHAR2(4000)		This column is for internal use only.

See Also:

- "[DBA_XML_TABLES](#)"
- "[USER_XML_TABLES](#)"

3.154 ALL_XML_VIEW_COLS

ALL_XML_VIEW_COLS describes the columns of the XML views accessible to the current user.

Related Views

- DBA_XML_VIEW_COLS describes the columns of all XML views in the database.
- USER_XML_VIEW_COLS describes the columns of the XML views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the XML view
VIEW_NAME	VARCHAR2(128)		Name of the XML view
COLUMN_NAME	VARCHAR2(4000)		Name of the XML view column
XMLSCHEMA	VARCHAR2(700)		Name of the XML Schema that is used for the view definition
SCHEMA_OWNER	VARCHAR2(128)		Owner of the XML Schema that is used for the view definition
ELEMENT_NAME	VARCHAR2(2000)		Name of the XML Schema element that is used for the view

 **See Also:**

- "[DBA_XML_VIEW_COLS](#)"
- "[USER_XML_VIEW_COLS](#)"

3.155 ALL_XML_VIEWS

`ALL_XML_VIEWS` describes the XML views accessible to the current user.

Related Views

- `DBA_XML_VIEWS` describes all XML views the database.
- `USER_XML_VIEWS` describes the XML views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the XML view
VIEW_NAME	VARCHAR2 (128)		Name of the XML view
XMLSCHEMA	VARCHAR2 (700)		Name of the XML Schema that is used for the view definition
SCHEMA_OWNER	VARCHAR2 (128)		Owner of the XML Schema that is used for the view definition
ELEMENT_NAME	VARCHAR2 (2000)		Name of the XML SCHEMA element that is used for the view

 **See Also:**

- "[DBA_XML_VIEWS](#)"
- "[USER_XML_VIEWS](#)"

3.156 ALL_XSTREAM_ADMINISTRATOR

`ALL_XSTREAM_ADMINISTRATOR` displays information about the current user's granted privileges to be an XStream administrator by procedures in the `DBMS_XSTREAM_AUTH` package.

Related View

`DBA_XSTREAM_ADMINISTRATOR` displays information about the users who have been granted privileges to be XStream administrators by procedures in the `DBMS_XSTREAM_AUTH` package.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (128)	NOT NULL	Name of the user who has been granted privileges to be an XStream administrator

Column	Datatype	NULL	Description
PRIVILEGE_TYPE	VARCHAR2(7)		Type of privilege granted: <ul style="list-style-type: none">• APPLY• CAPTURE• * - Both APPLY and CAPTURE
GRANT_SELECT_PRIVILEGES	VARCHAR2(3)		Shows whether set of privileges granted to the user (grantee) includes the SELECT_CATALOG_ROLE role, which enables the user to manage other XStream servers that belong to other XStream users. Possible values: <ul style="list-style-type: none">• YES: The administrator has the SELECT_CATALOG_ROLE role and other privileges, is considered a full privilege administrator, and can manage other users' XStream configuration• NO: The administrator is considered a minimum privilege administrator, and can only manage XStream configurations where the apply_user or capture_user (based on the PRIVILEGE_TYPE column) matches the username.
CREATE_TIME	TIMESTAMP(6)		Time at which the privilege was granted

 **See Also:**

- "[DBA_XSTREAM_ADMINISTRATOR](#)"

3.157 ALL_XSTREAM_INBOUND

ALL_XSTREAM_INBOUND displays information about the XStream inbound servers accessible to the current user.

Related View

[DBA_XSTREAM_INBOUND](#) displays information about all XStream inbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the inbound server
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue associated with the inbound server
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue associated with the inbound server
APPLY_USER	VARCHAR2(128)		Name of the user who can connect to the inbound server and apply messages
USER_COMMENT	VARCHAR2(4000)		User comment
CREATE_DATE	TIMESTAMP(6)		Date when the inbound server was created

Column	Datatype	NULL	Description
STATUS	VARCHAR2 (8)		Status of the inbound server: <ul style="list-style-type: none"> • DISABLED - The inbound server is not running. • DETACHED - The inbound server is running, but the XStream client application is not attached to it. • ATTACHED - The inbound server is running, and the XStream client application is attached to it. • ABORTED - The inbound server became disabled because it encountered an error.
COMMITTED_DATA_ONLY	VARCHAR2 (3)		YES - means the inbound server can receive only LCRs in committed transactions from the XStream client application. A committed transaction is an assembled, noninterleaving transaction with no rollbacks.

 See Also:["DBA_XSTREAM_INBOUND"](#)

3.158 ALL_XSTREAM_INBOUND_PROGRESS

ALL_XSTREAM_INBOUND_PROGRESS displays information about the progress made by the XStream inbound servers accessible to the current user.

Related View

DBA_XSTREAM_INBOUND_PROGRESS displays information about the progress made by all XStream inbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2 (128)	NOT NULL	Name of the inbound server
PROCESSED_LOW_POSITION	RAW (64)		Position of the processed low transaction
APPLIED_LOW_POSITION	RAW (64)		All messages with a commit position less than this value have been applied
APPLIED_HIGH_POSITION	RAW (64)		Highest commit position of a transaction that has been applied
SPILL_POSITION	RAW (64)		Position of the spill low watermark of the transactions currently being applied
OLDEST_POSITION	RAW (64)		Earliest position of the transactions currently being applied
OLDEST_MESSAGE_NUMBER	NUMBER	NOT NULL	Earliest message number of the transactions currently being applied
APPLIED_MESSAGE_NUMBER	NUMBER	NOT NULL	Message number up to which all transactions have definitely been applied. This value is the low watermark for the inbound server. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied.

Column	Datatype	NULL	Description
APPLIED_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied
APPLIED_MESSAGE_CREATE_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database
SPILL_MESSAGE_NUMBER	NUMBER		Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk. The XStream client application does not need to send logical change records (LCRs) with a lower SCN than the spill low watermark. Spilled messages may not have been applied yet.
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Database where the transaction originated
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

 See Also:["DBA_XSTREAM_INBOUND_PROGRESS"](#)

3.159 ALL_XSTREAM_OUT_SUPPORT_MODE

ALL_XSTREAM_OUT_SUPPORT_MODE displays information about the level of XStream capture process support for the tables accessible to the current user in the database.

Related View

DBA_XSTREAM_OUT_SUPPORT_MODE displays information about the level of XStream capture process support for the tables in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Table owner
OBJECT_NAME	VARCHAR2(128)		Table name
SUPPORT_MODE	VARCHAR2(6)		Capture process support level for the table: <ul style="list-style-type: none"> • FULL - A capture process can capture changes made to all of the columns in the table. • ID KEY - A capture process can capture changes made to the key columns and any other columns in the table that are supported by the capture process, except for LOB, LONG, LONG RAW, and XMLType columns. • NONE - A capture process cannot capture changes made to any columns in the table.

 See Also:["DBA_XSTREAM_OUT_SUPPORT_MODE"](#)

3.160 ALL_XSTREAM_OUTBOUND

`ALL_XSTREAM_OUTBOUND` displays information about the XStream outbound servers accessible to the current user.

Related View

`DBA_XSTREAM_OUTBOUND` displays information about all XStream outbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the outbound server
CONNECT_USER	VARCHAR2(128)		Name of the user who can connect to the outbound server and process the outbound LCRs
CAPTURE_NAME	VARCHAR2(128)		Name of the Replication capture process
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated
CAPTURE_USER	VARCHAR2(128)		Current user who is enqueueing captured messages
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue associated with the outbound server
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue associated with the outbound server
USER_COMMENT	VARCHAR2(4000)		User comment
CREATE_DATE	TIMESTAMP(6)		Date when the outbound server was created
STATUS	VARCHAR2(8)		Status of the outbound server: <ul style="list-style-type: none"> • DISABLED - The outbound server is not running. • DETACHED - The outbound server is running, but the XStream client application is not attached to it. • ATTACHED - The outbound server is running, and the XStream client application is attached to it. • ABORTED - The outbound server became disabled because it encountered an error.
COMMITTED_DATA_ONLY	VARCHAR2(3)		YES if the outbound server can send only LCRs in committed transactions to the XStream client application. A committed transaction is an assembled, noninterleaving transaction with no rollbacks. NO if the outbound server can send LCRs in transactions that have not yet committed to the XStream client application. This mode is for internal Oracle use only.
START_SCN	NUMBER		The SCN from which the outbound server's capture process started capturing changes when it was last started
START_TIME	TIMESTAMP(6)		The time from which the outbound server's capture process started capturing changes when it was last started

Column	Datatype	NULL	Description
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
LCRID_VERSION	NUMBER		LCR ID format currently being used

 See Also:["DBA_XSTREAM_OUTBOUND"](#)

3.161 ALL_XSTREAM_OUTBOUND_PROGRESS

ALL_XSTREAM_OUTBOUND_PROGRESS displays information about the progress made by the XStream outbound servers accessible to the current user.

Related View

DBA_XSTREAM_OUTBOUND_PROGRESS displays information about the progress made by all XStream outbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the outbound server
SOURCE_DATABASE	VARCHAR2(128)		Global name of the database where the transaction originated. For a PDB, this is the global name of the PDB.
PROCESSED_LOW_POSITION	RAW(64)		Position of the low-watermark transaction processed by the outbound server
PROCESSED_LOW_TIME	DATE		Time when the processed low position was last updated by the outbound server
OLDEST_POSITION	RAW(64)		The position of the earliest LCR that is required by the XStream client application
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
PROCESSED_LOW_SCN	NUMBER	NOT NULL	SCN of the processed low transaction
OLDEST_SCN	NUMBER	NOT NULL	Oldest SCN of the transactions currently being captured

 See Also:["DBA_XSTREAM_OUTBOUND_PROGRESS"](#)

3.162 ALL_XSTREAM_RULES

`ALL_XSTREAM_RULES` displays information about the XStream rules accessible to the current user.

Related View

`DBA_XSTREAM_RULES` displays information about all XStream server rules in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)		Name of the XStream process
STREAMS_TYPE	VARCHAR2(12)		Type of the XStream process: <ul style="list-style-type: none">• CAPTURE• APPLY
STREAMS_RULE_TYPE	VARCHAR2(9)		The XStream type of the rule: <ul style="list-style-type: none">• TABLE• SCHEMA• GLOBAL
RULE_SET_OWNER	VARCHAR2(128)		Owner of the rule set
RULE_SET_NAME	VARCHAR2(128)		Name of the rule set
RULE_SET_TYPE	CHAR(8)		Type of the rule set: <ul style="list-style-type: none">• POSITIVE• NEGATIVE
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_TYPE	VARCHAR2(9)		The type of the rule: <ul style="list-style-type: none">• DML• DDL
RULE_CONDITION	CLOB		Current rule condition
SCHEMA_NAME	VARCHAR2(128)		For table and schema rules, the schema name
OBJECT_NAME	VARCHAR2(128)		For table rules, the table name
INCLUDE_TAGGED_LCR	VARCHAR2(3)		Indicates whether to include tagged LCRs (YES) or not (NO)
SUBSETTING_OPERATION	VARCHAR2(6)		For subset rules, the type of operation: <ul style="list-style-type: none">• INSERT• UPDATE• DELETE
DML_CONDITION	VARCHAR2(4000)		For subset rules, the row subsetting condition
SOURCE_DATABASE	VARCHAR2(128)		The global name of the database where the LCRs originated. In a PDB, this is the global name of the PDB.
ORIGINAL_RULE_CONDITION	VARCHAR2(4000)		For rules created by the XStream administrative APIs, the original rule condition when the rule was created
SAME_RULE_CONDITION	VARCHAR2(3)		For rules created by the XStream administrative APIs, indicates whether the current rule condition is the same as the original rule condition (YES) or not (NO)
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

Column	Datatype	NULL	Description
SOURCE_CONTAINER_NAME	VARCHAR2(128)		The container name of the database where the transactions originated

 **See Also:**

["DBA_XSTREAM_RULES"](#)

3.163 ALL_XSTREAM_TRANSFORMATIONS

`ALL_XSTREAM_TRANSFORMATIONS` displays information about all XStream transformations accessible to the current user, in order of execution.

Related View

`DBA_XSTREAM_TRANSFORMATIONS` displays information about all XStream transformations available on a system, in order of execution.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule which has an associated transformation
RULE_NAME	VARCHAR2(128)		Name of the rule which has an associated transformation
TRANSFORM_TYPE	VARCHAR2(26)		Type of the transformation: <ul style="list-style-type: none"> • DECLARATIVE TRANSFORMATION • SUBSET RULE • CUSTOM TRANSFORMATION
FROM_SCHEMA_NAME	VARCHAR2(128)		Schema to be renamed
TO_SCHEMA_NAME	VARCHAR2(128)		New schema name
FROM_TABLE_NAME	VARCHAR2(128)		Table to be renamed
TO_TABLE_NAME	VARCHAR2(128)		New table name
SCHEMA_NAME	VARCHAR2(128)		Schema of the column to be modified
TABLE_NAME	VARCHAR2(128)		Table of the column to be modified
FROM_COLUMN_NAME	VARCHAR2(4000)		Column to be renamed
TO_COLUMN_NAME	VARCHAR2(4000)		New column name
COLUMN_NAME	VARCHAR2(4000)		Column to add or delete
COLUMN_VALUE	ANYDATA		Value of the column to add
COLUMN_TYPE	VARCHAR2(4000)		Type of the new column
COLUMN_FUNCTION	VARCHAR2(128)		Name of the default function used to add a column
VALUE_TYPE	VARCHAR2(3)		Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR
USER_FUNCTION_NAME	VARCHAR2(4000)		Name of the user-defined transformation function to run

Column	Datatype	NULL	Description
SUBSETTING_OPERATION	VARCHAR2 (6)		DML operation for row subsetting: <ul style="list-style-type: none"> • INSERT • UPDATE • DELETE
DML_CONDITION	VARCHAR2 (4000)		Row subsetting condition
DECLARATIVE_TYPE	VARCHAR2 (13)		Type of declarative transform to run: <ul style="list-style-type: none"> • KEEP COLUMNS • DELETE COLUMN • RENAME COLUMN • ADD COLUMN • RENAME TABLE • RENAME SCHEMA
PRECEDENCE	NUMBER		Execution order relative to other declarative transformations on the same STEP_NUMBER
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

 See Also:["DBA_XSTREAM_TRANSFORMATIONS"](#)

3.164 ALL_XTERNAL_LOC_PARTITIONS

ALL_XTERNAL_LOC_PARTITIONS describes partition-level locations accessible to the current user.

If an external table is partitioned, then the existing ALL_EXTERNAL_LOCATIONS, DBA_EXTERNAL_LOCATIONS, and USER_EXTERNAL_LOCATIONS views will have no rows for that table. Instead, locations will be indicated in the ALL_XTERNAL_LOC_PARTITIONS, DBA_XTERNAL_LOC_PARTITIONS, USER_XTERNAL_LOC_PARTITIONS, ALL_XTERNAL_LOC_SUBPARTITIONS, DBA_XTERNAL_LOC_SUBPARTITIONS, and USER_XTERNAL_LOC_SUBPARTITIONS views.

Related Views

- DBA_XTERNAL_LOC_PARTITIONS describes partition-level locations in the database.
- USER_XTERNAL_LOC_PARTITIONS describes partition-level locations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the partitioned external table
TABLE_NAME	VARCHAR2 (128)		Name of the partitioned external table
PARTITION_NAME	VARCHAR2 (128)		Name of the partition
LOCATION	VARCHAR2 (4000)		External table location clause for the partition
DIRECTORY_OWNER	CHAR (3)		Owner of the directory containing the external table partition location

Column	Datatype	NULL	Description
DIRECTORY_NAME	VARCHAR2(128)		Name of the directory containing the external table partition location

 **See Also:**

- "[DBA_XTERNAL_LOC_PARTITIONS](#)"
- "[USER_XTERNAL_LOC_PARTITIONS](#)"

3.165 ALL_XTERNAL_LOC_SUBPARTITIONS

`ALL_XTERNAL_LOC_SUBPARTITIONS` describes subpartition-level locations accessible to the current user.

If an external table is partitioned, then the existing `ALL_EXTERNAL_LOCATIONS`, `DBA_EXTERNAL_LOCATIONS`, and `USER_EXTERNAL_LOCATIONS` views will have no rows for that table. Instead, locations will be indicated in the `ALL_XTERNAL_LOC_PARTITIONS`, `DBA_XTERNAL_LOC_PARTITIONS`, `USER_XTERNAL_LOC_PARTITIONS`, `ALL_XTERNAL_LOC_SUBPARTITIONS`, `DBA_XTERNAL_LOC_SUBPARTITIONS`, and `USER_XTERNAL_LOC_SUBPARTITIONS` views.

Related Views

- `DBA_XTERNAL_LOC_SUBPARTITIONS` describes subpartition-level locations in the database.
- `USER_XTERNAL_LOC_SUBPARTITIONS` describes subpartition-level locations owned by the current user. This view does not display the `TABLE_OWNER` column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned external table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
LOCATION	VARCHAR2(4000)		External table location clause for the subpartition
DIRECTORY_OWNER	CHAR(3)		Owner of the directory containing the external table subpartition location
DIRECTORY_NAME	VARCHAR2(128)		Name of the directory containing the external table subpartition location

 **See Also:**

- "[DBA_XTERNAL_LOC_SUBPARTITIONS](#)"
- "[USER_XTERNAL_LOC_SUBPARTITIONS](#)"

3.166 ALL_XTERNAL_PART_TABLES

ALL_XTERNAL_PART_TABLES describes object-level information for partitioned external tables accessible to the current user.

Related Views

- DBA_XTERNAL_PART_TABLES describes object-level information for partitioned external tables in the database
- USER_XTERNAL_PART_TABLES describes object-level information for partitioned external tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned external table
TYPE_OWNER	CHAR(3)		Owner of the implementation type for the external table access driver
TYPE_NAME	VARCHAR2(128)		Name of the implementation type for the external table access driver
DEFAULT_DIRECTORY_OWNER	CHAR(3)		Owner of the default directory for the external table
DEFAULT_DIRECTORY_NAME	VARCHAR2(128)		Name of the default directory for the external table
REJECT_LIMIT	VARCHAR2(40)		Reject limit for the external table, or UNLIMITED
ACCESS_TYPE	VARCHAR2(7)		Type of access parameters for the external table (BLOB, CLOB)
ACCESS_PARAMETERS	CLOB		Access parameters for the external table
PROPERTY	VARCHAR2(10)		Property of the external table (REFERENCED, ALL)

See Also:

- "[DBA_XTERNAL_PART_TABLES](#)"
- "[USER_XTERNAL_PART_TABLES](#)"

3.167 ALL_XTERNAL_TAB_PARTITIONS

ALL_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables accessible to the current user.

Related Views

- DBA_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables in the database
- USER_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)		Name of the partitioned external table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
DEFAULT_DIRECTORY_OWNER	CHAR(3)		Owner of the default directory for the external table partition
DEFAULT_DIRECTORY_NAME	VARCHAR2(128)		Name of the default directory for the external table partition
ACCESS_TYPE	VARCHAR2(7)		Type of access parameters for the partition (BLOB, CLOB)
ACCESS_PARAMETERS	CLOB		Access parameters for the external table partition

 See Also:

- "[DBA_XTERNAL_TAB_PARTITIONS](#)"
- "[USER_XTERNAL_TAB_PARTITIONS](#)"

3.168 ALL_XTERNAL_TAB_SUBPARTITIONS

ALL_XTERNAL_TAB_SUBPARTITIONS describes subpartition-level information for partitioned external tables accessible to the current user.

Related Views

- DBA_XTERNAL_TAB_SUBPARTITIONS describes subpartition-level information for partitioned external tables in the database.
- USER_XTERNAL_TAB_SUBPARTITIONS describes subpartition-level information for partitioned external tables owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned external table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
DEFAULT_DIRECTORY_OWNER	CHAR(3)		Owner of the default directory for the external table partition
DEFAULT_DIRECTORY_NAME	VARCHAR2(128)		Name of the default directory for the external table partition
ACCESS_TYPE	VARCHAR2(7)		Type of access parameters for the partition (BLOB, CLOB)
ACCESS_PARAMETERS	CLOB		Access parameters for the external table partition

 **See Also:**

- "[DBA_XTERNAL_TAB_SUBPARTITIONS](#)"

3.169 ALL_ZONEMAP_MEASURES

`ALL_ZONEMAP_MEASURES` describes the measures for all zone maps accessible to the user.

Related Views

- `DBA_ZONEMAP_MEASURES` describes the measures for all the zone maps in the database.
- `USER_ZONEMAP_MEASURES` describes the measures for all the zone maps owned by the user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the zone map
ZONEMAP_NAME	VARCHAR2(128)	NOT NULL	Name of the zone map
MEASURE	LONG		Column whose MIN/MAX value is computed
POSITION_IN_SELECT	NUMBER	NOT NULL	Original position of the measure aggregate on the SELECT list of zone map defining query
AGG_FUNCTION	VARCHAR2(13)		Name of aggregate in zone map table
AGG_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column whose MIN/MAX per zone maintained

 **Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

 **See Also:**

3.170 ALL_ZONEMAPS

`ALL_ZONEMAPS` describes all the zone maps accessible to the user.

Related Views

- `DBA_ZONEMAPS` describes all the zone maps in the database.

- `USER_ZONEMAPS` describes all the zone maps owned by the user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the zone map
ZONEMAP_NAME	VARCHAR2(128)		Name of the zone map
FACT_OWNER	VARCHAR2(128)		Owner of the fact table of the zone map
FACT_TABLE	VARCHAR2(128)		Name of the fact table on which the zone map is defined
SCALE	NUMBER		Scale factor of the zone map
HIERARCHICAL	VARCHAR2(12)		Indicates whether the zone map is hierarchical (YES) or not (NO)
WITH_CLUSTERING	VARCHAR2(15)		Indicates whether the zone map is created with the CLUSTERING clause (YES) or not (NO)
QUERY	LONG		Zone map defining query
QUERY_LEN	NUMBER(38)		Length of defining query in bytes
PRUNING	VARCHAR2(8)		Indicates whether the zone map is enabled for pruning (ENABLED) or not (DISABLED)
REFRESH_MODE	VARCHAR2(17)		Refresh mode for the zone map: <ul style="list-style-type: none"> • COMMIT • DEMAND • DATAMOVEMENT • LOAD • LOAD DATAMOVEMENT
REFRESH_METHOD	VARCHAR2(14)		Refresh method for the zone map <ul style="list-style-type: none"> • COMPLETE • FORCE • FAST
LAST_REFRESH_METHOD	VARCHAR2(19)		The last refresh method used for the zone map: <ul style="list-style-type: none"> • NA • COMPLETE • FAST • ERROR-UNKNOWN
LAST_REFRESH_TIME	TIMESTAMP(9)		Time of the last refresh
INVALID	VARCHAR2(7)		Indicates whether the zone map is invalid due to some DDL (YES) or not (NO)
STALE	VARCHAR2(7)		Indicates whether the zone map is stale because of DML operations and cannot be used for pruning (YES) or not (NO) or whether this cannot be determined (UNKNOWN)
UNUSABLE	VARCHAR2(8)		Indicates whether the zone map has been marked unusable by the owner (YES) or not (NO)
COMPILE_STATE	VARCHAR2(19)		Current compile state of the zone map: <ul style="list-style-type: none"> • VALID • AUTHORIZATION_ERROR • COMPILE_ERROR • NEEDS_COMPILE • ERROR_UNKNOWN
			Similar to <code>ALL_MVIEWS.COMPILE_STATE</code> .

 **Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

 **See Also:**

3.171 AUDIT_ACTIONS

AUDIT_ACTIONS describes audit trail action type codes. This table can be used to map action type numbers to action type names.

 **Note:**

The mapping explained in this view is valid for audit trail records from the following views only, and such audit records are generated only when unified auditing is not enabled:

- DBA_AUDIT_TRAIL
- DBA_COMMON_AUDIT_TRAIL
- DBA_FGA_AUDIT_TRAIL
- USER_AUDIT_TRAIL
- V\$XML_AUDIT_TRAIL

 **See Also:**

- *Oracle Database Security Guide* for more information about unified auditing.
- *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
ACTION	NUMBER	NOT NULL	Numeric audit trail action type code.
NAME	VARCHAR2(28)	NOT NULL	Name of the type of audit trail action

3.172 AUDIT_UNIFIED_CONTEXTS

AUDIT_UNIFIED_CONTEXTS describes the application context's attributes, which are configured to be captured in the audit trail.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(128)		Application context namespace
ATTRIBUTE	VARCHAR2(128)		Application context attribute
USER_NAME	VARCHAR2(128)		Username of database user for whom the application context's attribute is configured to be captured in the audit trail

3.173 AUDIT_UNIFIED_ENABLED_POLICIES

AUDIT_UNIFIED_ENABLED_POLICIES describes all the audit policies that are enabled in the database.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		Name of the audit policy
ENABLED_OPTION	VARCHAR2(15)		Enabled option of the audit policy. Possible values: <ul style="list-style-type: none"> • BY USER: For policies that are enabled on users • EXCEPT USER: For policies that are enabled on users • BY GRANTED ROLE: For policies that are enabled on roles • INVALID: For policies that are not enabled on either users or roles

Column	Datatype	NULL	Description
ENTITY_NAME	VARCHAR2(128)		Database entity (user name or role name) on which the audit policy is enabled. When an audit policy is enabled on all database users, ALL USERS is displayed in this column.
ENTITY_TYPE	VARCHAR2(7)		Database entity type. Possible values: <ul style="list-style-type: none">• USER: Indicates that the policy is enabled on a user or users.• ROLE: Indicates that the policy is enabled on a role or roles.
SUCCESS	VARCHAR2(3)		Indicates whether the audit policy is enabled for auditing successful events (YES) or not (NO)
FAILURE	VARCHAR2(3)		Indicates whether the audit policy is enabled for auditing unsuccessful events (YES) or not (NO)

3.174 AUDIT_UNIFIED_POLICIES

AUDIT_UNIFIED_POLICIES describes all audit policies created in the database.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		Name of the audit policy
AUDIT_CONDITION	VARCHAR2(4000)		Condition associated with the audit policy
CONDITION_EVAL_OPT	VARCHAR2(9)		Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, and NONE.
AUDIT_OPTION	VARCHAR2(128)		Auditing option defined in the audit policy
AUDIT_OPTION_TYPE	VARCHAR2(18)		Type of the auditing option. Possible values: <ul style="list-style-type: none">• SYSTEM PRIVILEGE• STANDARD ACTION• SYSTEM ACTION• XS ACTION• OLS_ACTION• DATAPUMP ACTION• DIRECT LOAD ACTION• DV ACTION• INVALID• OBJECT ACTION• ROLE PRIVILEGE

Column	Datatype	NULL	Description
OBJECT_SCHEMA	VARCHAR2(128)		Owner of the object, for an object-specific auditing option
OBJECT_NAME	VARCHAR2(128)		Name of the object, for an object-specific auditing option
OBJECT_TYPE	VARCHAR2(23)		Type of the object, for an object-specific auditing option
COMMON	VARCHAR2(3)		Indicates whether the audit policy is a common audit policy or local audit policy. The value is <code>NULL</code> for a non-CDB. For local audit policies, the value of the <code>COMMON</code> column is always <code>NO</code> . For a CDB common policy: <ul style="list-style-type: none"> • If you query <code>AUDIT_UNIFIED_POLICIES</code> from the CDB root container, the value of the <code>COMMON</code> column will be <code>YES</code> and the value of the <code>INHERITED</code> column will be <code>NO</code>. • If you query <code>AUDIT_UNIFIED_POLICIES</code> from any other container besides the CDB root container, the value of the <code>COMMON</code> column and the <code>INHERITED</code> column will be <code>YES</code>. For an application container common policy: <ul style="list-style-type: none"> • If you query <code>AUDIT_UNIFIED_POLICIES</code> from the application root container, the value of the <code>COMMON</code> column will be <code>YES</code> and the value of the <code>INHERITED</code> column will be <code>NO</code>. • If you query <code>AUDIT_UNIFIED_POLICIES</code> from any other container besides the application root container, the value of the <code>COMMON</code> column and the <code>INHERITED</code> column will be <code>YES</code>.
INHERITED	VARCHAR2(3)		Indicates whether the audit policy was inherited from another container (<code>YES</code>) or not (<code>NO</code>). This value is <code>NULL</code> for non-CDBs.
AUDIT_ONLY_Toplevel ¹	VARCHAR2(3)		Indicates whether the audit policy is defined to audit only top level SQL statements (<code>YES</code>) or both top level SQL statements and recursive SQL statements (<code>NO</code>)
ORACLE_SUPPLIED ²	VARCHAR2(3)		Indicates whether the audit policy is an Oracle-supplied policy (<code>YES</code>) or not (<code>NO</code>) Oracle-supplied policies are also called predefined policies.

¹ This column is available starting with Oracle Database 19c.

² This column is available starting with Oracle Database 19c, Release Update 19.11.

3.175 AUDIT_UNIFIED_POLICY_COMMENTS

AUDIT_UNIFIED_POLICY_COMMENTS shows the description of each unified audit policy, if a description was entered for the unified audit policy using the COMMENT SQL statement.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)	NOT NULL	Name of the unified audit policy
COMMENTS	VARCHAR2(4000)		Description of the unified audit policy, if one was entered using the COMMENT SQL statement

3.176 AUDITABLE_SYSTEM_ACTIONS

AUDITABLE_SYSTEM_ACTIONS maps the auditable system action numbers to the action names. These actions are configurable for audit when unified auditing is enabled.

The actions include:

- All standard RDBMS actions (from the V\$SQLCOMMAND view) except the following, which are not configurable for auditing:
 - ALTER EDITION
 - ALTER REWRITE EQUIVALENCE
 - ALTER SUMMARY
 - ALTER TRACING
 - CREATE BITMAPFILE
 - CREATE CONTROL FILE
 - CREATE DATABASE
 - CREATE SUMMARY
 - DECLARE REWRITE EQUIVALENCE
 - DROP BITMAPFILE
 - DROP DATABASE
 - DROP REWRITE EQUIVALENCE
 - DROP SUMMARY
 - FLASHBACK DATABASE
 - MERGE

- SAVEPOINT
- SET CONSTRAINTS
- UNDROP OBJECT
- UPDATE INDEXES
- UPDATE JOIN INDEX
- VALIDATE INDEX
- Other actions:
 - ALL
 - LOGON
 - LOGOFF

 **Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
TYPE	NUMBER		Numeric component type for system wide actions
COMPONENT	VARCHAR2 (64)		Name of component for system wide actions
ACTION	NUMBER		Numeric auditable action code for system wide actions
NAME	VARCHAR2 (64)		Name of auditable action

Some auditable actions in AUDITABLE_SYSTEM_ACTIONS have different names than their equivalent commands in V\$SQLCOMMAND, as shown in the following table:

AUDITABLE_SYSTEM_ACTIONS Action Name	V\$SQLCOMMAND Command Name
GRANT	GRANT OBJECT
REVOKE	REVOKE OBJECT
AUDIT	AUDIT OBJECT
NOAUDIT	NOAUDIT OBJECT
EXECUTE	PL/SQL EXECUTE
EXPLAIN PLAN	EXPLAIN
CALL	CALL METHOD
PURGE DBA_RECYCLEDBIN	PURGE DBA RECYLEBIN

 **See Also:**

"V\$SQLCOMMAND"

3.177 CAT

CAT is a synonym for `USER_CATALOG`.

 **See Also:**

["USER_CATALOG"](#)

3.178 CATALOG

`CATALOG` is included for compatibility. Oracle recommends that you not use this view.

3.179 CHAINED_ROWS

`CHAINED_ROWS` stores the output for the `ANALYZE` statement with the `LIST CHAINED ROWS` clause.

You must run the `utlchain.sql` or `utlchn1.sql` script to create this table.

Column	Description
<code>OWNER_NAME</code>	Table owner
<code>TABLE_NAME</code>	Table name
<code>CLUSTER_NAME</code>	Cluster the table is in, if any
<code>PARTITION_NAME</code>	The name of the partition
<code>SUBPARTITION_NAME</code>	The name of the subpartition
<code>HEAD_ROWID</code>	ROWID the chained row is accessed by
<code>ANALYZE_TIMESTAMP</code>	Date/time that the <code>ANALYZE</code> statement was issued

3.180 CLIENT_RESULT_CACHE_STATS\$

`CLIENT_RESULT_CACHE_STATS$` displays various Client Result Cache settings and usage statistics.

Statistics are stored as name, value pairs. For each client cache ID, there will be multiple rows for each statistic.

Column	Datatype	NULL	Description
<code>CACHE_ID</code>	NUMBER	NOT NULL	Unique ID per client cache
<code>STAT_ID</code>	NUMBER	NOT NULL	Statistic ID
<code>NAME</code>	VARCHAR2(128)		Name of the statistic (see Table 3-1)
<code>VALUE</code>	NUMBER		Value of the statistic

Table 3-1 CLIENT_RESULT_CACHE_STATS\$ Statistics

Statistic Name	Description
Block Size	Size (in bytes) of each memory block in the result cache.
Block Count Max	Maximum number of blocks that can be allocated in the result cache based on the cache size configuration parameters on server and on client.
Block Count Current	Current number of blocks allocated by the client result cache.
Hash Bucket Count	Size of the hash table used for query matching.
Create Count Success	Number of cached result sets that did not get invalidated before caching all the rows of the result set.
Create Count Failure	Number of cached result sets that did not fetch all the rows in the result set.
Find Count	Number of cache hits.
Invalidation Count	Number of cached result sets that got invalidated due to database changes that could have affected the result set.
Delete Count Invalid	Number of cached result sets not invalidated whose memory was reclaimed by result cache.
Delete Count Valid	Number of invalidated cached result sets whose memory was reclaimed by result cache.

3.181 CLU

CLU is a synonym for `USER_CLUSTERS`.

 **See Also:**

"`USER_CLUSTERS`"

3.182 COL

COL is included for compatibility. Oracle recommends that you not use this view.

3.183 COLS

COLS is a synonym for `USER_TAB_COLUMNS`.

 **See Also:**

"`USER_TAB_COLUMNS`"

3.184 DATABASE_EXPORT_OBJECTS

DATABASE_EXPORT_OBJECTS lists simple path names for some of the object types belonging to a full Data Pump export, which is invoked using the FULL=Y parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

Column	Datatype	NULL	Description
OBJECT_PATH	VARCHAR2(200)	NOT NULL	Simple path name for the object type
COMMENTS	VARCHAR2(2000)		Comment on the object type
NAMED	CHAR(1)		Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters.

 **See Also:**

- "[SCHEMA_EXPORT_OBJECTS](#)"
- "[TABLE_EXPORT_OBJECTS](#)"
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the expdp command

3.185 DATABASE_PROPERTIES

DATABASE_PROPERTIES lists permanent database properties.

Column	Datatype	NULL	Description
PROPERTY_NAME	VARCHAR2(128)	NOT NULL	Property name
PROPERTY_VALUE	VARCHAR2(4000)		Property value
DESCRIPTION	VARCHAR2(4000)		Property description

 **Note:**

The CDB_PROPERTIES view provides access to data visible to PDBs through the DATABASE_PROPERTIES view.

4

Static Data Dictionary Views: DBA_2PC_NEIGHBORS to DBA_HIST_JAVA_POOL_ADVICE

This chapter contains the static data dictionary views DBA_2PC_NEIGHBORS through DBA_HIST_JAVA_POOL_ADVICE.

4.1 DBA_2PC_NEIGHBORS

DBA_2PC_NEIGHBORS describes incoming and outgoing connections for pending transactions.

Column	Datatype	NULL	Description
LOCAL_TRAN_ID	VARCHAR2 (22)		Local identifier of a transaction
IN_OUT	VARCHAR2 (3)		IN for incoming connections, OUT for outgoing
DATABASE	VARCHAR2 (128)		IN for client database name, OUT for outgoing database link
DBUSER_OWNER	VARCHAR2 (128)		IN for name of local user, OUT for owner of database link
INTERFACE	VARCHAR2 (1)		C for request commit, otherwise N for prepare or request read only commit
DBID	VARCHAR2 (16)		Database ID at the other end of the connection
SESS#	NUMBER (38)		Session number of the connection at this database
BRANCH	VARCHAR2 (128)		Transaction branch ID of the connection at this database

4.2 DBA_2PC_PENDING

DBA_2PC_PENDING describes distributed transactions awaiting recovery.

Column	Datatype	NULL	Description
LOCAL_TRAN_ID	VARCHAR2 (22)	NOT NULL	String of form: n.n.n; n is a number
GLOBAL_TRAN_ID	VARCHAR2 (169)		Globally unique transaction ID
STATE	VARCHAR2 (16)	NOT NULL	Collecting, prepared, committed, forced commit, or forced rollback
MIXED	VARCHAR2 (3)		YES indicates part of the transaction committed and part rolled back
ADVICE	VARCHAR2 (1)		C for commit, R for rollback, else NULL
TRAN_COMMENT	VARCHAR2 (255)		Text for commit work comment text
FAIL_TIME	DATE	NOT NULL	Value of SYSDATE when the row was inserted (transaction or system recovery)

Column	Datatype	NULL	Description
FORCE_TIME	DATE		Time of manual force decision (null if not forced locally)
RETRY_TIME	DATE	NOT NULL	Time automatic recovery (RECO) last tried to recover the transaction
OS_USER	VARCHAR2 (64)		Operating system-specific name for the end-user
OS_TERMINAL	VARCHAR2 (255)		Operating system-specific name for the end-user terminal
HOST	VARCHAR2 (128)		Name of the host system for the end-user
DB_USER	VARCHAR2 (128)		Oracle user name of the end-user at the topmost database
COMMIT#	VARCHAR2 (16)		Global commit number for committed transactions

4.3 DBA_ACCHK_EVENTS

`DBA_ACCHK_EVENTS` displays information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

Each row in this view represents one trace record for an event. You can use this view in conjunction with the `DBA_ACCHK_STATISTICS` view. Join the `SESSION_ID` and `SERIAL#` columns in this view with the `SESSION_ID` and `SERIAL#` columns in `DBA_ACCHK_STATISTICS` to view Application Continuity protection statistics for a particular session.

The `ACCHK_READ` role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER		Identifier for the instance in which the trace record was generated
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data
TIMESTAMP	TIMESTAMP (3) WITH TIMEZONE		Time at which the event occurred
SESSION_ID	NUMBER		ID of the session that generated the trace record
SERIAL#	NUMBER		Serial number of the session that generated the trace record
SERVICE_NAME	VARCHAR2 (64)		Service name of the session that generated the trace record
PROGRAM	VARCHAR2 (84)		Name of the operating system program that generated the trace record
MODULE	VARCHAR2 (64)		Name of the module that generated the trace record
ACTION	VARCHAR2 (64)		Name of the action that generated the trace record

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)		SQL identifier of the SQL statement that generated the trace record
CALL_NAME	VARCHAR2(20)		Name of the user call that generated the trace record
EVENT_TYPE	VARCHAR2(16)		Event type. Possible values: <ul style="list-style-type: none"> • DISABLED - The event caused capture or replay to be disabled. Refer to the <code>ERROR_CODE</code> column for more information. • NEVER ENABLED - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred. • NOT ENABLING - The event describes why the database could not reenable protection after protection was disabled. Refer to the <code>ERROR_CODE</code> column for more information. • REPLAY FAILED - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the <code>ERROR_CODE</code> column for more information.
ERROR_CODE	NUMBER		If an error occurred, this column displays the error code: <code>ORA-number</code> . Otherwise, the value of this column is 0.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.11. However, it is not created by default. To create this view, you must run the `DBMS_APP_CONT_ADMIN.ACCHK_VIEWS()` procedure. See *Oracle Database PL/SQL Packages and Types Reference* for more information.

 **See Also:**

"[DBA_ACCHK_STATISTICS](#)"

4.4 DBA_ACCHK_EVENTS_SUMMARY

`DBA_ACCHK_EVENTS_SUMMARY` displays summary information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

This view describes the number of times a particular type of event occurred in a session. You can use this view in conjunction with the `DBA_ACCHK_STATISTICS_SUMMARY` view. Join the `INST_ID` and `CON_ID` columns in this view with the `INST_ID` and `CON_ID` columns in `DBA_ACCHK_STATISTICS_SUMMARY` to view Application Continuity protection statistics for a particular instance.

The `ACCHK_READ` role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER		Identifier for the instance
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data
SERVICE_NAME	VARCHAR2(64)		Service name of the session
FAILOVER_TYPE	VARCHAR2(16)		Indicates the FAILOVER_TYPE service setting for the session. Possible values: <ul style="list-style-type: none"> • AUTO - Transparent Application Continuity (TAC) was enabled for the session • TRANSACTION - Application Continuity (AC) was enabled for the session • NONE - Failover was disabled for the session
FAILOVER_RESTORE	VARCHAR2(16)		Indicates the FAILOVER_RESTORE service setting for the session. Possible values: <ul style="list-style-type: none"> • AUTO - Transparent Application Continuity • LEVEL1 - Application Continuity • NONE - Session state was not restored at failover
RESET_STATE	VARCHAR2(16)		Indicates the RESET_STATE service setting for the session. Possible values: <ul style="list-style-type: none"> • LEVEL1 - The session state was cleaned at the end of a request • NONE - The session state was not cleaned at the end of a request
PROGRAM	VARCHAR2(84)		Name of the operating system program that generated the trace record
MODULE	VARCHAR2(64)		Name of the module that generated the trace record
ACTION	VARCHAR2(64)		Name of the action that generated the trace record
SQL_ID	VARCHAR2(13)		SQL identifier of the SQL statement that generated the trace record
CALL_NAME	VARCHAR2(20)		Name of the user call that generated the trace record

Column	Datatype	NULL	Description
EVENT_TYPE	VARCHAR2(16)		<p>Event type. Possible values:</p> <ul style="list-style-type: none"> • DISABLED - The event caused capture or replay to be disabled. Refer to the <code>ERROR_CODE</code> column for more information. • NEVER ENABLED - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred. • NOT ENABLING - The event describes why the database could not reenable protection after protection was disabled. Refer to the <code>ERROR_CODE</code> column for more information. • REPLAY FAILED - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the <code>ERROR_CODE</code> column for more information.
ERROR_CODE	NUMBER		If an error occurred, this column displays the error code: <code>ORA-number</code> . Otherwise, the value of this column is 0.
FREQUENCY	NUMBER		Number of times the event occurred during the workload run

Note:

This view is available starting with Oracle Database 19c, Release Update 19.11. However, it is not created by default. To create this view, you must run the `DBMS_APP_CONT_ADMIN.ACCHK_VIEWS()` procedure. See *Oracle Database PL/SQL Packages and Types Reference* for more information.

4.5 DBA_ACCHK_STATISTICS

`DBA_ACCHK_STATISTICS` displays Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are aborted are not included in this view.

The `ACCHK_READ` role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER		Identifier for the instance for the session
CON_ID	NUMBER		<p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

Column	Datatype	NULL	Description
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE		Time at which the session was terminated and the statistics were reported
SESSION_ID	NUMBER		ID of the session
SERIAL#	NUMBER		Serial number of the session
STAT_TYPE	VARCHAR2(32)		Type of statistic The value of this column is always SESSION_STATISTICS.
SERVICE_NAME	VARCHAR2(64)		Service name of the session
FAILOVER_TYPE	VARCHAR2(16)		Indicates the FAILOVER_TYPE service setting for the session. Possible values: <ul style="list-style-type: none"> AUTO - Transparent Application Continuity (TAC) was enabled for the session TRANSACTION - Application Continuity (AC) was enabled for the session NONE - Failover was disabled for the session
FAILOVER_RESTORE	VARCHAR2(16)		Indicates the FAILOVER_RESTORE service setting for the session. Possible values: <ul style="list-style-type: none"> AUTO - Transparent Application Continuity LEVEL1 - Application Continuity NONE - Session state was not restored at failover
RESET_STATE	VARCHAR2(16)		Indicates the RESET_STATE service setting for the session. Possible values: <ul style="list-style-type: none"> LEVEL1 - The session state was cleaned at the end of a request NONE - The session state was not cleaned at the end of a request
PROGRAM	VARCHAR2(84)		Name of the operating system program
BEGIN_REQUESTS	NUMBER		Number of begin requests received for the session
END_REQUESTS	NUMBER		Number of end requests received for the session
USER_CALLS_IN_REQUESTS	NUMBER		Number of user calls received from the application within requests (between begin request and end request)
PROTECTED_CALLS_IN_REQUESTS	NUMBER		Number of user calls protected by Application Continuity (between begin request and end request)
TIME_IN_REQUESTS	NUMBER		Time in microseconds spent in user calls within requests (between begin request and end request)
TIME_PROTECTED_IN_REQUESTS	NUMBER		Time in microseconds for user calls protected by Application Continuity within requests (between begin request and end request)

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.11. However, it is not created by default. To create this view, you must run the DBMS_APP_CONT_ADMIN.ACCHK_VIEWS() procedure. See *Oracle Database PL/SQL Packages and Types Reference* for more information.

4.6 DBA_ACCHK_STATISTICS_SUMMARY

`DBA_ACCHK_STATISTICS_SUMMARY` displays a summary of Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are aborted are not included in this view.

The `ACCHK_READ` role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER		Identifier for the instance for the session
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. 1: This value is used for rows containing data that pertain to only the root <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data
SERVICE_NAME	VARCHAR2 (64)		Service name of the session
FAILOVER_TYPE	VARCHAR2 (16)		Indicates the <code>FAILOVER_TYPE</code> service setting for the session. Possible values: <ul style="list-style-type: none"> AUTO - Transparent Application Continuity (TAC) was enabled for the session TRANSACTION - Application Continuity (AC) was enabled for the session NONE - Failover was disabled for the session
FAILOVER_RESTORE	VARCHAR2 (16)		Indicates the <code>FAILOVER_RESTORE</code> service setting for the session. Possible values: <ul style="list-style-type: none"> AUTO - Transparent Application Continuity LEVEL1 - Application Continuity NONE - Session state is not restored at failover
RESET_STATE	VARCHAR2 (16)		Indicates the <code>RESET_STATE</code> service setting for the session. Possible values: <ul style="list-style-type: none"> LEVEL1 - The session state was cleaned at the end of a request NONE - The session state was not cleaned at the end of a request
TOTAL_REQUESTS	NUMBER		Number of requests received for this session
PROTECTED_CALLS_PERCENT	NUMBER		Percentage of user calls within requests protected by Application Continuity for failover
PROTECTED_TIME_PERCENT	NUMBER		Percentage of time spent within requests protected by Application Continuity for failover
AVG_USER_CALLS_IN_REQUESTS	NUMBER		Average number of user calls received from the application within requests (between begin request and end request)

Column	Datatype	NULL	Description
AVG_PROTECTED_CALLS_IN_REQUESTS	NUMBER		Average number of user calls protected by Application Continuity within requests (between begin request and end request)
AVG_TIME_IN_REQUESTS	NUMBER		Average time in microseconds spent in user calls within requests (between begin request and end request)
AVG_TIME_PROTECTED_IN_REQUESTS	NUMBER		Average time in microseconds for user calls protected by Application Continuity within requests (between begin request and end request)

Note:

This view is available starting with Oracle Database 19c, Release Update 19.11. However, it is not created by default. To create this view, you must run the DBMS_APP_CONT_ADMIN.ACCHK_VIEWS() procedure. See *Oracle Database PL/SQL Packages and Types Reference* for more information.

4.7 DBA_ACL_NAME_MAP

DBA_ACL_NAME_MAP maps new names of the access control lists for PL/SQL network utility packages from old XDB names.

Column	Datatype	NULL	Description
XDB_NAME	VARCHAR2(4000)	NOT NULL	The old XDB name of the access control list
ACL	VARCHAR2(128)		The new name of the access control list
ACL_OWNER	VARCHAR2(128)		The owner of the access control list

4.8 DBA_ADDM_FDG_BREAKDOWN

DBA_ADDM_FDG_BREAKDOWN describes the contribution for each finding from the different instances.

There is one row for each finding and for each instance participating in the analysis. Rows are omitted if the impact from that instance is not sufficient to register a finding in a local ADDM analysis.

Related View

USER_ADDM_FDG_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER	NOT NULL	Identifies the task to which this finding belongs (see DBA_ADVISOR_TASKS)
FINDING_ID	NUMBER	NOT NULL	Identifies the finding (see DBA_ADVISOR_FINDINGS)

Column	Datatype	NULL	Description
INSTANCE_NUMBER	NUMBER	NOT NULL	The number of the instance contributing to the finding
DATABASE_TIME	NUMBER		The database time, in microseconds, accumulated by this instance during the analysis period
ACTIVE_SESSIONS	NUMBER		The average number of active sessions of the finding in this instance
PERC_ACTIVE_SESSIONS	NUMBER		The percentage of contribution from this instance compared to the total impact of the finding

 See Also:["USER_ADDM_FDG_BREAKDOWN"](#)

4.9 DBA_ADDM_FINDINGS

DBA_ADDM_FINDINGS displays the ADDM findings discovered by all advisors in the database.

Each row for ADDM tasks in the related DBA_ADVISOR_FINDINGS view has a corresponding row in this view.

Related View

USER_ADDM_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user. Each row for ADDM tasks in the related USER_ADVISOR_FINDINGS view has a corresponding row in this view. The USER_ADDM_FINDINGS view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
FINDING_ID	NUMBER	NOT NULL	Identifier of the finding
FINDING_NAME	VARCHAR2(4000)		Name of the finding
TYPE	VARCHAR2(11)		Type of the finding: PROBLEM SYMPTOM ERROR INFORMATION
TYPE_ID	NUMBER	NOT NULL	Numeric ID for the value in column TYPE
PARENT	NUMBER	NOT NULL	Identifier of the parent finding
OBJECT_ID	NUMBER		Identifier of the associated object, if any
IMPACT_TYPE	VARCHAR2(4000)		Impact of the finding on the system
IMPACT	NUMBER		Impact value

Column	Datatype	NULL	Description
MESSAGE	VARCHAR2(4000)		Message describing the finding
MORE_INFO	VARCHAR2(4000)		Additional info associated with the finding
FILTERED	VARCHAR2(1)		A value of <code>Y</code> means that the row in the view was filtered out by a directive (or a combination of directives). A value of <code>N</code> means that the row was not filtered.
FLAGS	NUMBER		For internal use only by advisor framework clients
DATABASE_TIME	NUMBER		The database time, in microseconds, accumulated by this finding
ACTIVE_SESSIONS	NUMBER		The average number of active sessions for the finding
PERC_ACTIVE_SESS	NUMBER		The percentage of active sessions for this finding out of the total active sessions for the task
IS_AGGREGATE	CHAR(1)		A value of <code>Y</code> means that this finding is created for global/continental ADDM as an aggregate of local ADDM findings. Otherwise, the value is <code>N</code> .
METER_LEVEL	VARCHAR2(6)		Reserved for future use
QUERY_IS_APPROX	CHAR(1)		Indicates whether the ASH SQL associated with the finding is an approximate query (<code>Y</code>) or an exact query (<code>N</code>). To get the associated query, use the <code>TASK_NAME</code> and <code>FINDING_ID</code> columns from this view and call the PL/SQL function <code>DBMS_ADDM.GET_ASH_QUERY(task_name, finding_id)</code> .

See Also:

- ["USER_ADDM_FINDINGS"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ADDM.GET_ASH_QUERY` procedure

4.10 DBA_ADDM_INSTANCES

`DBA_ADDM_INSTANCES` displays instance-level information for ADDM tasks that finished executing.

For each instance that was supposed to be analyzed (whether it was or not) there is one row describing information about it.

Related View

`USER_ADDM_INSTANCES` displays instance-level information for ADDM tasks that finished executing in all instances owned by the current user.

Column	Datatype	NULL	Description
<code>TASK_ID</code>	NUMBER	NOT NULL	The ID of the main ADDM task

Column	Datatype	NULL	Description
INSTANCE_NUMBER	NUMBER	NOT NULL	The number of the instance
INSTANCE_NAME	VARCHAR2(16)		The name of the instance
HOST_NAME	VARCHAR2(64)		The name of the system on which the instance was running
STATUS	VARCHAR2(10)		How information from this instance was used by the ADDM task. A value of ANALYZED means that the instance participated fully in the analysis. For the following remaining values, the instance was not used during task execution, for the stated reason: BOUNCED - the instance was shut down or started during the analysis period NO_SNAPS - there were either begin or end snapshots missing for the instance NO_STATS - there were key statistics missing for the instance NOT_FOUND - no mention of this instance could be found in AWR during the analysis period
DATABASE_TIME	NUMBER		The database time, in microseconds, accumulated by this instance during the analysis period
ACTIVE_SESSIONS	NUMBER		The average number of active sessions for the instance during the analysis period
PERC_ACTIVE_SESS	NUMBER		The percentage of active sessions for this instance, out of the total active sessions for the task
METER_LEVEL	VARCHAR2(6)		Reserved for future use
LOCAL_TASK_ID	NUMBER		The ID of a local ADDM task that contained an analysis of the instance for the same analysis period as that of the main task. If the main task is a local ADDM, then this value is the same as the <code>TASK_ID</code> value.

 **See Also:**

["USER_ADDM_INSTANCES"](#)

4.11 DBA_ADDM_SYSTEM_DIRECTIVES

`DBA_ADDM_SYSTEM_DIRECTIVES` displays information about global instances for ADDM system directives.

Column	Datatype	NULL	Description
INSTANCE_ID	NUMBER	NOT NULL	Unique ID for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2(128)	NOT NULL	User-assigned name for the directive instance.

Column	Datatype	NULL	Description
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.
DESCRIPTION	VARCHAR2(4000)		Description of the ADDM system directive, shown in the language used by the current session

4.12 DBA_ADDM_TASK_DIRECTIVES

DBA_ADDM_TASK_DIRECTIVES displays information about all ADDM task directives in the database.

Related View

USER_ADDM_TASK_DIRECTIVES displays information about ADDM task directives owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		An ADDM advisor task identifier to which the directive instance is associated
TASK_NAME	VARCHAR2(128)		An ADDM advisor task to which the directive instance is associated
USERNAME	VARCHAR2(128)	NOT NULL	Database user who owns the ADDM task instance
SEQ_ID	NUMBER	NOT NULL	Unique ID for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2(128)	NOT NULL	A user-assigned name for the ADDM task directive instance
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.
DESCRIPTION	VARCHAR2(4000)		Description of the ADDM task directive, shown in the language used by the current session

See Also:

"USER_ADDM_TASK_DIRECTIVES"

4.13 DBA_ADDM_TASKS

DBA_ADDM_TASKS displays information about all ADDM tasks in the database.

The view contains one row for each row in the related DBA_ADVISOR_TASKS view that has ADVISOR_NAME=ADDM and STATUS=COMPLETED.

Related View

USER_ADDM_TASKS displays information about the ADDM tasks owned by the current user. The view contains one row for each row in the related USER_ADVISOR_TASKS view that has ADVISOR_NAME=ADDM and STATUS=COMPLETED. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
CREATED	DATE	NOT NULL	Creation date of the task
LAST_MODIFIED	DATE	NOT NULL	Date on which the task was last modified
PARENT_TASK_ID	NUMBER		Identifier of the parent task (if the task was created because of the recommendation of another task)
PARENT_RXEC_ID	NUMBER		Identifier of the recommendation within the parent task that resulted in the creation of the task
LAST_EXECUTION	VARCHAR2(128)		Name of the current or last task execution
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution. This information is optional for single-execution tasks.
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_DESCRIPTION	VARCHAR2(256)		Optional description of the last execution
EXECUTION_START	DATE		Execution start date and time of the task
EXECUTION_END	DATE		Execution end date and time of the task
STATUS	VARCHAR2(11)		Current operational status of the task: <ul style="list-style-type: none"> • INITIAL - Initial state of the task; no recommendations are present • EXECUTING - Task is currently running • INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time. • COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported. • ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor, regarding the status
PCT_COMPLETION_TIME	NUMBER		Percent completion, in terms of time, of the task when it is executing
PROGRESS_METRIC	NUMBER		Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.
METRIC_UNITS	VARCHAR2(64)		Unit of the metric used to measure progress
ACTIVITY_COUNTER	NUMBER		Counter that is updated frequently by the advisor, denoting that useful work is being performed
RECOMMENDATION_COUNT	NUMBER		Number of recommendations produced

Column	Datatype	NULL	Description
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition
SOURCE	VARCHAR2(128)		Optional name that identifies the creator of the task
HOW_CREATED	VARCHAR2(30)		Optional task or template on which the object was based
READ_ONLY	VARCHAR2(5)		Indicates whether the task is read-only (TRUE) or not (FALSE)
SYSTEM_TASK	VARCHAR2(5)		Indicates whether the task is a system task (TRUE) or not (FALSE). The automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, is one example of a system task.
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
STATUS#	NUMBER		Reserved for internal use
DBID	NUMBER		The database ID that the task was using
DBNAME	VARCHAR2(9)		The name of the database that the task was analyzing
DBVERSION	VARCHAR2(17)		The version of the database that the task was analyzing
ANALYSIS_VERSION	VARCHAR2(17)		The version of the database that executed the task
BEGIN_SNAP_ID	NUMBER		The snapshot ID that starts the analysis period
BEGIN_TIME	TIMESTAMP(3)		The SYSDATE at the time the BEGIN_SNAP_ID was taken
END_SNAP_ID	NUMBER		The snapshot ID that ends the analysis period
END_TIME	TIMESTAMP(3)		The SYSDATE at the time the END_SNAP_ID was taken
REQUESTED_ANALYSIS	VARCHAR2(8)		The type of ADDM analysis that was requested before task execution, as follows: DATABASE - global ADDM INSTANCE - local ADDM PARTIAL - continental ADDM
ACTUAL_ANALYSIS	VARCHAR2(8)		The type of ADDM analysis that was actually performed when the task was executed (either DATABASE, INSTANCE, or PARTIAL)
DATABASE_TIME	NUMBER		The total database time accumulated in the analysis period (and analyzed instances) in microseconds
ACTIVE_SESSIONS	NUMBER		The average active sessions during the analysis period (and analyzed sessions)
METER_LEVEL	VARCHAR2(6)		Reserved for future use
FDG_COUNT	NUMBER		The number of findings for the ADDM task, which will appear in the list of findings in a default ADDM report
DB_TYPE_DETECTED ¹	VARCHAR2(10)		Indicates the open mode of the database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none">• READ-ONLY• READ-WRITE

Column	Datatype	NULL	Description
DB_TYPE_ANALYZED ¹	VARCHAR2 (10)		Indicates the assumed open mode of the database that the task was analyzing. If the value of this column is different from the value of the DB_TYPE_DETECTED column, then ADDM ignored the detected open mode of the database and analyzed the task as if it occurred on a database with the assumed open mode. Possible values: <ul style="list-style-type: none">• READ-ONLY• READ-WRITE
CDB_TYPE_DETECTED ¹	VARCHAR2 (25)		Indicates the type of database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none">• NON-CDB - A non-CDB• CDB ROOT - The root container in a CDB• PDB - A pluggable database (PDB) in a CDB• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service
CDB_TYPE_ANALYZED ¹	VARCHAR2 (25)		Indicates the assumed type of database that the task was analyzing. If the value of this column is different from the value of the CDB_TYPE_DETECTED column, then ADDM ignored the detected type of database and analyzed the task as if it occurred on the assumed type of database. Possible values: <ul style="list-style-type: none">• NON-CDB - A non-CDB• CDB ROOT - The root container in a CDB• PDB - A pluggable database (PDB) in a CDB• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service

¹ This column is available starting with Oracle Database 19c. If the task was analyzing a database at a release earlier than Oracle Database 19c, and that database was subsequently upgraded to Oracle Database 19c, then the value of this column is NULL.

["USER_ADDM_TASKS"](#)

4.14 DBA_ADVISOR_ACTIONS

DBA_ADVISOR_ACTIONS displays information about the actions associated with all recommendations in the database.

Each action is specified by the COMMAND and ATTR1 through ATTR6 columns. Each command defines how the attribute columns will be used.

Related View

`USER_ADVISOR_ACTIONS` displays information about the actions associated with the recommendations owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
REC_ID	NUMBER	NOT NULL	Recommendation associated with the action
ACTION_ID	NUMBER	NOT NULL	Unique identifier for the action
OBJECT_ID	NUMBER		Object associated with the action
COMMAND	VARCHAR2(64)		Command to be executed See Also: DBA_ADVISOR_COMMANDS for a list of commands
COMMAND_ID	NUMBER	NOT NULL	ID of the command to be executed See Also: DBA_ADVISOR_COMMANDS for a list of commands
FLAGS	NUMBER		Advisor-specific flags
ATTR1	VARCHAR2(4000)		Parameters defining the command
ATTR2	VARCHAR2(4000)		Parameters defining the command
ATTR3	VARCHAR2(4000)		Parameters defining the command
ATTR4	VARCHAR2(4000)		Parameters defining the command
ATTR5	CLOB		Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view)
ATTR6	CLOB		Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view)
NUM_ATTR1	NUMBER		General numeric attribute
NUM_ATTR2	NUMBER		General numeric attribute
NUM_ATTR3	NUMBER		General numeric attribute
NUM_ATTR4	NUMBER		General numeric attribute
NUM_ATTR5	NUMBER		General numeric attribute
MESSAGE	VARCHAR2(4000)		Message associated with the action
FILTERED	VARCHAR2(1)		A value of <code>Y</code> means that the row in the view was filtered out by a directive (or a combination of directives). A value of <code>N</code> means that the row was not filtered.

Column	Datatype	NULL	Description
RESULT_STATUS ¹	VARCHAR2 (25)		Result status. Possible values: <ul style="list-style-type: none"> • AUTOMATION PENDING • TIMED OUT • MISSING INFORMATION • COMPLETED WITH NO RESULTS • COMPLETED AND IMPLEMENTED • ENCOUNTERED ERROR • NOT AUTOMATED
RESULT_LAST_MODIFIED ¹	TIMESTAMP (3)		Time at which result status was last modified
RESULT_MESSAGE ¹	VARCHAR2 (4000)		Result message text

¹ This column is available starting with Oracle Database 19c.

See Also:

"USER ADVISED ACTIONS"

4.15 DBA ADVISED COMMANDS

DBA ADVISED COMMANDS displays information about the commands used by all advisors in the database for specifying recommendation actions.

In addition to the set of commands in the COMMAND column of V\$SESSION, the following additional commands are defined:

- RUN ADVISOR
- CHECK EXECUTION PLAN
- ALTER PARAMETER
- ENABLE TRACE

Column	Datatype	NULL	Description
COMMAND_ID	NUMBER		Identifier of the command
COMMAND_NAME	VARCHAR2 (64)		Name of the command

4.16 DBA ADVISED DEF PARAMETERS

DBA ADVISED DEF PARAMETERS displays all default task parameters and their current values in the database.

When a task or object is created, the parameters and their values are copied into the private parameter table.

Column	Datatype	NULL	Description
ADVISOR_NAME	VARCHAR2 (128)	NOT NULL	Name of the advisor that supports the parameter

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2(4000)	NOT NULL	Value of the parameter. Numeric parameter values are converted to a string equivalent. Possible keywords as values: <ul style="list-style-type: none">• ALL• UNLIMITED• UNUSED
PARAMETER_TYPE	VARCHAR2(10)		Datatype of the parameter: <ul style="list-style-type: none">• NUMBER - Numeric value• STRING - String value. If the string contains special characters, then it will be enclosed in single quotes.• STRINGLIST - Comma-separated list of string elements. If a string element contains a comma or other special characters, then the element will be enclosed in single quotes.• TABLE - Single table reference. A reference will contain a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.• TABLELIST - List of one or more comma-separated table references. A reference will contain schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.
IS_DEFAULT	VARCHAR2(1)		Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)
IS_OUTPUT	VARCHAR2(1)		Indicates whether the task execution process sets the parameter value (Y) or not (N)
IS_MODIFIABLE_ANYTIME	VARCHAR2(1)		Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)
IS_SYSTEM_TASK_ONLY	VARCHAR2(1)		Indicates whether the task is a system task (Y) or not (N)
DESCRIPTION	VARCHAR2(4000)		Optional description of the parameter
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution. This information is optional for single-execution tasks.

4.17 DBA_ADVISOR_DEFINITIONS

DBA_ADVISOR_DEFINITIONS displays the properties of all advisors in the database.

The view contains one row for each task, representing the current state of the task as well as execution-specific data such as progress monitoring and completion status.

Column	Datatype	NULL	Description
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Name of the advisor
PROPERTY	NUMBER	NOT NULL	Properties: <ul style="list-style-type: none"> • Bit 0: - Indicates whether the advisor runs in COMPREHENSIVE mode (1) or not (0) • Bit 1: - Indicates whether the advisor runs in LIMITED mode (1) or not (0) • Bit 2: - Indicates whether the advisor is resumable (1) or not (0) • Bit 3: - Indicates whether the advisor accepts user directives (1) or not (0)

4.18 DBA_ADVISOR_DIR_DEFINITIONS

`DBA_ADVISOR_DIR_DEFINITIONS` provides a definition of the base directive.

Column	Datatype	NULL	Description
ID	NUMBER	NOT NULL	Unique id for directive. The directive management engine automatically generates ID numbers. The identifier is unique among all directives regardless of the domain name and directive name.
ADVISOR_ID	NUMBER	NOT NULL	Identifier number of the owner advisor.
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	The name of the advisor to which this directive belongs.
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.
DOMAIN_NAME	VARCHAR2(128)	NOT NULL	Domain or namespace name.
DESCRIPTION	VARCHAR2(256)	NOT NULL	An optional description that documents the purpose of the directive.
TYPE	NUMBER	NOT NULL	Further describes the use of the directive. Possible values are: <ol style="list-style-type: none"> 1. Filter - An Xpath filter 2. Single Value - Evaluation returns a single string value 3. Multiple Values - Evaluation returns one to many string values 4. Conditional - Evaluation returns a single value based on an input key, similar to a CASE or SWITCH statement
TYPE_NAME	VARCHAR2(15)		A decoded version of the TYPE column.
TASK_STATUS	VARCHAR2(9)		The status of the directive instances when a task is not in its initial state. Possible values are: <ul style="list-style-type: none"> • IMMUTABLE • MUTABLE

Column	Datatype	NULL	Description
INSTANCES	VARCHAR2 (8)		Indicates whether a directive will permit multiple instances. Possible values are: <ul style="list-style-type: none">• SINGLE• MULTIPLE
METADATA	CLOB	NOT NULL	A DTD that is used to process the directive.

4.19 DBA_ADVISOR_DIR_INSTANCES

`DBA_ADVISOR_DIR_INSTANCES` provides information about all global instances for a directive.

Column	Datatype	NULL	Description
DIRECTIVE_ID	NUMBER	NOT NULL	Unique id for directive. The directive management engine automatically generates ID numbers.
INSTANCE_ID	NUMBER	NOT NULL	Unique id for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2 (128)	NOT NULL	A user-assigned name for the directive instance.
DATA	CLOB	NOT NULL	An XML document that gives meaningful default values for all parts of the directive.

4.20 DBA_ADVISOR_DIR_TASK_INST

`DBA_ADVISOR_DIR_TASK_INST` provides information about all task directive instances.

Related View

`USER_ADVISOR_DIR_TASK_INST` provides information about all task directive instances owned by the current user.

Column	Datatype	NULL	Description
DIRECTIVE_ID	NUMBER	NOT NULL	Unique id for directive. The directive management engine automatically generates ID numbers.
SEQ_ID	NUMBER	NOT NULL	Unique id for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2 (128)	NOT NULL	A user-assigned name for the directive instance.
USERNAME	VARCHAR2 (128)	NOT NULL	Database user who owns the task instance.
TASK_ID	NUMBER		An advisor task identifier to which the directive instance is associated
TASK_NAME	VARCHAR2 (128)		An advisor task to which the directive instance is associated.
DATA	CLOB	NOT NULL	An XML document that gives meaningful default values for all parts of the directive.

 See Also:["USER_ADVISOR_DIR_TASK_INST"](#)

4.21 DBA_ADVISOR_EXEC_PARAMETERS

`DBA_ADVISOR_EXEC_PARAMETERS` displays the parameter values used for past executions of tasks.

It is more useful for advisors supporting multiple executions, such as SQL Performance Analyzer, where a parameter can have different values for different executions.

Related View

`USER_ADVISOR_EXEC_PARAMETERS` displays the parameter values used for past executions of tasks owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2 (128)		Name of the task
EXECUTION_NAME	VARCHAR2 (128)	NOT NULL	Name of the task execution with which this entry (row) is associated
EXECUTION_TYPE	VARCHAR2 (128)		Type of the last execution. This information is optional for single-execution tasks.
PARAMETER_NAME	VARCHAR2 (128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2 (4000)		Value of the parameter. Numeric parameter values are converted to a string equivalent.
PARAMETER_TYPE	VARCHAR2 (10)		Datatype of the parameter (see <code>DBA_ADVISOR_PARAMETERS</code>)
IS_DEFAULT	VARCHAR2 (1)		Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)
IS_OUTPUT	VARCHAR2 (1)		Indicates whether the task execution process sets the parameter value (Y) or not (N)
IS_MODIFIABLE_ANYTIME	VARCHAR2 (1)		Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)
DESCRIPTION	VARCHAR2 (4000)		Optional description of the parameter
PARAMETER_FLAGS	NUMBER	NOT NULL	Reserved for internal use
PARAMETER_TYPE#	NUMBER	NOT NULL	Reserved for internal use

 See Also:["USER_ADVISOR_EXEC_PARAMETERS"](#)

4.22 DBA_ADVISOR_EXECUTION_TYPES

DBA_ADVISOR_EXECUTION_TYPES displays possible execution action for a given advisor.

Only advisors that support multiple executions of their tasks have entries in this view.

Column	Datatype	NULL	Description
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Name of the advisor
EXECUTION_TYPE	VARCHAR2(128)	NOT NULL	Execution type supported by the advisor
EXECUTION_DESCRIPTION	VARCHAR2(4000)		Optional description of the execution type

4.23 DBA_ADVISOR_EXECUTIONS

DBA_ADVISOR_EXECUTIONS displays metadata information for task executions.

For example, the SQL Performance Analyzer creates a minimum of three executions to perform a change impact analysis on a SQL workload. The first one collects performance data for the version of the workload before the change, the second one collects data for the version of the workload after the change, and the third one performs impact analysis. All of these executions belong to the same task and are grouped into this view. Similarly, the automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, creates a new execution for each tuning run.

Related View

USER_ADVISOR_EXECUTIONS displays metadata information for task executions owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Name of the task execution with which this entry (row) is associated
EXECUTION_ID	NUMBER	NOT NULL	Execution ID
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution (optional for single-execution tasks)
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_START	DATE		Execution start date and time
EXECUTION_LAST_MODIFIED	DATE	NOT NULL	Last modified date and time for the execution
EXECUTION_END	DATE		Execution end date and time
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
REQUESTED_DOP	NUMBER		The degree of parallelism (DOP) value requested by the user (through the TEST_EXECUTE_DOP parameter). It can be any value greater or equal to zero.

Column	Datatype	NULL	Description
ACTUAL_DOP	NUMBER		The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than what is available on the system, the ACTUAL_DOP value can be lower than the REQUESTED_DOP value.
CONCURRENT_EXECUTION	VARCHAR2(3)		Indicates whether concurrency was used for this execution (YES) or not (NO)
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
STATUS	VARCHAR2(11)		Current operational status of the task: <ul style="list-style-type: none"> • EXECUTING • COMPLETED • INTERRUPTED • CANCELLED • FATAL ERROR
STATUS#	NUMBER	NOT NULL	Reserved for internal use
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor regarding the status
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition

See Also:

["USER_ADVISOR_EXECUTIONS"](#)

4.24 DBA_ADVISOR_FDG_BREAKDOWN

DBA_ADVISOR_FDG_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task.

This view is populated only with ADDM tasks that are analyzing multiple instances (that is, the ACTUAL_ANALYSIS column in the task's row in DBA_ADDM_TASKS is set to DATABASE or PARTIAL).

Related View

USER_ADVISOR_FDG_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task (see DBA_ADVISOR_TASKS and DBA_ADDM_TASKS)
FINDING_ID	NUMBER	NOT NULL	Identifier of the finding to which this breakdown applies (see DBA_ADVISOR_FINDINGS and DBA_ADDM_FINDINGS)
INSTANCE_NUMBER	NUMBER	NOT NULL	The number of the instance for the breakdown
IMPACT	NUMBER		The database time (in microseconds) of the finding in the instance

Column	Datatype	NULL	Description
PERC_IMPACT	NUMBER		Percentage of the contribution of the instance to the overall finding's impact
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated

 See Also:["USER_ADVISOR_FDG_BREAKDOWN"](#)

4.25 DBA_ADVISOR_FINDING_NAMES

DBA_ADVISOR_FINDING_NAMES provides a list of all finding names registered with the Advisor Framework.

Column	Datatype	NULL	Description
ID	NUMBER		ID of the finding name
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Advisor name
FINDING_NAME	VARCHAR2(4000)		Finding name

4.26 DBA_ADVISOR_FINDINGS

DBA_ADVISOR_FINDINGS displays the findings discovered by all advisors in the database.

Related View

USER_ADVISOR_FINDINGS displays the findings discovered by the advisors owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
FINDING_ID	NUMBER	NOT NULL	Identifier of the finding
FINDING_NAME	VARCHAR2(4000)		Name of the finding
TYPE	VARCHAR2(11)		Type of the finding: <ul style="list-style-type: none"> • PROBLEM • SYMPTOM • ERROR • INFORMATION
TYPE_ID	NUMBER	NOT NULL	Numeric ID for the value in column TYPE
PARENT	NUMBER	NOT NULL	Identifier of the parent finding

Column	Datatype	NULL	Description
OBJECT_ID	NUMBER		Identifier of the associated object, if any
IMPACT_TYPE	VARCHAR2(4000)		Impact of the finding on the system
IMPACT	NUMBER		Impact value
MESSAGE	VARCHAR2(4000)		Message describing the finding
MORE_INFO	VARCHAR2(4000)		Additional info associated with the finding
FILTERED	VARCHAR2(1)		A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.
FLAGS	NUMBER		For internal use only by advisor framework clients

 See Also:["USER_ADVISOR_FINDINGS"](#)

4.27 DBA_ADVISOR_JOURNAL

DBA_ADVISOR_JOURNAL displays the journal entries for all tasks in the database.

Related View

USER_ADVISOR_JOURNAL displays the journal entries for the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task or workload object
TASK_NAME	VARCHAR2(128)		Name of the task or workload object
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
JOURNAL_ENTRY_SEQ	NUMBER	NOT NULL	Sequence number of the journal entry (unique for each task). This sequence number is used to order the data.
JOURNAL_ENTRY_TYPE	VARCHAR2(12)		Type of the task: <ul style="list-style-type: none"> • FATAL • ERROR • WARNING • INFORMATION • INFORMATION[2 3 4 5 6]
JOURNAL_ENTRY	VARCHAR2(4000)		Entry in the journal

 See Also:["USER_ADVISOR_JOURNAL"](#)

4.28 DBA_ADVISOR_LOG

DBA_ADVISOR_LOG displays information about the current state of all tasks in the database, as well as execution-specific data such as progress monitoring and completion status.

The view contains one row for each task.

Related View

USER_ADVISOR_LOG displays information about the current state of the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2 (128)		Name of the task
EXECUTION_START	DATE		Execution start date and time of the task
EXECUTION_END	DATE		Execution end date and time of the task
STATUS	VARCHAR2 (11)		Current operational status of the task: <ul style="list-style-type: none"> • INITIAL - Initial state of the task; no recommendations are present • EXECUTING - Task is currently running • COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported. • INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time. • CANCELLED • FATAL_ERROR - A fatal error occurred during the analysis operation. All recommendation data is unusable.
STATUS_MESSAGE	VARCHAR2 (4000)		Informational message provided by the advisor regarding the status
PCT_COMPLETION_TIME	NUMBER		Percent completion, in terms of time, of the task when it is executing
PROGRESS_METRIC	NUMBER		Metric that measures the progress of the task in terms of quality. Each advisor could have its own metric.
METRIC_UNITS	VARCHAR2 (64)		Unit of the metric used to measure progress
ACTIVITY_COUNTER	NUMBER		Counter that is updated frequently by the advisor, denoting that useful work is being performed
RECOMMENDATION_COUNT	NUMBER		Number of recommendations produced
ERROR_MESSAGE	VARCHAR2 (4000)		Informational message or an error message indicating the current operation or condition

 See Also:

"USER_ADVISOR_LOG"

4.29 DBA_ADVISOR_OBJECT_TYPES

DBA_ADVISOR_OBJECT_TYPES displays information about the object types used by all advisors in the database.

In addition to the regular database object types (such as TABLE and INDEX), the following types are defined:

- SYSTEM
- I/O
- SGA
- PGA
- SHARED POOL
- BUFFER CACHE
- LIBRARY CACHE
- PROCESS
- SESSION
- ENQUEUE
- LATCH
- ROLLBACK SEGMENT
- FILE
- PARAMETER
- CURSOR
- SQL
- SQL WORKLOAD

Column	Datatype	NULL	Description
OBJECT_TYPE_ID	NUMBER		Type identifier
OBJECT_TYPE	VARCHAR2(64)		Type name

4.30 DBA_ADVISOR_OBJECTS

DBA_ADVISOR_OBJECTS displays information about the objects currently referenced by all advisors in the database.

Each row in the view pertains to an object instantiation.

Related View

`USER_ADVISOR_OBJECTS` displays information about the objects currently referenced by the advisors owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
OBJECT_ID	NUMBER	NOT NULL	Identifier of the object
TYPE	VARCHAR2(64)		Name of the type
TYPE_ID	NUMBER	NOT NULL	Type identifier number
TASK_ID	NUMBER	NOT NULL	Task referencing the object
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
ATTR1	VARCHAR2(4000)		Attributes and identifier of the object
ATTR2	VARCHAR2(4000)		Attributes and identifier of the object
ATTR3	VARCHAR2(4000)		Attributes and identifier of the object
ATTR4	CLOB		Attributes and identifiers that cannot be expressed in the ATTR1, ATTR2, and ATTR3 columns
ATTR5	VARCHAR2(4000)		Attributes and identifier of the object
ATTR6	RAW(2000)		Attributes and identifier of the object
ATTR7	NUMBER		Attributes and identifier of the object
ATTR8	NUMBER		Attributes and identifier of the object
ATTR9	NUMBER		Attributes and identifier of the object
ATTR10	NUMBER		Attributes and identifier of the object
ATTR11	NUMBER		Attributes and identifier of the object
ATTR16	VARCHAR2(4000)		Attributes and identifier of the object
ATTR17	VARCHAR2(4000)		Attributes and identifier of the object
ATTR18	VARCHAR2(4000)		Attributes and identifier of the object
OTHER	CLOB		Other attributes and identifiers of the object
ADV_SQL_ID	VARCHAR2(13)		If the object type is SQL, then this column contains the SQL identifier of the SQL statement. Otherwise, the value of this column is null.

 **Note:**

The definition of the ATTRn columns depends on the advisors that are using the object. For example, the SQL object type defines the attribute columns as follows:

- ATTR1 contains the SQL ID
- ATTR2 contains the SQL address (in the cursor cache)
- ATTR4 contains the SQL text

 See Also:["USER_ADVISOR_OBJECTS"](#)

4.31 DBA_ADVISOR_PARAMETERS

DBA_ADVISOR_PARAMETERS displays all task parameters and their current values in the database.

This data is accessible by all tasks.

Related View

USER_ADVISOR_PARAMETERS displays the task parameters and their current values for the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task or workload object
TASK_ID	NUMBER	NOT NULL	Unique identifier number of the task or workload object
TASK_NAME	VARCHAR2(128)		Name of the task or workload object
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2(4000)	NOT NULL	Value of the parameter. Numeric parameter values are converted to a string equivalent. Possible keywords as values: <ul style="list-style-type: none">• ALL• UNLIMITED• UNUSED
PARAMETER_TYPE	VARCHAR2(10)		Datatype of the parameter: <ul style="list-style-type: none">• NUMBER - Numeric value• STRING - String value. If the string contains special characters, then it will be enclosed in single quotes.• STRINGLIST - Comma-separated list of string elements. If a string element contains a comma or other special characters, then the element will be enclosed in single quotes.• TABLE - Single table reference. A reference will contain a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.• TABLELIST - List of one or more comma-separated table references. A reference will contain schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.
IS_DEFAULT	VARCHAR2(1)		Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)

Column	Datatype	NULL	Description
IS_OUTPUT	VARCHAR2(1)		Indicates whether the task execution process sets the parameter value (Y) or not (N)
IS_MODIFIABLE_ANYTIME	VARCHAR2(1)		Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)
DESCRIPTION	VARCHAR2(4000)		Optional description of the parameter
EXECUTION_TYPE	VARCHAR2(128)		For advisors supporting multiple executions, the type of execution this parameter pertains to

4.32 DBA_ADVISOR_RATIONALE

DBA_ADVISOR_RATIONALE displays information about the rationales for all recommendations in the database.

Related View

USER_ADVISOR_RATIONALE displays information about the rationales for the recommendations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
REC_ID	NUMBER		Recommendation associated with the rationale
RATIONALE_ID	NUMBER	NOT NULL	Unique identifier for the rationale
IMPACT_TYPE	VARCHAR2(4000)		Impact on the system due to the problem described in the rationale. The impact can be described in terms of time, cost, or % degradation.
IMPACT	NUMBER		Calculated impact value
MESSAGE	VARCHAR2(4000)		Message containing an overview of the rationale
OBJECT_ID	NUMBER		Identifier of an object specified in the DBA_ADVISOR_OBJECTS view
TYPE	VARCHAR2(30)		Type of the rationale; defines what data exists in the attribute columns and how to interpret it: <ul style="list-style-type: none"> • TEXT - Text sentence for descriptive messages. The ATTR1 column contains the text. • CHART - Chart containing data to be displayed. The ATTR1 column contains the data.
ATTR1	VARCHAR2(4000)		Parameters defining the rationale

Column	Datatype	NULL	Description
ATTR2	VARCHAR2(4000)		Parameters defining the rationale
ATTR3	VARCHAR2(4000)		Parameters defining the rationale
ATTR4	VARCHAR2(4000)		Parameters defining the rationale
ATTR5	CLOB		Parameters defining the rationale

 See Also:["USER_ADVISOR_RATIONALE"](#)

4.33 DBA_ADVISOR_RECOMMENDATIONS

DBA_ADVISOR_RECOMMENDATIONS displays the results of an analysis of all recommendations in the database.

A recommendation can have multiple actions associated with it. Actions are described in the DBA_ADVISOR_ACTIONS view. A recommendation also points to a set of rationales that present a justification/reasoning for that recommendation. These rationales are in the DBA_ADVISOR_RATIONALE view.

Related View

USER_ADVISOR_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
REC_ID	NUMBER	NOT NULL	Unique identifier of the recommendation
TASK_ID	NUMBER	NOT NULL	Task that owns the recommendation
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
FINDING_ID	NUMBER		Unique identifier of the finding
TYPE	VARCHAR2(30)		Type of the recommendation
RANK	NUMBER		Ranking, in terms of importance, within the set of recommendations generated for the task
PARENT_REC_IDS	VARCHAR2(4000)		Comma-separated list of the recommendation IDs of the parent recommendations. If this column is nonzero, then the recommendation depends on the parents, and cannot be accepted if the parents are not accepted.

Column	Datatype	NULL	Description
BENEFIT_TYPE	VARCHAR2(4000)		<p>Describes the benefit obtained by carrying out the recommendation</p> <p>If there is a set of parents for the recommendation, then the benefit is the cumulative benefit (the improvement in system performance when this and all prior parent recommendations are accepted).</p> <p>If there are no parents, then this is the improvement when the recommendation is accepted, independent of other recommendations.</p>
BENEFIT	NUMBER		<p>Calculated benefit value</p> <p>This column displays an estimate of the savings in total activity (or load) on the system if all actions of the recommendation are implemented.</p> <p>Recommendations are not additive, that is, the benefit from one recommendation may overlap with the benefit from another. For example, Oracle might recommend increasing the shared pool size, or reducing hard parses (by not using literals), and both recommendations might reduce the same part of the workload related to parsing.</p> <p>The benefit is given in both pure active sessions and as a percent of the average active sessions of the analysis time period. Therefore, if the benefit is 20% of active sessions, Oracle estimates that if you apply the actions on the same workload, the average active sessions on the server will be reduced by 20%. The DBA_ADDM_TASKS view displays the average active sessions for an ADDM task.</p>
ANNOTATION_STATUS	VARCHAR2(11)		<p>When a task is complete, the recommendations are marked ACCEPT. The status can be changed later using the MARK_RECOMMENDATION procedure:</p> <ul style="list-style-type: none"> • ACCEPT - Current recommendation is ready to implement. This recommendation can also be used as advice for future analysis operations. • REJECT - Current recommendation is not acceptable to the user, and therefore will be excluded from any implementation scripts. This recommendation can also be used as advice for future analysis operations. • IGNORE - Though not rejected, the current recommendation will be ignored when generating scripts and will never be used as advice to future analysis operations.
FLAGS	NUMBER		Advisor-specific flags
FILTERED	VARCHAR2(1)		A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.
REC_TYPE_ID	NUMBER		Recommendation type ID

 **See Also:**

- "[USER_ADVISOR_RECOMMENDATIONS](#)"
- "[DBA_ADDM_TASKS](#)"

4.34 DBA_ADVISOR_SQLA_REC_SUM

`DBA_ADVISOR_SQLA_REC_SUM` displays recommendation rollup information for all workload objects in the database after an Access Advisor analysis operation.

Related View

`USER_ADVISOR_SQLA_REC_SUM` displays recommendation rollup information for the workload objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the task
TASK_ID	NUMBER		Unique identifier of the task
TASK_NAME	VARCHAR2 (128)		Name of the task
REC_ID	NUMBER		Identifier of the recommendation
TOTAL_STMTS	NUMBER		Total number of statements processed during analysis
TOTAL_PRECOST	NUMBER		Total cost of executing the statements in which the recommended object will be used, before the recommendations
TOTAL_POSTCOST	NUMBER		Total cost of executing the statements in which the recommended object will be utilized, after the recommendations have been implemented

 **See Also:**

- "[USER_ADVISOR_SQLA_REC_SUM](#)"

4.35 DBA_ADVISOR_SQLA_TABLES

`DBA_ADVISOR_SQLA_TABLES` displays cross references between the workload statements and the tables referenced in the statement.

Related View

`USER_ADVISOR_SQLA_TABLES` displays cross references between the workload statements and the tables referenced in the statement for the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the workload object

Column	Datatype	NULL	Description
TASK_ID	NUMBER		Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
SQL_ID	VARCHAR2(13)		SQL identifier of the parent cursor in the library cache
STMT_ID	NUMBER		Statement ID
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Table name

 See Also:["USER_ADVISOR_SQLA_TABLES"](#)

4.36 DBA_ADVISOR_SQLA_WK_MAP

DBA_ADVISOR_SQLA_WK_MAP displays the workload references for all tasks in the database.

Workload references are necessary to allow the SQL Access Advisor to find required workload data.

Related View

USER_ADVISOR_SQLA_WK_MAP displays the workload references for the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER		Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
WORKLOAD_ID	NUMBER		Unique identifier of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload
IS_STS	NUMBER		Type of workload source: <ul style="list-style-type: none"> • 0 - SQL workload object • 1 - SQL Tuning Set

 See Also:["USER_ADVISOR_SQLA_WK_MAP"](#)

4.37 DBA_ADVISOR_SQLA_WK_STMTS

`DBA_ADVISOR_SQLA_WK_STMTS` displays information about all workload objects in the database after an Access Advisor analysis operation.

Related View

`USER_ADVISOR_SQLA_WK_STMTS` displays information about the workload objects owned by the current user after an Access Advisor analysis operation. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_NAME	VARCHAR2(128)		Name of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
SQLSET_ID	NUMBER		ID of the SQL tuning set for the statement
SQLSET_NAME	VARCHAR2(128)		Name of the SQL tuning set for the statement
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload
SQL_ID	VARCHAR(13)	NOT NULL	Generated identifier of the statement
SQL_SEQ	NUMBER	NOT NULL	SQL sequence
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the SQL plan for the cursor. Comparing one <code>PLAN_HASH_VALUE</code> to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).
PARSING_SCHEMA_NAME	VARCHAR2(128)		Schema name that was used to originally build this child cursor
USERNAME	VARCHAR2(128)		Name of the user executing the statement
MODULE	VARCHAR2(64)		Name of the module issuing the statement
ACTION	VARCHAR2(64)		Module action for the statement
CPU_TIME	NUMBER		Total CPU count (in seconds) of the executing statement
BUFFER_GETS	NUMBER		Total number of buffer gets for the statement
DISK_READS	NUMBER		Total disk-read I/O count for the statement
ELAPSED_TIME	NUMBER		Total elapsed time (in seconds) of the executing statement
ROWS_PROCESSED	NUMBER		Total number of rows processed by the statement
EXECUTIONS	NUMBER		Total number of times the statement was executed
FIRST_LOAD_TIME	DATE		Load time of parent cursor
LAST_EXECUTION_DATE	DATE		Date on which the statement was last executed
PRIORITY	NUMBER		Business importance of the statement: <ul style="list-style-type: none"> • 1 - High • 2 - Medium • 3 - Low
COMMAND_TYPE	NUMBER		Type of the command
STAT_PERIOD	NUMBER		Unused

Column	Datatype	NULL	Description
ACTIVE_STAT_PERIOD	NUMBER		Effective period of time (in seconds) during which the SQL statement was active
SQL_TEXT	CLOB		Text of the SQL statement
PRECOST	NUMBER		Cost of executing the statement in the workload prior to the recommendations
POSTCOST	NUMBER		Cost of executing the statement in the workload after the recommendations
IMPORTANCE	NUMBER		Advisor-calculated importance value
REC_ID	NUMBER		Associated recommendation identifier
VALIDATED	NUMBER		Indicates whether the statement is valid for analysis: <ul style="list-style-type: none"> • 0 - Statement will not be analyzed by the EXECUTE_TASK procedure. Typically, the statement references one or more tables that do not have valid statistics. To correct this problem, ensure that the tables have valid statistics and execute the RESET_SQLWLD procedure on the current workload. • 1 - Statement is eligible for analysis by the EXECUTE_TASK procedure

 See Also:["USER_ADVISOR_SQLA_WK_STMTS"](#)

4.38 DBA_ADVISOR_SQLPLANS

DBA_ADVISOR_SQLPLANS displays the different SQL execution plans generated as part of an advisor analysis.

Related View

USER_ADVISOR_SQLPLANS displays the different SQL execution plans owned by the current user generated as part of an advisor analysis.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2 (128)		Advisor task name in which the SQL plan was generated (see DBA_ADVISOR_TASKS)
TASK_ID	NUMBER (38)	NOT NULL	Advisor task ID in which the SQL plan was generated (see DBA_ADVISOR_TASKS)
EXECUTION_NAME	VARCHAR2 (128)	NOT NULL	Advisor task execution in which the SQL plan was generated (see DBA_ADVISOR_EXECUTIONS)
SQL_ID	VARCHAR2 (13)	NOT NULL	Identifier for the relevant SQL statement
OBJECT_ID	NUMBER (38)	NOT NULL	Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)

Column	Datatype	NULL	Description
ATTRIBUTE	VARCHAR2 (34)		Text string identifying the type of the execution plan. The following values are used by the SQL Tuning Advisor: <ul style="list-style-type: none"> • Original - Original plan of the query • Original with adjusted cost - Same as Original but with adjusted cost • Using SQL profile - Plan with SQL profile applied • Using new indices - Plan with indexes applied
STATEMENT_ID	VARCHAR2 (30)		Optional statement identifier specified in the EXPLAIN PLAN statement
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the execution plan
PLAN_ID	NUMBER	NOT NULL	Plan identifier
TIMESTAMP	DATE		Date and time when the EXPLAIN PLAN statement was issued
REMARKS	VARCHAR2 (4000)		Place for comments that can be added to the steps of the execution plan
OPERATION	VARCHAR2 (30)		Name of the operation performed at this step
OPTIONS	VARCHAR2 (255)		Options used for the operation performed at this step
OBJECT_NODE	VARCHAR2 (128)		Name of the database link used to reference the object
OBJECT_OWNER	VARCHAR2 (128)		Owner of the object
OBJECT_NAME	VARCHAR2 (128)		Name of the object
OBJECT_ALIAS	VARCHAR2 (261)		Object alias
OBJECT_INSTANCE	NUMBER (38)		Numbered position of the object name in the original SQL statement
OBJECT_TYPE	VARCHAR2 (30)		Descriptive modifier that further describes the type of object
OPTIMIZER	VARCHAR2 (255)		Current mode of the optimizer
SEARCH_COLUMNS	NUMBER		Number of index columns with start and stop keys (that is, the number of columns with matching predicates)
ID	NUMBER (38)	NOT NULL	Identification number for this step in the execution plan
PARENT_ID	NUMBER (38)		ID of the next step that operates on the results of this step
DEPTH	NUMBER (38)		Depth
POSITION	NUMBER (38)		Order of processing for steps with the same parent ID
COST	NUMBER (38)		Cost of the current operation estimated by the cost-based optimizer (CBO)
CARDINALITY	NUMBER (38)		Number of rows returned by the current operation (estimated by the CBO)
BYTES	NUMBER (38)		Number of bytes returned by the current operation

Column	Datatype	NULL	Description
OTHER_TAG	VARCHAR2 (255)		<p>Describes the function of the SQL text in the OTHER column. Values for OTHER_TAG are:</p> <ul style="list-style-type: none"> • SERIAL - SQL is the text of a locally-executed, serial query plan. Currently, SQL is not loaded in OTHER for this case. • SERIAL_FROM_REMOTE - SQL text shown in the OTHER column will be executed at a remote site • PARALLEL_COMBINED_WITH_PARENT - Parent of this operation is a DFO that performs both operations in the parallel execution plan • PARALLEL_COMBINED_WITH_CHILD - Child of this operation is a DFO that performs both operations in the parallel execution plan. • PARALLEL_TO_SERIAL - SQL text shown in the OTHER column is the top-level of the parallel plan. • PARALLEL_TO_PARALLEL - SQL text shown in the OTHER column is executed and output in parallel • PARALLEL_FROM_SERIAL - Operation consumes data from a serial operation and outputs it in parallel
PARTITION_START	VARCHAR2 (255)		Start partition of a range of accessed partitions
PARTITION_STOP	VARCHAR2 (255)		Stop partition of a range of accessed partitions
PARTITION_ID	NUMBER (38)		Step that has computed the pair of values of the PARTITION_START and PARTITION_STOP columns
OTHER	LONG		Information about parallel execution servers and parallel queries
DISTRIBUTION	VARCHAR2 (30)		Distribution method
CPU_COST	NUMBER (38)		User-defined CPU cost
IO_COST	NUMBER (38)		User-defined I/O cost
TEMP_SPACE	NUMBER (38)		Temporary space usage of the operation (sort or hash-join) as estimated by the CBO
ACCESS_PREDICATES	VARCHAR2 (4000)		Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.
FILTER_PREDICATES	VARCHAR2 (4000)		Predicates used to filter rows before producing them
PROJECTION	VARCHAR2 (4000)		Expressions produced by the operation
TIME	NUMBER (38)		Elapsed time (in seconds) of the operation as estimated by the CBO
QBLOCK_NAME	VARCHAR2 (128)		Name of the query block

Column	Datatype	NULL	Description
OTHER_XML	CLOB		<p>Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML because it allows multiple pieces of information to be stored, including the following:</p> <ul style="list-style-type: none"> • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan

4.39 DBA_ADVISOR_SQLSTATS

DBA_ADVISOR_SQLSTATS displays execution statistics for the test-execution of different SQL plans during the advisor analysis.

Related View

USER_ADVISOR_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)		Advisor task name in which the SQL statement was executed (see DBA_ADVISOR_TASKS)
TASK_ID	NUMBER(38)	NOT NULL	Advisor task ID in which the SQL statement was executed (see DBA_ADVISOR_TASKS)
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)
EXECUTION_TYPE	VARCHAR2(128)		Type of the advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)
OBJECT_ID	NUMBER(38)	NOT NULL	Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)
PLAN_ID	NUMBER	NOT NULL	Plan ID number generated to uniquely identify a plan for a particular SQL statement (foreign key to DBA_ADVISOR_SQLPLANS)
SQL_ID	VARCHAR2(13)	NOT NULL	Identifier for the SQL statement executed
PLAN_HASH_VALUE	NUMBER	NOT NULL	Hash value of the SQL execution plan

Column	Datatype	NULL	Description
ATTR1	NUMBER		For internal use only
CON_DBID	NUMBER		The database ID of the pluggable database (PDB)
PARSE_TIME	NUMBER		Parse time (in microseconds) measured for the SQL
ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) to execute the SQL and fetch all of its rows, after parsing
CPU_TIME	NUMBER		CPU time (in microseconds) to execute the SQL and fetch all of its rows, after parsing
USER_IO_TIME	NUMBER		I/O time (in microseconds) to execute the SQL and fetch all of its rows, after parsing
BUFFER_GETS	NUMBER		Number of buffer gets measured for executing the SQL and fetching all of its rows
DISK_READS	NUMBER		Number of disk reads measured for executing the SQL and fetching all of its rows
DIRECT_WRITES	NUMBER		Number of direct writes measured for executing the SQL and fetching all of its rows
PHYSICAL_READ_REQUESTS	NUMBER		Number of physical read I/O requests issued by the monitored SQL
PHYSICAL_WRITE_REQUESTS	NUMBER		Number of physical write I/O requests issued by the monitored SQL
PHYSICAL_READ_BYTES	NUMBER		Number of bytes read from disks by the monitored SQL
PHYSICAL_WRITE_BYTES	NUMBER		Number of bytes written to disks by the monitored SQL
ROWS_PROCESSED	NUMBER		Number of rows returned by the SQL execution
FETCHES	NUMBER		Number of fetches for the SQL execution
EXECUTIONS	NUMBER		Execution count for the SQL. This column will always have a value of 1 or 0.
END_OF_FETCH_COUNT	NUMBER		Indicates whether the SQL was executed to end-of-fetch (1) or not (0)
OPTIMIZER_COST	NUMBER		Optimizer cost for the execution plan
OTHER	CLOB		For internal use only
TESTEXEC_TOTAL_EXECS	NUMBER		Total number of executions during test execute
IO_INTERCONNECT_BYTES	NUMBER		Number of I/O bytes exchanged between Oracle Database and the storage system
TESTEXEC_FIRST_EXEC_IGNRED	VARCHAR2(1)		Indicates whether the first execution in test execute is ignored (Y) or not (N)
CON_DBID	NUMBER		The database ID of the PDB
ATTR2	NUMBER		For internal use only
ATTR3	NUMBER		For internal use only
CACHED_GETS	NUMBER		The total of the db block gets from cache statistic and the consistent gets from cache statistic
DIRECT_GETS	NUMBER		The total of the db block gets direct statistic and the consistent gets direct statistic

 **See Also:**

- "[USER_ADVISOR_SQLSTATS](#)"
- "[Statistics Descriptions](#)" for more information about statistics

4.40 DBA_ADVISOR_SQLW_JOURNAL

`DBA_ADVISOR_SQLW_JOURNAL` displays the journal entries for all workload objects in the database.

Related View

`USER_ADVISOR_SQLW_JOURNAL` displays the journal entries for the workload objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the workload
WORKLOAD_ID	NUMBER	NOT NULL	Identifier number of the workload object
WORKLOAD_NAME	VARCHAR2 (128)		Name of the workload object
JOURNAL_ENTRY_SEQ	NUMBER	NOT NULL	Sequence number of the journal entry (unique for each workload). The sequence number is used to order the data.
JOURNAL_ENTRY_TYPE	VARCHAR2 (12)		Type of the task: <ul style="list-style-type: none"> • FATAL • ERROR • WARNING • INFORMATION • INFORMATION[2 3 4 5 6]
JOURNAL_ENTRY	VARCHAR2 (4000)		Entry in the journal

 **See Also:**

- "["USER_ADVISOR_SQLW_JOURNAL"](#)"

4.41 DBA_ADVISOR_SQLW_PARAMETERS

`DBA_ADVISOR_SQLW_PARAMETERS` displays all workload parameters and their current values in the database.

Related View

`USER_ADVISOR_SQLW_PARAMETERS` displays the workload parameters and their current values owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task or workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload object
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2(4000)	NOT NULL	Value of the parameter. Numeric parameter values are converted to a string equivalent. Possible keywords as values: <ul style="list-style-type: none"> • ALL • UNLIMITED • UNUSED
PARAMETER_TYPE	VARCHAR2(10)		Datatype of the parameter: <ul style="list-style-type: none"> • NUMBER - Numeric value • STRING - String value. If the string contains special characters, then it will be enclosed in single quotes. • STRINGLIST - Comma-separated list of string elements. If a string element contains a comma or other special characters, then the element will be enclosed in single quotes. • TABLE - Single table reference. A reference contains a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported. • TABLELIST - List of one or more comma-separated table references. A reference contains a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.
DESCRIPTION	VARCHAR2(4000)		Parameter description

 **See Also:**

["USER_ADVISOR_SQLW_PARAMETERS"](#)

4.42 DBA_ADVISOR_SQLW_STMTS

DBA_ADVISOR_SQLW_STMTS displays rows that correspond to all statements in the workload.

All columns are guaranteed to be non-null.

Related View

USER_ADVISOR_SQLW_STMTS displays rows that correspond to the statements in the workload owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload
SQL_ID	NUMBER	NOT NULL	Generated identifier of the statement
HASH_VALUE	NUMBER		Hash value for the parent statement in the cache
USERNAME	VARCHAR2(128)		Name of the user executing the statement
MODULE	VARCHAR2(64)		Name of the module issuing the statement
ACTION	VARCHAR2(64)		Module action for the statement
CPU_TIME	NUMBER		Total CPU count (in seconds) of the executing statement
BUFFER_GETS	NUMBER		Total number of buffer gets for the statement
DISK_READS	NUMBER		Total disk-read I/O count for the statement
ELAPSED_TIME	NUMBER		Total elapsed time (in seconds) of the executing statement
ROWS_PROCESSED	NUMBER		Total number of rows processed by the statement
EXECUTIONS	NUMBER		Total number of times the statement was executed
OPTIMIZER_COST	NUMBER		Cost of executing the statement in the workload prior to the recommendations
LAST_EXECUTION_DATE	DATE		Date on which the statement was last executed
PRIORITY	NUMBER		Priority of the statement: <ul style="list-style-type: none"> • 1 - High • 2 - Medium • 3 - Low
COMMAND_TYPE	NUMBER		Type of the command
STAT_PERIOD	NUMBER		Unused
SQL_TEXT	CLOB		Text of the SQL statement
VALID	NUMBER		Indicates whether the statement is valid for analysis: <ul style="list-style-type: none"> • 0 - Statement will not be analyzed by the EXECUTE_TASK procedure. Typically, the statement references one or more tables that do not have valid statistics. To correct this problem, ensure that the tables have valid statistics and execute the RESET_SQLWKLD procedure on the current workload. • 1 - Statement is eligible for analysis by the EXECUTE_TASK procedure.

 See Also:["USER_ADVISOR_SQLW_STMTS"](#)

4.43 DBA_ADVISOR_SQLW_SUM

`DBA_ADVISOR_SQLW_SUM` displays an aggregated picture of all SQLWkld workload objects in the database.

Related View

`USER_ADVISOR_SQLW_SUM` displays an aggregated picture of the SQLWkld workload objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Unique name of the workload
DESCRIPTION	VARCHAR2(256)		User-specified description of the workload
CREATE_DATE	DATE	NOT NULL	Date on which the workload object was created
MODIFY_DATE	DATE	NOT NULL	Date of last update to the current workload
NUM_SELECT_STMT	NUMBER		Number of <code>SELECT</code> statements in the workload
NUM_UPDATE_STMT	NUMBER		Number of <code>UPDATE</code> statements in the workload
NUM_DELETE_STMT	NUMBER		Number of <code>DELETE</code> statements in the workload
NUM_INSERT_STMT	NUMBER		Number of <code>INSERT</code> statements in the workload
NUM_MERGE_STMT	NUMBER		Number of <code>MERGE</code> statements in the workload
SOURCE	VARCHAR2(128)		Optional name that identifies the creator of the object
HOW_CREATED	VARCHAR2(30)		Optional object or template on which the object was based
DATA_SOURCE	VARCHAR2(2000)		Workload data source
READ_ONLY	VARCHAR2(5)		Indicates whether or not the workload can be modified or deleted (<code>TRUE</code>) or not (<code>FALSE</code>)

See Also:

["USER_ADVISOR_SQLW_SUM"](#)

4.44 DBA_ADVISOR_SQLW_TABLES

`DBA_ADVISOR_SQLW_TABLES` displays cross references between the workload statements and the tables referenced in the statement.

Related View

`USER_ADVISOR_SQLW_TABLES` displays cross references between the workload statements and the tables referenced in the statement. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the workload object
WORKLOAD_ID	NUMBER		Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2 (128)		Name of the workload
SQL_ID	NUMBER		Identifier of the statement
TABLE_OWNER	VARCHAR2 (128)		Owner of the table
TABLE_NAME	VARCHAR2 (128)		Name of the table

 See Also:["USER_ADVISOR_SQLW_TABLES"](#)

4.45 DBA_ADVISOR_SQLW_TEMPLATES

DBA_ADVISOR_SQLW_TEMPLATES displays an aggregated picture of all SQLWkld template objects in the database.

Related View

USER_ADVISOR_SQLW_TEMPLATES displays an aggregated picture of the SQLWkld template objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2 (128)		Unique name of the workload
DESCRIPTION	VARCHAR2 (256)		User-specified description of the workload
CREATE_DATE	DATE	NOT NULL	Date on which the workload object was created
MODIFY_DATE	DATE	NOT NULL	Date of last update to the current workload
SOURCE	VARCHAR2 (128)		Optional object or template on which the object was based
READ_ONLY	VARCHAR2 (5)		Indicates whether the workload template can be modified or deleted (TRUE) or not (FALSE)

 See Also:["USER_ADVISOR_SQLW_TEMPLATES"](#)

4.46 DBA_ADVISOR_TASKS

`DBA_ADVISOR_TASKS` displays information about all tasks in the database.

The view contains one row for each task. Each task has a name that is unique to the owner. Task names are just informational and no uniqueness is enforced within any other namespace.

Related View

`USER_ADVISOR_TASKS` displays information about the tasks owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2 (128)		Name of the task
DESCRIPTION	VARCHAR2 (256)		User-supplied description of the task
ADVISOR_NAME	VARCHAR2 (128)		Advisor associated with the task
CREATED	DATE	NOT NULL	Creation date of the task
LAST_MODIFIED	DATE	NOT NULL	Date on which the task was last modified
PARENT_TASK_ID	NUMBER		Identifier of the parent task (if the task was created because of the recommendation of another task)
PARENT_RXEC_ID	NUMBER		Identifier of the recommendation within the parent task that resulted in the creation of the task
LAST_EXECUTION	VARCHAR2 (128)		Name of the current or last task execution
EXECUTION_TYPE	VARCHAR2 (128)		Type of the last execution. This information is optional for single-execution tasks.
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_DESCRIPTION	VARCHAR2 (256)		Optional description of the last execution
EXECUTION_START	DATE		Execution start date and time of the task
EXECUTION_END	DATE		Execution end date and time of the task
STATUS	VARCHAR2 (11)		Current operational status of the task: <ul style="list-style-type: none"> • INITIAL - Initial state of the task; no recommendations are present • EXECUTING - Task is currently running • INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time. • COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported. • ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.
STATUS_MESSAGE	VARCHAR2 (4000)		Informational message provided by the advisor regarding the status
PCT_COMPLETION_TIME	NUMBER		Percent completion, in terms of time, of the task when it is executing

Column	Datatype	NULL	Description
PROGRESS_METRIC	NUMBER		Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.
METRIC_UNITS	VARCHAR2(64)		Unit of the metric used to measure progress
ACTIVITY_COUNTER	NUMBER		Counter that is updated frequently by the advisor, denoting that useful work is being performed
RECOMMENDATION_COUNT	NUMBER		Number of recommendations produced
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition
SOURCE	VARCHAR2(128)		Optional name that identifies the creator of the task
HOW_CREATED	VARCHAR2(30)		Optional task or template on which the object was based
READ_ONLY	VARCHAR2(5)		Indicates whether the task is read-only (TRUE) or not (FALSE)
SYSTEM_TASK	VARCHAR2(5)		Indicates whether the task is a system task (TRUE) or not (FALSE). The automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, is one example of a system task.
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
STATUS#	NUMBER		Reserved for internal use

 See Also:["USER_ADVISOR_TASKS"](#)

4.47 DBA_ADVISOR_TEMPLATES

DBA_ADVISOR_TEMPLATES displays information about all templates in the database.

Related View

USER_ADVISOR_TEMPLATES displays information about the templates owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
CREATED	DATE	NOT NULL	Creation date of the task
LAST_MODIFIED	DATE	NOT NULL	Date on which the task was last modified
SOURCE	VARCHAR2(128)		Optional task or template on which the template was based

Column	Datatype	NULL	Description
READ_ONLY	VARCHAR2 (5)		Indicates whether the task can be modified or deleted (TRUE) or not (FALSE)

 **See Also:**

["USER_ADVISOR_TEMPLATES"](#)

4.48 DBA_ADVISOR_USAGE

`DBA_ADVISOR_USAGE` displays the usage information for each type of advisor in the database.

Column	Datatype	NULL	Description
ADVISOR_ID	NUMBER	NOT NULL	Type of the advisor
ADVISOR_NAME	VARCHAR2 (128)	NOT NULL	Name of the advisor
LAST_EXEC_TIME	DATE	NOT NULL	Date of the last execution
NUM_EXECS	NUMBER	NOT NULL	Cumulative number of executions
NUM_DB_REPORTS	NUMBER	NOT NULL	Cumulative number of reports
FIRST_REPORT_TIME	DATE		Time of the first report
LAST_REPORT_TIME	DATE		Time of the last report

4.49 DBA_ALERT_HISTORY

`DBA_ALERT_HISTORY` describes a time-limited history of alerts which are no longer outstanding.

Column	Datatype	NULL	Description
SEQUENCE_ID	NUMBER	NOT NULL	Alert sequence number
REASON_ID	NUMBER		ID of the alert reason
OWNER	VARCHAR2 (128)		Owner of the object on which the alert was issued
OBJECT_NAME	VARCHAR2 (513)		Name of the object
SUBOBJECT_NAME	VARCHAR2 (128)		Name of the subobject (for example: partition)
OBJECT_TYPE	VARCHAR2 (64)		Type of the object (for example: table, tablespace)
REASON	VARCHAR2 (4000)		Reason for the alert
TIME_SUGGESTED	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was last updated
CREATION_TIME	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was first created
SUGGESTED_ACTION	VARCHAR2 (4000)		Advice of the recommended action
ADVISOR_NAME	VARCHAR2 (128)		Name of the advisor to be invoked for more information
METRIC_VALUE	NUMBER		Value of the related metrics

Column	Datatype	NULL	Description
MESSAGE_TYPE	VARCHAR2(12)		Message type: <ul style="list-style-type: none">• Notification• Warning
MESSAGE_GROUP	VARCHAR2(64)		Name of the message group to which the alert belongs
MESSAGE_LEVEL	NUMBER		Severity message level (1 to 32)
HOSTING_CLIENT_ID	VARCHAR2(64)		ID of the client or security group to which the alert relates
MODULE_ID	VARCHAR2(64)		ID of the module that originated the alert
PROCESS_ID	VARCHAR2(128)		Process ID
HOST_ID	VARCHAR2(256)		DNS host name of the originating host
HOST_NW_ADDR	VARCHAR2(256)		IP or other network address of the originating host
INSTANCE_NAME	VARCHAR2(16)		Originating instance name
INSTANCE_NUMBER	NUMBER		Originating instance number
USER_ID	VARCHAR2(128)		User ID
EXECUTION_CONTEXT_ID	VARCHAR2(128)		Execution Context ID
ERROR_INSTANCE_ID	VARCHAR2(142)		ID of an error instance plus a sequence number
RESOLUTION	VARCHAR2(7)		Resolution: <ul style="list-style-type: none">• Cleared• N/A
PDB_NAME	VARCHAR2(128)		PDB name
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.50 DBA_ALERT_HISTORY_DETAIL

DBA_ALERT_HISTORY_DETAIL describes a time-limited history of cleared and outstanding alerts.

Column	Datatype	NULL	Description
SEQUENCE_ID	NUMBER	NOT NULL	Alert sequence number
REASON_ID	NUMBER		ID of the alert reason
OWNER	VARCHAR2(128)		Owner of the object on which alert is issued
OBJECT_NAME	VARCHAR2(513)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example: partition)
OBJECT_TYPE	VARCHAR2(64)		Type of the object (for example: table, tablespace)
REASON	VARCHAR2(4000)		Reason for the alert
TIME_SUGGESTED	TIMESTAMP(6) WITH TIMEZONE		Time when the alert was last updated

Column	Datatype	NULL	Description
CREATION_TIME	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was first created
SUGGESTED_ACTION	VARCHAR2(4000)		Advice of the recommended action
ADVISOR_NAME	VARCHAR2(128)		Name of the advisor to be invoked for more information
METRIC_VALUE	NUMBER		Value of the related metrics
MESSAGE_TYPE	VARCHAR2(12)		Message type: <ul style="list-style-type: none"> • Notification • Warning
MESSAGE_GROUP	VARCHAR2(64)		Name of the message group to which the alert belongs
MESSAGE_LEVEL	NUMBER		Severity level (1 to 32)
HOSTING_CLIENT_ID	VARCHAR2(64)		ID of the client or security group to which the alert relates
MODULE_ID	VARCHAR2(64)		ID of the module that originated the alert
PROCESS_ID	VARCHAR2(128)		Process id
HOST_ID	VARCHAR2(256)		DNS host name of the originating host
HOST_NW_ADDR	VARCHAR2(256)		IP or other network address of originating host
INSTANCE_NAME	VARCHAR2(16)		Originating instance name
INSTANCE_NUMBER	NUMBER		Originating instance number
USER_ID	VARCHAR2(128)		User ID
EXECUTION_CONTEXT_ID	VARCHAR2(128)		Execution Context ID
ERROR_INSTANCE_ID	VARCHAR2(142)		ID of an error instance plus a sequence number
RESOLUTION	VARCHAR2(11)		Resolution: <ul style="list-style-type: none"> • Cleared • Outstanding • N/A
STATE_TRANSITION_NUMBER	NUMBER	NOT NULL	Sequence number of the state transition for the alert
PDB_NAME	VARCHAR2(128)		PDB name
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.51 DBA_ALL_TABLES

DBA_ALL_TABLES describes all object tables and relational tables in the database. Its columns are the same as those in ALL_ALL_TABLES.

 **See Also:**

"ALL_ALL_TABLES"

4.52 DBA_ANALYTIC_VIEW_ATTR_CLASS

DBA_ANALYTIC_VIEW_ATTR_CLASS describes the attribute classifications of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_ATTR_CLASS.

 **See Also:**

"ALL_ANALYTIC_VIEW_ATTR_CLASS"

4.53 DBA_ANALYTIC_VIEW_ATTR_CLS

DBA_ANALYTIC_VIEW_ATTR_CLS is identical to DBA_ANALYTIC_VIEW_ATTR_CLASS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"DBA_ANALYTIC_VIEW_ATTR_CLASS"

4.54 DBA_ANALYTIC_VIEW_ATTR_CLS_AE

DBA_ANALYTIC_VIEW_ATTR_CLS_AE describes the attribute classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_ATTR_CLS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_ATTR_CLS_AE"](#)

4.55 DBA_ANALYTIC_VIEW_BAS_MEAS

DBA_ANALYTIC_VIEW_BAS_MEAS is identical to DBA_ANALYTIC_VIEW_BASE_MEAS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["DBA_ANALYTIC_VIEW_BASE_MEAS"](#)

4.56 DBA_ANALYTIC_VIEW_BAS_MEAS_AE

DBA_ANALYTIC_VIEW_BAS_MEAS_AE describes the base measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_BAS_MEAS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_BAS_MEAS_AE"](#)

4.57 DBA_ANALYTIC_VIEW_BASE_MEAS

DBA_ANALYTIC_VIEW_BASE_MEAS describes the base measures in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_BASE_MEAS.

 **See Also:**

["ALL_ANALYTIC_VIEW_BASE_MEAS"](#)

4.58 DBA_ANALYTIC_VIEW_CALC_MEAS

DBA_ANALYTIC_VIEW_CALC_MEAS describes the calculated measures in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CALC_MEAS.

 **See Also:**

["ALL_ANALYTIC_VIEW_CALC_MEAS"](#)

4.59 DBA_ANALYTIC_VIEW_CLASS

DBA_ANALYTIC_VIEW_CLASS describes the classifications of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CLASS.

 **See Also:**

["ALL_ANALYTIC_VIEW_CLASS"](#)

4.60 DBA_ANALYTIC_VIEW_CLASS_AE

DBA_ANALYTIC_VIEW_CLASS_AE describes the classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CLASS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_CLASS_AE"](#)

4.61 DBA_ANALYTIC_VIEW_CLC_MEAS

DBA_ANALYTIC_VIEW_CLC_MEAS is identical to DBA_ANALYTIC_VIEW_CALC_MEAS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["DBA_ANALYTIC_VIEW_CALC_MEAS"](#)

4.62 DBA_ANALYTIC_VIEW_CLC_MEAS_AE

DBA_ANALYTIC_VIEW_CLC_MEAS_AE describes the calculated measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CLC_MEAS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_CLC_MEAS_AE"](#)

4.63 DBA_ANALYTIC_VIEW_COLUMNS

DBA_ANALYTIC_VIEW_COLUMNS describes the columns of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_COLUMNS.

 **See Also:**

["ALL_ANALYTIC_VIEW_COLUMNS"](#)

4.64 DBA_ANALYTIC_VIEW_COLUMNS_AE

DBA_ANALYTIC_VIEW_COLUMNS_AE describes the columns of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_COLUMNS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_COLUMNS_AE"](#)

4.65 DBA_ANALYTIC_VIEW_DIM_CLASS

DBA_ANALYTIC_VIEW_DIM_CLASS describes the classifications of the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_DIM_CLASS.

 **See Also:**

["ALL_ANALYTIC_VIEW_DIM_CLASS"](#)

4.66 DBA_ANALYTIC_VIEW_DIM_CLS

DBA_ANALYTIC_VIEW_DIM_CLS is identical to DBA_ANALYTIC_VIEW_DIM_CLASS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["DBA_ANALYTIC_VIEW_DIM_CLASS"](#)

4.67 DBA_ANALYTIC_VIEW_DIM_CLS_AE

DBA_ANALYTIC_VIEW_DIM_CLS_AE describes the classifications of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_DIM_CLS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_DIM_CLS_AE"](#)

4.68 DBA_ANALYTIC_VIEW_DIMENSIONS

DBA_ANALYTIC_VIEW_DIMENSIONS describes the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_DIMENSIONS.

 **See Also:**

["ALL_ANALYTIC_VIEW_DIMENSIONS"](#)

4.69 DBA_ANALYTIC_VIEW_DIMS

DBA_ANALYTIC_VIEW_DIMS is identical to DBA_ANALYTIC_VIEW_DIMENSIONS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["DBA_ANALYTIC_VIEW_DIMENSIONS"](#)

4.70 DBA_ANALYTIC_VIEW_DIMS_AE

DBA_ANALYTIC_VIEW_DIMS_AE describes the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_DIMS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_DIMS_AE"](#)

4.71 DBA_ANALYTIC_VIEW_HIER_CLASS

DBA_ANALYTIC_VIEW_HIER_CLASS describes the classifications of the hierarchies in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_HIER_CLASS.

 **See Also:**

["ALL_ANALYTIC_VIEW_HIER_CLASS"](#)

4.72 DBA_ANALYTIC_VIEW_HIER_CLS

DBA_ANALYTIC_VIEW_HIER_CLS is identical to DBA_ANALYTIC_VIEW_HIER_CLASS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["DBA_ANALYTIC_VIEW_HIER_CLASS"](#)

4.73 DBA_ANALYTIC_VIEW_HIER_CLS_AE

DBA_ANALYTIC_VIEW_HIER_CLS_AE describes the classifications of the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_HIER_CLS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_HIER_CLS_AE"](#)

4.74 DBA_ANALYTIC_VIEW_HIERS

DBA_ANALYTIC_VIEW_HIERS describes the hierarchies in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_HIERS.

 **See Also:**

["ALL_ANALYTIC_VIEW_HIERS"](#)

4.75 DBA_ANALYTIC_VIEW_HIERS_AE

DBA_ANALYTIC_VIEW_HIERS_AE describes the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_HIERS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_HIERS_AE"](#)

4.76 DBA_ANALYTIC_VIEW_KEYS

DBA_ANALYTIC_VIEW_KEYS describes the key columns of the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_KEYS.

 **See Also:**

["ALL_ANALYTIC_VIEW_KEYS"](#)

4.77 DBA_ANALYTIC_VIEW_KEYS_AE

DBA_ANALYTIC_VIEW_KEYS_AE describes the key columns of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_KEYS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ANALYTIC_VIEW_KEYS_AE](#)"

4.78 DBA_ANALYTIC_VIEW_LEVEL_CLASS

DBA_ANALYTIC_VIEW_LEVEL_CLASS describes the level classifications of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LEVEL_CLASS.

 **See Also:**

"[ALL_ANALYTIC_VIEW_LEVEL_CLASS](#)"

4.79 DBA_ANALYTIC_VIEW_LEVELS

DBA_ANALYTIC_VIEW_LEVELS describes the levels in the hierarchies in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LEVELS.

 **See Also:**

"[ALL_ANALYTIC_VIEW_LEVELS](#)"

4.80 DBA_ANALYTIC_VIEW_LEVELS_AE

DBA_ANALYTIC_VIEW_LEVELS_AE describes the levels in the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LEVELS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ANALYTIC_VIEW_LEVELS_AE](#)"

4.81 DBA_ANALYTIC_VIEW_LVL_CLS

DBA_ANALYTIC_VIEW_LVL_CLS is identical to DBA_ANALYTIC_VIEW_LEVEL_CLASS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[DBA_ANALYTIC_VIEW_LEVEL_CLASS](#)"

4.82 DBA_ANALYTIC_VIEW_LVL_CLS_AE

DBA_ANALYTIC_VIEW_LVL_CLS_AE describes the level classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LVL_CLS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_LVL_CLS_AE"](#)

4.83 DBA_ANALYTIC_VIEW_LVLGRPS

DBA_ANALYTIC_VIEW_LVLGRPS describes the analytic view measure and level groups of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LVLGRPS.

 **See Also:**

["ALL_ANALYTIC_VIEW_LVLGRPS"](#)

4.84 DBA_ANALYTIC_VIEW_LVLGRPS_AE

DBA_ANALYTIC_VIEW_LVLGRPS_AE describes the analytic view measure and level groups of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LVLGRPS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ANALYTIC_VIEW_LVLGRPS_AE"](#)

4.85 DBA_ANALYTIC_VIEW_MEAS_CLASS

DBA_ANALYTIC_VIEW_MEAS_CLASS describes the classifications of the measures of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_MEAS_CLASS.

 **See Also:**

["ALL_ANALYTIC_VIEW_MEAS_CLASS"](#)

4.86 DBA_ANALYTIC_VIEW_MEAS_CLS

DBA_ANALYTIC_VIEW_MEAS_CLS is identical to DBA_ANALYTIC_VIEW_MEAS_CLASS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[DBA_ANALYTIC_VIEW_MEAS_CLASS](#)"

4.87 DBA_ANALYTIC_VIEW_MEAS_CLS_AE

DBA_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_MEAS_CLS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ANALYTIC_VIEW_MEAS_CLS_AE](#)"

4.88 DBA_ANALYTIC_VIEWS

DBA_ANALYTIC_VIEWS describes all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEWS.

 **See Also:**

"[ALL_ANALYTIC_VIEWS](#)"

4.89 DBA_ANALYTIC_VIEWS_AE

DBA_ANALYTIC_VIEWS_AE describes all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEWS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ANALYTIC_VIEWS_AE](#)"

4.90 DBA_APP_ERRORS

DBA_APP_ERRORS displays errors raised when an application PDB synchronizes with an application in the application root.

This view displays errors raised during the last synchronization for each application.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2 (128)		Name of the application whose statement was captured
APP_STATEMENT	CLOB		Application statement
ERRORNUM	NUMBER		Error number for the statement
ERRORMSG	VARCHAR2 (4000)		Error message for the statement
SYNC_TIME	DATE	NOT NULL	Sync time for the statement
SYSTEM_IGNORABLE	VARCHAR2 (1)		Indicates whether the error is a system-ignorable error (Y) or not (N)
USER_IGNORABLE	VARCHAR2 (1)		Indicates whether the error is a user-ignorable error (Y) or not (N)

4.91 DBA_APP_PATCHES

DBA_APP_PATCHES describes all the application patches in the Application Container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2 (128)		Name of the application
PATCH_NUMBER	NUMBER		Patch number
PATCH_MIN_VERSION	VARCHAR2 (30)		Minimum application version for the patch
PATCH_STATUS	VARCHAR2 (10)		Status of the patch
PATCH_COMMENT	VARCHAR2 (4000)		Comment associated with the patch

Column	Datatype	NULL	Description
PATCH_CHECKSUM	NUMBER		Checksum for the patch

4.92 DBA_APP_PDB_STATUS

DBA_APP_PDB_STATUS provides information about applications in all the application PDBs in the current application container. It provides this information when queried in the application root.

The view should be queried in the application root.

This view can be used to show which version of an application has been synced to which application PDBs.

Column	Datatype	NULL	Description
CON_UID	NUMBER		Unique ID of the PDB
APP_NAME	VARCHAR2 (128)		Name of the application
APP_ID	NUMBER		Id of the application
APP_VERSION	VARCHAR2 (30)		Version of the application
APP_STATUS	VARCHAR2 (12)		Status of the application

4.93 DBA_APP_STATEMENTS

DBA_APP_STATEMENTS describes all statements from all the applications in the Application Container.

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.• n: This value is used for rows containing data that originate in the container with container ID n ($n=1$ if the row originates in root)
STATEMENT_ID	NUMBER		Statement ID
CAPTURE_TIME	DATE	NOT NULL	Time of capture of the application statement
APP_STATEMENT	CLOB		Application statement
APP_NAME	VARCHAR2 (128)		Name of the application whose statement was captured
APP_STATUS	VARCHAR2 (12)		Status of the application when the statement was captured
PATCH_NUMBER	NUMBER		Patch number of patch installation when the statement was captured
VERSION_NUMBER	NUMBER		Version number when the statement was captured
SESSION_ID	NUMBER		Unique session ID when the statement was captured
OPCODE	NUMBER	NOT NULL	Operation code indicating the statement type

4.94 DBA_APP VERSIONS

DBA_APP VERSIONS displays information about all application versions installed in an application container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2 (128)		Name of the application
APP_VERSION	VARCHAR2 (30)		Version of the application
APP_VERSION_COMMENT	VARCHAR2 (4000)		Comment associated with the application version
APP_VERSION_CHECKSUM	NUMBER		Checksum for the application version
APP_ROOT_CLONE_NAME ¹	VARCHAR2 (64)		Name of the application root clone that corresponds to the application
APP_VERSION_BEGIN_TIME ²	DATE		Begin time of the most recent sync of the application
APP_VERSION_END_TIME ²	DATE		End time of the most recent sync of the application
APP_VERSION_NUMBER ²	NUMBER		Version number of the application version

¹ This column is available starting with Oracle Database 19c, Release Update 19.7.

² This column is available only on Oracle Autonomous Database Serverless.

 **See Also:**

Oracle Multitenant Administrator's Guide for more information about application containers

4.95 DBA_APPLICATION_ROLES

DBA_APPLICATION_ROLES describes all the roles that have authentication policy functions defined.

Column	Datatype	NULL	Description
ROLE	VARCHAR2 (128)	NOT NULL	Name of the application role
SCHEMA	VARCHAR2 (128)	NOT NULL	Schema of the authorized package
PACKAGE	VARCHAR2 (128)	NOT NULL	Name of the authorized package

4.96 DBA_APPLICATIONS

DBA_APPLICATIONS provides information about the applications in the current application container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2 (128)		Name of the application
APP_ID	NUMBER		ID of the application

Column	Datatype	NULL	Description
APP_VERSION	VARCHAR2(30)		Version of the application
APP_STATUS	VARCHAR2(12)		Status of the application
APP_IMPLICIT	VARCHAR2(1)		Indicates whether the application is implicit (Y) or not (N)
APP_CAPTURE_SERVICE	VARCHAR2(64)		Service name used for the capture
APP_CAPTURE_MODULE	VARCHAR2(64)		Module name used for the capture

4.97 DBA_APPLY

DBA_APPLY displays information about all apply processes in the database. Its columns are the same as those in ALL_APPLY.

 See Also:

"ALL_APPLY"

4.98 DBA_APPLY_CHANGE_HANDLERS

DBA_APPLY_CHANGE_HANDLERS displays information about the change handlers on all tables in the database. Its columns are the same as those in ALL_APPLY_CHANGE_HANDLERS.

 See Also:

"ALL_APPLY_CHANGE_HANDLERS"

4.99 DBA_APPLY_CONFLICT_COLUMNS

DBA_APPLY_CONFLICT_COLUMNS displays information about the conflict handlers on all tables in the database. Its columns are the same as those in ALL_APPLY_CONFLICT_COLUMNS.

 See Also:

"ALL_APPLY_CONFLICT_COLUMNS"

4.100 DBA_APPLY_DML_CONF_HANDLERS

DBA_APPLY_DML_CONF_HANDLERS provides details about DML conflict handlers. Its columns are the same as those in ALL_APPLY_DML_CONF_HANDLERS.

 **See Also:**

["ALL_APPLY_DML_CONF_HANDLERS"](#)

4.101 DBA_APPLY_DML_HANDLERS

DBA_APPLY_DML_HANDLERS displays information about the DML handlers on all tables in the database. Its columns are the same as those in ALL_APPLY_DML_HANDLERS.

 **See Also:**

["ALL_APPLY_DML_HANDLERS"](#)

4.102 DBA_APPLY_ENQUEUE

DBA_APPLY_ENQUEUE displays information about the apply enqueue actions for all rules in the database. Its columns are the same as those in ALL_APPLY_ENQUEUE.

 **See Also:**

["ALL_APPLY_ENQUEUE"](#)

4.103 DBA_APPLY_ERROR

DBA_APPLY_ERROR displays information about the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL_APPLY_ERROR.

 **See Also:**

["ALL_APPLY_ERROR"](#)

4.104 DBA_APPLY_ERROR_MESSAGES

DBA_APPLY_ERROR_MESSAGES displays information about the individual messages in all of the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL_APPLY_ERROR_MESSAGES.

For XStream inbound servers, each message in an error transaction is an LCR.

 **Note:**

- Messages that were spilled from memory to hard disk do not appear in this view.
- This view does not contain information related to XStream outbound servers.

 **See Also:**

"[ALL_APPLY_ERROR_MESSAGES](#)"

4.105 DBA_APPLY_EXECUTE

DBA_APPLY_EXECUTE displays information about the apply execute actions for all rules in the database. Its columns are the same as those in ALL_APPLY_EXECUTE.

 **See Also:**

"[ALL_APPLY_EXECUTE](#)"

4.106 DBA_APPLY_HANDLE_COLLISIONS

DBA_APPLY_HANDLE_COLLISIONS provides details about apply handlers for collisions at the table level. Its columns are the same as those in ALL_APPLY_HANDLE_COLLISIONS.

 **See Also:**

"[ALL_APPLY_HANDLE_COLLISIONS](#)"

4.107 DBA_APPLY_INSTANTIATED_GLOBAL

DBA_APPLY_INSTANTIATED_GLOBAL displays information about databases for which an instantiation SCN has been set. Its columns are the same as those in ALL_APPLY_INSTANTIATED_GLOBAL.

 **See Also:**

["ALL_APPLY_INSTANTIATED_GLOBAL"](#)

4.108 DBA_APPLY_INSTANTIATED_OBJECTS

DBA_APPLY_INSTANTIATED_OBJECTS displays information about objects for which an instantiation SCN has been set. Its columns are the same as those in ALL_APPLY_INSTANTIATED_OBJECTS.

 **See Also:**

["ALL_APPLY_INSTANTIATED_OBJECTS"](#)

4.109 DBA_APPLY_INSTANTIATED_SCHEMAS

DBA_APPLY_INSTANTIATED_SCHEMAS displays information about schemas for which an instantiation SCN has been set. Its columns are the same as those in ALL_APPLY_INSTANTIATED_SCHEMAS.

 **See Also:**

["ALL_APPLY_INSTANTIATED_SCHEMAS"](#)

4.110 DBA_APPLY_KEY_COLUMNS

DBA_APPLY_KEY_COLUMNS displays information about the substitute key columns for all tables in the database. Its columns are the same as those in ALL_APPLY_KEY_COLUMNS.

 **See Also:**

["ALL_APPLY_KEY_COLUMNS"](#)

4.111 DBA_APPLY_OBJECT_DEPENDENCIES

DBA_APPLY_OBJECT_DEPENDENCIES displays information about the object dependencies for all apply processes in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
PARENT_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Parent of the object owner
PARENT_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Parent of the named object

4.112 DBA_APPLY_PARAMETERS

DBA_APPLY_PARAMETERS displays information about the parameters for all apply processes in the database. Its columns are the same as those in ALL_APPLY_PARAMETERS.

 See Also:

"ALL_APPLY_PARAMETERS"

4.113 DBA_APPLY_PROGRESS

DBA_APPLY_PROGRESS displays information about the progress made by all apply processes in the database. Its columns are the same as those in ALL_APPLY_PROGRESS.

 See Also:

"ALL_APPLY_PROGRESS"

4.114 DBA_APPLY_REPERROR_HANDLERS

DBA_APPLY_REPERROR_HANDLERS provides details about apply reperror handlers. Its columns are the same as those in ALL_APPLY_REPERROR_HANDLERS.

 See Also:

"ALL_APPLY_REPERROR_HANDLERS"

4.115 DBA_APPLY_SPILL_TXN

DBA_APPLY_SPILL_TXN displays information about the transactions spilled from memory to hard disk by all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process that spilled one or more transactions
XIDUSN	NUMBER	NOT NULL	Transaction ID undo segment number
XIDSLT	NUMBER	NOT NULL	Transaction ID slot number
XIDSQN	NUMBER	NOT NULL	Transaction ID sequence number
PDB_ID	NUMBER		PDB ID number
FIRST_SCN	NUMBER	NOT NULL	SCN of the first message in the transaction
MESSAGE_COUNT	NUMBER		Number of messages spilled for the transaction
FIRST_MESSAGE_CREATE_TIME	DATE		Source creation time of the first message in the transaction
SPILL_CREATION_TIME	DATE		Time the first message was spilled
FIRST_POSITION	RAW(64)		Position of the first message in this transaction. This column is populated only for an XStream inbound server.
TRANSACTION_ID	VARCHAR2(128)		Transaction ID of the spilled transaction

4.116 DBA_APPLY_TABLE_COLUMNS

DBA_APPLY_TABLE_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations. Its columns are the same as those in ALL_APPLY_TABLE_COLUMNS.

 See Also:

["ALL_APPLY_TABLE_COLUMNS"](#)

4.117 DBA_APPLY_VALUE_DEPENDENCIES

DBA_APPLY_VALUE_DEPENDENCIES displays information about the value dependencies for all apply processes in the database.

Column	Datatype	NULL	Description
DEPENDENCY_NAME	VARCHAR2(128)	NOT NULL	Name of the dependency
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
COLUMN_POSITION	NUMBER		Position of the column

4.118 DBA_AQ_AGENT_PRIVS

`DBA_AQ_AGENT_PRIVS` displays information about the registered AQ agents that are mapped to all users in the database.

Related View

`USER_AQ_AGENT_PRIVS` displays information about the registered AQ agents that are mapped to the current user. This view does not display the `DB_USERNAME` column.

Column	Datatype	NULL	Description
AGENT_NAME	VARCHAR2(128)	NOT NULL	Name of the AQ agent
DB_USERNAME	VARCHAR2(128)		Name of the database user that the agent maps to
HTTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO)
SMTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO)

See Also:

"`USER_AQ_AGENT_PRIVS`"

4.119 DBA_AQ_AGENTS

`DBA_AQ_AGENTS` displays information about all registered AQ agents in the database.

Column	Datatype	NULL	Description
AGENT_NAME	VARCHAR2(128)	NOT NULL	Name of the AQ agent
HTTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO)
SMTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO)

4.120 DBA_ARGUMENTS

`DBA_ARGUMENTS` lists the arguments of the functions and procedures that are available in the database. Its columns are the same as those in `ALL_ARGUMENTS`.

See Also:

- "`ALL_ARGUMENTS`"
- "`DBA PROCEDURES`" for information about the functions and procedures that are available in the database

4.121 DBA_ASSEMBLIES

DBA_ASSEMBLIES provides information about all assemblies in the database. Its columns are the same as those in ALL_ASSEMBLIES.

 **See Also:**

"[ALL_ASSEMBLIES](#)"

4.122 DBA_ASSOCIATIONS

DBA_ASSOCIATIONS describes all user-defined statistics in the database. Its columns are the same as those in ALL_ASSOCIATIONS.

 **See Also:**

"[ALL_ASSOCIATIONS](#)"

4.123 DBA_ATTRIBUTE_DIM_ATTR_CLASS

DBA_ATTRIBUTE_DIM_ATTR_CLASS describes the attribute classifications of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTR_CLASS.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_ATTR_CLASS](#)"

4.124 DBA_ATTRIBUTE_DIM_ATTR_CLS

DBA_ATTRIBUTE_DIM_ATTR_CLS is identical to DBA_ATTRIBUTE_DIM_ATTR_CLASS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[DBA_ATTRIBUTE_DIM_ATTR_CLASS](#)"

4.125 DBA_ATTRIBUTE_DIM_ATTR_CLS_AE

DBA_ATTRIBUTE_DIM_ATTR_CLS_AE describes the attribute classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTR_CLS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_ATTR_CLS_AE](#)"

4.126 DBA_ATTRIBUTE_DIM_ATTRS

DBA_ATTRIBUTE_DIM_ATTRS describes the attributes of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTRS.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_ATTRS](#)"

4.127 DBA_ATTRIBUTE_DIM_ATTRS_AE

DBA_ATTRIBUTE_DIM_ATTRS_AE describes the attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTRS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_ATTRS_AE](#)"

4.128 DBA_ATTRIBUTE_DIM_CLASS

DBA_ATTRIBUTE_DIM_CLASS describes the classifications of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_CLASS.

 **See Also:**

["ALL_ATTRIBUTE_DIM_CLASS"](#)

4.129 DBA_ATTRIBUTE_DIM_CLASS_AE

DBA_ATTRIBUTE_DIM_CLASS_AE describes the classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_CLASS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ATTRIBUTE_DIM_CLASS_AE"](#)

4.130 DBA_ATTRIBUTE_DIM_JN_PTHS

DBA_ATTRIBUTE_DIM_JN_PTHS is identical to DBA_ATTRIBUTE_DIM_JOIN_PATHS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["DBA_ATTRIBUTE_DIM_JOIN_PATHS"](#)

4.131 DBA_ATTRIBUTE_DIM_JN_PTHS_AE

DBA_ATTRIBUTE_DIM_JN_PTHS_AE describes the join paths for all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_JN_PTHS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_JN_PTHS_AE](#)"

4.132 DBA_ATTRIBUTE_DIM_JOIN_PATHS

DBA_ATTRIBUTE_DIM_JOIN_PATHS describes the join paths for all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_JOIN_PATHS.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_JOIN_PATHS](#)"

4.133 DBA_ATTRIBUTE_DIM_KEYS

DBA_ATTRIBUTE_DIM_KEYS describes the keys of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_KEYS.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_KEYS](#)"

4.134 DBA_ATTRIBUTE_DIM_KEYS_AE

DBA_ATTRIBUTE_DIM_KEYS_AE describes the keys of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_KEYS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_KEYS_AE](#)"

4.135 DBA_ATTRIBUTE_DIM_LEVEL_ATTRS

DBA_ATTRIBUTE_DIM_LEVEL_ATTRS describes the attributes of the levels of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LEVEL_ATTRS.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_LEVEL_ATTRS](#)"

4.136 DBA_ATTRIBUTE_DIM_LEVELS

DBA_ATTRIBUTE_DIM_LEVELS describes the levels of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LEVELS.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_LEVELS](#)"

4.137 DBA_ATTRIBUTE_DIM_LEVELS_AE

DBA_ATTRIBUTE_DIM_LEVELS_AE describes the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LEVELS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_LEVELS_AE](#)"

4.138 DBA_ATTRIBUTE_DIM_LVL_ATRS

DBA_ATTRIBUTE_DIM_LVL_ATRS is identical to DBA_ATTRIBUTE_DIM_LEVEL_ATTRS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[DBA_ATTRIBUTE_DIM_LEVEL_ATTRS](#)"

4.139 DBA_ATTRIBUTE_DIM_LVL_ATRS_AE

DBA_ATTRIBUTE_DIM_LVL_ATRS_AE describes the attributes of the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LVL_ATRS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ATTRIBUTE_DIM_LVL_ATRS_AE"](#)

4.140 DBA_ATTRIBUTE_DIM_LVL_CLASS

DBA_ATTRIBUTE_DIM_LVL_CLASS describes the level classifications of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LVL_CLASS.

 **See Also:**

["ALL_ATTRIBUTE_DIM_LVL_CLASS"](#)

4.141 DBA_ATTRIBUTE_DIM_LVL_CLS

DBA_ATTRIBUTE_DIM_LVL_CLS is identical to DBA_ATTRIBUTE_DIM_LVL_CLASS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["DBA_ATTRIBUTE_DIM_LVL_CLASS"](#)

4.142 DBA_ATTRIBUTE_DIM_LVL_CLS_AE

DBA_ATTRIBUTE_DIM_LVL_CLS_AE describes the level classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LVL_CLS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ATTRIBUTE_DIM_LVL_CLS_AE"](#)

4.143 DBA_ATTRIBUTE_DIM_ORD_ATRS

DBA_ATTRIBUTE_DIM_ORD_ATRS is identical to DBA_ATTRIBUTE_DIM_ORDER_ATTRS.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[DBA_ATTRIBUTE_DIM_ORDER_ATTRS](#)"

4.144 DBA_ATTRIBUTE_DIM_ORD_ATRS_AE

DBA_ATTRIBUTE_DIM_ORD_ATRS_AE describes the order attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ORD_ATRS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_ORD_ATRS_AE](#)"

4.145 DBA_ATTRIBUTE_DIM_ORDER_ATTRS

DBA_ATTRIBUTE_DIM_ORDER_ATTRS describes the order attributes of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ORDER_ATTRS.

 **See Also:**

"[ALL_ATTRIBUTE_DIM_ORDER_ATTRS](#)"

4.146 DBA_ATTRIBUTE_DIM_TABLES

DBA_ATTRIBUTE_DIM_TABLES describes the tables used by all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_TABLES.

 **See Also:**

["ALL_ATTRIBUTE_DIM_TABLES"](#)

4.147 DBA_ATTRIBUTE_DIM_TABLES_AE

DBA_ATTRIBUTE_DIM_TABLES_AE describes the tables used by all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_TABLES_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_ATTRIBUTE_DIM_TABLES_AE"](#)

4.148 DBA_ATTRIBUTE_DIMENSIONS

DBA_ATTRIBUTE_DIMENSIONS describes all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIMENSIONS.

 **See Also:**

["ALL_ATTRIBUTE_DIMENSIONS"](#)

4.149 DBA_ATTRIBUTE_DIMENSIONS_AE

DBA_ATTRIBUTE_DIMENSIONS_AE describes all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIMENSIONS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_ATTRIBUTE_DIMENSIONS_AE](#)"

4.150 DBA_ATTRIBUTE_TRANSFORMATIONS

DBA_ATTRIBUTE_TRANSFORMATIONS describes the transformation functions for all transformations in the database. Its columns are the same as those in ALL_ATTRIBUTE_TRANSFORMATIONS.

 **See Also:**

"[ALL_ATTRIBUTE_TRANSFORMATIONS](#)"

4.151 DBA_AUDIT_EXISTS

DBA_AUDIT_EXISTS displays audit trail entries produced by AUDIT EXISTS and AUDIT NOT EXISTS.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED_AUDIT_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2 (255)		Operating system login username of the user whose actions were audited

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2 (128)		Client host machine name
TERMINAL	VARCHAR2 (255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
OWNER	VARCHAR2 (128)		Intended creator of the non-existent object
OBJ_NAME	VARCHAR2 (128)		Name of the object affected by the action
ACTION_NAME	VARCHAR2 (28)		Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL
NEW_OWNER	VARCHAR2 (128)		Owner of the object named in the NEW_NAME column
NEW_NAME	VARCHAR2 (128)		New name of an object after a RENAME or the name of the underlying object

Column	Datatype	NULL	Description
OBJ_PRIVILEGE	VARCHAR2 (32)		<p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> 0 - ALTER 1 - AUDIT 2 - COMMENT 3 - DELETE 4 - GRANT 5 - INDEX 6 - INSERT 7 - LOCK 8 - CREATE 9 - SELECT 10 - UPDATE 11 - REFERENCES 12 - EXECUTE 13 - VIEW 14 - DROP 15 - ANALYZE 16 - CREATE 17 - READ 18 - WRITE 19 - KEEP SEQUENCE 20 - ENQUEUE 21 - DEQUEUE 22 - UNDER 23 - ON COMMIT 24 - REWRITE 25 - UPSERT 26 - DEBUG 27 - FLASHBACK 28 - MERGE 29 - USE 30 - FLASHBACK ARCHIVE 31 - DIRECTORY EXECUTE <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p>-----Y---</p>
SYS_PRIVILEGE	VARCHAR2 (40)		System privileges granted or revoked by a GRANT or REVOKE statement
GRANTEE	VARCHAR2 (128)		Name of the grantee specified in a GRANT or REVOKE statement

Column	Datatype	NULL	Description
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session
STATEMENTID	NUMBER	NOT NULL	Numeric ID for each statement run
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> • 0 - Action succeeded • 2004 - Security violation
CLIENT_ID	VARCHAR2 (128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2 (64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2 (32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2 (16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW (8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the query
SQL_BIND	NVARCHAR2 (2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2 (2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2 (128)		Name of the edition containing the audited object

Note:

The SQL_BIND and SQL_TEXT columns are only populated if the AUDIT_TRAIL initialization parameter is set to db, extended.

See Also:

["AUDIT_TRAIL"](#)

4.152 DBA_AUDIT_MGMT_CLEAN_EVENTS

`DBA_AUDIT_MGMT_CLEAN_EVENTS` displays information about the history of audit trail cleanup or purge events.

Periodically, you should delete the contents of this view so that it will not grow too large.

 **Note:**

This view is intended for use with traditional auditing (pre-Oracle Database 12c auditing) only, not for unified auditing.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
AUDIT_TRAIL	VARCHAR2(28)		Audit trail that was cleaned at the time of the event: <ul style="list-style-type: none"> • STANDARD AUDIT TRAIL • FGA AUDIT TRAIL • STANDARD AND FGA AUDIT TRAIL • OS AUDIT TRAIL • XML AUDIT TRAIL • OS AND XML AUDIT TRAIL • ALL AUDIT TRAILS
RAC_INSTANCE	NUMBER	NOT NULL	Instance number indicating the Oracle RAC instance that was cleaned up at the time of the event; 0 implies not applicable
CLEANUP_TIME	TIMESTAMP(6) WITH TIME ZONE		Timestamp when the cleanup event completed
DELETE_COUNT	NUMBER		Number of audit records or audit files that were deleted at the time of the event
WAS_FORCED	VARCHAR2(3)		Indicates whether a forced cleanup occurred (YES) or not (NO); forced cleanup bypasses the last archive timestamp set

 **Note:**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated. Instead, a summary of cleanup events is written to the respective database instance's alert log file.

4.153 DBA_AUDIT_MGMT_CLEANUP_JOBS

`DBA_AUDIT_MGMT_CLEANUP_JOBS` displays information about the configured audit trail purge jobs.

 **Note:**

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
JOB_NAME	VARCHAR2(100)	NOT NULL	Name of the audit trail purge job
JOB_STATUS	VARCHAR2(8)		Current status of the audit trail purge job (ENABLED) or (DISABLED)
AUDIT_TRAIL	VARCHAR2(28)		<p>Audit trail for which the audit trail purge job is configured:</p> <ul style="list-style-type: none"> • STANDARD AUDIT TRAIL • FGA AUDIT TRAIL • STANDARD AND FGA AUDIT TRAIL • OS AUDIT TRAIL • XML AUDIT TRAIL • OS AND XML AUDIT TRAIL • ALL AUDIT TRAILS • UNIFIED AUDIT TRAIL
JOB_FREQUENCY	VARCHAR2(100)		Frequency at which the audit trail purge job runs
USE_LAST_ARCHIVE_TIMESTAMP	VARCHAR2(3)		<p>Indicates whether the audit trail purge job invocation uses the last archive timestamp. The last archive timestamp is shown in the <code>LAST_ARCHIVE_TS</code> column of the <code>DBA_AUDIT_MGMT_LAST_ARCH_TS</code> view. Possible values:</p> <ul style="list-style-type: none"> • YES - Indicates that the audit trail purge job invocation uses the last archive timestamp • NO - Indicates that the audit trail purge job invocation does not use the last archive timestamp
JOB_CONTAINER	VARCHAR2(7)		<p>In a CDB, indicates whether audit trail purge job will be performed only in the current container or in all the containers. Possible values:</p> <ul style="list-style-type: none"> • CURRENT - Indicates that audit trail purge job will be performed only in the current container • ALL - Indicates that audit trail purge job will be performed in all the containers <p>In a non-CDB, the value in this column is always CURRENT.</p>

 See Also:["DBA_AUDIT_MGMT_LAST_ARCH_TS"](#)

4.154 DBA_AUDIT_MGMT_CONFIG_PARAMS

`DBA_AUDIT_MGMT_CONFIG_PARAMS` displays information about the currently configured audit trail properties that are used by the `DBMS_AUDIT_MGMT` PL/SQL package.

 Note:

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(1024)	NOT NULL	Name of the property
PARAMETER_VALUE	VARCHAR2(4000)		Value of the property
AUDIT_TRAIL	VARCHAR2(28)		Audit trails for which the property is configured: <ul style="list-style-type: none"> • STANDARD AUDIT TRAIL • FGA AUDIT TRAIL • STANDARD AND FGA AUDIT TRAIL • OS AUDIT TRAIL • XML AUDIT TRAIL • OS AND XML AUDIT TRAIL • ALL AUDIT TRAILS • UNIFIED AUDIT TRAIL

 Note:

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when the `DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL` PL/SQL procedure is invoked. If the procedure was used when the database was in read-only mode, use `DBMS_AUDIT_MGMT.GET_AUDIT_TRAIL` to check the value of the property.

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for more information about the parameters specified with the `DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_PROPERTY` procedure

4.155 DBA_AUDIT_MGMT_LAST_ARCH_TS

`DBA_AUDIT_MGMT_LAST_ARCH_TS` displays information about the last archive timestamps set for audit trail cleanup or purges.

 **Note:**

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
AUDIT_TRAIL	VARCHAR2(20)		Audit trail for which the last archive timestamp applies: <ul style="list-style-type: none"> • STANDARD AUDIT TRAIL • FGA AUDIT TRAIL • OS AUDIT TRAIL • XML AUDIT TRAIL • UNIFIED AUDIT TRAIL
RAC_INSTANCE	NUMBER	NOT NULL	Oracle RAC instance number for which the last archive timestamp applies; 0 implies not applicable
LAST_ARCHIVE_TS	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last audit record or audit file that has been archived
DATABASE_ID	NUMBER	NOT NULL	Database ID of the audit records to clean up
CONTAINER_GUID	VARCHAR2(33)	NOT NULL	GUID of the container of the audit records to clean up

 **Note:**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when

`DBMS_AUDIT_MGMT.SET_LAST_ARCHIVE_TIMESTAMP` is invoked. In such a case, use `DBMS_AUDIT_MGMT.GET_LAST_ARCHIVE_TIMESTAMP` to check for the timestamp, if it was configured for the database instance.

 See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about DBMS_AUDIT_MGMT subprograms

4.156 DBA_AUDIT_OBJECT

DBA_AUDIT_OBJECT displays audit trail records for all objects in the database.

 Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED_AUDIT_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Related View

USER_AUDIT_OBJECT displays audit trail records for the objects accessible to the current user.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2 (255)		Operating system login username of the user whose actions were audited
USERNAME	VARCHAR2 (128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2 (128)		Client host machine name
TERMINAL	VARCHAR2 (255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
OWNER	VARCHAR2 (128)		Creator of the object affected by the action
OBJ_NAME	VARCHAR2 (128)		Name of the object affected by the action
ACTION_NAME	VARCHAR2 (28)		Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL
NEW_OWNER	VARCHAR2 (128)		Owner of the object named in the NEW_NAME column
NEW_NAME	VARCHAR2 (128)		New name of an object after a RENAME or the name of the underlying object

Column	Datatype	NULL	Description
SES_ACTIONS	VARCHAR2(19)		Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none">• - - None• S - Success• F - Failure• B - Both
COMMENT_TEXT	VARCHAR2(4000)		Text comment on the audit trail
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session
STATEMENTID	NUMBER	NOT NULL	Numeric ID for each statement run
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none">• 0 - Action succeeded• 2004 - Security violation
PRIV_USED	VARCHAR2(40)		System privilege used to execute the action
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2(64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the query
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2(2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object

 **Note:**

The SQL_BIND and SQL_TEXT columns are only populated if the AUDIT_TRAIL initialization parameter is set to db, extended.

 **See Also:**

- "[AUDIT_TRAIL](#)"
- "[USER_AUDIT_OBJECT](#)"

4.157 DBA_AUDIT_POLICIES

`DBA_AUDIT_POLICIES` describes all fine-grained auditing policies in the database. Its columns are the same as those in `ALL_AUDIT_POLICIES`.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

 **See Also:**

["ALL_AUDIT_POLICIES"](#)

4.158 DBA_AUDIT_POLICY_COLUMNS

`DBA_AUDIT_POLICY_COLUMNS` describes all fine-grained auditing policy columns in the database. Its columns are the same as those in `ALL_AUDIT_POLICY_COLUMNS`.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

See Also:["ALL_AUDIT_POLICY_COLUMNS"](#)

4.159 DBA_AUDIT_SESSION

DBA_AUDIT_SESSION displays all audit trail records concerning CONNECT and DISCONNECT.

Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED_AUDIT_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Related View

USER_AUDIT_SESSION displays the audit trail records concerning connections and disconnections of the current user.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2 (255)		Operating system login username of the user whose actions were audited
USERNAME	VARCHAR2 (128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2 (128)		Client host machine name
TERMINAL	VARCHAR2 (255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
ACTION_NAME	VARCHAR2 (28)		Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL
LOGOFF_TIME	DATE		Date and time of user log off
LOGOFF_LREAD	NUMBER		Logical reads for the session
LOGOFF_PREAD	NUMBER		Physical reads for the session
LOGOFF_LWRITE	NUMBER		Logical writes for the session
LOGOFF_DLOCK	VARCHAR2 (40)		Deadlocks detected during the session
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> • 0 - Action succeeded • 2004 - Security violation

Column	Datatype	NULL	Description
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session (in centiseconds)
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process

4.160 DBA_AUDIT_STATEMENT

`DBA_AUDIT_STATEMENT` displays audit trail records for all `GRANT`, `REVOKE`, `AUDIT`, `NOAUDIT`, and `ALTER SYSTEM` statements in the database.

 Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Related View

`USER_AUDIT_STATEMENT` displays audit trail records for the `GRANT`, `REVOKE`, `AUDIT`, `NOAUDIT`, and `ALTER SYSTEM` statements issued by the current user.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2(255)		Operating system login username of the user whose actions were audited

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2 (128)		Client host machine name
TERMINAL	VARCHAR2 (255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
OWNER	VARCHAR2 (128)		Creator of the object affected by the action
OBJ_NAME	VARCHAR2 (128)		Name of the object affected by the action
ACTION_NAME	VARCHAR2 (28)		Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL
NEW_NAME	VARCHAR2 (128)		New name of an object after a RENAME or the name of the underlying object

Column	Datatype	NULL	Description
OBJ_PRIVILEGE	VARCHAR2(32)		<p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> 0 - ALTER 1 - AUDIT 2 - COMMENT 3 - DELETE 4 - GRANT 5 - INDEX 6 - INSERT 7 - LOCK 8 - CREATE 9 - SELECT 10 - UPDATE 11 - REFERENCES 12 - EXECUTE 13 - VIEW 14 - DROP 15 - ANALYZE 16 - CREATE 17 - READ 18 - WRITE 19 - KEEP SEQUENCE 20 - ENQUEUE 21 - DEQUEUE 22 - UNDER 23 - ON COMMIT 24 - REWRITE 25 - UPSERT 26 - DEBUG 27 - FLASHBACK 28 - MERGE 29 - USE 30 - FLASHBACK ARCHIVE 31 - DIRECTORY EXECUTE <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p>-----Y---</p>
SYS_PRIVILEGE	VARCHAR2(40)		System privileges granted or revoked by a GRANT or REVOKE statement
ADMIN_OPTION	VARCHAR2(1)		Signifies the role or system privilege was granted with the ADMIN option

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the grantee specified in a GRANT or REVOKE statement
AUDIT_OPTION	VARCHAR2(40)		Auditing option set with the AUDIT statement
SES_ACTIONS	VARCHAR2(19)		Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none">• - - None• S - Success• F - Failure• B - Both
COMMENT_TEXT	VARCHAR2(4000)		Text comment on the audit trail, inserted by the application
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session
STATEMENTID	NUMBER	NOT NULL	Numeric ID for each statement run
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none">• 0 - Action succeeded• 2004 - Security violation
PRIV_USED	VARCHAR2(40)		System privilege used to execute the action
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2(64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the query
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2(2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object

Note:

The SQL_BIND and SQL_TEXT columns are only populated if the AUDIT_TRAIL initialization parameter is set to db, extended.

4.161 DBA_AUDIT_TRAIL

`DBA_AUDIT_TRAIL` displays all standard audit trail entries.

Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Related View

`USER_AUDIT_TRAIL` displays the standard audit trail entries related to the current user.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2 (255)		Operating system login username of the user whose actions were audited
USERNAME	VARCHAR2 (128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2 (128)		Client host machine name
TERMINAL	VARCHAR2 (255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by <code>AUDIT SESSION</code>) in the local database session time zone
OWNER	VARCHAR2 (128)		Creator of the object affected by the action
OBJ_NAME	VARCHAR2 (128)		Name of the object affected by the action
ACTION	NUMBER	NOT NULL	Numeric action type code. The corresponding name of the action type is in the <code>ACTION_NAME</code> column.

Column	Datatype	NULL	Description
ACTION_NAME	VARCHAR2(28)		Name of the action type corresponding to the numeric code in the ACTION column
NEW_OWNER	VARCHAR2(128)		Owner of the object named in the NEW_NAME column
NEW_NAME	VARCHAR2(128)		New name of the object after a RENAME or the name of the underlying object

Column	Datatype	NULL	Description
OBJ_PRIVILEGE	VARCHAR2 (32)		<p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> 0 - ALTER 1 - AUDIT 2 - COMMENT 3 - DELETE 4 - GRANT 5 - INDEX 6 - INSERT 7 - LOCK 8 - CREATE 9 - SELECT 10 - UPDATE 11 - REFERENCES 12 - EXECUTE 13 - VIEW 14 - DROP 15 - ANALYZE 16 - CREATE 17 - READ 18 - WRITE 19 - KEEP SEQUENCE 20 - ENQUEUE 21 - DEQUEUE 22 - UNDER 23 - ON COMMIT 24 - REWRITE 25 - UPSERT 26 - DEBUG 27 - FLASHBACK 28 - MERGE 29 - USE 30 - FLASHBACK ARCHIVE 31 - DIRECTORY EXECUTE <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p>-----Y---</p>
SYS_PRIVILEGE	VARCHAR2 (40)		System privileges granted or revoked by a GRANT or REVOKE statement
ADMIN_OPTION	VARCHAR2 (1)		Indicates whether the role or system privilege was granted with the ADMIN option

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the grantee specified in a GRANT or REVOKE statement
AUDIT_OPTION	VARCHAR2(40)		Auditing option set with the AUDIT statement
SES_ACTIONS	VARCHAR2(19)		Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none">• - - None• S - Success• F - Failure• B - Both
LOGOFF_TIME	DATE		Date and time of user log off
LOGOFF_LREAD	NUMBER		Logical reads for the session
LOGOFF_PREAD	NUMBER		Physical reads for the session
LOGOFF_LWRITE	NUMBER		Logical writes for the session
LOGOFF_DLOCK	VARCHAR2(40)		Deadlocks detected during the session
COMMENT_TEXT	VARCHAR2(4000)		Text comment on the audit trail entry, providing more information about the statement audited
			Also indicates how the user or remote call was authenticated. The method can be one of the following: <ul style="list-style-type: none">• DATABASE - Authentication was done by password• NETWORK - Authentication was done by Oracle Net Services or strong authentication• PROXY - Client was authenticated by another user; the name of the proxy user follows the method type
			When an object is accessed remotely over a database link, the COMMENT_TEXT column also captures the information about the database link. For example:
			<pre>DBLINK_INFO: (SOURCE_GLOBAL_NAME=view02.regress.rdbms.dev .us.example.com, DBLINK_NAME=VIEW05_LINK.REGRESS.RDBMS.DEV.US .EXAMPLE.COM, SOURCE_AUDIT_SESSIONID=250805)</pre>
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session. Each user session gets a unique session ID.
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session. The entry ID is an index of a session's audit entries that starts at 1 and increases to the number of entries that are written.

Column	Datatype	NULL	Description
STATEMENTID	NUMBER	NOT NULL	<i>n</i> th statement in the user session. The first SQL statement gets a value of 1 and the value is incremented for each subsequent SQL statement. Note that one SQL statement can create more than one audit trail entry (for example, when more than one object is audited from the same SQL statement), and in this case the statement ID remains the same for that statement and the entry ID increases for each audit trail entry created by the statement.
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> • 0 - Action succeeded • 2004 - Security violation
PRIV_USED	VARCHAR2 (40)		System privilege used to execute the action
CLIENT_ID	VARCHAR2 (128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2 (64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session (in centiseconds)
EXTENDED_TIMESTAMP	TIMESTAMP (6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2 (32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2 (16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW (8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the creation of the audit trail entry
SQL_BIND	NVARCHAR2 (2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2 (2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2 (128)		Name of the edition containing the audited object
DBID	NUMBER		Database identifier of the audited database
RLS_INFO	CLOB		Stores virtual private database (VPD) policy names and predicates separated by delimiter.
CURRENT_USER	VARCHAR2 (128)		To format the output into individual rows, use the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_STD function.
			Effective user for the statement execution

Note:

The `SQL_BIND` and `SQL_TEXT` columns are only populated if the `AUDIT_TRAIL` initialization parameter is set to `db, extended`.

See Also:

- "[AUDIT_TRAIL](#)"
- "[USER_AUDIT_TRAIL](#)"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_XML` function.

4.162 DBA_AUTO_INDEX_CONFIG

`DBA_AUTO_INDEX_CONFIG` displays the current configuration parameter settings for automatic indexing.

You can set automatic indexing configuration parameters by using the `DBMS_AUTO_INDEX.CONFIGURE` procedure.

Column	Datatype	NULL	Description
<code>PARAMETER_NAME</code>	<code>VARCHAR2(128)</code>	NOT NULL	Name of the configuration parameter
<code>PARAMETER_VALUE</code>	<code>VARCHAR2(4000)</code>		Value of the configuration parameter
<code>LAST_MODIFIED</code>	<code>TIMESTAMP(6)</code>		Time at which the parameter value was last modified
<code>MODIFIED_BY</code>	<code>VARCHAR2(128)</code>		User who last modified the parameter value

Note:

This view is available starting with Oracle Database 19c.

See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about the `DBMS_AUTO_INDEX.CONFIGURE` procedure

4.163 DBA_AUTO_SEGADV_CTL

`DBA_AUTO_SEGADV_CTL` exposes the control information used by the segment advisor.

This information gives the DBA an idea of what is happening in the auto advisor.

Column	Datatype	NULL	Description
AUTO_TASKID	NUMBER		Unique task ID generated by the auto advisor
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the segment
SEGMENT_OWNER	VARCHAR2(128)		Owner of the segment
SEGMENT_NAME	VARCHAR2(128)		Name of the segment
SEGMENT_TYPE	VARCHAR2(18)		The type of segment (TABLE, INDEX, and so on)
PARTITION_NAME	VARCHAR2(128)		Name of the subsegment (if partitioned)
STATUS	VARCHAR2(40)		Status of the analysis: <ul style="list-style-type: none"> • NEW - the segment/tablespace has not been analyzed • BEING-PROCESSED - the segment/tablespace is being processed • COMPLETE - the segment/tablespace has been analyzed • ERROR - problem with the segment/tablespace
REASON	VARCHAR2(40)		Reason why this segment was chosen
REASON_VALUE	NUMBER		A value associated with the reason
CREATION_TIME	TIMESTAMP(6)		Time when this entry was created
PROCESSED_TASKID	NUMBER		Auto advisor task that was used to process the segment/tablespace
END_TIME	TIMESTAMP(6)		Time at which the advisor task was completed

4.164 DBA_AUTO_SEGADV_SUMMARY

DBA_AUTO_SEGADV_SUMMARY provides a summary of the auto advisor task runs.

Column	Datatype	NULL	Description
AUTO_TASKID	NUMBER	NOT NULL	Unique auto task ID
SNAPID	NUMBER		Maximum AWR snapid used to process the segments
SEGMENTS_SELECTED	NUMBER		Number of segments chosen for analysis
SEGMENTS_PROCESSED	NUMBER		Number of segments actually processed
TABLESPACE_SELECTED	NUMBER		Number of tablespaces chosen for analysis
TABLESPACE_PROCESSED	NUMBER		Number of tablespaces actually processed
RECOMMENDATIONS_COUNT	NUMBER		Number of recommendations generated
START_TIME	TIMESTAMP(6)		Time at which the auto task was started
END_TIME	TIMESTAMP(6)		Time at which the auto task ended

4.165 DBA_AUTO_STAT_EXECUTIONS

DBA_AUTO_STAT_EXECUTIONS displays information about automatic optimizer statistics collection tasks, which are executed by the automated maintenance tasks infrastructure (known as AutoTask).

Column	Datatype	NULL	Description
OPID	NUMBER		Unique identifier for the execution of the task
ORIGIN	VARCHAR2 (19)		Origin of the execution of the task. Possible values: <ul style="list-style-type: none"> AUTO_TASK: A standard automatic optimizer statistics collection task, which is executed automatically in an Oracle Scheduler window, known as maintenance window HIGH_FREQ_AUTO_TASK: A high-frequency automatic optimizer statistics collection task, which is executed at frequent intervals and complements the standard automatic optimizer statistics collection tasks
STATUS	VARCHAR2 (49)		Status of the execution of the task. Possible values: <ul style="list-style-type: none"> IN PROGRESS: The operation is currently running COMPLETED: The operation has completed successfully FAILED: The operation has failed TIMED OUT: The operation timed out because the time allocated for the maintenance window was not sufficient for the operation to complete
START_TIME	TIMESTAMP (6) WITH TIME ZONE		Start time for the execution of the task
END_TIME	TIMESTAMP (6) WITH TIME ZONE		End time for the execution of the task
COMPLETED	NUMBER		Number of objects for which statistics collection was completed during the execution of the task
FAILED	NUMBER		Number of objects for which statistics collection failed during the execution of the task
TIMED_OUT	NUMBER		Number of objects for which statistics collection timed out during the execution of the task
IN_PROGRESS	NUMBER		Number of objects for which statistics collection is in progress during the execution of the task

 **Note:**

This view is available starting with Oracle Database 19c.

4.166 DBA_AUTOTASK_CLIENT

DBA_AUTOTASK_CLIENT displays statistical data for each automated maintenance task over 7-day and 30-day periods.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2 (64)		Name of the client
STATUS	VARCHAR2 (8)		Job status: <ul style="list-style-type: none"> ENABLED DISABLED

Column	Datatype	NULL	Description
CONSUMER_GROUP	VARCHAR2(128)		Consumer group used for normal priority jobs for this client
CLIENT_TAG	VARCHAR2(2)		Tag used to identify jobs for this client
PRIORITY_OVERRIDE	VARCHAR2(7)		User-specified priority at which the task executes: <ul style="list-style-type: none"> • URGENT • HIGH • MEDIUM • LOW
ATTRIBUTES	VARCHAR2(4000)		Attributes of the client
WINDOW_GROUP	VARCHAR2(64)		Window group used to schedule jobs
SERVICE_NAME	VARCHAR2(64)		Name of the service on which jobs will execute for the client
RESOURCE_PERCENTAGE	NUMBER		Percentage of maintenance resources for high priority maintenance tasks for this client
USE_RESOURCE_ESTIMATES	VARCHAR2(5)		Indicates whether resource estimates are used for this client (TRUE) or not (FALSE)
MEAN_JOB_DURATION	INTERVAL DAY(9) TO SECOND(9)		Average elapsed time for a job for this client (in seconds)
MEAN_JOB_CPU	INTERVAL DAY(9) TO SECOND(9)		Average CPU time for a job submitted by this client (in seconds)
MEAN_JOB_ATTEMPTS	NUMBER		Average number of attempts it takes to complete a task
MEAN_INCOMING_TASKS_7_DAYS	NUMBER		Average number of incoming tasks at the Maintenance Window Start over the last 7 days
MEAN_INCOMING_TASKS_30_DAYS	NUMBER		Average number of incoming tasks at the Maintenance Window Start over the last 30 days
TOTAL_CPU_LAST_7_DAYS	INTERVAL DAY(9) TO SECOND(9)		Cumulative CPU time used by the jobs for this client over the last 7 days (in seconds)
TOTAL_CPU_LAST_30_DAYS	INTERVAL DAY(9) TO SECOND(9)		Cumulative CPU time used by the jobs for this client over the last 30 days (in seconds)
MAX_DURATION_LAST_7_DAYS	INTERVAL DAY(3) TO SECOND(0)		Maximum elapsed time for a job over the last 7 days (in seconds)
MAX_DURATION_LAST_30_DAYS	INTERVAL DAY(3) TO SECOND(0)		Maximum elapsed time for a job over the last 30 days (in seconds)
WINDOW_DURATION_LAST_7_DAYS	INTERVAL DAY(9) TO SECOND(9)		Total time during which the client was active during the last 7 days
WINDOW_DURATION_LAST_30_DAYS	INTERVAL DAY(9) TO SECOND(9)		Total time during which the client was active during the last 30 days
LAST_CHANGE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of last configuration change for the client

4.167 DBA_AUTOTASK_CLIENT_HISTORY

DBA_AUTOTASK_CLIENT_HISTORY displays per-window history of job execution counts for each automated maintenance task.

This information is viewable in the Job History page of Enterprise Manager.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
WINDOW_NAME	VARCHAR2(261)		Name of the maintenance window
WINDOW_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Maintenance window start time
WINDOW_DURATION	INTERVAL DAY(9) TO SECOND(6)		Window duration (NULL for currently open window)
JOBS_CREATED	NUMBER		Number of jobs created on behalf of the client in this window
JOBS_STARTED	NUMBER		Number of jobs started on behalf of the client during the maintenance window
JOBS_COMPLETED	NUMBER		Number of jobs successfully completed on behalf of the client during the maintenance window
WINDOW_END_TIME	TIMESTAMP(6) WITH TIME ZONE		Window end time

4.168 DBA_AUTOTASK_CLIENT_JOB

DBA_AUTOTASK_CLIENT_JOB displays information about currently running Scheduler jobs created for automated maintenance tasks.

DBA_AUTOTASK_CLIENT_JOB provides information about some objects targeted by those jobs, as well as some additional statistics from previous instantiations of the same task. Some of this additional data is taken from generic Scheduler views.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
JOB_NAME	VARCHAR2(65)		Name of the job
JOB_SCHEDULER_STATUS	VARCHAR2(15)		Job status: <ul style="list-style-type: none"> • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • REMOTE • SUCCEEDED • CHAIN_STALLED
TASK_NAME	VARCHAR2(64)		Name of the task being performed
TASK_TARGET_TYPE	VARCHAR2(64)		Type of the target being processed
TASK_TARGET_NAME	VARCHAR2(513)	NOT NULL	Name of the target
TASK_PRIORITY	VARCHAR2(7)		Priority of the task: <ul style="list-style-type: none"> • URGENT • HIGH • MEDIUM • LOW
TASK_OPERATION	VARCHAR2(64)		Operation performed on the object

4.169 DBA_AUTOTASK_JOB_HISTORY

`DBA_AUTOTASK_JOB_HISTORY` displays the history of automated maintenance task job runs. Jobs are added to this view after they finish executing.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the automated maintenance client
WINDOW_NAME	VARCHAR2(261)		Name of the maintenance window
WINDOW_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time of the maintenance window
WINDOW_DURATION	INTERVAL DAY(9) TO SECOND(6)		Duration of the maintenance window
JOB_NAME	VARCHAR2(261)		Name of the maintenance job
JOB_STATUS	VARCHAR2(30)		Status of the maintenance job
JOB_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time of the maintenance job
JOB_DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the maintenance job
JOB_ERROR	NUMBER		Error code for the job (if any)
JOB_INFO	VARCHAR2(4000)		Additional information about the job

4.170 DBA_AUTOTASK_OPERATION

`DBA_AUTOTASK_OPERATION` displays all automated maintenance task operations for each client.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
OPERATION_NAME	VARCHAR2(64)		Name of the operation
OPERATION_TAG	VARCHAR2(3)		Tag for the operation
PRIORITY_OVERRIDE	VARCHAR2(7)		User-specified priority at which the task executes: <ul style="list-style-type: none"> • URGENT • HIGH • MEDIUM • LOW
ATTRIBUTES	VARCHAR2(4000)		Attributes of the operation
USE_RESOURCE_ESTIMATES	VARCHAR2(5)		Indicates whether resource usage estimates are used for the operation (<code>TRUE</code>) or not (<code>FALSE</code>)
STATUS	VARCHAR2(8)		Job status: <ul style="list-style-type: none"> • ENABLED • DISABLED
LAST_CHANGE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last change

4.171 DBA_AUTOTASK_SCHEDULE

DBA_AUTOTASK_SCHEDULE displays the schedule of maintenance windows for the next 32 days for each client.

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2(128)		Name of the maintenance window
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Projected start time of the window
DURATION	INTERVAL DAY(3) TO SECOND(0)		Currently defined duration of the window (NULL for the currently open window)

4.172 DBA_AUTOTASK_STATUS

DBA_AUTOTASK_STATUS displays status information for automated maintenance.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(8)		Shows the status of automated maintenance. Possible values are: <ul style="list-style-type: none">• ENABLED• DISABLED• ALLOWED• INVALID
LAST_CHANGE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of last status change

4.173 DBA_AUTOTASK_TASK

DBA_AUTOTASK_TASK displays information about current and past automated maintenance tasks.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
TASK_NAME	VARCHAR2(64)		Name of the task being performed
TASK_TARGET_TYPE	VARCHAR2(64)		Target type of the task
TASK_TARGET_NAME	VARCHAR2(513)	NOT NULL	Name of the target
OPERATION_NAME	VARCHAR2(64)		Operation performed on the object
ATTRIBUTES	VARCHAR2(4000)		Attributes of the task
TASK_PRIORITY	NUMBER		Task priority, relative to other tasks for this Client
PRIORITY_OVERRIDE	NUMBER		Task priority as overridden by the user
STATUS	VARCHAR2(8)		Status of the task: <ul style="list-style-type: none">• DISABLED• DEFERRED• ENABLED
DEFERRED_WINDOW_NAME	VARCHAR2(65)		Appropriate window for this task

Column	Datatype	NULL	Description
CURRENT_JOB_NAME	VARCHAR2(65)		Name of the currently scheduled job, if any
JOB_SCHEDULER_STATUS	VARCHAR2(15)		<p>Job status:</p> <ul style="list-style-type: none"> • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • REMOTE • SUCCEEDED • CHAIN_STALLED
ESTIMATE_TYPE	VARCHAR2(7)		<p>Type of resource estimates applied:</p> <ul style="list-style-type: none"> • DERIVED • FORCED • LOCKED
ESTIMATED_WEIGHT	NUMBER		Task weight indicator
ESTIMATED_DURATION	NUMBER		Estimated elapsed time for the job (in seconds)
ESTIMATED_CPU_TIME	NUMBER		Estimated CPU time for the job (in seconds)
ESTIMATED_TEMP	NUMBER		Estimated temporary space usage for the job (in KB)
ESTIMATED_DOP	NUMBER		Estimated degree of parallelism for the job
ESTIMATED_IO_RATE	NUMBER		Estimated I/O utilization for the job (in KB per second)
ESTIMATED_UNDO_RATE	NUMBER		Estimated UNDO generation rate for the job (in KB per second)
RETRY_COUNT	NUMBER		Number of attempts to perform this task since the last successful attempt
LAST_GOOD_DATE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last successful attempt to perform this task
LAST_GOOD_PRIORITY	NUMBER		Job priority of the last successful attempt to perform this task
LAST_GOOD_DURATION	NUMBER		Elapsed time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_CPU_TIME	NUMBER		CPU time for the job (in seconds) of the last successful attempt to perform this task
LAST_GOOD_TEMP	NUMBER		Temporary space usage for the job (in KB) of the last successful attempt to perform this task
LAST_GOOD_DOP	NUMBER		Peak degree of parallelism for the job during the last successful attempt to perform this task
LAST_GOOD_IO_RATE	NUMBER		I/O utilization rate for the job (in KB per second) of the last successful attempt to perform this task
LAST_GOOD_UNDO_RATE	NUMBER		UNDO generation rate (in KB per second) of the last successful attempt to perform this task
LAST_GOOD_CPU_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_IO_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task

Column	Datatype	NULL	Description
LAST_GOOD_UNDO_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_TEMP_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_CONCURRENCY	NUMBER		Concurrency wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_CONTENTION	NUMBER		Contention wait time (in seconds) of the last successful attempt to perform this task
NEXT_TRY_DATE	TIMESTAMP(6) WITH TIME ZONE		Next projected start time for the deferred maintenance window
LAST_TRY_DATE	TIMESTAMP(6) WITH TIME ZONE		Time at which the task was last attempted
LAST_TRY_PRIORITY	NUMBER		Task priority at the time of the last attempt
LAST_TRY_RESULT	VARCHAR2(36)		Result code of the last execution of the task: <ul style="list-style-type: none">• SUCCEEDED• FAILED• STOPPED BY USER ACTION• STOPPED AT END OF MAINTENANCE WINDOW• STOPPED AT INSTANCE SHUTDOWN• STOPPED
LAST_TRY_DURATION	NUMBER		Elapsed time of the last run (in seconds)
LAST_TRY_CPU_TIME	NUMBER		CPU time during the last run (in seconds)
LAST_TRY_TEMP	NUMBER		Temporary space usage for the job (in KB) for the last run
LAST_TRY_DOP	NUMBER		Peak degree of parallelism for the job during the last run
LAST_TRY_IO_RATE	NUMBER		I/O rate during the last run (in seconds)
LAST_TRY_UNDO_RATE	NUMBER		UNDO generation rate during the last run (in seconds)
LAST_TRY_CPU_WAIT	NUMBER		Time spent waiting for CPU during the last run (in seconds)
LAST_TRY_IO_WAIT	NUMBER		Time spent waiting for I/O during the last run (in seconds)
LAST_TRY_UNDO_WAIT	NUMBER		Time spent waiting for UNDO during the last run (in seconds)
LAST_TRY_TEMP_WAIT	NUMBER		Time spent waiting for temporary space during the last run (in seconds)
LAST_TRY_CONCURRENCY	NUMBER		Concurrency wait time during the last run (in seconds)
LAST_TRY_CONTENTION	NUMBER		Contention wait time during the last run (in seconds)
MEAN_GOOD_DURATION	NUMBER		Average elapsed time for successful executions of this task (in seconds)
MEAN_GOOD_CPU_TIME	NUMBER		Average CPU time for successful executions of this task (in seconds)
MEAN_GOOD_TEMP	NUMBER		Average temporary space usage for successful executions of this task (in KB)
MEAN_GOOD_DOP	NUMBER		Average peak degree of parallelism for successful executions of this task

Column	Datatype	NULL	Description
MEAN_GOOD_IO	NUMBER		Average I/O utilization for successful executions of this task (in KB per second)
MEAN_GOOD_UNDO	NUMBER		Average UNDO generation rate for this task (in KB per second)
MEAN_GOOD_CPU_WAIT	NUMBER		Average time waiting for CPU for successful executions of this task (in seconds)
MEAN_GOOD_IO_WAIT	NUMBER		Average time waiting for I/O for successful executions of this task (in seconds)
MEAN_GOOD_UNDO_WAIT	NUMBER		Average time waiting for UNDO for successful executions of this task (in seconds)
MEAN_GOOD_TEMP_WAIT	NUMBER		Average time waiting for temporary space for successful executions of this task (in seconds)
MEAN_GOOD_CONCURRENCY	NUMBER		Average concurrency wait time for successful executions of this task (in seconds)
MEAN_GOOD_CONTENTION	NUMBER		Average contention wait time for successful executions of this task (in seconds)
INFO_FIELD_1	VARCHAR2(4000)		Client-interpreted information
INFO_FIELD_2	CLOB		Client-interpreted information
INFO_FIELD_3	NUMBER		Client-interpreted information
INFO_FIELD_4	NUMBER		Client-interpreted information

4.174 DBA_AUTOTASK_WINDOW_CLIENTS

DBA_AUTOTASK_WINDOW_CLIENTS displays the windows that belong to MAINTENANCE_WINDOW_GROUP, along with the Enabled or Disabled status for the window for each maintenance task.

DBA_AUTOTASK_WINDOW_CLIENTS is primarily used by Enterprise Manager.

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2(128)	NOT NULL	Name of the maintenance window
WINDOW_NEXT_TIME	TIMESTAMP(6) WITH TIMEZONE		Next scheduled window open time unless the window is disabled
WINDOW_ACTIVE	VARCHAR2(5)		Indicates whether the window is currently active (open) (TRUE) or not (FALSE)
AUTOTASK_STATUS	VARCHAR2(8)		Status of the automated maintenance task subsystem: <ul style="list-style-type: none"> • ENABLED • DISABLED
OPTIMIZER_STATS	VARCHAR2(8)		Status of optimizer statistics gathering: <ul style="list-style-type: none"> • ENABLED • DISABLED
SEGMENT_ADVISOR	VARCHAR2(8)		Status of Segment Advisor: <ul style="list-style-type: none"> • ENABLED • DISABLED

Column	Datatype	NULL	Description
SQL_TUNE_ADVISOR	VARCHAR2(8)		Status of SQL Tuning Advisor: <ul style="list-style-type: none"> • ENABLED • DISABLED

4.175 DBA_AUTOTASK_WINDOW_HISTORY

DBA_AUTOTASK_WINDOW_HISTORY displays historical information for automated maintenance task windows.

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2(261)		Name of the maintenance window
WINDOW_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Window start time
WINDOW_END_TIME	TIMESTAMP(6) WITH TIME ZONE		Window end time

4.176 DBA_AW_PS

DBA_AW_PS describes the page spaces in all analytic workspaces in the database. Its columns are the same as those in ALL_AW_PS.

 **See Also:**

["ALL_AW_PS"](#)

4.177 DBA_AWS

DBA_AWS describes all analytic workspaces in the database. Its columns are the same as those in ALL_AWS.

 **See Also:**

["ALL_AWS"](#)

4.178 DBA_BASE_TABLE_MVIEWS

DBA_BASE_TABLE_MVIEWS describes all materialized views using materialized view logs in the database. Its columns are the same as those in ALL_BASE_TABLE_MVIEWS.

 **See Also:**

["ALL_BASE_TABLE_MVIEWS"](#)

4.179 DBA_BLOCKCHAIN_TABLES

DBA_BLOCKCHAIN_TABLES describes all blockchain tables in the database. Its columns are the same as those in ALL_BLOCKCHAIN_TABLES.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.10.

 **See Also:**

["ALL_BLOCKCHAIN_TABLES"](#)

4.180 DBA_BLOCKERS

DBA_BLOCKERS displays a session if it is not waiting for a locked object but is holding a lock on an object for which another session is waiting.

In an Oracle RAC environment, this only applies if the blocker is on the same instance.

Column	Datatype	NULL	Description
HOLDING_SESSION	NUMBER		Session holding a lock
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.181 DBA_CAPTURE

DBA_CAPTURE displays information about all capture processes in the database. Its columns are the same as those in ALL_CAPTURE.

 See Also:

["ALL_CAPTURE"](#)

4.182 DBA_CAPTURE_EXTRA_ATTRIBUTES

DBA_CAPTURE_EXTRA_ATTRIBUTES displays information about the extra attributes for all capture processes in the database. Its columns are the same as those in ALL_CAPTURE_EXTRA_ATTRIBUTES.

 See Also:

["ALL_CAPTURE_EXTRA_ATTRIBUTES"](#)

4.183 DBA_CAPTURE_PARAMETERS

DBA_CAPTURE_PARAMETERS displays information about the parameters for all capture processes in the database. Its columns are the same as those in ALL_CAPTURE_PARAMETERS.

 See Also:

["ALL_CAPTURE_PARAMETERS"](#)

4.184 DBA_CAPTURE_PREPARED_DATABASE

DBA_CAPTURE_PREPARED_DATABASE displays information about when the local database was prepared for instantiation. Its columns are the same as those in ALL_CAPTURE_PREPARED_DATABASE.

 See Also:

["ALL_CAPTURE_PREPARED_DATABASE"](#)

4.185 DBA_CAPTURE_PREPARED_SCHEMAS

DBA_CAPTURE_PREPARED_SCHEMAS displays information about all schemas prepared for instantiation at the local database. Its columns are the same as those in ALL_CAPTURE_PREPARED_SCHEMAS.

 **See Also:**

"[ALL_CAPTURE_PREPARED_SCHEMAS](#)"

4.186 DBA_CAPTURE_PREPARED_TABLES

DBA_CAPTURE_PREPARED_TABLES displays information about all tables prepared for instantiation at the local database. Its columns are the same as those in ALL_CAPTURE_PREPARED_TABLES.

 **See Also:**

"[ALL_CAPTURE_PREPARED_TABLES](#)"

4.187 DBA_CATALOG

DBA_CATALOG lists all tables, views, clusters, synonyms, and sequences in the database. Its columns are the same as those in ALL_CATALOG.

 **See Also:**

"[ALL_CATALOG](#)"

4.188 DBA_CDB_RSRC_PLAN_DIRECTIVES

DBA_CDB_RSRC_PLAN_DIRECTIVES provides information about all the CDB resource plan directives.

 **Note:**

ORA\$DEFAULT_PDB_DIRECTIVE is the default directive for PDBs. For more information about ORA\$DEFAULT_PDB_DIRECTIVE, see *Oracle Multitenant Administrator's Guide*.

Column	Datatype	NULL	Description
PLAN	VARCHAR2 (128)		Name of the CDB resource plan to which this directive belongs
PLUGGABLE_DATABASE	VARCHAR2 (128)		Name of the PDB referred to. NULL for profile directives
PROFILE	VARCHAR2 (128)		For internal use only
DIRECTIVE_TYPE	VARCHAR2 (30)		For internal use only
SHARES	NUMBER		Resource allocation, expressed in shares
UTILIZATION_LIMIT	NUMBER		Maximum resource utilization allowed, expressed in percentage
PARALLEL_SERVER_LIMIT	NUMBER		Maximum percentage of the parallel target used before queueing subsequent parallel queries
MEMORY_MIN	NUMBER		The percentage of Exadata Smart Flash Cache and Exadata PMEM cache that is guaranteed to the PDB This percentage is based on the total amount of space allocated to the CDB for Exadata Smart Flash Cache and Exadata PMEM cache. See <i>Oracle Exadata System Software User's Guide</i> for more information.
MEMORY_LIMIT	NUMBER		The maximum percentage of Exadata Smart Flash Cache and Exadata PMEM cache that the PDB can use This percentage is based on the total amount of space allocated to the CDB for Exadata Smart Flash Cache and Exadata PMEM cache. See <i>Oracle Exadata System Software User's Guide</i> for more information.
COMMENTS	VARCHAR2 (2000)		Text comment on the resource plan directive
STATUS	VARCHAR2 (128)		PENDING if it is part of the pending area, NULL otherwise
MANDATORY	VARCHAR2 (3)		Whether the resource plan directive is mandatory. Mandatory plans cannot be deleted.

Note:

Oracle recommends that you do not use the `parallel_server_limit` directive in a CDB resource plan.

4.189 DBA_CDB_RSRC_PLANS

`DBA_CDB_RSRC_PLANS` provides information about all the CDB resource plans.

Column	Datatype	NULL	Description
PLAN_ID	NUMBER	NOT NULL	CDB resource plan ID
PLAN	VARCHAR2 (128)		CDB resource plan name

Column	Datatype	NULL	Description
COMMENTS	VARCHAR2 (2000)		Text comment on the CDB resource plan
STATUS	VARCHAR2 (128)		PENDING if it is part of the pending area, NULL otherwise
MANDATORY	VARCHAR2 (3)		Whether the resource plan is mandatory. Mandatory plans cannot be deleted.

4.190 DBA_CERTIFICATES

DBA_CERTIFICATES displays all certificates in the database which are used for signature verification for blockchain tables. Its columns are the same as those in ALL_CERTIFICATES.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.10.

 **See Also:**

"ALL_CERTIFICATES"

4.191 DBA_CHANGE_NOTIFICATION_REGS

DBA_CHANGE_NOTIFICATION_REGS describes all change notification registrations in the database.

Related View

USER_CHANGE_NOTIFICATION_REGS describes the change notification registrations owned by the current user. This view does not display the USERNAME column.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (31)		For invoker's rights units, the user creating the registration
			For definer's rights units, the owner of the registration
REGID	NUMBER		Internal registration ID
REGFLAGS	NUMBER		Registration flags
CALLBACK	VARCHAR2 (256)		Notification callback
OPERATIONS_FILTER	NUMBER		Operations filter (if specified)
CHANGELAG	NUMBER		Transaction lag between notifications (if specified)
TIMEOUT	NUMBER		Registration timeout (if specified)
TABLE_NAME	VARCHAR2 (63)		Name of the registered table

 See Also:["USER_CHANGE_NOTIFICATION_REGS"](#)

4.192 DBA_CHECKED_ROLES

`DBA_CHECKED_ROLES` lists the roles (without role grant paths) that are used for the role analysis policies reported by the `DBMS_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed role records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a role analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the role analysis run during which the role was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose role was reported
CHECKED_ROLE	VARCHAR2(128)		Checked role
RUN_NAME	VARCHAR2(128)		The name of the run during which the role was reported

 See Also:["DBA_CHECKED_ROLES_PATH"](#)

4.193 DBA_CHECKED_ROLES_PATH

`DBA_CHECKED_ROLES_PATH` lists the roles that are used for the role analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed role records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a role analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the role analysis run during which the role was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose role was reported
CHECKED_ROLE	VARCHAR2(128)		Checked role
PATH	GRANT_PATH		Role grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the role was reported

 See Also:["DBA_CHECKED_ROLES"](#)

4.194 DBA_CLU_COLUMNS

DBA_CLU_COLUMNS maps all table columns to related cluster columns.

Related View

USER_CLU_COLUMNS maps all table columns owned by the current user to related cluster columns. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cluster
CLUSTER_NAME	VARCHAR2(128)	NOT NULL	Name of the cluster
CLU_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Key column in the cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Clustered table name
TAB_COLUMN_NAME	VARCHAR2(4000)		Key column or attribute of the object type column

 See Also:["USER_CLU_COLUMNS"](#)

4.195 DBA_CLUSTER_HASH_EXPRESSIONS

DBA_CLUSTER_HASH_EXPRESSIONS lists hash functions for all hash clusters in the database. Its columns are the same as those in ALL_CLUSTER_HASH_EXPRESSIONS.

 See Also:["ALL_CLUSTER_HASH_EXPRESSIONS"](#)

4.196 DBA_CLUSTERING_DIMENSIONS

DBA_CLUSTERING_DIMENSIONS describes dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL_CLUSTERING_DIMENSIONS.

 **See Also:**

- "[ALL_CLUSTERING_DIMENSIONS](#)"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

4.197 DBA_CLUSTERING_JOINS

DBA_CLUSTERING_JOINS describes joins to the dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL_CLUSTERING_JOINS.

 **See Also:**

- "[ALL_CLUSTERING_JOINS](#)"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

4.198 DBA_CLUSTERING_KEYS

DBA_CLUSTERING_KEYS describes clustering keys for all tables with an attribute clustering clause. Its columns are the same as those in ALL_CLUSTERING_KEYS.

 **See Also:**

- "[ALL_CLUSTERING_KEYS](#)"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

4.199 DBA_CLUSTERING_TABLES

DBA_CLUSTERING_TABLES describes all the tables with an attribute clustering clause. Its columns are the same as those in ALL_CLUSTERING_TABLES.

 **See Also:**

- "[ALL_CLUSTERING_TABLES](#)"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

4.200 DBA_CLUSTERS

DBA_CLUSTERS describes all clusters in the database. Its columns are the same as those in ALL_CLUSTERS.

 **Note:**

["ALL_CLUSTERS"](#)

4.201 DBA_CODE_ROLE_PRIVS

DBA_CODE_ROLE_PRIVS describes all the roles that are associated with program units in the database. Its columns are the same as those in ALL_CODE_ROLE_PRIVS.

 **See Also:**

["ALL_CODE_ROLE_PRIVS"](#)

4.202 DBA_COL_COMMENTS

DBA_COL_COMMENTS displays comments on the columns of all tables and views in the database. Its columns are the same as those in ALL_COL_COMMENTS.

 **See Also:**

["ALL_COL_COMMENTS"](#)

4.203 DBA_COL_PENDING_STATS

DBA_COL_PENDING_STATS describes the pending statistics of all columns in the database. Its columns are the same as those in ALL_COL_PENDING_STATS.

 **See Also:**

["ALL_COL_PENDING_STATS"](#)

4.204 DBA_COL_PRIVS

DBA_COL_PRIVS describes all column object grants in the database.

Related View

USER_COL_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2 (128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2 (128)		Owner of the object
TABLE_NAME	VARCHAR2 (128)		Name of the object
COLUMN_NAME	VARCHAR2 (128)		Name of the column
GRANTOR	VARCHAR2 (128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2 (40)		Privilege on the column
GRANTABLE	VARCHAR2 (3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
COMMON	VARCHAR2 (3)		Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2 (3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

 **See Also:**

["USER_COL_PRIVS"](#)

4.205 DBA_COLL_TYPES

DBA_COLL_TYPES describes all named collection types (arrays, nested tables, object tables, and so on) in the database. Its columns are the same as those in ALL_COLL_TYPES.

 **Note:**

"ALL_COLL_TYPES"

4.206 DBA_COMMON_AUDIT_TRAIL

DBA_COMMON_AUDIT_TRAIL displays all standard and fine-grained audit trail entries, mandatory and SYS audit records written in XML format.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED_AUDIT_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
AUDIT_TYPE	VARCHAR2(22)		Audit trail type: <ul style="list-style-type: none"> • Standard Audit • Standard XML Audit • Fine Grained Audit • Fine Grained XML Audit • SYS XML Audit • Mandatory XML Audit
SESSION_ID	NUMBER		Numeric ID for the Oracle session
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
STATEMENTID	NUMBER		Numeric ID for the statement run; a statement may cause multiple audit records
ENTRYID	NUMBER		Numeric ID for the audit trail entry in the session
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIMEZONE		Timestamp of the audited operation (timestamp of user login for entries created by AUDIT SESSION) in the session's time zone
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
DB_USER	VARCHAR2(128)		Database user name of the user whose actions were audited

Column	Datatype	NULL	Description
CLIENT_ID	VARCHAR2(128)		Client identifier in the Oracle session
ECONTEXT_ID	VARCHAR2(64)		Application execution context identifier
EXT_NAME	VARCHAR2(4000)		User external name
OS_USER	VARCHAR2(255)		Operating system login user name of the user whose actions were audited
USERHOST	VARCHAR2(128)		Client host machine name
OS_PROCESS	VARCHAR2(16)		Operating system process identifier of the Oracle process
TERMINAL	VARCHAR2(255)		Identifier of the user's terminal
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OBJECT_SCHEMA	VARCHAR2(128)		Owner of the audited object
OBJECT_NAME	VARCHAR2(128)		Name of the object affected by the action
POLICY_NAME	VARCHAR2(128)		Name of the Fine-Grained Auditing Policy
NEW_OWNER	VARCHAR2(128)		Owner of the object named in the NEW_NAME column
NEW_NAME	VARCHAR2(128)		New name of the object after a RENAME or the name of the underlying object
ACTION	NUMBER		Numeric action type code. The corresponding name of the action type is in the STATEMENT_TYPE column.
STATEMENT_TYPE	VARCHAR2(28)		Name of the action type corresponding to the numeric code in the ACTION column
AUDIT_OPTION	VARCHAR2(40)		Auditing option set with the AUDIT statement
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object was accessed or modified
RETURNCODE	NUMBER		Oracle error code generated by the action (0 if the action succeeded)
SCN	NUMBER		System change number (SCN) of the query
COMMENT_TEXT	VARCHAR2(4000)		Text comment on the audit trail entry, providing more information about the statement audited
			Also indicates how the user was authenticated:
			<ul style="list-style-type: none"> • DATABASE - Authentication was done by password • NETWORK - Authentication was done by Oracle Net Services or the Advanced Networking Option • PROXY - Client was authenticated by another user. The name of the proxy user follows the method type.
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2(2000)		SQL text of the query

Column	Datatype	NULL	Description
OBJ_PRIVILEGE	VARCHAR2 (32)		<p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> 0 - ALTER 1 - AUDIT 2 - COMMENT 3 - DELETE 4 - GRANT 5 - INDEX 6 - INSERT 7 - LOCK 8 - CREATE 9 - SELECT 10 - UPDATE 11 - REFERENCES 12 - EXECUTE 13 - VIEW 14 - DROP 15 - ANALYZE 16 - CREATE 17 - READ 18 - WRITE 19 - KEEP SEQUENCE 20 - ENQUEUE 21 - DEQUEUE 22 - UNDER 23 - ON COMMIT 24 - REWRITE 25 - UPSERT 26 - DEBUG 27 - FLASHBACK 28 - MERGE 29 - USE 30 - FLASHBACK ARCHIVE 31 - DIRECTORY EXECUTE <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p style="text-align: center;">-----Y---</p>
SYS_PRIVILEGE	VARCHAR2 (40)		System privileges granted or revoked by a GRANT or REVOKE statement
ADMIN_OPTION	VARCHAR2 (1)		Indicates whether the role or system privilege was granted with the ADMIN option

Column	Datatype	NULL	Description
OS_PRIVILEGE	VARCHAR2(7)		Operating privilege (SYSDBA or SYSOPER), if any, used in the session. If no privilege is used, it will be NONE.
GRANTEE	VARCHAR2(128)		Name of the grantee specified in a GRANT or REVOKE statement
PRIV_USED	VARCHAR2(40)		System privilege used to execute the action
SES_ACTIONS	VARCHAR2(19)		Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none"> • - - None • S - Success • F - Failure • B - Both
LOGOFF_TIME	DATE		Timestamp of user log off
LOGOFF_LREAD	NUMBER		Number of logical reads in the session
LOGOFF_PREAD	NUMBER		Number of physical reads in the session
LOGOFF_LWRITE	NUMBER		Number of logical writes for the session
LOGOFF_DLOCK	VARCHAR2(40)		Number of deadlocks detected during the session
SESSION_CPU	NUMBER		Amount of CPU time used by the Oracle session
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object
DBID	NUMBER		Database identifier of the audited database
RLS_INFO	CLOB		Stores virtual private database (VPD) policy names and predicates separated by delimiter
COMMON_USER	VARCHAR2(128)		Effective user for the statement execution

Note:

The SQL_BIND and SQL_TEXT columns are only populated if the AUDIT_TRAIL initialization parameter is set to db, extended or xml, extended or if the AUDIT_SYS_OPERATIONS initialization parameter is set to TRUE.

4.207 DBA_COMPARISON

DBA_COMPARISON displays information about all comparison objects in the database.

Related View

USER_COMPARISON displays information about the comparison objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the comparison
COMPARISON_NAME	VARCHAR2 (128)	NOT NULL	Name of the comparison
COMPARISON_MODE	VARCHAR2 (5)		Mode of the comparison: <ul style="list-style-type: none">• TABLE
SCHEMA_NAME	VARCHAR2 (128)		Schema name of the local object
OBJECT_NAME	VARCHAR2 (128)		Name of the local object
OBJECT_TYPE	VARCHAR2 (17)		Type of the local object: <ul style="list-style-type: none">• TABLE• VIEW• SYNONYM• MATERIALIZED VIEW
REMOTE_SCHEMA_NAME	VARCHAR2 (128)		Schema name of the remote object
REMOTE_OBJECT_NAME	VARCHAR2 (128)		Name of the remote object
REMOTE_OBJECT_TYPE	VARCHAR2 (17)		Type of the remote object: <ul style="list-style-type: none">• TABLE• VIEW• SYNONYM• MATERIALIZED VIEW
DBLINK_NAME	VARCHAR2 (128)		Database link name to the remote database
SCAN_MODE	VARCHAR2 (9)		Scan mode of the comparison: FULL <ul style="list-style-type: none">• FULL• RANDOM• CYCLIC• CUSTOM
SCAN_PERCENT	NUMBER		Scan percent of the comparison; applicable to random and cyclic modes
CYCLIC_INDEX_VALUE	VARCHAR2 (4000)		Last index column value used in a cyclic scan
NULL_VALUE	VARCHAR2 (4000)		Value to use for NULL columns
LOCAL_CONVERGE_TAG	RAW (2000)		Local Replication tag used while performing converge DMLs
REMOTE_CONVERGE_TAG	RAW (2000)		Remote Replication tag used while performing converge DMLs
MAX_NUM_BUCKETS	NUMBER		Suggested maximum number of buckets in a scan
MIN_ROWS_IN_BUCKET	NUMBER		Suggested minimum number of rows in a bucket
LAST_UPDATE_TIME	TIMESTAMP (6)		Time that this row was last updated

 See Also:["USER_COMPARISON"](#)

4.208 DBA_COMPARISON_COLUMNS

`DBA_COMPARISON_COLUMNS` displays information about the columns for all comparison objects in the database.

Related View

`USER_COMPARISON_COLUMNS` displays information about the columns for the comparison objects owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the comparison
COMPARISON_NAME	VARCHAR2 (128)	NOT NULL	Name of the comparison
COLUMN_POSITION	NUMBER	NOT NULL	Position of the column
COLUMN_NAME	VARCHAR2 (128)	NOT NULL	Name of the column
INDEX_COLUMN	VARCHAR2 (1)		Indicates whether the column is an index column (Y) or not (N)

 See Also:["USER_COMPARISON_COLUMNS"](#)

4.209 DBA_COMPARISON_ROW_DIF

`DBA_COMPARISON_ROW_DIF` displays information about the differing rows in all comparison scans in the database.

Related View

`USER_COMPARISON_ROW_DIF` displays information about the differing rows in the comparison scans owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the comparison
COMPARISON_NAME	VARCHAR2 (128)	NOT NULL	Name of the comparison
SCAN_ID	NUMBER	NOT NULL	Scan ID for the comparison scan
LOCAL_ROWID	ROWID		Local rowid of the differing row
REMOTE_ROWID	ROWID		Remote rowid of the differing row
INDEX_VALUE	VARCHAR2 (4000)		Index column value of the differing row

Column	Datatype	NULL	Description
STATUS	VARCHAR2 (3)		Status of the differing row: <ul style="list-style-type: none"> • SUC • DIF
LAST_UPDATE_TIME	TIMESTAMP (6)		Time that this row was last updated

 **See Also:**

["USER_COMPARISON_ROW_DIF"](#)

4.210 DBA_COMPARISON_SCAN

`DBA_COMPARISON_SCAN` displays information about all comparison scans in the database.

Related View

`USER_COMPARISON_SCAN` displays information about the comparison scans owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the comparison scan
COMPARISON_NAME	VARCHAR2 (128)	NOT NULL	Name of the comparison scan
SCAN_ID	NUMBER	NOT NULL	Scan ID
PARENT_SCAN_ID	NUMBER		Scan ID of the immediate parent scan
ROOT_SCAN_ID	NUMBER		Scan ID of the root (top-most) parent
STATUS	VARCHAR2 (16)		Status of the scan: <ul style="list-style-type: none"> • SUC • BUCKET DIF • FINAL BUCKET DIF • ROW DIF
CURRENT_DIF_COUNT	NUMBER		Current cumulative (including children) diff count of the scan
INITIAL_DIF_COUNT	NUMBER		Initial cumulative (including children) diff count of the scan
COUNT_ROWS	NUMBER		Number of rows in the scan
SCAN_NULLS	VARCHAR2 (1)		Indicates whether NULLs are part of this scan (Y) or not (N)
LAST_UPDATE_TIME	TIMESTAMP (6)		Time that this row was last updated

 **See Also:**

["USER_COMPARISON_SCAN"](#)

4.211 DBA_COMPARISON_SCAN_VALUES

`DBA_COMPARISON_SCAN_VALUES` displays information about the values for all comparison scans in the database.

Related View

`USER_COMPARISON_SCAN_VALUES` displays information about the values for the comparison scans owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the comparison scan
COMPARISON_SCAN	VARCHAR2(128)	NOT NULL	Name of the comparison scan
SCAN_ID	NUMBER	NOT NULL	Scan ID
COLUMN_POSITION	NUMBER	NOT NULL	Column position, as in <code>DBA_COMPARISON_COLUMNS</code>
MIN_VALUE	VARCHAR2(4000)		Minimum value of the scan
MAX_VALUE	VARCHAR2(4000)		Maximum value of the scan
LAST_UPDATE_TIME	TIMESTAMP(6)		Time that this row was last updated

 **See Also:**

["USER_COMPARISON_SCAN_VALUES"](#)

4.212 DBA_CONNECT_ROLE_GRANTEES

`DBA_CONNECT_ROLE_GRANTEES` displays information about users who are granted the `CONNECT` privilege.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		User or schema to which the <code>CONNECT</code> role is granted
PATH_OF_CONNECT_ROLE_GRANTED	VARCHAR2(4000)		The path of role inheritance through which the grantee is granted the <code>CONNECT</code> role
ADMIN_OPT	VARCHAR2(3)		Whether or not the grantee was granted the <code>ADMIN</code> option for the <code>CONNECT</code> role

4.213 DBA_CONNECTION_TESTS

`DBA_CONNECTION_TESTS` provides information about connection tests in use for CDBs and PDBs.

This view shows SQL and non-SQL connection tests.

Column	Datatype	NULL	Description
PREDEFINED	VARCHAR2(1)		<p>Indicates whether the test is predefined or custom. Possible values:</p> <ul style="list-style-type: none"> • Y: The test is predefined. • N: The test is added by the user. <p>Predefined tests can be disabled, but not deleted.</p>
CONNECTION_TEST_TYPE	VARCHAR2(15)		<p>Indicates the test type. Possible values include:</p> <ul style="list-style-type: none"> • SQL_TEST: Application servers and applications use SQL tests to check the validity of a connection. Use this value for SQL based connection tests, for example (SELECT 1 FROM DUAL;) • PING_TEST: Used when you are using tests that use the ping function to test the connection, including the OCIPing, isValid, isUsable, connection.status, and PING_DATABASE connection tests. • ENDREQUEST_TEST: Used when request boundaries are received at the RDBMS. Oracle Connection Pools and all application servers using JDK9 send request boundaries to the RDBMS starting in Oracle Database 12c Release 2 (12.2.0.1). <p>The test type values are the CONNECTION_TEST_TYPE parameter values that can be specified for the ENABLE_CONNECTION_TEST and DISABLE_CONNECTION_TEST procedures for the DBMS_APP_CONT_ADMIN PL/SQL package.</p>
SQL_CONNECTION_TEST	VARCHAR2(64)		SQL test. This column is null for non-SQL tests.
SERVICE_NAME	VARCHAR2(128)		Optional service name qualifier
ENABLED	VARCHAR2(1)		<p>Indicates whether the SQL test is enabled. Possible values:</p> <ul style="list-style-type: none"> • Y: The test is enabled. • N: The test is not enabled.

See Also:

Oracle Database PL/SQL Packages and Types Reference for additional information about the ENABLE_CONNECTION_TEST procedure for the DBMS_APP_CONT_ADMIN PL/SQL package

4.214 DBA_CONS_COLUMNS

DBA_CONS_COLUMNS describes all columns in the database that are specified in constraints. Its columns are the same as those in ALL_CONS_COLUMNS.

 **See Also:**

["ALL_CONS_COLUMNS"](#)

4.215 DBA_CONS_OBJ_COLUMNS

DBA_CONS_OBJ_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in all tables in the database. Its columns are the same as those in ALL_CONS_OBJ_COLUMNS.

 **See Also:**

["ALL_CONS_OBJ_COLUMNS"](#)

4.216 DBA_CONSTRAINTS

DBA_CONSTRAINTS describes all constraint definitions on all tables in the database. Its columns are the same as those in ALL_CONSTRAINTS.

 **See Also:**

["ALL_CONSTRAINTS"](#)

4.217 DBA_CONTAINER_DATA

DBA_CONTAINER_DATA displays default (user-level) and object-specific CONTAINER_DATA attributes for container data objects.

Objects created with the CONTAINER_DATA clause include CONTAINER_DATA attributes.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (128)		Name of the user whose attribute is described by this row
DEFAULT_ATTR	CHAR2 (1)		An indicator of whether the attribute is a default attribute
OWNER	VARCHAR2 (128)		Name of the object owner if the attribute is object-specific

Column	Datatype	NULL	Description
OBJECT_NAME	VARCHAR2(128)		Name of the object if the attribute is object-specific
ALL_CONTAINERS	VARCHAR2(1)		An indicator of whether this attribute applies to all containers
CONTAINER_NAME	VARCHAR2(128)		Name of a container included in this attribute if it does not apply to all containers

 **See Also:**

For more information about container data objects:

- "[CDB_* Views](#)"
- "[ALL_TABLES](#)"
- "[ALL_VIEWS](#)"
- "[ALL_VIEWS_AE](#)"
- "[V\\$ Views](#)"
- "[GV\\$ Views](#)"
- *Oracle Multitenant Administrator's Guide*
- *Oracle Database Security Guide*

4.218 DBA_CONTEXT

`DBA_CONTEXT` provides all context namespace information in the database.

Related View

`ALL_CONTEXT` describes all context namespaces in the current session for which attributes and values have been specified using the `DBMS_SESSION.SET_CONTEXT` procedure. This view does not describe the `TYPE` and `ORIGIN_CON_ID` columns.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(128)	NOT NULL	Name of the context namespace
SCHEMA	VARCHAR2(128)	NOT NULL	Schema name of the designated package that can set attributes using this namespace
PACKAGE	VARCHAR2(128)	NOT NULL	Package name of the designated package that can set attributes using this namespace
TYPE	VARCHAR2(22)		Type of the context create
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)

 See Also:["ALL_CONTEXT"](#)

4.219 DBA_CPOOL_INFO

DBA_CPOOL_INFO displays configuration information about all Database Resident Connection Pools in the database.

Column	Datatype	NULL	Description
CONNECTION_POOL	VARCHAR2(128)		Name of the connection pool
STATUS	VARCHAR2(16)		Status of the pool: <ul style="list-style-type: none"> • ACTIVE • INACTIVE
MINSIZE	NUMBER		Minimum number of pooled servers that are always alive in the pool
MAXSIZE	NUMBER		Maximum number of pooled servers in the pool
INCRSIZE	NUMBER		Number of pooled servers by which the pool is incremented if servers are unavailable when a client application request is received
SESSION_CACHED_CURSORS	NUMBER		Number of session cursors to cache in each pooled server
INACTIVITY_TIMEOUT	NUMBER		Maximum time (in seconds) that the pooled server can stay idle in the pool. After this time, the server is terminated.
MAX_THINK_TIME	NUMBER		Maximum time of inactivity (in seconds) for a client after obtaining a pooled server from the pool. After obtaining a pooled server from the pool, if the client application does not issue a database call for the time specified by this column, then the pooled server is freed and the client connection is terminated.
MAX_USE_SESSION	NUMBER		Number of times a pooled server can be taken and released to the pool
MAX_LIFETIME_SESSION	NUMBER		Time (in seconds) for a pooled server to live in the pool
NUM_CBROK	NUMBER		Number of connection brokers spawned per instance
MAXCONN_CBROK	NUMBER		Maximum number of connections per connection broker

Column	Datatype	NULL	Description
MAX_TXN_THINK_TIME	NUMBER		Maximum time of inactivity (in seconds) for a client after it obtains a pooled server from the pool and starts a transaction. If the client application does not issue a database call for the time specified by MAX_TXN_THINK_TIME while in a transaction, the pooled server is freed, the transaction is rolled back, and the client connection is terminated. The default value is 0, which means MAX_THINK_TIME applies for all connections, irrespective of transactions being open or not in those connections. Care should be taken while setting the two parameters MAX_THINK_TIME and MAX_TXN_THINK_TIME to higher values, as it would mean the servers are not released to the pool for a longer time, even if clients are not responding for any reason, thereby making other users wait unnecessarily.
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

- *Oracle Database Administrator's Guide* for more information about the configuration parameters for Database Resident Connection Pooling
- *Oracle Database PL/SQL Packages and Types Reference* for more information on the DBMS_CONNECTION_POOL package

4.220 DBA_CPU_USAGE_STATISTICS

DBA_CPU_USAGE_STATISTICS displays database CPU usage statistics.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
VERSION	VARCHAR2 (17)	NOT NULL	Database version
TIMESTAMP	DATE	NOT NULL	Time at which the CPU usage changed
CPU_COUNT	NUMBER		CPU count of the database
CPU_CORE_COUNT	NUMBER		CPU core count of the database
CPU_SOCKET_COUNT	NUMBER		CPU socket count of the database

4.221 DBA_CQ_NOTIFICATION_QUERIES

DBA_CQ_NOTIFICATION_QUERIES describes the registered queries for all CQ notifications in the database.

Related View

USER_CQ_NOTIFICATION_QUERIES describes the registered queries for the CQ notifications owned by the current user. This view does not display the USERNAME column.

Column	Datatype	NULL	Description
QUERYID	NUMBER		ID of the query
QUERYTEXT	CLOB		Text of the query
REGID	NUMBER		Registration ID that the query is registered with
USERNAME	VARCHAR2 (31)		Name of the user who registered the query

 **See Also:**

["USER_CQ_NOTIFICATION_QUERIES"](#)

4.222 DBA_CREDENTIALS

DBA_CREDENTIALS lists all credentials in the database. Its columns are the same as those in ALL_CREDENTIALS.

 **See Also:**

["ALL_CREDENTIALS"](#)

4.223 DBA_CUBE_ATTR_VISIBILITY

DBA_CUBE_ATTR_VISIBILITY describes all OLAP attributes visible for the dimensions, hierarchies, and levels in the database. Its columns are the same as those in ALL_CUBE_ATTR_VISIBILITY.

 **See Also:**

["ALL_CUBE_ATTR_VISIBILITY"](#)

4.224 DBA_CUBE_ATTRIBUTES

DBA_CUBE_ATTRIBUTES describes the attributes for all OLAP cube dimensions in the database. Its columns are the same as those in ALL_CUBE_ATTRIBUTES.

 See Also:

"ALL_CUBE_ATTRIBUTES"

4.225 DBA_CUBE_BUILD_PROCESSES

DBA_CUBE_BUILD_PROCESSES describes all OLAP build processes and maintenance scripts in the database. Its columns are the same as those in ALL_CUBE_BUILD_PROCESSES.

 See Also:

"ALL_CUBE_BUILD_PROCESSES"

4.226 DBA_CUBE_CALCULATED_MEMBERS

DBA_CUBE_CALCULATED_MEMBERS describes the calculated members for all OLAP cube dimensions in the database. Its columns are the same as those in ALL_CUBE_CALCULATED_MEMBERS.

 See Also:

"ALL_CUBE_CALCULATED_MEMBERS"

4.227 DBA_CUBE_DIM_LEVELS

DBA_CUBE_DIM_LEVELS describes all OLAP dimension levels in the database. Its columns are the same as those in ALL_CUBE_DIM_LEVELS.

 See Also:

"ALL_CUBE_DIM_LEVELS"

4.228 DBA_CUBE_DIM_MODELS

DBA_CUBE_DIM_MODELS describes the models for all OLAP dimensions in the database. Its columns are the same as those in ALL_CUBE_DIM_MODELS.

 **See Also:**

["ALL_CUBE_DIM_MODELS"](#)

4.229 DBA_CUBE_DIM_VIEW_COLUMNS

DBA_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of all OLAP cube dimensions in the database. Its columns are the same as those in ALL_CUBE_DIM_VIEW_COLUMNS.

 **See Also:**

["ALL_CUBE_DIM_VIEW_COLUMNS"](#)

4.230 DBA_CUBE_DIM_VIEWS

DBA_CUBE_DIM_VIEWS describes the relational views of all OLAP dimensions in the database. Its columns are the same as those in ALL_CUBE_DIM_VIEWS.

 **See Also:**

["ALL_CUBE_DIM_VIEWS"](#)

4.231 DBA_CUBE_DIMENSIONALITY

DBA_CUBE_DIMENSIONALITY describes the dimension order for all OLAP cubes in the database. Its columns are the same as those in ALL_CUBE_DIMENSIONALITY.

 **See Also:**

["ALL_CUBE_DIMENSIONALITY"](#)

4.232 DBA_CUBE_DIMENSIONS

DBA_CUBE_DIMENSIONS describes all OLAP cube dimensions in the database. Its columns are the same as those in ALL_CUBE_DIMENSIONS.

 See Also:

["ALL_CUBE_DIMENSIONS"](#)

4.233 DBA_CUBE_HIER_LEVELS

DBA_CUBE_HIER_LEVELS describes the hierarchy levels for all OLAP cube dimensions in the database. Its columns are the same as those in ALL_CUBE_HIER_LEVELS.

 See Also:

["ALL_CUBE_HIER_LEVELS"](#)

4.234 DBA_CUBE_HIER_VIEW_COLUMNS

DBA_CUBE_HIER_VIEW_COLUMNS describes the columns of the relational hierarchy views of all OLAP cube dimensions in the database. Its columns are the same as those in ALL_CUBE_HIER_VIEW_COLUMNS.

 See Also:

["ALL_CUBE_HIER_VIEW_COLUMNS"](#)

4.235 DBA_CUBE_HIER_VIEWS

DBA_CUBE_HIER_VIEWS describes the hierarchies for all OLAP cube dimensions in the database. Its columns are the same as those in ALL_CUBE_HIER_VIEWS.

 See Also:

["ALL_CUBE_HIER_VIEWS"](#)

4.236 DBA_CUBE_HIERARCHIES

DBA_CUBE_HIERARCHIES describes all OLAP dimension hierarchies in the database. Its columns are the same as those in ALL_CUBE_HIERARCHIES.

 **See Also:**

["ALL_CUBE_HIERARCHIES"](#)

4.237 DBA_CUBE_MEASURES

DBA_CUBE_MEASURES describes the measures for all OLAP cubes in the database. Its columns are the same as those in ALL_CUBE_MEASURES.

 **See Also:**

["ALL_CUBE_MEASURES"](#)

4.238 DBA_CUBE_NAMED_BUILD_SPECS

DBA_CUBE_NAMED_BUILD_SPECS describes the OLAP cube named build specifications in the database. Its columns are the same as those in ALL_CUBE_NAMED_BUILD_SPECS.

 **See Also:**

["ALL_CUBE_NAMED_BUILD_SPECS"](#)

4.239 DBA_CUBE_SUB_PARTITION_LEVELS

DBA_CUBE_SUB_PARTITION_LEVELS describes the OLAP secondary partition levels in the database. Its columns are the same as those in ALL_CUBE_SUB_PARTITION_LEVELS.

 **See Also:**

["ALL_CUBE_SUB_PARTITION_LEVELS"](#)

4.240 DBA_CUBE_VIEW_COLUMNS

DBA_CUBE_VIEW_COLUMNS describes the columns of relational views of all OLAP cubes in the database. Its columns are the same as those in ALL_CUBE_VIEW_COLUMNS.

 **See Also:**

["ALL_CUBE_VIEW_COLUMNS"](#)

4.241 DBA_CUBE_VIEWS

DBA_CUBE_VIEWS describes the relational views of all OLAP cubes in the database. Its columns are the same as those in ALL_CUBE_VIEWS.

 **See Also:**

["ALL_CUBE_VIEWS"](#)

4.242 DBA_CUBES

DBA_CUBES describes all OLAP cubes in the database. Its columns are the same as those in ALL_CUBES.

 **See Also:**

["ALL_CUBES"](#)

4.243 DBA_DATA_FILES

DBA_DATA_FILES describes database files.

 **Note:**

When you query the DBA_DATA_FILES data dictionary view, Oracle must have access to all tablespaces and their data files if the requested information is not already available in the dictionary. If the tablespaces are encrypted, then you must open the Oracle wallet (keystore) before you can query DBA_DATA_FILES. You can use the ADMINISTER KEY MANAGEMENT SET KEYSTORE OPEN statement to open the keystore.

Column	Datatype	NULL	Description
FILE_NAME	VARCHAR2 (513)		Name of the database file
FILE_ID	NUMBER		Absolute file number of the database file
TABLESPACE_NAME	VARCHAR2 (30)		Name of the tablespace to which the file belongs
BYTES	NUMBER		Size of the file in bytes
BLOCKS	NUMBER		Size of the file in Oracle blocks
STATUS	VARCHAR2 (9)		File status: AVAILABLE or INVALID (INVALID means that the file number is not in use, for example, a file in a tablespace that was dropped)
RELATIVE_FNO	NUMBER		Relative file number
AUTOEXTENSIBLE	VARCHAR2 (3)		Autoextensible indicator
MAXBYTES	NUMBER		Maximum file size in bytes
MAXBLOCKS	NUMBER		Maximum file size in blocks
INCREMENT_BY	NUMBER		Number of Oracle blocks used as autoextension increment
USER_BYTES	NUMBER		The size of the file available for user data. The actual size of the file minus the USER_BYTES value is used to store file related metadata.
USER_BLOCKS	NUMBER		Number of blocks which can be used by the data
ONLINE_STATUS	VARCHAR2 (7)		Online status of the file: <ul style="list-style-type: none"> • SYSOFF • SYSTEM • OFFLINE • ONLINE • RECOVER
LOST_WRITE_PROTECT	VARCHAR2 (7)		Lost write protection status of the file. Possible values: <ul style="list-style-type: none"> • ENABLED: Indicates that lost write data is being collected • OFF: Indicates that lost write data is not being collected • SUSPEND: Indicates that lost write data is not currently being collected, but it can be enabled at a later date. The lost write data collected when the file was ENABLED remains in the lost write database, but it is not being checked or updated. <p>If lost write protection is enabled for a single data file, it does not have to be enabled for another data file in the same tablespace.</p> <p>If lost write protection is enabled for a tablespace, it is enabled for all data files for that tablespace, including data files added later.</p> <p>You can check the lost write protection status for a tablespace by querying the LOST_WRITE_PROTECT column in the DBA_TABLESPACES view.</p>

 **See Also:**

- *Oracle Database Advanced Security Guide* for information on opening a hardware keystore
- "[DBA_TABLESPACES](#)"

4.244 DBA_DATAPUMP_JOBS

`DBA_DATAPUMP_JOBS` identifies all active Data Pump jobs in the database, regardless of their state, on an instance (or on all instances for Real Application Clusters). It also shows all Data Pump master tables not currently associated with an active job.

Related View

`USER_DATAPUMP_JOBS` displays the Data Pump jobs owned by the current user. This view does not display the `OWNER_NAME` column.

Column	Datatype	NULL	Description
<code>OWNER_NAME</code>	VARCHAR2(128)		User that initiated the job
<code>JOB_NAME</code>	VARCHAR2(128)		User-supplied name for the job (or the default name generated by the server)
<code>OPERATION</code>	VARCHAR2(128)		Type of job
<code>JOB_MODE</code>	VARCHAR2(128)		Mode of job
<code>STATE</code>	VARCHAR2(128)		Current job state
<code>DEGREE</code>	NUMBER		Number of worker processes performing the operation
<code>ATTACHED_SESSIONS</code>	NUMBER		Number of sessions attached to the job
<code>DATAPUMP_SESSIONS</code>	NUMBER		Number of Data Pump sessions participating in the job

 **See Also:**

- "[USER_DATAPUMP_JOBS](#)"

4.245 DBA_DATAPUMP_SESSIONS

`DBA_DATAPUMP_SESSIONS` identifies the user sessions that are attached to a Data Pump job. The information in this view is useful for determining why a stopped Data Pump operation has not gone away.

Column	Datatype	NULL	Description
<code>OWNER_NAME</code>	VARCHAR2(128)		User that initiated the job

Column	Datatype	NULL	Description
JOB_NAME	VARCHAR2 (128)		User-supplied name for the job (or the default name generated by the server)
INSTANCE_ID	NUMBER		Instance ID
SADDR	RAW (4 8)		Address of the session attached to the job. Can be used with V\$SESSION view.
SESSION_TYPE	VARCHAR2 (14)		<p>Data Pump session type:</p> <ul style="list-style-type: none"> • DBMS_DATAPUMP - Data Pump interface process (one for each active instantiation of DBMS_DATAPUMP.OPEN and DBMS_DATAPUMP.ATTACH per job.) • MASTER - master control process (one per job) • WORKER - worker process (1 to n per job, depending on degree of parallelism) • EXTERNAL TABLE - external table data access process (1 to n, depending on degree of parallelism, for jobs that use external tables as the data access method for some tables) • OTHER

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_DATAPUMP package

4.246 DBA_DB_LINK_SOURCES

DBA_DB_LINK_SOURCES identifies all unique source databases that opened database links to the local database.

By default, only a DBA has access to this view. However, a DBA can grant access to this view to others.

This view is based on a persistent table that resides in the same system tablespace that is used by Database Auditing.

In a multitenant container database (CDB) environment, for every DBA_view, there is a corresponding CDB_view that contains data for all the pluggable databases (PDBs) in the CDB. A query on the CDB_DB_LINK_SOURCES view done in the CDB\$ROOT container will show sources of all the database links recorded in all PDBs. A query on the corresponding DBA_DB_LINK_SOURCES view done in a PDB show information corresponding to that PDB only (that is, where that specific PDB was the target of an inbound database link).

Note that the CDB_views would only show data from PDBs that are open at the time the query is issued. Therefore, when you are diagnosing sources of database links, Oracle recommends that you keep open any or all PDBs that might contain useful information for the diagnosis.

Column	Datatype	NULL	Description
SOURCE_ID	NUMBER	NOT NULL	Unique ID that identifies an incoming database link

Column	Datatype	NULL	Description
DB_NAME	VARCHAR2 (256)	NOT NULL	Global name of the source database
DBID	NUMBER	NOT NULL	Database identifier of the source database. Maps to the DBID of the source database in V\$DATABASE.
DB_UNIQUE_NAME	VARCHAR2 (256)		Unique database name of the source database. Maps to the DB_UNIQUE_NAME of the source database in V\$DATABASE. Null for source databases that do not provide this information.
HOST_NAME	VARCHAR2 (256)		Resolved host name. Null if not available.
IP_ADDRESS	VARCHAR2 (128)		IP address of source machine. Null if not available.
PROTOCOL	VARCHAR2 (64)		One of supported protocols such as ipc, sdp, tcp, or tcps. Null if not available.
USERNAME	VARCHAR2 (128)	NOT NULL	Oracle username of the user who logged into the local database. Maps to the USERNAME column in V\$SESSION.
USER#	NUMBER	NOT NULL	Oracle user id of the user who logged into the local database. Maps to the USER# column in V\$SESSION.
FIRST_LOGON_TIME	TIMESTAMP (6)	NOT NULL	The timestamp of the first connection on this database link in UTC
LAST_LOGON_TIME	TIMESTAMP (6)		The timestamp of the last connection on this database link in UTC
LOGON_COUNT	NUMBER		Number of times connection has been established through this database link

 See Also:

- "[V\\$DATABASE](#)"
- "[V\\$SESSION](#)"
- "[DBA_EXTERNAL_SCN_ACTIVITY](#)"
- "[DBA_DB_LINKS](#)"

4.247 DBA_DB_LINKS

DBA_DB_LINKS describes all database links in the database. Its columns are the same as those in ALL_DB_LINKS.

 See Also:

- "[ALL_DB_LINKS](#)"
- "[DBA_DB_LINK_SOURCES](#)"
- "[DBA_EXTERNAL_SCN_ACTIVITY](#)"

4.248 DBA_DBFS_HS

DBA_DBFS_HS shows all Database File System (DBFS) hierarchical stores.

Related View

USER_DBFS_HS shows all Database File System hierarchical stores owned by the current user. This view does not display the STOREOWNER column.

Column	Datatype	NULL	Description
STORENAME	VARCHAR2 (256)		Name of store
STOREOWNER	VARCHAR2 (64)		Owner of store

 **See Also:**

["USER_DBFS_HS"](#)

4.249 DBA_DBFS_HS_COMMANDS

DBA_DBFS_HS_COMMANDS shows all the registered store commands for all Database File System (DBFS) hierarchical stores.

Related View

USER_DBFS_HS_COMMANDS shows all the registered store commands for all DBFS hierarchical stores owned by current user. This view does not display the STOREOWNER column.

Column	Datatype	NULL	Description
STORENAME	VARCHAR2 (256)		Name of store
STOREOWNER	VARCHAR2 (64)		Owner of store
STORECOMMAND	VARCHAR2 (512)		Store command
STOREFLAGS	NUMBER		Valid values are: <ul style="list-style-type: none"> • 1 - Indicates that the command is sent to the device before put • 2 - Indicates that the command is sent to the device before get

 **See Also:**

["USER_DBFS_HS_COMMANDS"](#)

4.250 DBA_DBFS_HS_FIXED_PROPERTIES

`DBA_DBFS_HS_FIXED_PROPERTIES` shows non-modifiable properties of all Database File System (DBFS) hierarchical stores.

Related View

`USER_DBFS_HS_FIXED_PROPERTIES` shows non-modifiable properties of all DBFS hierarchical stores owned by current user. This view does not display the `STORE_OWNER` column.

Column	Datatype	NULL	Description
STORE_NAME	VARCHAR2(128)	NOT NULL	Name of store
STORE_OWNER	VARCHAR2(128)	NOT NULL	Owner of store
PROP_NAME	VARCHAR2(256)	NOT NULL	Property name
PROP_VALUE	VARCHAR2(256)	NOT NULL	Property value

 **See Also:**

["USER_DBFS_HS_FIXED_PROPERTIES"](#)

4.251 DBA_DBFS_HS_PROPERTIES

`DBA_DBFS_HS_PROPERTIES` shows modifiable properties of all Database File System (DBFS) hierarchical stores.

Related View

`USER_DBFS_HS_PROPERTIES` shows modifiable properties of all DBFS hierarchical stores owned by current user. This view does not display the `STOREOWNER` column.

Column	Datatype	NULL	Description
STORENAME	VARCHAR2(256)		Name of store
STOREOWNER	VARCHAR2(64)		Owner of store
PROPERTYNAME	VARCHAR2(256)		Property name
PROPERTYVALUE	VARCHAR2(256)		Property value

 **See Also:**

["USER_DBFS_HS_PROPERTIES"](#)

4.252 DBA_DDL_LOCKS

DBA_DDL_LOCKS lists all DDL locks held in the database and all outstanding requests for a DDL lock.

Column	Datatype	NULL	Description
SESSION_ID	NUMBER		Session identifier
OWNER	VARCHAR2(128)		Owner of the lock
NAME	VARCHAR2(1000)		Name of the lock
TYPE	VARCHAR2(40)		Lock type: <ul style="list-style-type: none"> • Cursor • Table/Procedure/Type • Body • Trigger • Index • Cluster • Java Source • Java Resource • Java Data
MODE_HELD	VARCHAR2(9)		Lock mode: <ul style="list-style-type: none"> • None • Null • Share • Exclusive
MODE_REQUESTED	VARCHAR2(9)		Lock request type: <ul style="list-style-type: none"> • None • Null • Share • Exclusive

 **See Also:**

Oracle Database Concepts for more information about DDL locks

4.253 DBA_DEPENDENCIES

DBA_DEPENDENCIES describes all dependencies in the database between procedures, packages, functions, package bodies, and triggers, including dependencies on views created without any database links. Its columns are the same as those in ALL_DEPENDENCIES.

 **See Also:**

"ALL_DEPENDENCIES"

4.254 DBA_DIGEST_VERIFIERS

DBA_DIGEST_VERIFIERS enables the database administrator to check which users have Digest verifiers stored on disk and the type of hashing algorithm used for the verifiers.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2 (128)		Name of the user
HAS_DIGEST_VERIFIERS	VARCHAR2 (3)		YES if a Digest verifier exists, NO otherwise
DIGEST_TYPE	CHAR (3)		The type of hashing algorithm used for the Digest verifier. For instance, MD5 for users with MD5 Digest verifiers. If no Digest verifier exists, this column is NULL.

4.255 DBA_DIM_ATTRIBUTES

DBA_DIM_ATTRIBUTES describes the relationships between dimension levels and functionally dependent columns in the database. The level columns and the dependent column must be in the same table. This view's columns are the same as those in ALL_DIM_ATTRIBUTES.

 See Also:

"ALL_DIM_ATTRIBUTES"

4.256 DBA_DIM_CHILD_OF

DBA_DIM_CHILD_OF describes a hierarchical relationship of 1 to n between all the pairs of levels in the dimensions in the database. Its columns are the same as those in ALL_DIM_CHILD_OF.

 See Also:

"ALL_DIM_CHILD_OF"

4.257 DBA_DIM_HIERARCHIES

DBA_DIM_HIERARCHIES describes all the dimension hierarchies in the database. Its columns are the same as those in ALL_DIM_HIERARCHIES.

 See Also:

"ALL_DIM_HIERARCHIES"

4.258 DBA_DIM_JOIN_KEY

DBA_DIM_JOIN_KEY describes all joins in the database between two dimension tables. The join is always specified between a parent dimension level column and a child column. This view's columns are the same as those in ALL_DIM_JOIN_KEY.

See Also:

["ALL_DIM_JOIN_KEY"](#)

4.259 DBA_DIM_LEVEL_KEY

DBA_DIM_LEVEL_KEY describes the columns of all dimension levels in the database. This view's columns are the same as those in ALL_DIM_LEVEL_KEY.

See Also:

["ALL_DIM_LEVEL_KEY"](#)

4.260 DBA_DIM_LEVELS

DBA_DIM_LEVELS describes all dimension levels in the database. All columns of a dimension level must come from the same relation. This view's columns are the same as those in ALL_DIM_LEVELS.

See Also:

["ALL_DIM_LEVELS"](#)

4.261 DBA_DIMENSIONS

DBA_DIMENSIONS represents dimension objects. Its columns are the same as those in ALL_DIMENSIONS.

See Also:

["ALL_DIMENSIONS"](#)

4.262 DBA_DIRECTORIES

DBA_DIRECTORIES describes all directory objects in the database. Its columns are the same as those in ALL_DIRECTORIES.

 **See Also:**

["ALL_DIRECTORIES"](#)

4.263 DBA_DISCOVERY_SOURCE

DBA_DISCOVERY_SOURCE describes sensitive data discovery import information.

Column	Datatype	NULL	Description
SOURCE_NAME	VARCHAR2 (128)		The name of the discovery source. In the case of Application Data Model (ADM), this is the ADM instance name.
SOURCE_TYPE	VARCHAR2 (6)		<p>The type of the source:</p> <ul style="list-style-type: none"> • ADM: import from ADM • CUSTOM: custom import • DB: discovered within the database
CTIME	TIMESTAMP (6)		The last time sensitive data was imported from this source

 **See Also:**

Oracle Database Security Guide for more information about transparent sensitive data protection

4.264 DBA_DML_LOCKS

DBA_DML_LOCKS lists all DML locks held in the database and all outstanding requests for a DML lock.

Column	Datatype	NULL	Description
SESSION_ID	NUMBER		Session holding or acquiring the lock
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the lock
NAME	VARCHAR2 (128)	NOT NULL	Name of the lock

Column	Datatype	NULL	Description
MODE_HELD	VARCHAR2 (13)		The type of lock held. The values are: <ul style="list-style-type: none"> ROWS_S (SS): row share lock ROW-X (SX): row exclusive lock SHARE (S): share lock S/ROW-X (SSX): exclusive lock NONE: lock requested but not yet obtained
MODE_REQUESTED	VARCHAR2 (13)		Lock request type. The values are: <ul style="list-style-type: none"> ROWS_S (SS): row share lock ROW-X (SX): row exclusive lock SHARE (S): share lock S/ROW-X (SSX): exclusive lock NONE: Lock identifier obtained; lock not held or requested
LAST_CONVERT	NUMBER		Time since current mode was granted
BLOCKING_OTHERS	VARCHAR2 (40)		Blocking others

 See Also:

Oracle Database Concepts for more information about lock modes for table locks

4.265 DBA_DMT_FREE_SPACE

DBA_DMT_FREE_SPACE describes the free extents in all dictionary managed tablespaces in the database.

Column	Datatype	NULL	Description
TABLESPACE_ID	NUMBER	NOT NULL	Identifier number of the tablespace containing the extent
FILE_ID	NUMBER	NOT NULL	File identifier number of the file containing the extent
BLOCK_ID	NUMBER	NOT NULL	Starting block number of the extent
BLOCKS	NUMBER	NOT NULL	Size of the extent (in Oracle blocks)

4.266 DBA_DMT_USED_EXTENTS

DBA_DMT_USED_EXTENTS describes the extents comprising the segments in all dictionary managed tablespaces in the database.

Column	Datatype	NULL	Description
SEGMENT_FILEID	NUMBER	NOT NULL	File number of the segment header of the extent
SEGMENT_BLOCK	NUMBER	NOT NULL	Block number of the segment header of the extent
TABLESPACE_ID	NUMBER	NOT NULL	Identifier number of the tablespace containing the extent
EXTENT_ID	NUMBER	NOT NULL	Extent number in the segment

Column	Datatype	NULL	Description
FILEID	NUMBER	NOT NULL	File identifier number of the file containing the extent
BLOCK	NUMBER	NOT NULL	Starting block number of the extent
LENGTH	NUMBER	NOT NULL	Number of blocks in the extent

4.267 DBA_EDITION_COMMENTS

DBA_EDITION_COMMENTS describes the comments on all editions in the database. Its columns are the same as those in ALL_EDITION_COMMENTS.

 **See Also:**

["ALL_EDITION_COMMENTS"](#)

4.268 DBA_EDITIONED_TYPES

DBA_EDITIONED_TYPES lists all types that are editioned by default for every user in the database.

Related View

USER_EDITIONED_TYPES lists the types that are editioned by default for the current user. This view does not display the SCHEMA column.

Column	Datatype	NULL	Description
SCHEMA	VARCHAR2 (128)	NOT NULL	Schema in which the object types is editionable
OBJECT_TYPE	VARCHAR2 (23)		Object type that is editionable

 **See Also:**

["USER_EDITIONED_TYPES"](#)

4.269 DBA_EDITIONING_VIEW_COLS

DBA_EDITIONING_VIEW_COLS describes the relationship between the columns of all editioning views in the database and the table columns to which they map. Its columns are the same as those in ALL_EDITIONING_VIEW_COLS.

 **See Also:**

["ALL_EDITIONING_VIEW_COLS"](#)

4.270 DBA_EDITIONING_VIEW_COLS_AE

DBA_EDITIONING_VIEW_COLS_AE describes the relationship between the columns of all editioning views (across all editions) in the database and the table columns to which they map. Its columns are the same as those in ALL_EDITIONING_VIEW_COLS_AE.

 **See Also:**

["ALL_EDITIONING_VIEW_COLS_AE"](#)

4.271 DBA_EDITIONING_VIEWS

DBA_EDITIONING_VIEWS describes all editioning views in the database. Its columns are the same as those in ALL_EDITIONING_VIEWS.

 **See Also:**

["ALL_EDITIONING_VIEWS"](#)

4.272 DBA_EDITIONING_VIEWS_AE

DBA_EDITIONING_VIEWS_AE describes all editioning views (across all editions) in the database. Its columns are the same as those in ALL_EDITIONING_VIEWS_AE.

 **See Also:**

["ALL_EDITIONING_VIEWS_AE"](#)

4.273 DBA_EDITIONS

DBA_EDITIONS describes all editions in the database. Its columns are the same as those in ALL_EDITIONS.

 **See Also:**

- ["ALL_EDITIONS"](#)
- *Oracle Database Development Guide* for more information about editions

4.274 DBA_ENABLED_AGGREGATIONS

DBA_ENABLED_AGGREGATIONS displays information about enabled on-demand statistic aggregation.

Column	Datatype	NULL	Description
AGGREGATION_TYPE	VARCHAR2(21)		Type of the aggregation: <ul style="list-style-type: none"> • CLIENT_ID • SERVICE • SERVICE_MODULE • SERVICE_MODULE_ACTION
PRIMARY_ID	VARCHAR2(64)		Primary qualifier (specific client identifier or service name)
QUALIFIER_ID1	VARCHAR2(48)		Secondary qualifier (specific module name)
QUALIFIER_ID2	VARCHAR2(32)		Additional qualifier (specific action name)

4.275 DBA_ENABLED_TRACES

DBA_ENABLED_TRACES displays information about enabled SQL traces.

Column	Datatype	NULL	Description
TRACE_TYPE	VARCHAR2(21)		Type of the trace: <ul style="list-style-type: none"> • CLIENT_ID • SERVICE • SERVICE_MODULE • SERVICE_MODULE_ACTION • DATABASE
PRIMARY_ID	VARCHAR2(64)		Primary qualifier (specific client identifier or service name)
QUALIFIER_ID1	VARCHAR2(64)		Secondary qualifier (specific module name)
QUALIFIER_ID2	VARCHAR2(64)		Additional qualifier (specific action name)
WAITS	VARCHAR2(5)		Indicates whether waits are traced (TRUE) or not (FALSE)
BINDS	VARCHAR2(5)		Indicates whether binds are traced (TRUE) or not (FALSE)
PLAN_STATS	VARCHAR2(10)		Indicates whether cursor execution statistics are traced. Possible values include: <ul style="list-style-type: none"> • ALL_EXEC: Execution statistics are dumped at each cursor execution • NEVER: Execution statistics are never dumped • FIRST_EXEC: Execution statistics are dumped during the first execution of the cursor. This is the default behavior.
INSTANCE_NAME	VARCHAR2(16)		Instance name for tracing restricted to named instances

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_MONITOR package

4.276 DBA_ENCRYPTED_COLUMNS

DBA_ENCRYPTED_COLUMNS maintains encryption algorithm information for all encrypted columns in the database. Its columns are the same as those in ALL_ENCRYPTED_COLUMNS.

 **See Also:**

"ALL_ENCRYPTED_COLUMNS"

4.277 DBA_EPG_DAD_AUTHORIZATION

DBA_EPG_DAD_AUTHORIZATION describes the DADs that are authorized to use different user's privileges.

Related View

USER_EPG_DAD_AUTHORIZATION describes the DADs that are authorized to use the user's privileges. This view does not display the USERNAME column.

Column	Datatype	NULL	Description
DAD_NAME	VARCHAR2(64)	NOT NULL	Name of DAD
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privileges the DAD is authorized to use

 **See Also:**

"USER_EPG_DAD_AUTHORIZATION"

4.278 DBA_ERROR_TRANSLATIONS

DBA_ERROR_TRANSLATIONS describes all error translations in the database. Its columns are the same as those in ALL_ERROR_TRANSLATIONS.

 **See Also:**

"ALL_ERROR_TRANSLATIONS"

4.279 DBA_ERRORS

DBA_ERRORS describes the current errors on all stored objects in the database. Its columns are the same as those in ALL_ERRORS.

See Also:

"ALL_ERRORS"

4.280 DBA_ERRORS_AE

DBA_ERRORS_AE describes the current errors on all stored objects (across all editions) in the database. Its columns are the same as those in ALL_ERRORS_AE.

See Also:

"ALL_ERRORS_AE"

4.281 DBA_EVALUATION_CONTEXT_TABLES

DBA_EVALUATION_CONTEXT_TABLES describes the tables in all rule evaluation contexts in the database. Its columns are the same as those in ALL_EVALUATION_CONTEXT_TABLES.

See Also:

"ALL_EVALUATION_CONTEXT_TABLES"

4.282 DBA_EVALUATION_CONTEXT_VARS

DBA_EVALUATION_CONTEXT_VARS describes the variables in all rule evaluation contexts in the database. Its columns are the same as those in ALL_EVALUATION_CONTEXT_VARS.

See Also:

"ALL_EVALUATION_CONTEXT_VARS"

4.283 DBA_EVALUATION_CONTEXTS

DBA_EVALUATION_CONTEXTS describes all rule evaluation contexts in the database. Its columns are the same as those in ALL_EVALUATION_CONTEXTS.

 **See Also:**

["ALL_EVALUATION_CONTEXTS"](#)

4.284 DBA_EXP_FILES

DBA_EXP_FILES describes export files.

Column	Datatype	NULL	Description
EXP_VERSION	NUMBER (3)	NOT NULL	Version number of the export session
EXP_TYPE	VARCHAR2 (11)		Type of export file: complete, cumulative, or incremental
FILE_NAME	VARCHAR2 (100)	NOT NULL	Name of the export file
USER_NAME	VARCHAR2 (128)	NOT NULL	Name of user who executed export
TIMESTAMP	DATE	NOT NULL	Timestamp of the export session

4.285 DBA_EXP_OBJECTS

DBA_EXP_OBJECTS describes objects that have been incrementally exported.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)	NOT NULL	Owner of exported object
OBJECT_NAME	VARCHAR2 (128)	NOT NULL	Name of exported object
OBJECT_TYPE	VARCHAR2 (13)		Type of exported object
CUMULATIVE	DATE		Timestamp of last cumulative export
INCREMENTAL	DATE	NOT NULL	Timestamp of last incremental export
EXPORT_VERSION	NUMBER (3)	NOT NULL	The ID of the export session

4.286 DBA_EXP_VERSION

DBA_EXP_VERSION displays the version number of the last export session.

Column	Datatype	NULL	Description
EXP_VERSION	NUMBER (3)	NOT NULL	Version number of the last export session

4.287 DBA_EXPRESSION_STATISTICS

DBA_EXPRESSION_STATISTICS provides expression usage tracking statistics for all the tables in the database. Its columns are the same as those in ALL_EXPRESSION_STATISTICS.

 **See Also:**

["ALL_EXPRESSION_STATISTICS"](#)

4.288 DBA_EXTENTS

DBA_EXTENTS describes the extents comprising the segments in all tablespaces in the database.

Note that if a data file (or entire tablespace) is offline in a locally managed tablespace, you will not see any extent information. If an object has extents in an online file of the tablespace, you will see extent information about the offline data file. However, if the object is entirely in the offline file, a query of this view will not return any records.

Related View

USER_EXTENTS describes the extents comprising the segments owned by the current user's objects. This view does not display the OWNER, FILE_ID, BLOCK_ID, or RELATIVE_FNO columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Owner of the segment associated with the extent
SEGMENT_NAME	VARCHAR2 (128)		Name of the segment associated with the extent
PARTITION_NAME	VARCHAR2 (128)		Object Partition Name (Set to NULL for nonpartitioned objects)
SEGMENT_TYPE	VARCHAR2 (18)		Type of the segment: INDEX PARTITION, TABLE PARTITION
TABLESPACE_NAME	VARCHAR2 (30)		Name of the tablespace containing the extent
EXTENT_ID	NUMBER		Extent number in the segment
FILE_ID	NUMBER		Absolute file number of the data file containing the extent
BLOCK_ID	NUMBER		Starting block number of the extent
BYTES	NUMBER		Size of the extent in bytes
BLOCKS	NUMBER		Size of the extent in Oracle blocks
RELATIVE_FNO	NUMBER		Relative file number of the first extent block

 **See Also:**

["USER_EXTENTS"](#)

4.289 DBA_EXTERNAL_LOCATIONS

DBA_EXTERNAL_LOCATIONS describes the locations (data sources) of all external tables in the database. Its columns are the same as those in ALL_EXTERNAL_LOCATIONS.

 **See Also:**

["ALL_EXTERNAL_LOCATIONS"](#)

4.290 DBA_EXTERNAL_SCN_ACTIVITY

DBA_EXTERNAL_SCN_ACTIVITY works in conjunction with the DBA_DB_LINK_SOURCES and DBA_DB_LINKS views to determine the source of high SCN activities.

If the SCN is increased by an inbound database link, then you can join the DBA_EXTERNAL_SCN_ACTIVITY view with the DBA_DB_LINK_SOURCES view on the INBOUND_DB_LINK_SOURCE_ID column to get details of the remote database where the SCN increase originated.

If the SCN is increased by an outbound database link, then the INBOUND_DB_LINK_SOURCE_ID column will be NULL, but the OUTBOUND_DB_LINK_NAME and OUTBOUND_DB_LINK_OWNER columns can be joined with the DB_LINK and OWNER columns respectively in the DBA_DB_LINKS view to determine the remote database that caused the SCN increase.

If neither of the above cases are true (the INBOUND_DB_LINK_SOURCE_ID, OUTBOUND_DB_LINK_NAME, and OUTBOUND_DB_LINK_OWNER are all NULL), then the SCN increase resulted from a client connection and not as a result of a database link to or from another database. You can join the SESSION_ID and SESSION_SERIAL# columns with the SID and SERIAL# columns in V\$SESSION to get the client session details.

In a multitenant container database (CDB) environment, for every DBA_ view, there is a corresponding CDB_ view that contains data for all the pluggable databases (PDBs) in the CDB.

As the SCN is a property of the CDB (and not a PDB), a DBA interested in understanding large SCN jumps will likely find the CDB_EXTERNAL_SCN_ACTIVITY view more useful for diagnosing SCN jumps on a CDB. Querying the CDB_EXTERNAL_SCN_ACTIVITY view from CDB\$ROOT ensures that external SCN jumps occurring on all PDBs are looked at and noticed. On the other hand, a query on the corresponding DBA_EXTERNAL_SCN_ACTIVITY view, or a query on the CDB_EXTERNAL_SCN_ACTIVITY view done from a PDB would only show data for that PDB (that is, details regarding any external activity that occurred on that specific PDB that resulted in large SCN jumps).

Note that the CDB_ views would only show data from PDBs that are open at the time the query is issued. Therefore, when you are diagnosing sources of external SCN activities, Oracle recommends that you keep open any or all PDBs that might contain useful information for the diagnosis.

Column	Datatype	NULL	Description
OPERATION_TIMESTAMP	TIMESTAMP (6)	NOT NULL	Timestamp when SCN was received in UTC

Column	Datatype	NULL	Description
SESSION_ID	NUMBER	NOT NULL	Session identifier of the local session that created this entry. Maps to V\$SESSION.SID and to V\$ACTIVE_SESSION_HISTORY.SESSION_ID.
SESSION_SERIAL#	NUMBER	NOT NULL	Session serial number of the local session that created this entry. Maps to V\$SESSION.SERIAL# and to V\$ACTIVE_SESSION_HISTORY.SESSION_SERIAL#.
AUDIT_SESSIONID	NUMBER		Session identifier that can be joined with DBA_AUDIT_TRAIL.SESSIONID or UNIFIED_AUDIT_TRAIL.SESSIONID (depending on which kind of auditing is enabled). Null if auditing is not enabled.
USERNAME	VARCHAR2(128)	NOT NULL	Oracle username of the user who logged into the local database. Maps to V\$SESSION.USERNAME.
INBOUND_DB_LINK_SOURCE_I	NUMBER	D	If the SCN was bumped by an inbound database link, then this is the inbound database link identified by the DBA_DB_LINK_SOURCES.SOURCE_ID database link. If the SCN was not increased by an inbound database link, then this value is null.
OUTBOUND_DB_LINK_NAME	VARCHAR2(128)		If the SCN was bumped by an outbound database link, then this is the outbound database link identified by the DBA_DB_LINKS.DB_LINK database link. Using this column and the OUTBOUND_DB_LINK_OWNER column, you can determine the source of the SCN increase for outbound links. If the SCN was not increased by an outbound database link, then this value is null.
OUTBOUND_DB_LINK_OWNER	VARCHAR2(128)		If the SCN was bumped by an outbound database link, then this is the owner of the outbound database link identified by DBA_DB_LINKS.OWNER. Using this column and the OUTBOUND_DB_LINK_NAME column, you can determine the source of the SCN increase for outbound links. If the SCN was not increased by an outbound database link, then this value is null.
RESULT	VARCHAR2(64)	NOT NULL	The following SCN activities are captured: <ul style="list-style-type: none"> • REJECTED_HIGH_SCN - SCN rejection due to unreasonable value • REJECTED_HIGH_DELTA - SCN rejection due to unreasonable rate of growth • ACCEPTED - SCN accepted with warning Regular SCN activities which do not result in errors or warnings are not captured . SCN errors and warnings also appear in alert.log.
EXTERNAL_SCN	NUMBER	NOT NULL	The external SCN received from an inbound database link, an outbound database link, or a client
SCN_ADJUSTMENT	NUMBER	NOT NULL	For ACCEPTED SCNs in the RESULT column, how much the local SCN was increased. For REJECTED SCNs in the RESULT column, the attempted SCN increase.

- "[V\\$ACTIVE_SESSION_HISTORY](#)"
- "[DBA_AUDIT_TRAIL](#)"
- "[UNIFIED_AUDIT_TRAIL](#)"
- "[DBA_DB_LINKS](#)"
- "[DBA_DB_LINK_SOURCES](#)"

4.291 DBA_EXTERNAL_TABLES

`DBA_EXTERNAL_TABLES` describes all external tables in the database. Its columns are the same as those in `ALL_EXTERNAL_TABLES`.

See Also:

- "[ALL_EXTERNAL_TABLES](#)"

4.292 DBA_FEATURE_USAGE_STATISTICS

`DBA_FEATURE_USAGE_STATISTICS` displays information about database feature usage statistics.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database identifier of the database being tracked
NAME	VARCHAR2(64)	NOT NULL	Name of the feature
VERSION	VARCHAR2(17)	NOT NULL	Database version in which the feature was tracked
DETECTED_USAGES	NUMBER	NOT NULL	Number of times the system has detected usage for the feature
TOTAL_SAMPLES	NUMBER	NOT NULL	Number of times the system has woken up and checked for feature usage
CURRENTLY_USED	VARCHAR2(5)		Indicates whether usage was detected the last time the system checked (<code>TRUE</code>) or not (<code>FALSE</code>)
FIRST_USAGE_DATE	DATE		First sample time the system detected usage of the feature
LAST_USAGE_DATE	DATE		Last sample time the system detected usage of the feature
AUX_COUNT	NUMBER		This column stores feature-specific usage data in number format.
FEATURE_INFO	CLOB		This column stores feature-specific usage data in character format.
LAST_SAMPLE_DATE	DATE		The last time the system checked for usage

Column	Datatype	NULL	Description
LAST_SAMPLE_PERIOD	NUMBER		Amount of time (in seconds) between the last two usage sample times
SAMPLE_INTERVAL	NUMBER		Sample interval
DESCRIPTION	VARCHAR2 (128)		Description of the feature and usage detection logic

 **Note:**

Use the following SQL query to list the database features and their descriptions in alphabetical order:

```
SELECT name, description FROM dba_feature_usage_statistics
ORDER BY name;
```

4.293 DBA_FGA_AUDIT_TRAIL

DBA_FGA_AUDIT_TRAIL displays all audit records for fine-grained auditing.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED_AUDIT_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
SESSION_ID	NUMBER	NOT NULL	Session id of the query
TIMESTAMP	DATE		Date and time of the query in the local database session time zone
DB_USER	VARCHAR2 (128)		Database username who executed the query
OS_USER	VARCHAR2 (255)		Operating system username who executed the query
USERHOST	VARCHAR2 (128)		Client host machine name
CLIENT_ID	VARCHAR2 (128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2 (64)		Application execution context identifier
EXT_NAME	VARCHAR2 (4000)		External name
OBJECT_SCHEMA	VARCHAR2 (128)		Owner of the table or view
OBJECT_NAME	VARCHAR2 (128)		Name of the table or view
POLICY_NAME	VARCHAR2 (128)		Name of the Fine-Grained Auditing Policy
SCN	NUMBER		System change number (SCN) of the query
SQL_TEXT	NVARCHAR2 (2000)		SQL text of the query

Column	Datatype	NULL	Description
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
COMMENT\$TEXT	VARCHAR2(4000)		Comments
STATEMENT_TYPE	VARCHAR2(7)		Statement type of the query: <ul style="list-style-type: none"> • SELECT • INSERT • UPDATE • DELETE
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIMEZONE		Timestamp of the query in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object is accessed or modified
STATEMENTID	NUMBER		Numeric ID for each statement run (a statement may cause many actions)
ENTRYID	NUMBER		Numeric ID for each audit trail entry in the session
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object
DBID	NUMBER		Database identifier of the audited database
RLS_INFO	CLOB		Stores virtual private database (VPD) policy names and predicates separated by delimiter. To format the output into individual rows, use the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_FGA function.
CURRENT_USER	VARCHAR2(128)		Effective user for the statement execution

 **Note:**

The SQL_BIND and SQL_TEXT columns are populated only if the policy has been created with the AUDIT_TRAIL parameter set to db, extended.

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_FGA function.

4.294 DBA_FILE_GROUP_EXPORT_INFO

DBA_FILE_GROUP_EXPORT_INFO shows export-related information for each version in the database that has a valid Data Pump dump file. Its columns are the same as those in ALL_FILE_GROUP_EXPORT_INFO.

 **See Also:**

["ALL_FILE_GROUP_EXPORT_INFO"](#).

4.295 DBA_FILE_GROUP_FILES

DBA_FILE_GROUP_FILES shows the file set for each versioned file group in the database. Its columns are the same as those in ALL_FILE_GROUP_FILES.

 **See Also:**

["ALL_FILE_GROUP_FILES"](#)

4.296 DBA_FILE_GROUP_TABLES

DBA_FILE_GROUP_TABLES shows information about all the tables in the database that can be imported using the file set. Its columns are the same as those in ALL_FILE_GROUP_TABLES.

 **See Also:**

["ALL_FILE_GROUP_TABLES"](#)

4.297 DBA_FILE_GROUP_TABLESPACES

DBA_FILE_GROUP_TABLESPACES shows information about the transportable tablespaces present (partially or completely) in all file sets in the database (when the file set contains dump files). Its columns are the same as those in ALL_FILE_GROUP_TABLESPACES.

 **See Also:**

["ALL_FILE_GROUP_TABLESPACES"](#)

4.298 DBA_FILE_GROUP VERSIONS

DBA_FILE_GROUP VERSIONS shows top-level version information for all file groups in the database. Its columns are the same as those in ALL_FILE_GROUP VERSIONS.

 **See Also:**

["ALL_FILE_GROUP VERSIONS"](#)

4.299 DBA_FILE_GROUPS

DBA_FILE_GROUPS shows top-level metadata about all file groups in the database. Its columns are the same as those for ALL_FILE_GROUPS.

 **See Also:**

["ALL_FILE_GROUPS"](#)

4.300 DBA_FLASHBACK_ARCHIVE

DBA_FLASHBACK_ARCHIVE describes all flashback archives available in the database.

Related View

USER_FLASHBACK_ARCHIVE describes the flashback archives available to the current user.

Column	Datatype	NULL	Description
OWNER_NAME	VARCHAR2 (255)		Name of the creator of the flashback archive
FLASHBACK_ARCHIVE_NAME	VARCHAR2 (255)	NOT NULL	Name of the flashback archive
FLASHBACK_ARCHIVE#	NUMBER	NOT NULL	Number of the flashback archive
RETENTION_IN_DAYS	NUMBER	NOT NULL	Maximum duration (in days) for which data is retained in the flashback archive
CREATE_TIME	TIMESTAMP (9)		Time at which the flashback archive was created
LAST_PURGE_TIME	TIMESTAMP (9)		Time at which the data in the flashback archive was last purged by the system
STATUS	VARCHAR2 (7)		Indicates whether the flashback archive is a default flashback archive for the system (DEFAULT) or not (NULL)

 **See Also:**

["USER_FLASHBACK_ARCHIVE"](#)

4.301 DBA_FLASHBACK_ARCHIVE_TABLES

`DBA_FLASHBACK_ARCHIVE_TABLES` displays information about all tables in the database that are enabled for Flashback Archive.

Related View

`USER_FLASHBACK_ARCHIVE_TABLES` displays information about the tables owned by the current user that are enabled for Flashback Archive.

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table enabled for Flashback Archive
OWNER_NAME	VARCHAR2(128)	NOT NULL	Owner name of the table enabled for Flashback Archive
FLASHBACK_ARCHIVE_NAME	VARCHAR2(255)	NOT NULL	Name of the flashback archive
ARCHIVE_TABLE_NAME	VARCHAR2(53)		Name of the archive table containing the historical data for the user table
STATUS	VARCHAR2(13)		Status of whether flashback archive is enabled or being disabled on the table

 **See Also:**

["USER_FLASHBACK_ARCHIVE_TABLES"](#)

4.302 DBA_FLASHBACK_ARCHIVE_TS

`DBA_FLASHBACK_ARCHIVE_TS` describes all tablespaces in the flashback archives available in the database.

Column	Datatype	NULL	Description
FLASHBACK_ARCHIVE_NAME	VARCHAR2(255)	NOT NULL	Name of the flashback archive
FLASHBACK_ARCHIVE#	NUMBER	NOT NULL	Number of the flashback archive
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of a tablespace in the flashback archive
QUOTA_IN_MB	VARCHAR2(40)		Maximum space (in MB) that can be used for Flashback Archive from the tablespace; NULL indicates no Quota restriction

4.303 DBA_FLASHBACK_TXN_REPORT

`DBA_FLASHBACK_TXN_REPORT` displays information about all compensating transactions that have been committed in the database.

Each row in this view is associated with one compensating transaction.

Related View

`USER_FLASHBACK_TXN_REPORT` displays information about the compensating transactions owned by the current user that have been committed in the database. This view does not display the `USERNAME` column.

Column	Datatype	NULL	Description
COMPENSATING_XID	RAW (8)	NOT NULL	Transaction responsible for backout
COMPENSATING_TXN_NAME	VARCHAR2 (256)		Name of the compensating transaction
COMMIT_TIME	DATE		Timestamp when the compensating transaction committed
XID_REPORT	CLOB		An XML report describing the details of the transactions backed out by the compensating transaction
USERNAME	VARCHAR2 (128)	NOT NULL	User who is executing the compensating transaction

 **See Also:**

["USER_FLASHBACK_TXN_REPORT"](#)

4.304 DBA_FLASHBACK_TXN_STATE

`DBA_FLASHBACK_TXN_STATE` displays information about the compensating status of all transactions in the database.

For each compensating transaction, there could be multiple rows, where each row provides the dependency relation between the transactions that have been compensated by the compensating transaction.

Related View

`USER_FLASHBACK_TXN_STATE` displays information about the compensating status of the transactions owned by the current user. This view does not display the `USERNAME` column.

Column	Datatype	NULL	Description
COMPENSATING_XID	RAW (8)		Transaction ID of the compensating transaction
XID	RAW (8)		A transaction that has been compensated by the compensating transaction
DEPENDENT_XID	RAW (8)		A dependent transaction of XID Note: In the case of <code>BACKOUT_MODE = CASCADE</code> , there must be another row with <code>XID = DEPENDENT_XID</code> of this column.
BACKOUT_MODE	VARCHAR2 (16)		Mode in which XID was backed out: <ul style="list-style-type: none"> • NOCASCADE • NOCASCADE_FORCE • NONCONFLICT_ONLY • CASCADE
USERNAME	VARCHAR2 (128)	NOT NULL	User who is performing the compensating transaction

 See Also:["USER_FLASHBACK_TXN_STATE"](#)

4.305 DBA_FREE_SPACE

`DBA_FREE_SPACE` describes the free extents in all tablespaces in the database.

If a data file (or entire tablespace) is offline in a locally managed tablespace, you will not see any extent information. If an object has extents in an online file of the tablespace, you will see extent information about the offline data file. However, if the object is entirely in the offline file, a query of this view will not return any records.

If a data file does not have any free space, you will not see a row for the data file in this view.

Related View

`USER_FREE_SPACE` describes the free extents in the tablespaces accessible to the current user.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2 (30)		Name of the tablespace containing the extent
FILE_ID	NUMBER		Absolute file number of the data file containing the extent
BLOCK_ID	NUMBER		Starting block number of the extent
BYTES	NUMBER		Size of the extent (in bytes)
BLOCKS	NUMBER		Size of the extent (in Oracle blocks)
RELATIVE_FNO	NUMBER		Relative file number of the file containing the extent

 See Also:["USER_FREE_SPACE"](#)

4.306 DBA_FREE_SPACE_COALESCED

`DBA_FREE_SPACE_COALESCED` describes statistics on coalesced space in all tablespaces in the database.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2 (30)		Name of the tablespace
TOTAL_EXTENTS	NUMBER		Total number of free extents in the tablespace
EXTENTS_COALESCED	NUMBER		Total number of coalesced free extents in the tablespace
PERCENT_EXTENTS_COALESCED	NUMBER		Percentage of coalesced free extents in the tablespace
TOTAL_BYTES	NUMBER		Total number of free bytes in the tablespace

Column	Datatype	NULL	Description
BYTES_COALESCED	NUMBER		Total number of coalesced free bytes in the tablespace
TOTAL_BLOCKS	NUMBER		Total number of free Oracle blocks in the tablespace
BLOCKS_COALESCED	NUMBER		Total number of coalesced free Oracle blocks in the tablespace
PERCENT_BLOCKS_COALESCED	NUMBER		Percentage of coalesced free Oracle blocks in the tablespace

4.307 DBA_GG_AUTO_CDR_COLUMN_GROUPS

DBA_GG_AUTO_CDR_COLUMN_GROUPS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) column groups in the database.

Its columns are the same as those in ALL_GG_AUTO_CDR_COLUMN_GROUPS.

 See Also:

["ALL_GG_AUTO_CDR_COLUMN_GROUPS"](#)

4.308 DBA_GG_AUTO_CDR_COLUMNS

DBA_GG_AUTO_CDR_COLUMNS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) columns in the database.

Its columns are the same as those in ALL_GG_AUTO_CDR_COLUMNS.

 See Also:

["ALL_GG_AUTO_CDR_COLUMNS"](#)

4.309 DBA_GG_AUTO_CDR_TABLES

DBA_GG_AUTO_CDR_TABLES provides details about all the tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR).

Its columns are the same as those in ALL_GG_AUTO_CDR_TABLES.

 See Also:

["ALL_GG_AUTO_CDR_TABLES"](#)

4.310 DBA_GG_INBOUND_PROGRESS

DBA_GG_INBOUND_PROGRESS displays information about the progress made by all GoldenGate inbound servers in the database. Its columns are the same as those in ALL_GG_INBOUND_PROGRESS.

See Also:

["ALL_GG_INBOUND_PROGRESS"](#)

4.311 DBA_GG_PROC_OBJECT_EXCLUSION

DBA_GG_PROC_OBJECT_EXCLUSION provides details about all tables that should be filtered when operating on given objects.

Column	Datatype	NULL	Description
PACKAGE_OWNER	VARCHAR2 (384)		Procedure package owner
PACKAGE_NAME	VARCHAR2 (384)		Procedure package name
OBJECT_OWNER	VARCHAR2 (384)		Object owner to filter for the given procedure
OBJECT_NAME	VARCHAR2 (384)		Object name to filter for the given procedure

4.312 DBA_GG PROCEDURE_ANNOTATION

DBA_GG PROCEDURE_ANNOTATION annotates the position of Owner and Object arguments in procedure calls.

Column	Datatype	NULL	Description
PACKAGE_OWNER	VARCHAR2 (384)	NOT NULL	Procedure package owner
PACKAGE_NAME	VARCHAR2 (384)	NOT NULL	Procedure package name
PROCEDURE_NAME	VARCHAR2 (384)	NOT NULL	Procedure name
OBJECT_OWNER_ARGPOS	NUMBER	NOT NULL	Object owner name position in argument list, -1 if not present
OBJECT_ARGPOS	NUMBER	NOT NULL	Object name position in argument list, -1 if not present
MIN_DB_VERSION	VARCHAR2 (100)		Minimum database version for the procedure
MAX_DB_VERSION	VARCHAR2 (100)		Maximum database version for the procedure
MIN_REDO_COMPAT_LEVEL	VARCHAR2 (100)		Minimum redo compatibility for the procedure
MAX_REDO_COMPAT_LEVEL	VARCHAR2 (100)		Maximum redo compatibility for the procedure
FLAGS	NUMBER		Additional information about procedure arguments

4.313 DBA_GG_SUPPORTED_PACKAGES

`DBA_GG_SUPPORTED_PACKAGES` provides details about supported procedure packages for Oracle GoldenGate replication.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (384)	NOT NULL	Procedure package owner
NAME	VARCHAR2 (384)	NOT NULL	Procedure package name
FEATURE	VARCHAR2 (384)	NOT NULL	DBMS feature that the procedure package belongs to
MIN_DB_VERSION	VARCHAR2 (100)		Minimum database version for the supported package
MAX_DB_VERSION	VARCHAR2 (100)		Maximum database version for the supported package
MIN_REDO_COMPAT_LEVEL	VARCHAR2 (100)		Minimum redo compatibility for the supported package
MAX_REDO_COMPAT_LEVEL	VARCHAR2 (100)		Maximum redo compatibility for the supported package
SUPPORTED_LEVEL	VARCHAR2 (100)		Supported level of the package

4.314 DBA_GG_SUPPORTED PROCEDURES

`DBA_GG_SUPPORTED_PROCEDURES` provides details about all procedures that are supported for Oracle GoldenGate replication.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Procedure package owner
PACKAGE_NAME	VARCHAR2 (128)		Procedure package name
PROCEDURE_NAME	VARCHAR2 (128)		Procedure name
MIN_DB_VERSION	VARCHAR2 (100)		Minimum database version for the procedure
MAX_DB_VERSION	VARCHAR2 (100)		Maximum database version for the procedure
MIN_REDO_COMPAT_LEVEL	VARCHAR2 (100)		Minimum redo compatibility for the procedure
MAX_REDO_COMPAT_LEVEL	VARCHAR2 (100)		Maximum redo compatibility for the procedure
SUPPORTED_MODE	VARCHAR2 (100)		Supported mode for the procedure: <code>ALWAYS</code> or <code>DBMS_ROLLING</code>
EXCLUSION_RULE_EXISTS	VARCHAR2 (3)		Specifies whether an exclusion rule exists for the procedure (<code>YES</code>) or not (<code>NO</code>).
See Also: " DBA_GG_PROC_OBJECT_EXCLUSION "			

4.315 DBA_GLOBAL_CONTEXT

`DBA_GLOBAL_CONTEXT` displays the definition (name, schema, and package) of all global contexts created in the database.

This view is a subset of `DBA_CONTEXT`, which describes all contexts, including global contexts.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2 (128)	NOT NULL	Name of the context namespace

Column	Datatype	NULL	Description
SCHEMA	VARCHAR2 (128)	NOT NULL	Schema of the package that administers the globally accessible context
PACKAGE	VARCHAR2 (128)	NOT NULL	Package that administers the globally accessible context

 **See Also:**

- "[DBA_CONTEXT](#)"
- *Oracle Database Security Guide* for more information about using global application contexts
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_SESSION.SET_CONTEXT` procedure

4.316 DBA_GOLDENGATE_INBOUND

`DBA_GOLDENGATE_INBOUND` displays information about all GoldenGate inbound servers in the database. Its columns are the same as those in `ALL_GOLDENGATE_INBOUND`.

 **See Also:**

["ALL_GOLDENGATE_INBOUND"](#)

4.317 DBA_GOLDENGATE_NOT_UNIQUE

`DBA_GOLDENGATE_NOT_UNIQUE` displays all tables that have no primary and no non-null unique indexes.

Most of the tables displayed by this view are supported because their columns contain enough information to be maintained by Oracle GoldenGate. Some tables, however, cannot be supported because their columns do not contain the necessary information. Unsupported tables usually contain a column defined using an unsupported data type.

Column	Datatype	NULL	Description
OWNER	VARCHAR2 (128)		Schema name of the non-unique table
TABLE_NAME	VARCHAR2 (128)		Table name of the non-unique table

Column	Datatype	NULL	Description
BAD_COLUMN	VARCHAR2(1)		<p>Indicates that the table has a column not useful in the where clause. Possible values:</p> <ul style="list-style-type: none"> Y - Table column is defined using an unbounded data type, such as LONG or BLOB. If two rows in the table match except in their LOB columns, then the table cannot be maintained properly. Log apply services will attempt to maintain these tables, but you must ensure the application does not allow uniqueness only in the unbounded columns. N - Enough column information is present to maintain the table in Oracle GoldenGate but the log transport services and log apply services would run more efficiently if you added a primary key. You should consider adding a disabled RELY constraint to these tables.

4.318 DBA_GOLDENGATE_PRIVILEGES

DBA_GOLDENGATE_PRIVILEGES displays details about Oracle GoldenGate privileges. Its columns are the same as those in ALL_GOLDENGATE_PRIVILEGES.

 See Also:

["ALL_GOLDENGATE_PRIVILEGES"](#)

4.319 DBA_GOLDENGATE_RULES

DBA_GOLDENGATE_RULES displays information about all GoldenGate server rules in the database. Its columns are the same as those in ALL_GOLDENGATE_RULES.

 See Also:

["ALL_GOLDENGATE_RULES"](#)

4.320 DBA_GOLDENGATE_SUPPORT_MODE

DBA_GOLDENGATE_SUPPORT_MODE displays information about the level of Oracle GoldenGate capture process support for the tables in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Table owner
OBJECT_NAME	VARCHAR2(128)		Table name

Column	Datatype	NULL	Description
SUPPORT_MODE	VARCHAR2 (6)		<p>Capture process support level for the table:</p> <ul style="list-style-type: none"> FULL - A capture process can capture changes made to all of the columns in the table ID KEY - A capture process can capture changes made to the key columns and any other columns in the table supported by the capture process, except for LOB, LONG, LONG RAW, and XMLType columns. INTERNAL - A capture process cannot capture changes made to any columns in the table because the table is secondary to a user-created table and is updated implicitly when changes are made to the user-created table. Such tables include mapping tables for index-organized tables, storage tables for nested tables, materialized view logs, secondary objects associated with domain indexes, and temporary tables. NONE - A capture process cannot capture changes made to any columns in the table because the table is not supported for replication.

4.321 DBA_HANG_MANAGER_PARAMETERS

DBA_HANG_MANAGER_PARAMETERS shows the available user tunable Hang Manager parameters and their values.

Column	Datatype	NULL	Description
NAME	VARCHAR2 (40)	NOT NULL	String representation of the parameter names
CURRENT_VALUE	VARCHAR2 (20)		String representation of the parameter values
CURRENT_TIME	DATE		Time when the current value was set
PREVIOUS_VALUE	VARCHAR2 (20)		String representation of the parameter value from the previous update
PREVIOUS_TIME	DATE		Time when the previous value was set

 **Note:**

- "V\$HANG_INFO"
- "V\$HANG_SESSION_INFO"
- "V\$HANG_STATISTICS"

4.322 DBA_HEAT_MAP_SEG_HISTOGRAM

DBA_HEAT_MAP_SEG_HISTOGRAM displays segment access information for all segments. Its columns are the same as those in ALL_HEAT_MAP_SEG_HISTOGRAM.

 **See Also:**

["ALL_HEAT_MAP_SEG_HISTOGRAM"](#)

4.323 DBA_HEAT_MAP_SEGMENT

DBA_HEAT_MAP_SEGMENT displays the latest segment access time for all segments. Its columns are the same as those in ALL_HEAT_MAP_SEGMENT.

 **See Also:**

["ALL_HEAT_MAP_SEGMENT"](#)

4.324 DBA_HEATMAP_TOP_OBJECTS

DBA_HEATMAP_TOP_OBJECTS displays heat map information for the top 10000 objects by default.

If the database contains fewer than 10000 objects, then fewer than 10000 objects are returned by the view.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Object name
OBJECT_TYPE	VARCHAR2(18)		Object type
TABLESPACE_NAME	VARCHAR2(30)		Tablespace name
SEGMENT_COUNT	NUMBER		Segments in the tablespace
OBJECT_SIZE	NUMBER		Size of the object in MB
MIN_WRITETIME	DATE		Oldest modification time for a set of blocks
MAX_WRITETIME	DATE		Latest modification time for a set of blocks
AVG_WRITETIME	DATE		Average of the modification times for a set of blocks
MIN_READTIME	DATE		Oldest read time for a set of blocks
MAX_READTIME	DATE		Latest read time for a set of blocks
AVG_READTIME	DATE		Average of the read times for a set of blocks
MIN_FTSTIME	DATE		Minimum full table scan time of the object
MAX_FTSTIME	DATE		Maximum full table scan time of the object
AVG_FTSTIME	DATE		Average full table scan time of the object
MIN_LOOKUPTIME	DATE		Minimum lookup time of the object

Column	Datatype	NULL	Description
MAX_LOOKUPTIME	DATE		Maximum lookup time of the object
AVG_LOOKUPTIME	DATE		Average lookup time of the object

4.325 DBA_HEATMAP_TOP_TABLESPACES

DBA_HEATMAP_TOP_TABLESPACES displays heat map information for the top 100 tablespaces.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(128)		Tablespace name
SEGMENT_COUNT	NUMBER		Segments in the tablespace
ALLOCATED_BYTES	NUMBER		Total bytes allocated to the objects in the tablespace
MIN_WRITETIME	DATE		Minimum write time of objects tracked
MAX_WRITETIME	DATE		Maximum write time of objects tracked
AVG_WRITETIME	DATE		Average write time of objects tracked
MIN_READTIME	DATE		Minimum read time of objects tracked
MAX_READTIME	DATE		Maximum read time of objects tracked
AVG_READTIME	DATE		Average read time of objects tracked
MIN_FTSTIME	DATE		Minimum full table scan time of objects tracked
MAX_FTSTIME	DATE		Maximum full table scan time of objects tracked
AVG_FTSTIME	DATE		Average full table scan time of objects tracked
MIN_LOOKUPTIME	DATE		Minimum lookup time of objects tracked
MAX_LOOKUPTIME	DATE		Maximum lookup time of objects tracked
AVG_LOOKUPTIME	DATE		Average lookup time of objects tracked

4.326 DBA_HIER_CLASS

DBA_HIER_CLASS describes the classifications of all hierarchies in the database. Its columns are the same as those in ALL_HIER_CLASS.

 See Also:

"ALL_HIER_CLASS"

4.327 DBA_HIER_CLASS_AE

DBA_HIER_CLASS_AE describes the classifications of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_CLASS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_HIER_CLASS_AE"](#)

4.328 DBA_HIER_COLUMNS

DBA_HIER_COLUMNS describes the columns of all hierarchies in the database. Its columns are the same as those in ALL_HIER_COLUMNS.

 **See Also:**

["ALL_HIER_COLUMNS"](#)

4.329 DBA_HIER_COLUMNS_AE

DBA_HIER_COLUMNS_AE describes the columns of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_COLUMNS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_HIER_COLUMNS_AE"](#)

4.330 DBA_HIER_HIER_ATTR_CLASS

DBA_HIER_HIER_ATTR_CLASS describes the classifications of the hierarchical attributes of all hierarchies in the database. Its columns are the same as those in ALL_HIER_HIER_ATTR_CLASS.

 **See Also:**

["ALL_HIER_HIER_ATTR_CLASS"](#)

4.331 DBA_HIER_HIER_ATTR_CLASS_AE

DBA_HIER_HIER_ATTR_CLASS_AE describes the classifications of the hierarchical attributes of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_HIER_ATTR_CLASS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_HIER_HIER_ATTR_CLASS_AE"](#)

4.332 DBA_HIER_HIER_ATTRIBUTES

DBA_HIER_HIER_ATTRIBUTES describes the hierarchical attributes of all hierarchies in the database. Its columns are the same as those in ALL_HIER_HIER_ATTRIBUTES.

 **See Also:**

["ALL_HIER_HIER_ATTRIBUTES"](#)

4.333 DBA_HIER_HIER_ATTRIBUTES_AE

DBA_HIER_HIER_ATTRIBUTES_AE describes the hierarchical attributes of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_HIER_ATTRIBUTES_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_HIER_HIER_ATTRIBUTES_AE](#)"

4.334 DBA_HIER_JOIN_PATHS

DBA_HIER_JOIN_PATHS describes the join paths for all hierarchies in the database. Its columns are the same as those in ALL_HIER_JOIN_PATHS.

 **See Also:**

"[ALL_HIER_JOIN_PATHS](#)"

4.335 DBA_HIER_JOIN_PATHS_AE

DBA_HIER_JOIN_PATHS_AE describes the join paths for all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_JOIN_PATHS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_HIER_JOIN_PATHS_AE](#)"

4.336 DBA_HIER_LEVEL_ID_ATTRS

DBA_HIER_LEVEL_ID_ATTRS describes the attributes that uniquely identify members of the levels of all hierarchies in the database. Its columns are the same as those in ALL_HIER_LEVEL_ID_ATTRS.

 **See Also:**

["ALL_HIER_LEVEL_ID_ATTRS"](#)

4.337 DBA_HIER_LEVEL_ID_ATTRS_AE

DBA_HIER_LEVEL_ID_ATTRS_AE describes the attributes that uniquely identify members of the levels of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_LEVEL_ID_ATTRS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

["ALL_HIER_LEVEL_ID_ATTRS_AE"](#)

4.338 DBA_HIER_LEVELS

DBA_HIER_LEVELS describes the levels of all hierarchies in the database. Its columns are the same as those in ALL_HIER_LEVELS.

 **See Also:**

["ALL_HIER_LEVELS"](#)

4.339 DBA_HIER_LEVELS_AE

DBA_HIER_LEVELS_AE describes the levels of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_LEVELS_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_HIER_LEVELS_AE](#)"

4.340 DBA_HIERARCHIES

DBA_HIERARCHIES describes all hierarchies in the database. Its columns are the same as those in ALL_HIERARCHIES.

 **See Also:**

"[ALL_HIERARCHIES](#)"

4.341 DBA_HIERARCHIES_AE

DBA_HIERARCHIES_AE describes all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIERARCHIES_AE.

 **Note:**

This view is available starting with Oracle Database 19c, Release Update 19.13.

 **See Also:**

"[ALL_HIERARCHIES_AE](#)"

4.342 DBA_HIGH_WATER_MARK_STATISTICS

DBA_HIGH_WATER_MARK_STATISTICS displays information about database high-watermark statistics.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Identifier of the database for which the high-watermark statistics are tracked
NAME	VARCHAR2 (64)	NOT NULL	Name of the high-watermark statistic (see Table 4-1)
VERSION	VARCHAR2 (17)	NOT NULL	Database version in which the high watermarks were tracked
HIGHWATER	NUMBER		Highest value of the statistic seen at sampling time
LAST_VALUE	NUMBER		Value of the statistic at the last sample time
DESCRIPTION	VARCHAR2 (128)		Description of the high-watermark statistics (see Table 4-1)

Table 4-1 DBA_HIGH_WATER_MARK_STATISTICS Statistics

Name	Description
ACTIVE_SESSIONS	Maximum Number of Active Sessions seen in the system
CPU_COUNT	Maximum Number of CPUs
DATAFILES	Maximum Number of Datafiles
DB_SIZE	Maximum Size of the Database (Bytes)
EXADATA_DISKS	Number of physical disks
INSTANCES	Oracle Database instances
PART_INDEXES	Maximum Number of Partitions belonging to an User Index
PART_TABLES	Maximum Number of Partitions belonging to an User Table
QUERY_LENGTH	Maximum Query Length
SEGMENT_SIZE	Size of Largest Segment (Bytes)
SESSIONS	Maximum Number of Concurrent Sessions seen in the database
SQL_NCHAR_COLUMNS	Maximum Number of SQL NCHAR Columns
TABLESPACES	Maximum Number of Tablespaces
USER_INDEXES	Number of User Indexes
USER_MV	Maximum Number of Materialized Views (User)
USER_TABLES	Number of User Tables

4.343 DBA_HIST_ACTIVE_SESS_HISTORY

DBA_HIST_ACTIVE_SESS_HISTORY displays the history of the contents of the in-memory active session history of recent system activity.

DBA_HIST_ACTIVE_SESS_HISTORY contains snapshots of V\$ACTIVE_SESSION_HISTORY. See "[V\\$ACTIVE_SESSION_HISTORY](#)" for further interpretation details for many of these columns (except SNAP_ID, DBID, and INSTANCE_NUMBER).

 **Note:**

If you want to perform a join with the snapshots view, use the DBA_HIST_ASH_SNAPSHOT view instead of the DBA_HIST_SNAPSHOT view.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SAMPLE_ID	NUMBER	NOT NULL	ID of the sample
SAMPLE_TIME	TIMESTAMP (3)	NOT NULL	Time of the sample
SAMPLE_TIME_UTC	TIMESTAMP (3)		SAMPLE_TIME in UTC
USECS_PER_ROW	NUMBER		Time in microseconds since the last active session history sample
SESSION_ID	NUMBER	NOT NULL	Session identifier
SESSION_SERIAL#	NUMBER		Session serial number (used to uniquely identify a session's objects)
SESSION_TYPE	VARCHAR2 (10)		Session type: <ul style="list-style-type: none"> • FOREGROUND • BACKGROUND
FLAGS	NUMBER		Reserved for future use
USER_ID	NUMBER		Oracle user identifier
SQL_ID	VARCHAR2 (13)		SQL identifier of the SQL statement that is currently being executed
IS_SQLID_CURRENT	VARCHAR2 (1)		Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)
SQL_CHILD_NUMBER	NUMBER		Child number of the SQL statement that is currently being executed
SQL_OPCODE	NUMBER		Indicates what phase of operation the SQL statement is in
SQL_OPNAME	VARCHAR2 (64)		SQL command name
FORCE_MATCHING_SIGNATURE	NUMBER		Signature used when the CURSOR_SHARING parameter is set to FORCE
TOP_LEVEL_SQL_ID	VARCHAR2 (13)		SQL identifier of the top level SQL statement
TOP_LEVEL_SQL_OPCODE	NUMBER		Indicates what phase of operation the top level SQL statement was in
SQL_PLAN_HASH_VALUE	NUMBER		Numerical representation of the SQL plan for the cursor
SQL_FULL_PLAN_HASH_VALUE	NUMBER		Numerical representation of the complete SQL plan for the cursor being executed by this session
SQL_ADAPTIVE_PLAN_RESOLVED	NUMBER		Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not
SQL_PLAN_LINE_ID	NUMBER		SQL plan line ID
SQL_PLAN_OPERATION	VARCHAR2 (64)		Plan operation name
SQL_PLAN_OPTIONS	VARCHAR2 (64)		Plan operation options

Column	Datatype	NULL	Description
SQL_EXEC_ID	NUMBER		SQL execution identifier
SQL_EXEC_START	DATE		Time when the execution of the SQL started
PLSQL_ENTRY_OBJECT_ID	NUMBER		Object ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack)
PLSQL_ENTRY_SUBPROGRAM_ID	NUMBER		Subprogram ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack)
PLSQL_OBJECT_ID	NUMBER		Object ID of the currently executing PL/SQL subprogram (or NULL if executing SQL)
PLSQL_SUBPROGRAM_ID	NUMBER		Subprogram ID of the currently executing PL/SQL object (or NULL if executing SQL)
QC_INSTANCE_ID	NUMBER		Query coordinator instance ID
QC_SESSION_ID	NUMBER		Query coordinator session ID
QC_SESSION_SERIAL#	NUMBER		Query coordinator session serial number
PX_FLAGS	NUMBER		Reserved for internal use
EVENT	VARCHAR2(64)		If SESSION_STATE = WAITING, then the event for which the session was waiting at the time of sampling. If SESSION_STATE = ON CPU, then this column will be NULL.
EVENT_ID	NUMBER		Identifier of the resource or event for which the session is waiting or for which the session last waited
SEQ#	NUMBER		Sequence number that uniquely identifies the wait (incremented for each wait)
P1TEXT	VARCHAR2(64)		Text of first additional parameter
P1	NUMBER		First additional parameter
P2TEXT	VARCHAR2(64)		Text of second additional parameter
P2	NUMBER		Second additional parameter
P3TEXT	VARCHAR2(64)		Text of third additional parameter
P3	NUMBER		Third additional parameter
WAIT_CLASS	VARCHAR2(64)		Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS.
WAIT_CLASS_ID	NUMBER		Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS_ID.
WAIT_TIME	NUMBER		Total wait time (in microseconds) for the event for which the session last waited (0 if currently waiting)
SESSION_STATE	VARCHAR2(7)		Session state: <ul style="list-style-type: none">• WAITING• ON CPU
TIME_WAITED	NUMBER		Time that the current session actually spent waiting for the event (in microseconds). This column is set for waits that were in progress at the time the sample was taken.

Column	Datatype	NULL	Description
BLOCKING_SESSION_STATUS	VARCHAR2(11)		<p>Status of the blocking session:</p> <ul style="list-style-type: none"> • VALID • NO HOLDER • GLOBAL • NOT IN WAIT • UNKNOWN
BLOCKING_SESSION	NUMBER		Session identifier of the blocking session. Populated only when the session was waiting for enqueues or a "buffer busy" wait. Maps to V\$SESSION.BLOCKING_SESSION.
BLOCKING_SESSION_SERIAL#	NUMBER		Serial number of the blocking session
BLOCKING_INST_ID	NUMBER		Instance number of the blocker shown in BLOCKING_SESSION
BLOCKING_HANGCHAIN_INFO	VARCHAR2(1)		Indicates whether the information about BLOCKING_SESSION comes from the hang chain (Y) or not (N)
CURRENT_OBJ#	NUMBER		Object ID of the object that the session is currently referencing. This information is only available if the session was waiting for Application, Cluster, Concurrency, and User I/O wait events. Maps to V\$SESSION.ROW_WAIT_OBJ#.
CURRENT_FILE#	NUMBER		File number of the file containing the block that the session is currently referencing. This information is only available if the session was waiting for Cluster, Concurrency, and User I/O wait events. Maps to V\$SESSION.ROW_WAIT_FILE#.
CURRENT_BLOCK#	NUMBER		ID of the block that the session is currently referencing
CURRENT_ROW#	NUMBER		Row identifier that the session is referencing
TOP_LEVEL_CALL#	NUMBER		Oracle top level call number
TOP_LEVEL_CALL_NAME	VARCHAR2(64)		Oracle top level call name
CONSUMER_GROUP_ID	NUMBER		Consumer group ID
XID	RAW(8)		Transaction ID that the session was working on at the time of sampling. V\$SESSION does not contain this information.
REMOTE_INSTANCE#	NUMBER		Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events.
TIME_MODEL	NUMBER		Time model information
IN_CONNECTION_MGMT	VARCHAR2(1)		Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)
IN_PARSE	VARCHAR2(1)		Indicates whether the session was parsing at the time of sampling (Y) or not (N)
IN_HARD_PARSE	VARCHAR2(1)		Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)
IN_SQL_EXECUTION	VARCHAR2(1)		Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)
IN_PLSQL_EXECUTION	VARCHAR2(1)		Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)

Column	Datatype	NULL	Description
IN_PLSQL_RPC	VARCHAR2(1)		Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)
IN_PLSQL_COMPILATION	VARCHAR2(1)		Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)
IN_JAVA_EXECUTION	VARCHAR2(1)		Indicates whether the session was executing Java at the time of sampling (Y) or not (N)
IN_BIND	VARCHAR2(1)		Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)
IN_CURSOR_CLOSE	VARCHAR2(1)		Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)
IN_SEQUENCE_LOAD	VARCHAR2(1)		Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)
IN_INMEMORY_QUERY	VARCHAR2(1)		Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N)
IN_INMEMORY_POPULATE	VARCHAR2(1)		Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_PREPOPULATE	VARCHAR2(1)		Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_REPOPULATE	VARCHAR2(1)		Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_TREPOPULATE	VARCHAR2(1)		Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)
IN_TABLESPACE_ENCRYPTION	VARCHAR2(1)		Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)
CAPTURE_OVERHEAD	VARCHAR2(1)		Indicates whether the session is executing capture code (Y) or not (N)
REPLAY_OVERHEAD	VARCHAR2(1)		Indicates whether the session is executing replay code (Y) or not (N)
IS_CAPTURED	VARCHAR2(1)		Indicates whether the session is being captured (Y) or not (N)
IS_REPLIED	VARCHAR2(1)		Indicates whether the session is being replayed (Y) or not (N)
IS_REPLAY_SYNC_TOKEN_HOLDER	VARCHAR2(1)		Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay
SERVICE_HASH	NUMBER		Hash that identifies the Service
PROGRAM	VARCHAR2(64)		Name of the operating system program
MODULE	VARCHAR2(64)		Name of the currently executing module as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure
ACTION	VARCHAR2(64)		Name of the currently executing action as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure
CLIENT_ID	VARCHAR2(64)		Client identifier of the session
MACHINE	VARCHAR2(64)		Client's operating system machine name
PORT	NUMBER		Client port number

Column	Datatype	NULL	Description
ECID	VARCHAR2 (64)		Execution context identifier (sent by Application Server)
DBREPLAY_FILE_ID	NUMBER		If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.
DBREPLAY_CALL_COUNTER	NUMBER		If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL.
TM_DELTA_TIME	NUMBER		Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated
TM_DELTA_CPU_TIME	NUMBER		Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds
TM_DELTA_DB_TIME	NUMBER		Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds
DELTA_TIME	NUMBER		Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated
DELTA_READ_IO_REQUESTS	NUMBER		Number of read I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_REQUESTS	NUMBER		Number of write I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_READ_IO_BYTES	NUMBER		Number of I/O bytes read by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_BYTES	NUMBER		Number of I/O bytes written by this session over the last DELTA_TIME microseconds
DELTA_INTERCONNECT_IO_BY_TES	NUMBER		Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds
PGA_ALLOCATED	NUMBER		Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken
TEMP_SPACE_ALLOCATED	NUMBER		Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken
DBOP_NAME	VARCHAR2 (64)		Database operation name. If the type is SQL, the DBOP_NAME will be NULL.
DBOP_EXEC_ID	NUMBER		Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.344 DBA_HIST_APPLY_SUMMARY

`DBA_HIST_APPLY_SUMMARY` displays historical statistics information about each apply process for Oracle GoldenGate, and Oracle XStream. This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
STARTUP_TIME	DATE	NOT NULL	The time that the apply process was last started
READER_TOTAL_MESSAGES_DEQUEUED	NUMBER		Total number of messages dequeued since the apply process was last started
READER_LAG	NUMBER		For captured messages, the delay (in seconds) between the creation of the last message and it being received by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being received by the apply process.
COORD_TOTAL_RECEIVED	NUMBER		Total number of transactions received by the coordinator process since the apply process was last started
COORD_TOTAL_APPLIED	NUMBER		Total number of transactions applied by the apply process since the apply process was last started
COORD_TOTAL_ROLLBACKS	NUMBER		Number of transactions which were rolled back due to unexpected contention
COORD_TOTAL_WAIT_DEPS	NUMBER		Number of times since the apply process was last started that an apply server waited to apply a logical change record (LCR) in a transaction until another apply server applied a transaction because of a dependency between the transactions
COORD_TOTAL_WAIT_CMTS	NUMBER		Number of times since the apply process was last started that an apply server waited to commit a transaction until another apply server committed a transaction to serialize commits

Column	Datatype	NULL	Description
COORD_LWM_LAG	NUMBER		For captured messages, the delay (in seconds) between the creation of the message corresponding to the low watermark and it being applied by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being applied by the apply process.
SERVER_TOTAL_MESSAGES_APPLIED	NUMBER		Total number of messages applied by all the apply servers since the apply process was last started
SERVER_ELAPSED_DEQUEUE_TIME	NUMBER		Time elapsed (in hundredths of a second) dequeuing messages by all the apply servers since the apply process was last started
SERVER_ELAPSED_APPLY_TIME	NUMBER		Time elapsed (in hundredths of a second) applying messages by all the apply servers since the apply process was last started
CON_DBID	NUMBER		The database ID of the PDB
REPLICAT_NAME	VARCHAR2(128)		The name of the replicat group created from GGSCI using GoldenGate
UNASSIGNED_COMPLETE_TXN	NUMBER		Total number of complete transactions that the coordinator has not assigned to any apply servers
TOTAL_LCRS_RETRIED	NUMBER		Total number of LCRs retried by this server
TOTAL_TRANSACTIONS_RETRIED	NUMBER		Total transactions retried by this server
TOTAL_ERRORS	NUMBER		Number of transactions applied by the apply process that resulted in an apply error since the apply process was last started
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: <ul style="list-style-type: none"> • XStream • GoldenGate
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.345 DBA_HIST_ASH_SNAPSHOT

`DBA_HIST_ASH_SNAPSHOT` provides the list of snapshots that contains Active Session History (ASH) data.

This view differs from `DBA_HIST_SNAPSHOT` in that it provides snapshots which had errors flushing some Automatic Workload Repository (AWR) tables, but for which ASH data may be successfully flushed (`DBA_HIST_SNAPSHOT` filters out snapshots which had errors flushing AWR tables).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STARTUP_TIME	TIMESTAMP (3)	NOT NULL	Startup time of the instance
BEGIN_INTERVAL_TIME	TIMESTAMP (3)	NOT NULL	Time at the beginning of the snapshot interval
END_INTERVAL_TIME	TIMESTAMP (3)	NOT NULL	Time at the end of the snapshot interval; the actual time the snapshot was taken
FLUSH_ELAPSED	INTERVAL DAY (5) TO SECOND (1)		Amount of time to perform the snapshot
SNAP_LEVEL	NUMBER		Snapshot level
STATUS	NUMBER		Indicates if the snapshot was successfully flushed without any errors. Possible values: <ul style="list-style-type: none">• 0 - No errors• 1 - Errors on some AWR tables
ERROR_COUNT	NUMBER		Number of errors occurring in the tables for the particular snapshot
BL_MOVED	NUMBER		Reserved for internal use
SNAP_FLAG	NUMBER		Condition under which the snapshot was inserted. Possible values are: <ul style="list-style-type: none">• 1 - Manual snapshot created using a PL/SQL package• 2 - Imported snapshot• 4 - Snapshot taken while Diagnostic Pack or Tuning Pack was not enabled
SNAP_TIMEZONE	INTERVAL DAY (0) TO SECOND (0)		Snapshot time zone expressed as offset from UTC (Coordinated Universal Time) time zone
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.346 DBA_HIST_BASELINE

DBA_HIST_BASELINE displays information on baselines taken in the system.

For each baseline, this view displays the complete time range and whether the baseline is the default baseline.

Column	Datatype	NULL	Description
DBID	NUMBER		Database ID
BASELINE_ID	NUMBER		Internal ID for the baseline
BASELINE_NAME	VARCHAR2 (64)		User-specified name for the baseline
BASELINE_TYPE	VARCHAR2 (13)		The baseline type, as follows: STATIC - baselines that are created manually by the user MOVING WINDOW - baselines that have dynamic start and end snapshot IDs GENERATED - baselines that are automatically generated by the system, using a template
START_SNAP_ID	NUMBER		Start snapshot ID for the baseline
START_SNAP_TIME	TIMESTAMP (3)		Time associated with the start snapshot ID
END_SNAP_ID	NUMBER		End snapshot ID for the baseline
END_SNAP_TIME	TIMESTAMP (3)		Time associated with the end snapshot ID
MOVING_WINDOW_SIZE	NUMBER		If BASELINE_TYPE is MOVING WINDOW, this field is the size of the moving window in number of days. If NULL, then the window size is the value of the AWR retention setting.
CREATION_TIME	DATE		Time the baseline was created
EXPIRATION	NUMBER		How long to keep the baseline, in number of days. A NULL value means that the baseline will be kept forever.
TEMPLATE_NAME	VARCHAR2 (64)		Name of the template that created this baseline, if any.
LAST_TIME_COMPUTED	DATE		Last time that statistics were computed on the baseline.
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• n: Where n is the applicable container ID for the rows containing data

4.347 DBA_HIST_BASELINE_DETAILS

DBA_HIST_BASELINE_DETAILS displays details about the baseline.

Column	Datatype	NULL	Description
DBID	NUMBER		Database ID
INSTANCE_NUMBER	NUMBER		Instance ID for the baseline data
BASELINE_ID	NUMBER		Internal ID for the baseline
BASELINE_NAME	VARCHAR2 (64)		User-specified name for the baseline

Column	Datatype	NULL	Description
BASELINE_TYPE	VARCHAR2 (13)		The baseline type, as follows: STATIC - baselines that are created manually by the user MOVING WINDOW - baselines that have dynamic start and end snapshot IDs GENERATED - baselines that are automatically generated by the system, using a template
START_SNAP_ID	NUMBER		Start snapshot ID for the baseline
START_SNAP_TIME	TIMESTAMP (3)		Start snapshot time for the baseline
END_SNAP_ID	NUMBER		End snapshot ID for the baseline
END_SNAP_TIME	TIMESTAMP (3)		End snapshot time for the baseline
SHUTDOWN	VARCHAR2 (3)		Whether or not there is a database startup or shutdown in this interval (YES, NO, or NULL).
ERROR_COUNT	NUMBER		Number of errors in the snapshots in the baseline snapshot range
PCT_TOTAL_TIME	NUMBER		Amount of time captured in snapshots, divided by the total possible time for this baseline
LAST_TIME_COMPUTED	DATE		Last time that statistics were computed on the baseline
MOVING_WINDOW_SIZE	NUMBER		If BASELINE_TYPE is MOVING WINDOW, this field is the size of the moving window in number of days. If NULL, then the window size is the value of the AWR retention setting.
CREATION_TIME	DATE		Time the baseline was created
EXPIRATION	NUMBER		How long to keep the baseline, in number of days. A value of NULL indicates that the baseline will be kept forever.
TEMPLATE_NAME	VARCHAR2 (64)		Name of the template that created this baseline, if any.
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

4.348 DBA_HIST_BASELINE_METADATA

DBA_HIST_BASELINE_METADATA displays metadata information for the baseline.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
BASELINE_ID	NUMBER	NOT NULL	Internal ID for the baseline
BASELINE_NAME	VARCHAR2 (64)		User-specified name for the baseline

Column	Datatype	NULL	Description
BASELINE_TYPE	VARCHAR2(13)		The baseline type, as follows: STATIC - baselines that are created manually by the user MOVING WINDOW - baselines that have dynamic start and end snapshot IDs GENERATED - baselines that are automatically generated by the system, using a template
START_SNAP_ID	NUMBER		Start snapshot ID for the baseline
END_SNAP_ID	NUMBER		End snapshot ID for the baseline
MOVING_WINDOW_SIZE	NUMBER		If BASELINE_TYPE is MOVING WINDOW, this field is the size of the moving window in number of days. If NULL, then the window size is the value of the AWR retention setting.
CREATION_TIME	DATE		Time the baseline was created
EXPIRATION	NUMBER		How long to keep the baseline, in number of days. If the value is NULL, the baseline will be kept forever.
TEMPLATE_NAME	VARCHAR2(64)		Name of the template that created this baseline, if any
LAST_TIME_COMPUTED	DATE		Last time that statistics were computed on the baseline
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.349 DBA_HIST_BASELINE_TEMPLATE

DBA_HIST_BASELINE_TEMPLATE displays the templates used by the system for baseline generation.

The system uses this information to determine which baselines should be automatically created or removed.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
TEMPLATE_ID	NUMBER	NOT NULL	Internal ID for the template
TEMPLATE_NAME	VARCHAR2(128)	NOT NULL	Name of the template
TEMPLATE_TYPE	VARCHAR2(9)	NOT NULL	Type of the template, as follows: SINGLE - one time period REPEATING - maintain a time period

Column	Datatype	NULL	Description
BASELINE_NAME_PREFIX	VARCHAR2(128)	NOT NULL	Name to use for the baselines that are created: For a template type of SINGLE, the BASELINE_NAME_PREFIX is the name that will be used. For a template type of REPEATING, the BASELINE_NAME will be the prefix to the name.
START_TIME	DATE	NOT NULL	For a template type of SINGLE, this is the start time for future baselines For a template type of REPEATING, this is the effective start time that baselines should start being generated.
END_TIME	DATE	NOT NULL	For a template type of SINGLE, this is the end time for future baselines. For a template type of REPEATING, this is the effective end time that baselines should stop being generated.
DAY_OF_WEEK	VARCHAR2(9)		For a template type of REPEATING, this indicates the day of the week to create the baseline: SUNDAY, MONDAY, TUESDAY, WEDNESDAY, THURSDAY, FRIDAY, SATURDAY, ALL.
HOUR_IN_DAY	NUMBER		For a template type of REPEATING, a value from 0 - 23 to indicate the hour of the day to create the baseline for.
DURATION	NUMBER		For a template type of REPEATING, the length of time for the baseline to be created.
EXPIRATION	NUMBER		How long to keep the baseline, in number of days
REPEAT_INTERVAL	VARCHAR2(128)		String that represents the time repeating information in the format used by the DBMS_SCHEDULER package
LAST_GENERATED	DATE		Last time a baseline was generated for this template
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_SCHEDULER package

4.350 DBA_HIST_BG_EVENT_SUMMARY

DBA_HIST_BG_EVENT_SUMMARY displays the historical summary background event activity.

This view contains snapshots from V\$SESSION_EVENT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name of the class of the wait event
TOTAL_WAITS	NUMBER		Total number of waits for the event
TOTAL_TIMEOUTS	NUMBER		Total number of timeouts for the event
TIME_WAITED_MICRO	NUMBER		Total amount of time waited for the event (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$SESSION_EVENT"](#)

4.351 DBA_HIST_BUFFER_POOL_STAT

DBA_HIST_BUFFER_POOL_STAT displays historical statistics about all buffer pools available for the instance.

This view contains snapshots of V\$BUFFER_POOL_STATISTICS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
ID	NUMBER	NOT NULL	Buffer pool identifier number
NAME	VARCHAR2(20)		Name of the buffer pool
BLOCK_SIZE	NUMBER		Block Size
SET_MSIZE	NUMBER		Buffer pool maximum set size
CNUM_REPL	NUMBER		Number of buffers on the replacement list
CNUM_WRITE	NUMBER		Number of buffers on the write list

Column	Datatype	NULL	Description
CNUM_SET	NUMBER		Number of buffers in the set
BUF_GOT	NUMBER		Number of buffers gotten by the set
SUM_WRITE	NUMBER		Number of buffers written by the set
SUM_SCAN	NUMBER		Number of buffers scanned in the set
FREE_BUFFER_WAIT	NUMBER		Free buffer wait statistic
WRITE_COMPLETE_WAIT	NUMBER		Write complete wait statistic
BUFFER_BUSY_WAIT	NUMBER		Buffer busy wait statistic
FREE_BUFFER_INSPECTED	NUMBER		Free buffer inspected statistic
DIRTY_BUFFERS_INSPECTED	NUMBER		Dirty buffers inspected statistic
DB_BLOCK_CHANGE	NUMBER		Database blocks changed statistic
DB_BLOCK_GETS	NUMBER		Database blocks gotten statistic
CONSISTENT_GETS	NUMBER		Consistent gets statistic
PHYSICAL_READS	NUMBER		Physical reads statistic
PHYSICAL_WRITES	NUMBER		Physical writes statistic
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$BUFFER_POOL_STATISTICS"](#)

4.352 DBA_HIST_BUFFERED_QUEUES

DBA_HIST_BUFFERED_QUEUES displays historical information about all buffered queues available for the instance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
STARTUP_TIME	DATE	NOT NULL	Startup time of the instance

Column	Datatype	NULL	Description
QUEUE_ID	NUMBER	NOT NULL	ID of the queue
NUM_MSGS	NUMBER		Total number of outstanding messages currently enqueued in the buffered queue for the subscriber (includes the count of the messages overflowed to disk)
SPILL_MSGS	NUMBER		Current number of overflow messages spilled to disk from the buffered queue
CNUM_MSGS	NUMBER		Cumulative total number of messages enqueued into the buffered queue since the buffered queue was created.
CSPILL_MSGS	NUMBER		Cumulative total number of overflow messages spilled to disk from the buffered queue since the buffered queue was created
EXPIRED_MSGS	NUMBER		Number of expired messages
OLDEST_MSGID	RAW(16)		Message ID of the oldest message
OLDEST_MSG_ENQTM	TIMESTAMP(3)		Enqueue time of the oldest message
QUEUE_STATE	VARCHAR2(25)		Indicates whether the queue is in recovery mode (QUEUE IS IN RECOVERY MODE) or not (NORMAL)
ELAPSED_ENQUEUE_TIME	NUMBER		Total time spent in enqueue (in hundredths of a second)
ELAPSED_DEQUEUE_TIME	NUMBER		Total time spent in dequeue (in hundredths of a second)
ELAPSED_TRANSFORMATION_TIME	NUMBER		Total time for evaluating transformations (in hundredths of a second)
ELAPSED_RULE_EVALUATION_TIME	NUMBER		Total time for rule evaluations (in hundredths of a second)
ENQUEUE_CPU_TIME	NUMBER		Total CPU time for enqueue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)
LAST_ENQUEUE_TIME	TIMESTAMP(3)		Last message enqueue time
LAST_DEQUEUE_TIME	TIMESTAMP(3)		Last message dequeue time
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.353 DBA_HIST_BUFFERED_SUBSCRIBERS

DBA_HIST_BUFFERED_SUBSCRIBERS displays historical information about the subscribers for all buffered queues in the instance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
SUBSCRIBER_ID	NUMBER	NOT NULL	Internal subscriber number (for identification)
SUBSCRIBER_NAME	VARCHAR2(128)		Name of the subscriber
SUBSCRIBER_ADDRESS	VARCHAR2(1024)		Address of the subscribing agent
SUBSCRIBER_TYPE	VARCHAR2(128)		Type of subscriber: <ul style="list-style-type: none">• PROXY - Proxy subscriber• SUBSCRIBOR
STARTUP_TIME	DATE	NOT NULL	Startup time of the instance
LAST_BROWSED_SEQ	NUMBER		Sequence number of the most recently browsed message for the subscriber (comparable to the number of messages in the V\$STREAMS_APPLY_READER view)
LAST_BROWSED_NUM	NUMBER		Internal Message number for the most recently browsed message for the subscriber
LAST_DEQUEUED_SEQ	NUMBER		Sequence number of the most recently dequeued message for the subscriber (comparable to the number of messages in the V\$STREAMS_APPLY_COORDINATOR view)
LAST_DEQUEUED_NUM	NUMBER		Internal Message number for the most recently dequeued message for the subscriber
CURRENT_ENQ_SEQ	NUMBER		Current sequence number of the most recently enqueued message for the subscriber
NUM_MSGS	NUMBER		Total number of outstanding messages currently enqueued in the buffered queue for the subscriber (includes the count of the messages overflowed to disk)
CNUM_MSGS	NUMBER		Cumulative total number of messages enqueued for the subscriber since the creation of the buffered queue
TOTAL_DEQUEUED_MSG	NUMBER		Total number of messages dequeued by the subscriber
TOTAL_SPILLED_MSG	NUMBER		Total number of spilled messages for the subscriber
EXPIRED_MSGS	NUMBER		Number of expired messages
MESSAGE_LAG	NUMBER		Message lag of the subscriber
ELAPSED_DEQUEUE_TIME	NUMBER		Total time spent in dequeue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)
LAST_DEQUEUE_TIME	TIMESTAMP(3)		Last message dequeue time
OLDEST_MSGID	RAW(16)		Message ID of the oldest message
OLDEST_MSG_ENQTM	TIMESTAMP(3)		Enqueue time of the oldest message
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

4.354 DBA_HIST_CAPTURE

DBA_HIST_CAPTURE displays historical statistics information about each capture process for Oracle GoldenGate, and XStream capture operations.

This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
CAPTURE_NAME	VARCHAR2 (128)	NOT NULL	Name of the capture process
STARTUP_TIME	DATE	NOT NULL	Time that the capture process was last started
LAG	NUMBER		Delay (in seconds) between the creation and capture of the most recently captured message
TOTAL_MESSAGES_CAPTURED	NUMBER		Total changes captured since the capture process was last started
TOTAL_MESSAGES_ENQUEUED	NUMBER		Total number of messages enqueued since the capture process was last started
ELAPSED_RULE_TIME	NUMBER		Elapsed time (in hundredths of a second) evaluating rules since the capture process was last started
ELAPSED_ENQUEUE_TIME	NUMBER		Elapsed time (in hundredths of a second) enqueueing messages since the capture process was last started
ELAPSED_REDO_WAIT_TIME	NUMBER		Elapsed time (in hundredths of a second) spent by the capture process in the WAITING FOR REDO state since the capture process was last started.
ELAPSED_PAUSE_TIME	NUMBER		Elapsed pause time (in hundredths of a second) spent by the capture process since the capture process was last restarted
CON_DBID	NUMBER		The database ID of the PDB
EXTRACT_NAME	VARCHAR2 (128)		Name of the extract process, if applicable
BYTES_REDO_MINED	NUMBER		The total amount of redo data mined (in bytes) since the capture process last started
BYTES_SENT	NUMBER		Total number of bytes sent by the capture process to the extract process since the last time the extract process attached to the capture process

Column	Datatype	NULL	Description
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: <ul style="list-style-type: none">• XStream• GoldenGate
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.355 DBA_HIST_CHANNEL_WAITS

DBA_HIST_CHANNEL_WAITS display the amount of messages broadcast on KSR and KSXR channels as well as the total time taken for the broadcast to complete.

KSR channels are local to an instance, that is, only processes within an instance subscribed to the channel can receive the message. KSXR channels allow messages to be broadcast across instances. The messages broadcast and the total time to broadcast are cumulative from the start of the instance. Channels with high overall average wait times could indicate potential problems with a subscriber on that channel which can lead to poor scaled performance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
CHANNEL	VARCHAR2(64)		The name of the KSR or KSXR channel
MESSAGES_PUBLISHED	NUMBER		The cumulative count of messages published on the channel (from instance startup)
WAIT_COUNT	NUMBER		The total number of times a publisher has waited for a broadcast to complete. This metric is only pertinent for asynchronous broadcasts where the broadcast can be dispatched and publisher can wait for completion at a later point of time. A high wait count along with increased wait time can indicate a potential performance bottleneck.
WAIT_TIME_USEC	NUMBER		The cumulative amount of time in microseconds that publishers have waited for message broadcast to complete. Average time for broadcast on a channel can be computed by dividing WAIT_TIME_USEC by WAIT_COUNT. A high average time can indicate a potential performance bottleneck.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.356 DBA_HIST_CLUSTER_INTERCON

DBA_HIST_CLUSTER_INTERCON displays information about the devices used by the instance to access the interconnect (that is, communicate with other instances).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAME	VARCHAR2 (256)	NOT NULL	Operating system name of the device
IP_ADDRESS	VARCHAR2 (64)	NOT NULL	IP address of the device
IS_PUBLIC	VARCHAR2 (3)		<p>Indicates whether the device is a public interface (YES) or a private interface (NO)</p> <p>Public interfaces can be listened to by outside applications, which may be a security problem. Oracle recommends using private interfaces for interconnect.</p>
SOURCE	VARCHAR2 (31)		Describes the type of device
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.357 DBA_HIST_COLORED_SQL

DBA_HIST_COLORED_SQL displays the SQL IDs that have been marked for AWR SQL capture.

If a SQL statement is colored using the DBMS_WORKLOAD_REPOSITORY.ADD_COLORED_SQL procedure, then AWR will always capture the SQL statistics for the colored SQL ID. A SQL statement can be removed from coloring using the DBMS_WORKLOAD_REPOSITORY.REMOVE_COLORED_SQL procedure.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
SQL_ID	VARCHAR2(13)	NOT NULL	SQL ID of colored SQL statement
CREATE_TIME	DATE	NOT NULL	Time the SQL ID was colored
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_WORKLOAD_REPOSITORY package.

4.358 DBA_HIST_COMP_IOSTAT

DBA_HIST_COMP_IOSTAT displays information about I/O statistics aggregated on the component level.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
COMPONENT	VARCHAR2(64)	NOT NULL	Component name
FILE_TYPE	VARCHAR2(64)	NOT NULL	File type
IO_TYPE	CHAR(5)	NOT NULL	The type of I/O performed
OPERATION	CHAR(5)	NOT NULL	Operation name
BYTES	NUMBER	NOT NULL	Number of bytes
IO_COUNT	NUMBER	NOT NULL	Number of I/Os that were performed
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

4.359 DBA_HIST_CON_SYS_TIME_MODEL

`DBA_HIST_CON_SYS_TIME_MODEL` displays historical system time model statistics, including OLAP timed stastistics. This view contains snapshots of `V$SYS_TIME_MODEL`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
STAT_ID	NUMBER		Statistic ID
STAT_NAME	VARCHAR2(64)		Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> When queried from a non-CDB, the statistics for that instance are returned, and the <code>CON_ID</code> value is 0. When queried from the root of a CDB, the statistics in every container are returned, and the <code>CON_ID</code> value indicates the container to which the statistics belong. When queried from a PDB, statistics from that PDB are returned, and the <code>CON_ID</code> value is the container ID for that PDB.

 **See Also:**

- "`V$SYS_TIME_MODEL`"

4.360 DBA_HIST_CON_SYSMETRIC_HIST

`DBA_HIST_CON_SYSMETRIC_HIST` externalizes all available history of the system metric values for the entire set of data kept in the database. This view contains snapshots of `V$CON_SYSMETRIC_HISTORY`.

 **Note:**

This view is not populated and is reserved for future use.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
BEGIN_TIME	DATE		Begin time of the interval
END_TIME	DATE		End time of the interval
INTSIZE	NUMBER		Interval size (in hundredths of a second)
GROUP_ID	NUMBER		Group ID
METRIC_ID	NUMBER		Metric ID
METRIC_NAME	VARCHAR2 (64)		Metric name
VALUE	NUMBER		Metric value
METRIC_UNIT	VARCHAR2 (64)		Unit of measurement
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

4.361 DBA_HIST_CON_SYSMETRIC_SUMM

DBA_HIST_CON_SYSMETRIC_SUMM displays a history of statistical summary of all metric values in the system metrics long duration (60-second) group. This view contains snapshots of V\$CON_SYSMETRIC_SUMMARY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
BEGIN_TIME	DATE		Begin time of the interval
END_TIME	DATE		End time of the interval

Column	Datatype	NULL	Description
INTSIZE	NUMBER		Interval size (in hundredths of a second)
GROUP_ID	NUMBER		Group ID
METRIC_ID	NUMBER		Metric ID
METRIC_NAME	VARCHAR2 (64)		Metric name
METRIC_UNIT	VARCHAR2 (64)		Unit of measurement
NUM_INTERVAL	NUMBER		Number of intervals observed
MINVAL	NUMBER		Minimum value observed
MAXVAL	NUMBER		Maximum value observed
AVERAGE	NUMBER		Average over the period
STANDARD_DEVIATION	NUMBER		One standard deviation
SUM_SQUARES	NUMBER		Sum of the squared deviations from the mean
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

 **Note:**

- "V\$CON_SYSMETRIC_SUMMARY"
- "DBA_HIST_SYSMETRIC_SUMMARY"

4.362 DBA_HIST_CON_SYSSTAT

DBA_HIST_CON_SYSSTAT displays historical system statistics information, including OLAP kernel statistics. This view contains snapshots of V\$CON_SYSSTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STAT_ID	NUMBER	NOT NULL	Statistic identifier
STAT_NAME	VARCHAR2 (64)	NOT NULL	Statistic name
VALUE	NUMBER		Statistic value

Column	Datatype	NULL	Description
CON_DBID	NUMBER	NOT NULL	The database ID for the PDB of the sampled session
CON_ID	NUMBER	NOT NULL	<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

4.363 DBA_HIST_CON_SYSTEM_EVENT

DBA_HIST_CON_SYSTEM_EVENT displays historical information on total waits for an event in a container. This view contains snapshots of V\$CON_SYSTEM_EVENT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2 (64)	NOT NULL	Name of the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the Class of the Wait Event
WAIT_CLASS	VARCHAR2 (64)		Name of the Class of the Wait Event
TOTAL_WAITS	NUMBER		Total number of waits for the event
TOTAL_TIMEOUTS	NUMBER		Total number of timeouts for the event
TIME_WAITED_MICRO	NUMBER		Total amount of time waited for the event (in microseconds)
TOTAL_WAITS_FG	NUMBER		Total number of waits for the event, from foreground sessions
TOTAL_TIMEOUTS_FG	NUMBER		Total number of timeouts for the event, from foreground sessions
TIME_WAITED_MICRO_FG	NUMBER		Amount of time waited for the event (in microseconds), from foreground sessions
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 **See Also:**

["V\\$CON_SYSTEM_EVENT"](#)

4.364 DBA_HIST_CR_BLOCK_SERVER

DBA_HIST_CR_BLOCK_SERVER displays historical statistics on the Global Cache Service processes (LMS) used in cache fusion.

This view contains snapshots of V\$CR_BLOCK_SERVER.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
CR_REQUESTS	NUMBER		Number of CR blocks served due to remote CR block requests
CURRENT_REQUESTS	NUMBER		Number of current blocks served due to remote CR block requests $\text{CR_REQUESTS} + \text{CURRENT_REQUESTS} = \text{global cache CR blocks served (from V$SYSSTAT).}$
DATA_REQUESTS	NUMBER		Number of current or CR requests for data blocks
UNDO_REQUESTS	NUMBER		Number of CR requests for undo blocks
TX_REQUESTS	NUMBER		Number of CR requests for undo segment header blocks $\text{DATA_REQUESTS} + \text{UNDO_REQUESTS} + \text{TX_REQUESTS} = \text{total number of requests handled by the LMS processes}$
CURRENT_RESULTS	NUMBER		Number of requests for which no changes were rolled out of the block returned to the requesting instance
PRIVATE_RESULTS	NUMBER		Number of requests for which changes were rolled out of the block returned to the requesting instance, and only the requesting transaction can use the resulting CR block

Column	Datatype	NULL	Description
ZERO_RESULTS	NUMBER		Number of requests for which changes were rolled out of the block returned to the requesting instance. Only zero-XID transactions can use the block.
DISK_READ_RESULTS	NUMBER		Number of requests for which the requesting instance had to read the requested block from disk
FAIL_RESULTS	NUMBER		Number of requests that failed; the requesting transaction must reissue the request
FAIRNESS_DOWN_CONVERTS	NUMBER		Number of times an instance receiving a request has down-converted an X lock on a block because it was not modifying the block
FLUSHES	NUMBER		Number of times the log has been flushed by an LMS process
FLUSHES	NUMBER		Number of times the log has been flushed by an LMS process
BUILDS	NUMBER		Number of requests for which the server had to fabricate a CR block
LIGHT_WORKS	NUMBER		Number of times the light-work rule was evoked. This rule prevents the LMS processes from going to disk while responding to CR requests for data, undo, or undo segment header blocks. This rule can prevent the LMS process from completing its response to the CR request.
ERRORS	NUMBER		Number of times an error was signalled by an LMS process
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

4.365 DBA_HIST_CURRENT_BLOCK_SERVER

DBA_HIST_CURRENT_BLOCK_SERVER displays historical statistics on the Global Cache Service processes (LMS) used in cache fusion.

This view contains snapshots of V\$CURRENT_BLOCK_SERVER.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PINO	NUMBER		Pins taking less than 100 microseconds
PIN1	NUMBER		Pins taking 100 microseconds to 1 millisecond
PIN10	NUMBER		Pins taking 1 to 10 milliseconds
PIN100	NUMBER		Pins taking 10 to 100 milliseconds
PIN1000	NUMBER		Pins taking 100 to 1000 milliseconds
PIN10000	NUMBER		Pins taking 1000 to 10000 milliseconds
FLUSH0	NUMBER		Flushes taking less than 100 microseconds
FLUSH1	NUMBER		Flushes taking 100 microseconds to 1 millisecond
FLUSH10	NUMBER		Flushes taking 1 to 10 milliseconds
FLUSH100	NUMBER		Flushes taking 10 to 100 milliseconds
FLUSH1000	NUMBER		Flushes taking 100 to 1000 milliseconds
FLUSH10000	NUMBER		Flushes taking 1000 to 10000 milliseconds
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$CURRENT_BLOCK_SERVER"](#)

4.366 DBA_HIST_DATABASE_INSTANCE

DBA_HIST_DATABASE_INSTANCE displays the databases and instances in the Workload Repository.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number
STARTUP_TIME	TIMESTAMP (3)	NOT NULL	Startup time of the instance
PARALLEL	VARCHAR2 (3)	NOT NULL	Indicates whether the instance is running in an Oracle Real Application Clusters (Oracle RAC) environment (YES) or not (NO)

Column	Datatype	NULL	Description
VERSION	VARCHAR2(17)	NOT NULL	Database version
DB_NAME	VARCHAR2(9)		Name of the database
INSTANCE_NAME	VARCHAR2(16)		Name of the instance
HOST_NAME	VARCHAR2(64)		Name of the host
LAST_ASH_SAMPLE_ID	NUMBER	NOT NULL	Last sample ID for the active session history
PLATFORM_NAME	VARCHAR2(101)		Platform on which the instance is running
CDB	VARCHAR2(3)		Possible values are: <ul style="list-style-type: none"> • YES if the database is a CDB • NO if the database is not a CDB
EDITION	VARCHAR2(7)		The edition of the database: <ul style="list-style-type: none"> • PO: Personal Edition • XE: Express Edition • SE2: Standard Edition or Standard Edition 2 • EE: Enterprise Edition • HP: Enterprise Edition - High Performance • XP: Enterprise Edition - Extreme Performance
DB_UNIQUE_NAME	VARCHAR2(30)		Unique database name
DATABASE_ROLE	VARCHAR2(16)		Current role of the database: <ul style="list-style-type: none"> • SNAPSHOT STANDBY • LOGICAL STANDBY • PHYSICAL STANDBY • PRIMARY • FAR SYNC
CDB_ROOT_DBID	NUMBER		The database ID of the CDB root for the sampled session
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data
STARTUP_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Startup time of the instance

 **See Also:**

["DB_UNIQUE_NAME"](#)

4.367 DBA_HIST_DATAFILE

`DBA_HIST_DATAFILE` displays a history of the data file information from the control file.

This view contains snapshots of `V$DATAFILE`.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
FILE#	NUMBER	NOT NULL	File identification number
CREATION_CHANGE#	NUMBER	NOT NULL	Change number at which the data file was created
FILENAME	VARCHAR2(513)	NOT NULL	Name of the data file
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2(30)		Name of the tablespace
BLOCK_SIZE	NUMBER		Block size of the data file
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["V\\$DATAFILE"](#)

4.368 DBA_HIST_DB_CACHE_ADVICE

DBA_HIST_DB_CACHE_ADVICE displays historical predictions of the number of physical reads for the cache size corresponding to each row.

This view contains snapshots of V\$DB_CACHE_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BPID	NUMBER	NOT NULL	Buffer Pool identifier (ranges from 1 to 8)
BUFFERS_FOR_ESTIMATE	NUMBER	NOT NULL	Cache size for prediction (in terms of buffers)
NAME	VARCHAR2(20)		Buffer pool name
BLOCK_SIZE	NUMBER		Block size in bytes for buffers in the pool (the standard block size, the power of 2 nonstandard block sizes, 2048, 4096, 8192, 16384, or 32768)
ADVICE_STATUS	VARCHAR2(3)		Status of the advisory: <ul style="list-style-type: none"> • ON - Currently running • OFF - Disabled (the estimates are historical and calculated when last enabled)
SIZE_FOR_ESTIMATE	NUMBER		Cache size for prediction (in megabytes)

Column	Datatype	NULL	Description
SIZE_FACTOR	NUMBER		Size factor with respect to the current cache size
PHYSICAL_READS	NUMBER		Physical reads for the cache size
BASE_PHYSICAL_READS	NUMBER		Base physical reads for the cache size
ACTUAL_PHYSICAL_READS	NUMBER		Actual physical reads for the cache size
ESTD_PHYSICAL_READ_TIME	NUMBER		Estimated physical read time for the cache size
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$DB_CACHE_ADVICE"](#)

4.369 DBA_HIST_DISPATCHER

DBA_HIST_DISPATCHER displays historical information for each dispatcher process present at the time of the snapshot.

This view contains snapshots of information from V\$DISPATCHER and V\$QUEUE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAME	VARCHAR2(4)	NOT NULL	Name of the dispatcher process
SERIAL#	NUMBER		Serial number of the dispatcher process
IDLE	NUMBER		Total idle time for the dispatcher (in hundredths of a second)
BUSY	NUMBER		Total busy time for the dispatcher (in hundredths of a second)
WAIT	NUMBER		Total time that all items in the dispatcher queue have waited (in hundredths of a second). Divide by TOTALQ for average wait per item.
TOTALQ	NUMBER		Total number of items that have ever been in the dispatcher queue

Column	Datatype	NULL	Description
SAMPLED_TOTAL_CONN	NUMBER		Cumulative sum of total number of connections to the dispatcher over all samples. To determine the average number of connections to the dispatcher between two snapshots, divide the difference in SAMPLED_TOTAL_CONN by the difference in NUM_SAMPLES (obtained from DBA_HIST_SHARED_SERVER_SUMMARY).
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

- "[V\\$DISPATCHER](#)"
- "[V\\$QUEUE](#)"

4.370 DBA_HIST_DLM_MISC

DBA_HIST_DLM_MISC displays miscellaneous Oracle Real Application Clusters (Oracle RAC) statistics.

This view contains snapshots of V\$DLM_MISC.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
STATISTIC#	NUMBER		Statistic number
NAME	VARCHAR2 (38)		Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.371 DBA_HIST_DYN_REMASTER_STATS

DBA_HIST_DYN_REMASTER_STATS displays historical statistical information about the dynamic remastering process.

All times are given in hundredths of a second, and total values reflect what has been collected since instance startup. This view contains snapshots of V\$DYNAMIC_REMASTER_STATS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
REMASTER_TYPE	VARCHAR2(11)	NOT NULL	Remaster process type. Possible values: <ul style="list-style-type: none"> • AFFINITY: This value is used for the row containing statistics that pertain to dynamic remastering activity on object affinity. • READ-MOSTLY: This value is used for the row containing statistics that pertain to dynamic remastering activity on read-mostly objects.
PERSISTENT_OBJECTS ¹	NUMBER		Current number of objects that are marked persistent read-mostly in the cluster
REMASTER_OPS	NUMBER		Total number of dynamic remastering operations
REMASTER_TIME	NUMBER		Total dynamic remastering time
REMASTERED_OBJECTS	NUMBER		Total number of objects dynamically remastered due to affinity
QUIESCE_TIME	NUMBER		Total quiesce step time
FREEZE_TIME	NUMBER		Total freeze step time
CLEANUP_TIME	NUMBER		Total cleanup step time
REPLAY_TIME	NUMBER		Total replay step time
FIXWRITE_TIME	NUMBER		Total fixwrite step time
SYNC_TIME	NUMBER		Total synchronization step time
RESOURCES_CLEANED	NUMBER		Total number of resources cleaned in the cleanup steps
REPLAYED_LOCKS_SENT	NUMBER		Total number of locks replayed to other instances in the replay steps
REPLAYED_LOCKS_RECEIVED	NUMBER		Total number of locks received from other instances in the replay steps
CURRENT_OBJECTS	NUMBER		Current number of objects remastered on this instance due to affinity or the current number of objects that are marked read-mostly in the cluster
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

¹ This column is available starting with Oracle Database 19c.

4.372 DBA_HIST_ENQUEUE_STAT

DBA_HIST_ENQUEUE_STAT displays historical statistics on the number of enqueue (lock) requests for each type of lock.

This view contains snapshots of V\$ENQUEUE_STATISTICS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EQ_TYPE	VARCHAR2 (2)	NOT NULL	Type of enqueue requested
REQ_REASON	VARCHAR2 (64)	NOT NULL	Reason for the enqueue request
TOTAL_REQ#	NUMBER		Total number of enqueue requests or enqueue conversions for this type of enqueue
TOTAL_WAIT#	NUMBER		Total number of times an enqueue request or conversion resulted in a wait
SUCC_REQ#	NUMBER		Number of times an enqueue request or conversion was granted
FAILED_REQ#	NUMBER		Number of times an enqueue request or conversion failed
CUM_WAIT_TIME	NUMBER		Total amount of time (in milliseconds) spent waiting for the enqueue or enqueue conversion
EVENT#	NUMBER		Event number
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 **See Also:**

"V\$ENQUEUE_STATISTICS"

4.373 DBA_HIST_EVENT_HISTOGRAM

DBA_HIST_EVENT_HISTOGRAM displays event histogram historical statistics information.

This view contains snapshots of V\$EVENT_HISTOGRAM.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name of the class of the wait event
WAIT_TIME_MILLI	NUMBER	NOT NULL	Wait time (in milliseconds)
WAIT_COUNT	NUMBER		Wait count
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["V\\$EVENT_HISTOGRAM"](#)

4.374 DBA_HIST_EVENT_NAME

`DBA_HIST_EVENT_NAME` displays information about wait events.

This view contains a snapshot of `V$EVENT_NAME`.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
PARAMETER1	VARCHAR2(64)		Description of the first parameter for the wait event
PARAMETER2	VARCHAR2(64)		Description of the second parameter for the wait event
PARAMETER3	VARCHAR2(64)		Description of the third parameter for the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name of the class of the wait event
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$EVENT_NAME"](#)

4.375 DBA_HIST_FILEMETRIC_HISTORY

`DBA_HIST_FILEMETRIC_HISTORY` displays the history of file metrics collected in the Workload Repository.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FILEID	NUMBER	NOT NULL	File number

Column	Datatype	NULL	Description
CREATIONTIME	NUMBER	NOT NULL	File creation time
BEGIN_TIME	DATE	NOT NULL	Begin time of the interval
END_TIME	DATE	NOT NULL	End time of the interval
INTSIZE	NUMBER	NOT NULL	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	NOT NULL	ID of the group to which the file belongs
AVGREADTIME	NUMBER	NOT NULL	Average file read time
AVGWITETIME	NUMBER	NOT NULL	Average file write time
PHYSICALREAD	NUMBER	NOT NULL	Number of physical reads
PHYSICALWRITE	NUMBER	NOT NULL	Number of physical writes
PHYBLKREAD	NUMBER	NOT NULL	Number of physical block reads
PHYBLKWRITE	NUMBER	NOT NULL	Number of physical block writes
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.376 DBA_HIST_FILESTATXS

DBA_HIST_FILESTATXS displays information about file read/write statistics.

This view contains snapshots of V\$FILESTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FILE#	NUMBER	NOT NULL	File identification number
CREATION_CHANGE#	NUMBER	NOT NULL	Change number at which the data file was created
FILENAME	VARCHAR2 (513)	NOT NULL	Name of the data file
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2 (30)		Name of the tablespace
BLOCK_SIZE	NUMBER		Block size of the data file
PHYRDS	NUMBER		Number of physical reads done
PHYWRTS	NUMBER		Number of times DBWR is required to write
SINGLEBLKRDS	NUMBER		Number of single block reads
READTIM	NUMBER		Time (in hundredths of a second) spent doing reads if the TIMED_STATISTICS parameter is true; 0 if TIMED_STATISTICS is false

Column	Datatype	NULL	Description
WRITETIM	NUMBER		Time (in hundredths of a second) spent doing writes if the TIMED_STATISTICS parameter is true; 0 if TIMED_STATISTICS is false
SINGLEBLKRDTIM	NUMBER		Cumulative single block read time (in hundredths of a second)
PHYBLKRD	NUMBER		Number of physical blocks read
PHYBLKWRT	NUMBER		Number of blocks written to disk, which may be the same as PHYWRTS if all writes are single blocks
WAIT_COUNT	NUMBER		Shows the number of waits at the file level for contended buffers. This value includes the individual wait events that are included in the buffer busy waits wait event.
			See Also: "buffer busy waits"
TIME	NUMBER		Time spent waiting for the wait events in the WAIT_COUNT column
OPTIMIZED_PHYBLKD	NUMBER		Number of physical reads from Database Smart Flash Cache blocks
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$FILESTAT"](#)

4.377 DBA_HIST_IC_CLIENT_STATS

DBA_HIST_IC_CLIENT_STATS displays information about the usage of an interconnect device by the instance.

The information is divided into several areas of the Oracle Database, each identified by the NAME value.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot

Column	Datatype	NULL	Description
NAME	VARCHAR2 (9)	NOT NULL	Identifies the area of the Oracle Database: <ul style="list-style-type: none"> • ipq - Parallel query communications • dlm - Database lock management • cache - Global cache communications All other values are internal to Oracle and are not expected to have high usage.
BYTES_SENT	NUMBER		Number of bytes sent by the instance since instance startup for the software area identified by NAME. This information is aggregated across all devices used by the instance.
BYTES_RECEIVED	NUMBER		Number of bytes received by the instance since instance startup for the software area identified by NAME. This information is aggregated across all devices used by the instance.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

4.378 DBA_HIST_IC_DEVICE_STATS

DBA_HIST_IC_DEVICE_STATS displays operating system information about the usage of interconnect devices by the machine.

This usage contains Oracle usage but is not limited to it. The quality of the information depends on the operating system.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
IF_NAME	VARCHAR2 (256)	NOT NULL	Name of the device (same as NAME in DBA_HIST_CLUSTER_INTERCON)
IP_ADDR	VARCHAR2 (64)	NOT NULL	IP address of the device (same as IP_ADDRESS in DBA_HIST_CLUSTER_INTERCON)
NET_MASK	VARCHAR2 (16)		Network mask
FLAGS	VARCHAR2 (32)		Flags
MTU	NUMBER		Maximum transmission unit
BYTES_RECEIVED	NUMBER		Number of bytes received since operating system start time
PACKETS_RECEIVED	NUMBER		Number of packets received since operating system start time

Column	Datatype	NULL	Description
RECEIVE_ERRORS	NUMBER		Number of receive errors since operating system start time
RECEIVE_DROPPED	NUMBER		Number of receive messages that were dropped
RECEIVE_BUF_OR	NUMBER		Number of receive buffer overruns experienced
RECEIVE_FRAME_ERR	NUMBER		Number of receive errors due to frame error
BYTES_SENT	NUMBER		Number of bytes sent since operating system start time
PACKETS_SENT	NUMBER		Number of packets sent since operating system start time
SEND_ERRORS	NUMBER		Number of send errors since operating system start time
SENDS_DROPPED	NUMBER		Number of send messages that were dropped
SEND_BUF_OR	NUMBER		Number of send buffer overruns experienced
SEND_CARRIER_LOST	NUMBER		Number of send errors due to carrier lost
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.379 DBA_HIST_IM_SEG_STAT

DBA_HIST_IM_SEG_STAT displays information about historical in-memory segment statistics.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TS#	NUMBER	NOT NULL	Tablespace number
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
MEMBYTES	NUMBER		Size of in-memory version of the segment in bytes
SCANS	NUMBER		Count of segment statistics
SCANS_DELTA	NUMBER		Delta values for in-memory scans
DB_BLOCK_CHANGES	NUMBER		The total number of changes that were part of an update or delete operation that were made to segment blocks
DB_BLOCK_CHANGES_DELTA	NUMBER		Delta value for database block changes
POPULATE_CUS	NUMBER		Count of compression units (CUs) populated per segment

Column	Datatype	NULL	Description
POPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) populate operations
REPOPULATE_CUS	NUMBER		Count of CUs repopulated per segment
REPOPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) repopulate operations
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.380 DBA_HIST_IM_SEG_STAT_OBJ

DBA_HIST_IM_SEG_STAT_OBJ displays information about object metadata for historical in-memory segments.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database id for the snapshot
TS#	NUMBER	NOT NULL	Tablespace number
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject
OBJECT_TYPE	VARCHAR2(128)		Type of the object
TABLESPACE_NAME	VARCHAR2(128)		Tablespace name for the object
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.381 DBA_HIST_INST_CACHE_TRANSFER

DBA_HIST_INST_CACHE_TRANSFER displays the historical statistics on the cache blocks transferred among instances.

This view contains snapshots of V\$INSTANCE_CACHE_TRANSFER.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
INSTANCE	NUMBER	NOT NULL	Instance from which the blocks are transferred
CLASS	VARCHAR2 (18)	NOT NULL	Class of the cache block
CR_BLOCK	NUMBER		CR block transfers not affected by remote processing delays
CR_BUSY	NUMBER		Current block transfers affected by remote contention
CR_CONGESTED	NUMBER		CR block transfers affected by remote system load
CURRENT_BLOCK	NUMBER		Current block transfers not affected by remote processing delays
CURRENT_BUSY	NUMBER		Current block transfers affected by remote contention
CURRENT_CONGESTED	NUMBER		Current block transfers affected by remote system load
LOST	NUMBER		The number of blocks that were sent by a particular instance but that never arrived in this instance
CR_2HOP	NUMBER		The count of CR blocks which were received by this instance from a particular instance after a 2-way round-trip
CR_3HOP	NUMBER		The count of CR blocks which were received by this instance from a particular instance after a 3-way round-trip
CURRENT_2HOP	NUMBER		The count of current blocks which were received by this instance from a particular instance after a 2-way round-trip
CURRENT_3HOP	NUMBER		The count of current blocks which were received by this instance from a particular instance after a 3-way round-trip
CR_BLOCK_TIME	NUMBER		Total time waited for CR blocks from a particular instance (includes the other times)
CR_BUSY_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance
CR_CONGESTED_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance and which were delayed because LMS was busy
CURRENT_BLOCK_TIME	NUMBER		Total time waited for CR blocks from a particular instance (includes the other times)
CURRENT_BUSY_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance

Column	Datatype	NULL	Description
CURRENT_CONGESTED_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance and which were delayed because LMS was busy
LOST_TIME	NUMBER		The time waited for blocks that were sent by a particular instance but that never arrived in this instance
CR_2HOP_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance after a 2-way round-trip
CR_3HOP_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance after a 3-way round-trip
CURRENT_2HOP_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance after a 2-way round-trip
CURRENT_3HOP_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance after a 3-way round-trip
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$INSTANCE_CACHE_TRANSFER"](#)

4.382 DBA_HIST_INSTANCE_RECOVERY

DBA_HIST_INSTANCE_RECOVERY displays the historical monitoring of the mechanisms available to the user to limit recovery I/O.

This view contains snapshots of V\$INSTANCE_RECOVERY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
RECOVERY_ESTIMATED_IOS	NUMBER		Number of dirty buffers in the buffer cache.
ACTUAL_REDO_BLKS	NUMBER		Current actual number of redo blocks required for recovery

Column	Datatype	NULL	Description
TARGET_REDOLBLKS	NUMBER		Current target number of redo blocks that must be processed for recovery. This value is the minimum value of the following 3 columns, and identifies which of the 3 user-defined limits determines checkpointing.
LOG_FILE_SIZE_REDOLBLKS	NUMBER		Maximum number of redo blocks required to guarantee that a log switch does not occur before the checkpoint completes
LOG_CHKPT_TIMEOUT_REDOLBLKS	NUMBER		Number of redo blocks that need to be processed during recovery to satisfy the LOG_CHECKPOINT_TIMEOUT parameter. The value displayed is not meaningful unless LOG_CHECKPOINT_TIMEOUT has been set.
LOG_CHKPT_INTERVAL_REDOLBLKS	NUMBER		Number of redo blocks that need to be processed during recovery to satisfy the LOG_CHECKPOINT_INTERVAL parameter. The value displayed is not meaningful unless LOG_CHECKPOINT_INTERVAL has been set.
FAST_START_IO_TARGET_REDOLBLKS	NUMBER		This column is obsolete and maintained for backward compatibility. The value of this column is always null.
TARGET_MTTR	NUMBER		Effective MTTR (mean time to recover) target value in seconds. The TARGET_MTTR value is calculated based on the value of the FAST_START_MTTR_TARGET parameter (the TARGET_MTTR value is used internally), and is usually an approximation of the parameter's value. However, if the FAST_START_MTTR_TARGET parameter value is very small (for example, one second), or very large (for example, 3600 seconds), then the calculation will produce a target value dictated by system limitations. In such cases, the TARGET_MTTR value will be the shortest calculated time, or the longest calculated time that recovery is expected to take. If FAST_START_MTTR_TARGET is not specified, then the value of this field is the current estimated MTTR.
ESTIMATED_MTTR	NUMBER		Current estimated mean time to recover (MTTR) based on the number of dirty buffers and log blocks (0 if FAST_START_MTTR_TARGET is not specified). This value tells you how long you can expect recovery to take based on the work the system is doing right now.
CKPT_BLOCK_WRITES	NUMBER		Number of blocks written by checkpoint writes
OPTIMAL_LOGFILE_SIZE	NUMBER		Redo log file size (in megabytes) that is considered optimal based on the current setting of FAST_START_MTTR_TARGET. It is recommended that all online redo logs be configured to be at least this value.
ESTD_CLUSTER_AVAILABLE_TIME	NUMBER		Estimated time (in seconds) that the cluster would become partially available should the instance fail. This column is only meaningful in an Oracle Real Application Clusters (Oracle RAC) environment. In a non-Oracle RAC environment, the value of this column is null.
WRITES_MTTR	NUMBER		Number of writes driven by the FAST_START_MTTR_TARGET parameter

Column	Datatype	NULL	Description
WRITES_LOGFILE_SIZE	NUMBER		Number of writes driven by the smallest redo log file size
WRITES_LOG_CHECKPOINT_SETTINGS	NUMBER		Number of writes driven by the LOG_CHECKPOINT_INTERVAL parameter or the LOG_CHECKPOINT_TIMEOUT parameter
WRITES_OTHER_SETTINGS	NUMBER		Number of writes driven by other reasons (such as the deprecated FAST_START_IO_TARGET parameter)
WRITES_AUTOTUNE	NUMBER		Number of writes due to auto-tune checkpointing
WRITES_FULL_THREAD_CKPT	NUMBER		Number of writes due to full thread checkpoints
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$INSTANCE_RECOVERY"](#)

4.383 DBA_HIST_INTERCONNECT_PINGS

DBA_HIST_INTERCONNECT_PINGS displays information about measured latency of interconnect messages (round-trip) from instance to instance.

In Oracle Database 11g and later releases, the PING process assesses the latencies associated with communications for each pair of instances.

Every few seconds, the process in one instance (INSTANCE_NUMBER value) sends two messages to each instance (TARGET_INSTANCE value). One message has a size of 500 bytes and the other has a size of 8 KB. The message is received by the PING process on the target instance and is immediately acknowledged. The time for the round-trip is measured and collected.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TARGET_INSTANCE	NUMBER	NOT NULL	Target instance number
CNT_500B	NUMBER		Number of pings of size 500 bytes from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER)

Column	Datatype	NULL	Description
WAIT_500B	NUMBER		Sum of round-trip times for messages of size 500 bytes from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). Dividing by CNT_500B gives the average latency.
WAITSQ_500B	NUMBER		Sum of squares (divided by 1000) of round-trip times for messages of size 500 bytes from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). When used with CNT_500B and WAIT_500B, the standard deviation of the latency can be calculated.
CNT_8K	NUMBER		Number of pings of size 8 KB from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER)
WAIT_8K	NUMBER		Sum of round-trip times for messages of size 8 KB from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). Dividing by CNT_8K gives the average latency.
WAITSQ_8K	NUMBER		Sum of squares (divided by 1000) of round-trip times for messages of size 8 KB from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). When used with CNT_8K and WAIT_8K, the standard deviation of the latency can be calculated.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

4.384 DBA_HIST_IOSTAT_DETAIL

DBA_HIST_IOSTAT_DETAIL displays I/O statistics aggregated by combination of file type and function (component).

This view contains snapshots of V\$IOSTAT_FILE and V\$IOSTAT_FUNCTION.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FUNCTION_ID	NUMBER	NOT NULL	Function ID
FUNCTION_NAME	VARCHAR2(30)	NOT NULL	Function name
FILETYPE_ID	NUMBER	NOT NULL	Type of file (for example, log file, data file, and so on)

Column	Datatype	NULL	Description
FILETYPE_NAME	VARCHAR2 (30)	NOT NULL	Name of the file, in the case of a data file or temp file. For all other files, a corresponding string to be displayed (for example, ARCHIVELOG).
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	NOT NULL	Number of single block write requests
LARGE_READ_REQS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	NOT NULL	Number of multiblock write requests
NUMBER_OF_WAITS	NUMBER	NOT NULL	Number of I/O waits by functionality
WAIT_TIME	NUMBER	NOT NULL	Total wait time (in milliseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

- "[V\\$IOSTAT_FUNCTION](#)"

4.385 DBA_HIST_IOSTAT_FILETYPE

DBA_HIST_IOSTAT_FILETYPE displays historical I/O statistics by file type.

This view contains snapshots of V\$IOSTAT_FILE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FILETYPE_ID	NUMBER	NOT NULL	Type of file (for example, log file, data file, and so on)
FILETYPE_NAME	VARCHAR2 (30)	NOT NULL	Name of the file, in the case of a data file or temp file. For all other files, a corresponding string to be displayed (for example, ARCHIVELOG).

Column	Datatype	NULL	Description
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	NOT NULL	Number of single block write requests
SMALL_SYNC_READ_REQS	NUMBER	NOT NULL	Number of synchronous single block read requests
LARGE_READ_REQS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	NOT NULL	Number of multiblock write requests
SMALL_READ_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for single block read requests
SMALL_WRITE_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for single block write requests
SMALL_SYNC_READ_LATENCY	NUMBER	NOT NULL	Latency for single block synchronous reads (in milliseconds)
LARGE_READ_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for multiblock read requests
LARGE_WRITE_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for multiblock write requests
RETRIES_ON_ERROR	NUMBER	NOT NULL	Number of read retries on error
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

["V\\$IOSTAT_FILE"](#)

4.386 DBA_HIST_IOSTAT_FILETYPE_NAME

DBA_HIST_IOSTAT_FILETYPE_NAME displays historical I/O statistics for file type names.

This view contains snapshots of V\$IOSTAT_FILE.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
FILETYPE_ID	NUMBER	NOT NULL	Type of file (for example, log file, data file, and so on)

Column	Datatype	NULL	Description
FILETYPE_NAME	VARCHAR2(30)	NOT NULL	Name of the file, in the case of a data file or temp file. For all other files, a corresponding string to be displayed (for example, ARCHIVELOG).
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

["V\\$IOSTAT_FILE"](#)

4.387 DBA_HIST_IOSTAT_FUNCTION

DBA_HIST_IOSTAT_FUNCTION displays historical I/O statistics by function.

This view contains snapshots of V\$IOSTAT_FUNCTION.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FUNCTION_ID	NUMBER	NOT NULL	Function ID
FUNCTION_NAME	VARCHAR2(128)	NOT NULL	Function name
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	NOT NULL	Number of single block write requests
LARGE_READ_REQS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	NOT NULL	Number of multiblock write requests
NUMBER_OF_WAITS	NUMBER	NOT NULL	Number of I/O waits by functionality
WAIT_TIME	NUMBER	NOT NULL	Total wait time (in milliseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["V\\$IOSTAT_FUNCTION"](#)

4.388 DBA_HIST_IOSTAT_FUNCTION_NAME

DBA_HIST_IOSTAT_FUNCTION_NAME displays historical I/O statistics by function names.

This view contains snapshots of V\$IOSTAT_FUNCTION.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
FUNCTION_ID	NUMBER	NOT NULL	Function ID
FUNCTION_NAME	VARCHAR2(128)	NOT NULL	Function name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["V\\$IOSTAT_FUNCTION"](#)

4.389 DBA_HIST_JAVA_POOL_ADVICE

DBA_HIST_JAVA_POOL_ADVICE displays historical information about estimated parse time in the Java pool for different pool sizes.

This view contains snapshots of V\$JAVA_POOL_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
JAVA_POOL_SIZE_FOR_ESTIMATE	NUMBER	NOT NULL	Java pool size for the estimate (in megabytes)
JAVA_POOL_SIZE_FACTOR	NUMBER		Size factor with respect to the current Java pool size
ESTD_LC_SIZE	NUMBER		Estimated memory in use by the library cache (in megabytes)
ESTD_LC_MEMORY_OBJECTS	NUMBER		Estimated number of library cache memory objects in the Java pool of the specified size
ESTD_LC_TIME_SAVED	NUMBER		Estimated elapsed parse time saved (in seconds), owing to library cache memory objects being found in a Java pool of the specified size. This is the time that would have been spent in reloading the required objects in the Java pool had they been aged out due to insufficient amount of available free memory.
ESTD_LC_TIME_SAVED_FACTOR	NUMBER		Estimated parse time saved factor with respect to the current Java pool size
ESTD_LC_LOAD_TIME	NUMBER		Estimated elapsed time (in seconds) for parsing in a Java pool of the specified size.
ESTD_LC_LOAD_TIME_FACTOR	NUMBER		Estimated load time factor with respect to the current Java pool size
ESTD_LC_MEMORY_OBJECT_HI_TS	NUMBER		Estimated number of times a library cache memory object was found in a Java pool of the specified size
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

Static Data Dictionary Views: DBA_HIST_LATCH to DBA_STORED_SETTINGS

This chapter contains the static data dictionary views DBA_HIST_LATCH through DBA_STORED_SETTINGS.

5.1 DBA_HIST_LATCH

DBA_HIST_LATCH displays historical aggregate latch statistics for both parent and child latches, grouped by latch name.

This view contains snapshots of V\$LATCH.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
LEVEL#	NUMBER		Latch level
GETS	NUMBER		Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER		Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER		Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch
IMMEDIATE_GETS	NUMBER		Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER		Number of times a no-wait latch request did not succeed (that is, missed)
SPIN_GETS	NUMBER		Number of willing-to-wait latch requests which missed the first try but succeeded while spinning
SLEEP[1 2 3 4]	NUMBER		These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero.
WAIT_TIME	NUMBER		Elapsed time spent waiting for the latch (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["V\\$LATCH"](#)

5.2 DBA_HIST_LATCH_CHILDREN

DBA_HIST_LATCH_CHILDREN displays historical statistics about child latches.

This view includes all columns of DBA_HIST_LATCH plus the CHILD# column. Note that child latches have the same parent if their LATCH# columns match each other. This view contains snapshots of V\$LATCH_CHILDREN.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
CHILD#	NUMBER	NOT NULL	Child latch number (unique only to each parent latch)
GETS	NUMBER		Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER		Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER		Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch
IMMEDIATE_GETS	NUMBER		Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER		Number of times a no-wait latch request did not succeed (that is, missed)
SPIN_GETS	NUMBER		Number of willing-to-wait latch requests which missed the first try but succeeded while spinning

Column	Datatype	NULL	Description
SLEEP[1 2 3 4]	NUMBER		These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero.
WAIT_TIME	NUMBER		Elapsed time spent waiting for the latch (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.3 DBA_HIST_LATCH_MISSES_SUMMARY

DBA_HIST_LATCH_MISSES_SUMMARY displays historical summary statistics about missed attempts to acquire a latch.

This view contains snapshots of V\$LATCH_MISSES.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PARENT_NAME	VARCHAR2(50)	NOT NULL	Latch name of a parent latch
WHERE_IN_CODE	VARCHAR2(64)	NOT NULL	Location that attempted to acquire the latch
NWFAIL_COUNT	NUMBER		Number of times that no-wait acquisition of the latch failed
SLEEP_COUNT	NUMBER		Number of times that acquisition attempts caused sleeps
WTR_SLP_COUNT	NUMBER		Number of times a waiter slept
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 **See Also:**

"V\$LATCH_MISSES"

5.4 DBA_HIST_LATCH_NAME

DBA_HIST_LATCH_NAME displays information about decoded latch names for the latches shown in DBA_HIST_LATCH.

This view contains a snapshot of V\$LATCHNAME.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 **See Also:**

- "DBA_HIST_LATCH"
- "V\$LATCHNAME"

5.5 DBA_HIST_LATCH_PARENT

DBA_HIST_LATCH_PARENT displays historical statistics about parent latches.

This view contains snapshots of V\$LATCH_PARENT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
LEVEL#	NUMBER	NOT NULL	Latch level
GETS	NUMBER		Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER		Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER		Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch
IMMEDIATE_GETS	NUMBER		Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER		Number of times a no-wait latch request did not succeed (that is, missed)
SPIN_GETS	NUMBER		Number of willing-to-wait latch requests which missed the first try but succeeded while spinning
SLEEP[1 2 3 4]	NUMBER		These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero.
WAIT_TIME	NUMBER		Elapsed time spent waiting for the latch (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

See Also:

"V\$LATCH_PARENT"

5.6 DBA_HIST_LIBRARYCACHE

`DBA_HIST_LIBRARYCACHE` displays historical statistics about library cache performance and activity.

This view contains snapshots of `V$LIBRARYCACHE`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAMESPACE	VARCHAR2(15)	NOT NULL	Library cache namespace
GETS	NUMBER		Number of times a lock was requested for objects of the namespace
GETHITS	NUMBER		Number of times an object's handle was found in memory
PINS	NUMBER		Number of times a PIN was requested for objects of the namespace
PINHITS	NUMBER		Number of times all of the metadata pieces of the library object were found in memory
RELOADS	NUMBER		Any PIN of an object that is not the first PIN performed since the object handle was created, and which requires loading the object from disk
INVALIDATIONS	NUMBER		Total number of times objects in the namespace were marked invalid because a dependent object was modified
DLM_LOCK_REQUESTS	NUMBER		Number of GET requests lock instance locks
DLM_PIN_REQUESTS	NUMBER		Number of PIN requests lock instance locks
DLM_PIN_RELEASES	NUMBER		Number of release requests PIN instance locks
DLM_INVALIDATION_REQUESTS	NUMBER		Number of GET requests for invalidation instance locks
DLM_INVALIDATIONS	NUMBER		Number of invalidation pings received from other instances
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

See Also:

"`V$LIBRARYCACHE`"

5.7 DBA_HIST_LOG

DBA_HIST_LOG displays historical log file information from the control file. This view contains snapshots of V\$LOG.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
GROUP#	NUMBER	NOT NULL	Log group number
THREAD#	NUMBER	NOT NULL	Log thread number
SEQUENCE#	NUMBER	NOT NULL	Log sequence number
BYTES	NUMBER		Size of the log (in bytes)
MEMBERS	NUMBER		Number of members in the log group
ARCHIVED	VARCHAR2(3)		Archive status (YES) or NO
STATUS	VARCHAR2(16)		Log status: <ul style="list-style-type: none"> • UNUSED - Online redo log has never been written to. This is the state of a redo log that was just added, or just after a <code>RESETLOGS</code>, when it is not the current redo log. • CURRENT - Current redo log. This implies that the redo log is active. The redo log could be open or closed. • ACTIVE - Log is active but is not the current log. It is needed for crash recovery. It may be in use for block recovery. It may or may not be archived. • CLEARING - Log is being re-created as an empty log after an <code>ALTER DATABASE CLEAR LOGFILE</code> statement. After the log is cleared, the status changes to <code>UNUSED</code>. • CLEARING_CURRENT - Current log is being cleared of a closed thread. The log can stay in this status if there is some failure in the switch such as an I/O error writing the new log header. • INACTIVE - Log is no longer needed for instance recovery. It may be in use for media recovery. It may or may not be archived. • INVALIDATED - Archived the current redo log without a log switch.
FIRST_CHANGE#	NUMBER		Lowest system change number (SCN) in the log
FIRST_TIME	DATE		Time of the first SCN in the log
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$LOG"](#)

5.8 DBA_HIST_MEM_DYNAMIC_COMP

DBA_HIST_MEM_DYNAMIC_COMP displays historical memory component sizes.

This view contains snapshots of V\$MEMORY_DYNAMIC_COMPONENTS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
COMPONENT	VARCHAR2 (64)	NOT NULL	Component name
CURRENT_SIZE	NUMBER		Current size of the component
MIN_SIZE	NUMBER		Minimum size of the component since instance startup
MAX_SIZE	NUMBER		Maximum size of the component since instance startup
USER_SPECIFIED_SIZE	NUMBER		Value of the user parameter for the component
OPER_COUNT	NUMBER		Number of operations since instance startup
LAST_OPER_TYPE	VARCHAR2 (13)		Last completed operation for the component: <ul style="list-style-type: none"> • STATIC • INITIALIZING • DISABLED • GROW • SHRINK • SHRINK_CANCEL
LAST_OPER_MODE	VARCHAR2 (9)		Mode of the last completed operation: <ul style="list-style-type: none"> • MANUAL • DEFERRED • IMMEDIATE
LAST_OPER_TIME	DATE		Start time of the last completed operation
GRANULE_SIZE	NUMBER		Granularity of the GROW or SHRINK operation

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$MEMORY_DYNAMIC_COMPONENTS"](#)

5.9 DBA_HIST_MEMORY_RESIZE_OPS

DBA_HIST_MEMORY_RESIZE_OPS displays memory resize operations history.

This view contains snapshots of V\$MEMORY_RESIZE_OPS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
COMPONENT	VARCHAR2(64)	NOT NULL	Component name
OPER_TYPE	VARCHAR2(13)	NOT NULL	<p>Operation type:</p> <ul style="list-style-type: none"> • STATIC • INITIALIZING • DISABLED • GROW • SHRINK • SHRINK_CANCEL
START_TIME	DATE	NOT NULL	Start time of the operation
END_TIME	DATE	NOT NULL	End time of the operation
TARGET_SIZE	NUMBER	NOT NULL	Requested value of the parameter after the resize
OPER_MODE	VARCHAR2(9)		<p>Operation mode:</p> <ul style="list-style-type: none"> • MANUAL • DEFERRED • IMMEDIATE
PARAMETER	VARCHAR2(80)		Name of the parameter for the resize operation
INITIAL_SIZE	NUMBER		Parameter value at the start of the operation
FINAL_SIZE	NUMBER		Real value of the parameter after the resize

Column	Datatype	NULL	Description
STATUS	VARCHAR2 (9)		Completion status of the operation: <ul style="list-style-type: none">• INACTIVE• PENDING• COMPLETE• CANCELLED• ERROR
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$MEMORY_RESIZE_OPS"](#)

5.10 DBA_HIST_MEMORY_TARGET_ADVICE

DBA_HIST_MEMORY_TARGET_ADVICE displays memory target advice history.

This view contains snapshots of V\$MEMORY_TARGET_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
MEMORY_SIZE	NUMBER	NOT NULL	If the MEMORY_SIZE_FACTOR column has a value of 1, then this column shows the current size of memory, as set by the MEMORY_TARGET initialization parameter. If the value of the MEMORY_SIZE_FACTOR column is less than or greater than 1, then this column shows a proposed memory size.
MEMORY_SIZE_FACTOR	NUMBER		A multiplier for the current memory size. Possible values are 0.25, 0.5, 0.75, 1, 1.5, 1.75 and 2. This multiplier times the current memory size equals the value of the MEMORY_SIZE column.
ESTD_DB_TIME	NUMBER		For current memory size (MEMORY_SIZE_FACTOR = 1), the amount of database time required to complete the current workload. For a proposed memory size, the estimated amount of database time that would be required if the MEMORY_TARGET parameter were changed to the proposed size.

Column	Datatype	NULL	Description
ESTD_DB_TIME_FACTOR	NUMBER		For a proposed memory size, ratio of estimated database time to current database time
VERSION	NUMBER		Version number of this recommendation
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

["V\\$MEMORY_TARGET_ADVICE"](#)

5.11 DBA_HIST_METRIC_NAME

DBA_HIST_METRIC_NAME describes attributes of the set of RDBMS metrics.

This view contains a snapshot of V\$METRICNAME.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
GROUP_ID	NUMBER	NOT NULL	Metric Group ID
GROUP_NAME	VARCHAR2 (64)		Metric group name
METRIC_ID	NUMBER	NOT NULL	Metric ID
METRIC_NAME	VARCHAR2 (64)	NOT NULL	Metric name
METRIC_UNIT	VARCHAR2 (64)	NOT NULL	Unit of measurement
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$METRICNAME"](#)

5.12 DBA_HIST_MTTR_TARGET_ADVICE

`DBA_HIST_MTTR_TARGET_ADVICE` displays historical predictions of the number of physical I/O requests for the MTTR corresponding to each row.

The data also includes a physical I/O factor, which is the ratio of the number of estimated I/O requests to the number of I/O requests actually performed by the current MTTR setting during the measurement interval. This view contains snapshots of `V$MTTR_TARGET_ADVICE`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
MTTR_TARGET_FOR_ESTIMATE	NUMBER		MTTR setting being simulated (equal to the current MTTR setting if this is the first row of the view)
ADVICE_STATUS	VARCHAR2 (5)		Current status of MTTR simulation: <ul style="list-style-type: none"> • ON SET • READY SET • OFF
DIRTY_LIMIT	NUMBER		Dirty buffer limit derived from the MTTR being simulated
ESTD_CACHE_WRITES	NUMBER		Estimated number of cache physical writes under the MTTR
ESTD_CACHE_WRITE_FACTOR	NUMBER		Estimated cache physical write ratio under the MTTR. It is the ratio of the estimated number of cache writes to the number of cache writes under the current MTTR setting.
ESTD_TOTAL_WRITES	NUMBER		Estimated total number of physical writes under the MTTR
ESTD_TOTAL_WRITE_FACTOR	NUMBER		Estimated total physical write ratio under the MTTR. It is the ratio of the estimated total number of physical writes to the total number of physical writes under the current MTTR setting.
ESTD_TOTAL_IOS	NUMBER		Estimated total number of I/O requests under the MTTR
ESTD_TOTAL_IO_FACTOR	NUMBER		Estimated total I/O ratio under the MTTR. It is the ratio of the estimated total number of I/O requests to the total number of I/O requests under the current MTTR setting.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 **See Also:**

"V\$MTTR_TARGET_ADVICE"

5.13 DBA_HIST_MUTEX_SLEEP

DBA_HIST_MUTEX_SLEEP displays mutex sleep summary historical statistics information.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database identifier for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
MUTEX_TYPE	VARCHAR2 (32)	NOT NULL	Mutex type
LOCATION	VARCHAR2 (40)	NOT NULL	The code location where the waiter slept for the mutex
SLEEPS	NUMBER		Number of sleeps for this MUTEX_TYPE and LOCATION
WAIT_TIME	NUMBER		Wait time in microseconds
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.14 DBA_HIST_OPTIMIZER_ENV

DBA_HIST_OPTIMIZER_ENV displays the optimizer environments that have been captured in the Workload Repository.

This view is used with the DBA_HIST_SQLSTAT view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
OPTIMIZER_ENV_HASH_VALUE	NUMBER	NOT NULL	Hash value for the optimizer environment
OPTIMIZER_ENV	RAW(2000)		Optimizer environment
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["DBA_HIST_SQLSTAT"](#)

5.15 DBA_HIST_OSSTAT

DBA_HIST_OSSTAT displays historical operating system statistics.

This view contains snapshots of V\$OSSTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STAT_ID	NUMBER	NOT NULL	Statistic ID
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$OSSTAT"](#)

5.16 DBA_HIST_OSSTAT_NAME

`DBA_HIST_OSSTAT_NAME` displays the names of the operating system statistics.

This view is used with `DBA_HIST_OSSTAT`.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
STAT_ID	NUMBER	NOT NULL	Statistic ID
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["DBA_HIST_OSSTAT"](#)

5.17 DBA_HIST_PARAMETER

`DBA_HIST_PARAMETER` displays historical information about the initialization parameters that were in effect for the instance.

This view contains snapshots of `V$SYSTEM_PARAMETER`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PARAMETER_HASH	NUMBER	NOT NULL	Parameter hash
PARAMETER_NAME	VARCHAR2(64)	NOT NULL	Name of the parameter
VALUE	VARCHAR2(512)		Parameter value for the session (if modified within the session); otherwise, the instance-wide parameter value

Column	Datatype	NULL	Description
ISDEFAULT	VARCHAR2 (9)		Indicates whether the parameter is set to the default value (<code>TRUE</code>) or the parameter value was specified in the parameter file (<code>FALSE</code>)
ISMODIFIED	VARCHAR2 (10)		Indicates whether the parameter has been modified after instance startup: <ul style="list-style-type: none"> <code>MODIFIED</code> - Parameter has been modified with <code>ALTER SESSION</code> <code>SYSTEM_MOD</code> - Parameter has been modified with <code>ALTER SYSTEM</code> (which causes all the currently logged in sessions' values to be modified) <code>FALSE</code> - Parameter has not been modified after instance startup
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. 1: This value is used for rows containing data that pertain to only the root <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

["V\\$SYSTEM_PARAMETER"](#)

5.18 DBA_HIST_PARAMETER_NAME

`DBA_HIST_PARAMETER_NAME` displays information about the parameter names captured in the workload repository.

This view is used with the `DBA_HIST_PARAMETER` view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
PARAMETER_HASH	NUMBER	NOT NULL	Parameter hash
PARAMETER_NAME	VARCHAR2 (64)	NOT NULL	Name of the parameter
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["DBA_HIST_PARAMETER"](#)

5.19 DBA_HIST_PDB_IN_SNAP

DBA_HIST_PDB_IN_SNAP captures a list of open pluggable databases (PDBs) at the time of the Automatic Workload Repository (AWR) snapshot. This view can be used with other DBA_HIST_ views to construct the number of opened PDBs at the time of the snapshot.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	AWR snapshot ID
DBID	NUMBER	NOT NULL	Database ID of the database that took this snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number of the instance that took this snapshot
CON_DBID	NUMBER		DBID of an open PDB at the time of the snapshot
FLAG	NUMBER		Flag field in capture properties of the PDB. Not used at this time.
CON_ID	NUMBER		<p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data
OPEN_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Time the PDB was last opened

5.20 DBA_HIST_PDB_INSTANCE

DBA_HIST_PDB_INSTANCE displays the pluggable databases (PDBs) and instances in the Workload Repository.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number
STARTUP_TIME	TIMESTAMP (3)	NOT NULL	Startup time of the instance
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB for the sampled session
OPEN_TIME	TIMESTAMP (3)	NOT NULL	Time the PDB was last opened
OPEN_MODE	VARCHAR2 (16)		Open mode of the database
PDB_NAME	VARCHAR2 (128)		PDB name
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data
SNAP_ID	NUMBER		The unique snapshot identifier of the snapshot that flushed the corresponding row
STARTUP_TIME_TZ	TIMESTAMP (3) WITH TIME ZONE		Startup time of the instance
OPEN_TIME_TZ	TIMESTAMP (3) WITH TIME ZONE		Time the PDB was last opened

5.21 DBA_HIST_PERSISTENT_QMN_CACHE

DBA_HIST_PERSISTENT_QMN_CACHE displays the historical summary background queue table activity.

This view contains snapshots from V\$PERSISTENT_QMN_CACHE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_TABLE_ID	NUMBER	NOT NULL	Queue table object ID
TYPE	VARCHAR2 (32)		Type of the queue table's queue monitor cache
STATUS	NUMBER		Status of the queue table's queue monitor cache
NEXT_SERVICE_TIME	TIMESTAMP (3)		Time when the queue table should be serviced by QMON servers
WINDOW_END_TIME	TIMESTAMP (3)		Time manager activity period for non-owner queue table operations
TOTAL_RUNS	NUMBER		Total number of times this queue table is served
TOTAL_LATENCY	NUMBER		Cumulative latency in serving the queue table (in hundredths of a second)
TOTAL_ELAPSED_TIME	NUMBER		Total time spent in processing this queue table (in seconds)

Column	Datatype	NULL	Description
TOTAL_CPU_TIME	NUMBER		Cumulative CPU time for serving the queue table (in hundredths of a second)
TMGR_ROWS_PROCESSED	NUMBER		Number of time manager entries processed
TMGR_ELAPSED_TIME	NUMBER		Cumulative time for time management activities (in hundredths of a second)
TMGR_CPU_TIME	NUMBER		Cumulative CPU time for time management activities (in hundredths of a second)
LAST_TMGR_PROCESSING_TIM E	TIMESTAMP (3)		Last timer manager processing time
DEQLOG_ROWS_PROCESSED	NUMBER		Number of dequeue log entries processed
DEQLOG_PROCESSING_ELAPSE D_TIME	NUMBER		Total time for processing dequeue log entries (in hundredths of a second)
DEQLOG_PROCESSING_CPU_TI ME	NUMBER		Total CPU time for processing dequeue log entries (in hundredths of a second)
LAST_DEQLOG_PROCESSING_T IME	TIMESTAMP (3)		Last dequeue log processing time
DEQUEUE_INDEX_BLOCKS_FRE ED	NUMBER		Number of dequeue index blocks freed
HISTORY_INDEX_BLOCKS_FRE ED	NUMBER		Number of history index blocks freed
TIME_INDEX_BLOCKS_FREED	NUMBER		Number of time manager index blocks freed
INDEX_CLEANUP_COUNT	NUMBER		Number of times index block cleanup was attempted
INDEX_CLEANUP_ELAPSED_TI ME	NUMBER		Total time for index block cleanup (in hundredths of a second)
INDEX_CLEANUP_CPU_TIME	NUMBER		Total CPU time for index block cleanup (in hundredths of a second)
LAST_INDEX_CLEANUP_TIME	TIMESTAMP (3)		Last index block cleanup time
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$PERSISTENT_QMN_CACHE"](#)

5.22 DBA_HIST_PERSISTENT_QUEUES

DBA_HIST_PERSISTENT_QUEUES displays Oracle Database AQ persistent queues historical statistics information.

This view contains snapshots of V\$PERSISTENT_QUEUES.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_ID	NUMBER	NOT NULL	Identifier for the queue
FIRST_ACTIVITY_TIME	TIMESTAMP(6)		First queue activity time since database startup
ENQUEUED_MSGS	NUMBER		Number of messages enqueued
DEQUEUED_MSGS	NUMBER		Number of messages dequeued
			Note: This column will not be incremented until all the subscribers of the message have dequeued the message and its retention time has elapsed.
BROWSED_MSGS	NUMBER		Number of messages that have been browsed
ELAPSED_ENQUEUE_TIME	NUMBER		Total time (in hundredths of a second) spent doing enqueue
ELAPSED_DEQUEUE_TIME	NUMBER		Total time (in hundredths of a second) spent doing dequeue
ENQUEUE_CPU_TIME	NUMBER		Total CPU time for enqueue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)
AVG_MSG_AGE	NUMBER		Average age of messages in the queue
DEQUEUED_MSG_LATENCY	NUMBER		Last dequeued message latency (in seconds)
ELAPSED_TRANSFORMATION_TIME	NUMBER		Total time (in hundredths of a second) spent doing transformation
ELAPSED_RULE_EVALUATION_TIME	NUMBER		Total time (in hundredths of a second) spent doing rule evaluation
ENQUEUED_EXPIRY_MSGS	NUMBER		Number of messages enqueued with expiry
ENQUEUED_DELAY_MSGS	NUMBER		Number of messages enqueued with delay
MSGs_MADE_EXPIRED	NUMBER		Number of messages expired by time manager
MSGs_MADE_READY	NUMBER		Number of messages made ready by time manager
LAST_ENQUEUE_TIME	TIMESTAMP(6)		Last message enqueue time
LAST_DEQUEUE_TIME	TIMESTAMP(6)		Last message dequeue time
LAST_TM_EXPIRY_TIME	TIMESTAMP(6)		Last time message was expired by time manager
LAST_TM_READY_TIME	TIMESTAMP(6)		Last time message was made ready by time manager
ENQUEUE_TRANSACTIONS	NUMBER		Number of enqueue transactions
DEQUEUE_TRANSACTIONS	NUMBER		Number of dequeue transactions

Column	Datatype	NULL	Description
EXECUTION_COUNT	NUMBER		Number of executions of the dequeue cursor
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$PERSISTENT_QUEUES"](#)

5.23 DBA_HIST_PERSISTENT_SUBS

DBA_HIST_PERSISTENT_SUBS displays Oracle Database AQ persistent queue subscribers historical statistics information.

This view contains snapshots of V\$PERSISTENT_SUBSCRIBERS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
SUBSCRIBER_ID	NUMBER	NOT NULL	Internal subscriber number
SUBSCRIBER_NAME	VARCHAR2(128)		Name of the subscriber
SUBSCRIBER_ADDRESS	VARCHAR2(1024)		Address of the subscribing agent
SUBSCRIBER_TYPE	VARCHAR2(128)		Type of the subscriber: <ul style="list-style-type: none"> • PROXY - Propagation subscriber • SUBSCRIBER - Normal subscriber • RECIPIENT - Recipient
FIRST_ACTIVITY_TIME	TIMESTAMP(6)		First subscriber activity time since database startup
ENQUEUED_MSGS	NUMBER		Number of messages enqueued since FIRST_ACTIVITY_TIME
DEQUEUED_MSGS	NUMBER		Number of messages dequeued since FIRST_ACTIVITY_TIME
AVG_MSG_AGE	NUMBER		Average age of messages in the queue
BROWSED_MSGS	NUMBER		Number of messages that have been browsed

Column	Datatype	NULL	Description
EXPIRED_MSGS	NUMBER		Number of messages expired since FIRST_ACTIVITY_TIME
DEQUEUED_MSG_LATENCY	NUMBER		Last dequeued message latency (in seconds)
LAST_ENQUEUE_TIME	TIMESTAMP (6)		Timestamp of the last enqueued message
LAST_DEQUEUE_TIME	TIMESTAMP (6)		Timestamp of the last dequeued message
ELAPSED_DEQUEUE_TIME	NUMBER		Total time spent in dequeue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)
DEQUEUE_TRANSACTIONS	NUMBER		Number of dequeue transactions
EXECUTION_COUNT	NUMBER		Number of executions of the dequeue index cursor
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$PERSISTENT_SUBSCRIBERS"](#)

5.24 DBA_HIST_PGA_TARGET_ADVICE

DBA_HIST_PGA_TARGET_ADVICE displays historical predictions of how the cache hit percentage and over allocation count statistics displayed by the V\$PGASTAT performance view would be impacted if the value of the PGA_AGGREGATE_TARGET parameter is changed.

This view contains snapshots of V\$PGA_TARGET_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PGA_TARGET_FOR_ESTIMATE	NUMBER	NOT NULL	Value of PGA_AGGREGATE_TARGET for the prediction (in bytes)
PGA_TARGET_FACTOR	NUMBER		PGA_TARGET_FOR_ESTIMATE / the current value of the PGA_AGGREGATE_TARGET parameter
ADVICE_STATUS	VARCHAR2 (3)		Indicates whether the advice is enabled (ON) or disabled (OFF) depending on the value of the STATISTICS_LEVEL parameter

Column	Datatype	NULL	Description
BYTES_PROCESSED	NUMBER		Total bytes processed by all the work areas considered by this advice (in bytes)
ESTD_TIME	NUMBER		Time (in seconds) required to process the bytes
ESTD_EXTRA_BYTES_RW	NUMBER		Estimated number of extra bytes which would be read or written if PGA_AGGREGATE_TARGET was set to the value of the PGA_TARGET_FOR_ESTIMATE column. This number is derived from the estimated number and size of work areas which would run in one-pass (or multi-pass) for that value of PGA_AGGREGATE_TARGET.
ESTD_PGA_CACHE_HIT_PERCENTAGE	NUMBER		Estimated value of the cache hit percentage statistic when PGA_AGGREGATE_TARGET equals PGA_TARGET_FOR_ESTIMATE. This column is derived from the above two columns and is equal to $\text{BYTES_PROCESSED} / (\text{BYTES_PROCESSED} + \text{ESTD_EXTRA_BYTES_RW})$
ESTD_OVERALLOC_COUNT	NUMBER		Estimated number of PGA memory over-allocations if the value of PGA_AGGREGATE_TARGET is set to PGA_TARGET_FOR_ESTIMATE. A nonzero value means that PGA_TARGET_FOR_ESTIMATE is not large enough to run the work area workload. Hence, PGA_AGGREGATE_TARGET should not be set to PGA_TARGET_FOR_ESTIMATE since Oracle will not be able to honor that target.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.25 DBA_HIST_PGASTAT

DBA_HIST_PGASTAT displays historical PGA memory usage statistics as well as statistics about the automatic PGA memory manager when it is enabled.

This view contains snapshots of V\$PGASTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Database instance number
NAME	VARCHAR2(64)	NOT NULL	Name of the statistic: <ul style="list-style-type: none"> • aggregate PGA auto target • aggregate PGA target parameter • bytes processed • cache hit percentage • extra bytes read/written • global memory bound • max processes count • maximum PGA allocated • maximum PGA used for auto workareas • maximum PGA used for manual workareas • over allocation count • PGA memory freed back to OS • process count • recompute count (total) • total freeable PGA memory • total PGA allocated • total PGA inuse • total PGA used for auto workareas • total PGA used for manual workareas See Also: V\$PGASTAT for descriptions of the statistics
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 **See Also:**

"V\$PGASTAT"

5.26 DBA_HIST_PLAN_OPERATION_NAME

DBA_HIST_PLAN_OPERATION_NAME displays historical information about SQL plan operation names.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database identifier
OPERATION_ID	NUMBER	NOT NULL	Plan operation identifier
OPERATION_NAME	VARCHAR2 (64)		Plan operation name. This value also appears in the SQL_PLAN_OPERATION column of the DBA_HIST_ACTIVE_SESS_HISTORY view.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.27 DBA_HIST_PLAN_OPTION_NAME

DBA_HIST_PLAN_OPTION_NAME displays historical information about SQL plan option names.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database identifier
OPTION_ID	NUMBER	NOT NULL	Plan option identifier
OPTION_NAME	VARCHAR2 (64)		Plan option name. This value also appears in the SQL_PLAN_OPTIONS column of the DBA_HIST_ACTIVE_SESS_HISTORY view.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.28 DBA_HIST_PROCESS_MEM_SUMMARY

DBA_HIST_PROCESS_MEM_SUMMARY displays historical information about dynamic PGA memory usage by named component categories for each process.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot

Column	Datatype	NULL	Description
CATEGORY	VARCHAR2 (15)	NOT NULL	Category name. Categories include "SQL", "PL/SQL", "OLAP" and "JAVA". Special categories are "Freeable" and "Other". Freeable memory has been allocated to the process by the operating system, but has not been allocated to a category. "Other" memory has been allocated to a category, but not to one of the named categories
IS_INSTANCE_WIDE	NUMBER		This column shows whether the process memory detail is for only this container or for the whole instance. If the value is 1, the detail is for the whole instance. Any other value is the container ID for the container to which the detail pertains, as seen in the CON_ID column.
NUM_PROCESSES	NUMBER		Number of processes
NON_ZERO_ALLOCS	NUMBER		Number of processes with nonzero allocations
USED_TOTAL	NUMBER		Bytes of PGA memory used by the process for the category
ALLOCATED_TOTAL	NUMBER		Total number of bytes of PGA memory allocated by the process for the category.
ALLOCATED_AVG	NUMBER		Average number of bytes of PGA memory allocated by the process for the category
ALLOCATED_STDDEV	NUMBER		Standard deviation of the number of bytes of PGA memory allocated by the process for the category
ALLOCATED_MAX	NUMBER		Maximum bytes of PGA memory ever allocated by the process for the category
MAX_ALLOCATED_MAX	NUMBER		Maximum bytes of PGA memory that can be allocated by the process for the category
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.29 DBA_HIST_PROCESS_WAITTIME

DBA_HIST_PROCESS_WAITTIME displays CPU and wait time by process types.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PROCESS_TYPE	VARCHAR2 (5)	NOT NULL	Process type

Column	Datatype	NULL	Description
DESCRIPTION	VARCHAR2 (64)	NOT NULL	Process description
WAIT_CLASS_TYPE	VARCHAR2 (64)	NOT NULL	Type of wait class
VALUE	NUMBER		Wait time or CPU used time in milliseconds
CON_DBID	NUMBER		The database ID of the PDB for the process
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.30 DBA_HIST_RECOVERY_PROGRESS

DBA_HIST_RECOVERY_PROGRESS displays database recovery progress information for an instance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
START_TIME	DATE	NOT NULL	Start time of the recovery operation
TYPE	VARCHAR2 (64)	NOT NULL	Type of recovery operation being performed: <ul style="list-style-type: none"> • CRASH RECOVERY • INSTANCE RECOVERY • MEDIA RECOVERY
ITEM	VARCHAR2 (32)	NOT NULL	Item being measured. When TYPE is CRASH RECOVERY or INSTANCE RECOVERY, the possible values are: <ul style="list-style-type: none"> • Log Files • Redo Blocks When TYPE is MEDIA RECOVERY, the possible values are: <ul style="list-style-type: none"> • Active Apply Rate • Average Apply Rate • Maximum Apply Rate • Redo Applied • Log Files • Last Applied Redo • Active Time • Elapsed Time • Apply Time per Log • Checkpoint Time per Log • Standby Apply Lag • Recovery ID

Column	Datatype	NULL	Description
UNITS	VARCHAR2 (32)		The units of measurement for each item
SOFAR	NUMBER		Amount of work done so far
TOTAL	NUMBER		Total amount of work expected
TIMESTAMP	DATE		Timestamp of the last redo record applied
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root.• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.31 DBA_HIST_REPLICATION_TBL_STATS

DBA_HIST_REPLICATION_TBL_STATS displays replication table statistics for Oracle GoldenGate and XStream sessions. This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
APPLY_NAME	VARCHAR2 (128)	NOT NULL	Name of the apply process
TABLE_NAME	VARCHAR2 (128)	NOT NULL	Name of the table
TABLE_OWNER	VARCHAR2 (128)	NOT NULL	Owner of the table
SESSION_MODULE	VARCHAR2 (64)	NOT NULL	Session module. Valid values: <ul style="list-style-type: none">• XStream• GoldenGate
TOTAL_INSERTS	NUMBER		Number of insert operations on this table processed by this apply server
TOTAL_UPDATES	NUMBER		Number of update operations on this table processed by this apply server
TOTAL_DELETES	NUMBER		Number of delete operations on this table processed by this apply server
CDR_SUCCESSFUL	NUMBER		Number of successfully resolved conflicts
CDR_FAILED	NUMBER		Number of conflicts that could not be resolved due to an error during resolution
REPERR_CNT	NUMBER		The total number of errors for the replication operation
HANDLE_COLLISIONS	NUMBER		Number of collisions on this table handled by this apply server
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.32 DBA_HIST_REPLICATION_TXN_STATS

DBA_HIST_REPLICATION_TXN_STATS displays replication transaction statistics for Oracle GoldenGate and XStream sessions.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Object name
SESSION_TYPE	VARCHAR2(64)	NOT NULL	Type of session
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: <ul style="list-style-type: none"> • XStream • GoldenGate
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated
SOURCE_TXN_ID	VARCHAR2(128)	NOT NULL	Original transaction ID at the source database
FIRST_LCR_TIME	DATE		Time of the first LCR (message in an error transaction)
TOTAL_LCRS_COUNT	NUMBER		Total number of LCRs for this replication transaction
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.33 DBA_HIST_REPORTS

DBA_HIST_REPORTS displays information about XML reports captured into Automatic Workload Repository (AWR).

The reports themselves belong to components such as SQL Monitor, DBOP, and Real-Time ADDM.

Each XML report contains details about some activity of a component. For example, a SQL Monitor report contains a detailed report about a particular execution of a SQL statement, or a Real-Time ADDM report contains system performance data analyzed by Real-Time ADDM.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		ID of the first Automatic Workload Repository (AWR) snapshot that will be taken after this report is generated
DBID	NUMBER		Database ID of the current database for the report
INSTANCE_NUMBER	NUMBER		Instance number (for an Oracle RAC system)
REPORT_ID	NUMBER		ID of the captured report
COMPONENT_ID	NUMBER		ID of the component (for example, SQL Monitor) whose report is captured
SESSION_ID	NUMBER		ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)
SESSION_SERIAL#	NUMBER		Session serial number corresponding to the captured report (currently used only for SQL Monitor reports)
PERIOD_START_TIME	DATE		Time when the activity period started
PERIOD_END_TIME	DATE		Time when the activity period ended
GENERATION_TIME	DATE		Time when this report was generated
COMPONENT_NAME	VARCHAR2(128)		Name of the component whose report this is
REPORT_NAME	VARCHAR2(128)		Name of this report
REPORT_PARAMETERS	VARCHAR2(1024)		Parameters associated with this report
KEY1	VARCHAR2(128)		Key1 associated with the captured report
KEY2	VARCHAR2(128)		Key2 associated with the captured report
KEY3	VARCHAR2(128)		Key3 associated with the captured report
KEY4	VARCHAR2(256)		Key4 associated with the captured report
GENERATION_COST_SECONDS	NUMBER		Time taken to generate this report (in seconds)
REPORT_SUMMARY	VARCHAR2(4000)		Summary of this report
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

["DBA_HIST_REPORTS_DETAILS"](#)

5.34 DBA_HIST_REPORTS_CONTROL

DBA_HIST_REPORTS_CONTROL contains control information about the report capture mechanism that automatically captures XML reports to Automatic Workload Repository (AWR).

Reports are captured automatically for components like SQL Monitor and Real-Time Automatic Database Diagnostic Monitor (Real-Time ADDM).

Column	Datatype	NULL	Description
DBID	NUMBER		Database ID of the current database for the report
EXECUTION_MODE	VARCHAR2(12)		<p>Mode of execution of automatic report capture. Possible values:</p> <ul style="list-style-type: none"> • REGULAR: Regular per-minute report capture subject to DBTIME budget • FULL_CAPTURE: Report capture will be run per minute without the DBTIME budget constraints and is provided to capture a more comprehensive set of reports <p>NOTE: The FULL_CAPTURE mode can be started and ended respectively by executing the START_REPORT_CAPTURE and FINISH_REPORT_CAPTURE APIs in the DBMS_AUTO_REPORT package. At all other times, the execution mode should be REGULAR.</p>

 **See Also:**

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_AUTO_REPORT package

5.35 DBA_HIST_REPORTS_DETAILS

DBA_HIST_REPORTS_DETAILS displays details about each report captured in Automatic Workload Repository (AWR).

Metadata for each report appears in the DBA_HIST_REPORTS view while the actual report is available in the DBA_HIST_REPORTS_DETAILS view.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		ID of the first AWR snapshot that will be taken after this report is generated
DBID	NUMBER		Database ID of the current database for the report
INSTANCE_NUMBER	NUMBER		Instance number (for an Oracle RAC system)
REPORT_ID	NUMBER		ID of the captured report
SESSION_ID	NUMBER		ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)
SESSION_SERIAL#	NUMBER		Session serial number relevant to this report (currently used only for SQL Monitor reports)

Column	Datatype	NULL	Description
GENERATION_TIME	DATE		Time when this report was generated
REPORT_COMPRESSED	BLOB		Actual XML report in compressed form
REPORT	CLOB		Full uncompressed report
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["DBA_HIST_REPORTS"](#)

5.36 DBA_HIST_REPORTS_TIMEBANDS

DBA_HIST_REPORTS_TIMEBANDS contains bands of time with a new row created every day corresponding to a band of time.

Each band of time represents a period of time, and has a row for every report captured automatically into Automatic Workload Repository (AWR) during that time. If the activity period of a report spans across two bands of time (for example, the activity started before midnight and ended after midnight), then the view contains two rows for that report, with one row for each band of time. The view is partitioned to provide fast access to all reports captured in a given time frame.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		The AWR snapshot id corresponding to the report
DBID	NUMBER		Database ID of the current database for the report
INSTANCE_NUMBER	NUMBER		Instance number (for an Oracle RAC system)
CON_DBID	NUMBER		CDB ID of the captured report
COMPONENT_ID	NUMBER		ID of the component (for example, SQL Monitor) whose report is captured
COMPONENT_NAME	VARCHAR2(128)		Name of the component whose report is captured
BAND_START_TIME	DATE		Starting time of the time band
BAND_LENGTH	NUMBER		Length of time band in days (currently unused)
REPORT_ID	NUMBER		ID of the captured report
REPORT_GENERATION_TIME	DATE		Time when the report was generated
PERIOD_START_TIME	DATE		Time when the activity period started
PERIOD_END_TIME	DATE		Time when the activity period ended

Column	Datatype	NULL	Description
KEY1	VARCHAR2 (128)		Key1 associated with the captured report
KEY2	VARCHAR2 (128)		Key2 associated with the captured report
KEY3	VARCHAR2 (128)		Key3 associated with the captured report
KEY4	VARCHAR2 (256)		Key4 associated with the captured report
SESSION_ID	NUMBER		ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)
SESSION_SERIAL#	NUMBER		Session serial number corresponding to the captured report (currently used only for SQL Monitor reports)
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.37 DBA_HIST_RESOURCE_LIMIT

DBA_HIST_RESOURCE_LIMIT displays historical information about global resource use for some of the system resource.

This view contains snapshots of V\$RESOURCE_LIMIT.

If time is of interest, join this view with DBA_HIST_SNAPSHOT.END_INTERVAL_TIME.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
RESOURCE_NAME	VARCHAR2 (30)	NOT NULL	Name of the resource
CURRENT_UTILIZATION	NUMBER		Number of (resources, locks, or processes) currently being used
MAX_UTILIZATION	NUMBER		Maximum consumption of the resource since the last instance start up
INITIAL_ALLOCATION	VARCHAR2 (10)		Initial allocation. This will be equal to the value specified for the resource in the initialization parameter file (UNLIMITED for infinite allocation).
LIMIT_VALUE	VARCHAR2 (10)		Unlimited for resources and locks. This can be greater than the initial allocation value (UNLIMITED for infinite limit).
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.38 DBA_HIST_ROWCACHE_SUMMARY

DBA_HIST_ROWCACHE_SUMMARY displays historical summary statistics for data dictionary activity.

This view contains snapshots of V\$ROWCACHE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PARAMETER	VARCHAR2(32)	NOT NULL	Name of the initialization parameter that determines the number of entries in the data dictionary cache
TOTAL_USAGE	NUMBER		Sum of the total number of entries in the cache
USAGE	NUMBER		Number of cache entries that contain valid data
GETS	NUMBER		Total number of requests for information on the data object
GETMISSES	NUMBER		Number of data requests resulting in cache misses
SCANS	NUMBER		Number of scan requests
SCANMISSES	NUMBER		Number of times a scan failed to find the data in the cache
SCANCOMPLETES	NUMBER		For a list of subordinate entries, the number of times the list was scanned completely
MODIFICATIONS	NUMBER		Number of inserts, updates, and deletions
FLUSHES	NUMBER		Number of times flushed to disk
DLM_REQUESTS	NUMBER		Number of DLM requests
DLM_CONFLICTS	NUMBER		Number of DLM conflicts
DLM_RELEASES	NUMBER		Number of DLM releases
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

 See Also:["V\\$ROWCACHE"](#)

5.39 DBA_HIST_RSRC_CONSUMER_GROUP

`DBA_HIST_RSRC_CONSUMER_GROUP` displays historical information about Resource Manager consumer groups.

This view contains snapshots of `V$RSRC_CONS_GROUP_HISTORY`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes the <code>DBA_HIST_RSRC_PLAN</code> entry to which these consumer group statistics apply. When the instance is restarted, this value is reset to zero.
CONSUMER_GROUP_ID	NUMBER	NOT NULL	Consumer group object ID (a unique number, consistent across database shutdowns and startups)
CONSUMER_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the consumer group
REQUESTS	NUMBER	NOT NULL	Cumulative number of requests that were executed in the consumer group
CPU_WAIT_TIME	NUMBER	NOT NULL	Cumulative amount of time that sessions waited for CPU because of resource management. This does not include waits due to latch or enqueue contention, I/O waits, and so on.
CPU_WAITS	NUMBER	NOT NULL	Cumulative number of times all sessions in the consumer group had to wait for CPU because of resource management. This does not include waits due to latch or enqueue contention, I/O waits, and so on.
CONSUMED_CPU_TIME	NUMBER	NOT NULL	Cumulative amount of CPU time consumed by all sessions in the consumer group (in milliseconds)
YIELDS	NUMBER	NOT NULL	Cumulative number of times that sessions in the consumer group had to yield CPU to other sessions because of quantum expiration
ACTIVE_SESS_LIMIT_HIT	NUMBER	NOT NULL	Number of times that sessions in the consumer group were queued because the consumer group reached its active session limit
UNDO_LIMIT_HIT	NUMBER	NOT NULL	Number of times that queries in the consumer group were cancelled because the consumer group reached its <code>UNDO_POOL</code> limit
SWITCHES_IN_CPU_TIME	NUMBER	NOT NULL	Number of switches into the consumer group because of the Resource Manager plan's <code>SWITCH_TIME</code> limit
SWITCHES_OUT_CPU_TIME	NUMBER	NOT NULL	Number of switches out of the consumer group because of the Resource Manager plan's <code>SWITCH_TIME</code> limit

Column	Datatype	NULL	Description
SWITCHES_IN_IO_MEGABYTES	NUMBER	NOT NULL	Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_MEGABYTES limit
SWITCHES_OUT_IO_MEGABYTE_S	NUMBER	NOT NULL	Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_MEGABYTES limit
SWITCHES_IN_IO_REQUESTS	NUMBER	NOT NULL	Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_REQS limit
SWITCHES_OUT_IO_REQUESTS	NUMBER	NOT NULL	Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_REQS limit
SWITCHES_IN_IO_LOGICAL	NUMBER		Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_LOGICAL limit
SWITCHES_OUT_IO_LOGICAL	NUMBER		Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_LOGICAL limit
SWITCHES_IN_ELAPSED_TIME	NUMBER		Number of switches into the consumer group because of the Resource Manager plan's SWITCH_ELAPSED_TIME limit
SWITCHES_OUT_ELAPSED_TIME	NUMBER		Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_ELAPSED_TIME limit
PGA_LIMIT_SESSIONS_KILLED	NUMBER		The number of sessions that were killed because their PGA allocation exceeded the PGA limit specified in the Resource Plan's SESSION_PGA_LIMIT directive
SQL_CANCELED	NUMBER	NOT NULL	Number of times that SQL queries running in the consumer group were aborted because they exceeded the Resource Manager plan's SWITCH_TIME limit and CANCEL_SQL was specified as the Resource Manager plan's SWITCH_GROUP
ACTIVE_SESS_KILLED	NUMBER	NOT NULL	Number of times that sessions running in the consumer group were terminated because they exceeded the Resource Manager plan's SWITCH_TIME limit and KILL_SESSION was specified as the Resource Manager plan's SWITCH_GROUP
IDLE_SESS_KILLED	NUMBER	NOT NULL	Number of times that sessions in the consumer group were killed because they were idle for too long (reached MAX_IDLE_TIME)
IDLE_BLKR_SESS_KILLED	NUMBER	NOT NULL	Number of times that sessions in the consumer group were killed because they were idle too long (reached MAX_IDLE_BLOCKER_TIME) and were blocking other sessions
QUEUED_TIME	NUMBER	NOT NULL	Total amount of time that sessions in the consumer group have spent in the QUEUED state because of the active session limit (in milliseconds)
QUEUE_TIME_OUTS	NUMBER	NOT NULL	Number of times that requests from sessions in the consumer group timed out because they were queued for too long (reached QUEUEING_P1)
IO_SERVICE_TIME	NUMBER	NOT NULL	Cumulative I/O wait time (in milliseconds)

Column	Datatype	NULL	Description
IO_SERVICE_WAITS	NUMBER	NOT NULL	Total number of wait requests
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQUESTS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQUESTS	NUMBER	NOT NULL	Number of single block write requests
LARGE_READ_REQUESTS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQUESTS	NUMBER	NOT NULL	Number of multiblock write requests
PQS_QUEUED	NUMBER		Number of times that sessions in the consumer group were queued when trying to run parallel statements
PQ_QUEUED_TIME	NUMBER		Total amount of time that sessions in the consumer group were queued when trying to run parallel statements (in milliseconds)
PQ_QUEUE_TIME_OUTS	NUMBER		Number of times that parallel statements from sessions in the consumer group timed out because their queue time exceeded the Resource Manager plan's PARALLEL_QUEUE_TIMEOUT limit
PQS_COMPLETED	NUMBER		Total number of completed parallel statements in the consumer group
PQ_SERVERS_USED	NUMBER		Total number of parallel servers used by completed parallel statements in the consumer group
PQ_ACTIVE_TIME	NUMBER		Cumulative sum of the parallel active times for all completed parallel statements in the consumer group (in milliseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.40 DBA_HIST_RSRC_METRIC

DBA_HIST_RSRC_METRIC displays information about historical Resource Manager metrics for the past hour.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	TIMESTAMP (3)	NOT NULL	Begin time of the interval
END_TIME	TIMESTAMP (3)	NOT NULL	End time of the interval
INTSIZE_CSEC	NUMBER	NOT NULL	Interval size (in hundredths of a second)
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes the V\$RSRC_PLAN_HISTORY entry to which these consumer group statistics apply. When the instance is restarted, this value is reset to zero.
CONSUMER_GROUP_ID	NUMBER	NOT NULL	Consumer group object ID (a unique number, consistent across database shutdowns and startups)
CPU_CONSUMED_TIME	NUMBER	NOT NULL	Cumulative amount of CPU time consumed by all sessions in the consumer group, in milliseconds
CPU_WAIT_TIME	NUMBER	NOT NULL	Cumulative amount of time that sessions waited for CPU because of resource management, in milliseconds. This does not include waits due to latch or enqueue contention, I/O waits, and so on. When CPU resources are not being actively managed, this value is set to zero.
AVG_RUNNING_SESSIONS	NUMBER		Average number of sessions in the consumer group that are currently running
AVG_WAITING_SESSIONS	NUMBER		Average number of sessions in the consumer group that are waiting for CPU due to resource management. When CPU resources are not being actively managed, this value is set to zero.
AVG_CPU_UTILIZATION	NUMBER		Average percentage of CPU consumed by the consumer group, with respect to the total number of CPUs in the system
IO_REQUESTS	NUMBER	NOT NULL	I/O requests
IO_MEGABYTES	NUMBER	NOT NULL	I/O megabytes
IOPS	NUMBER		I/O operations per second during the previous minute for this PDB
IOMBPS	NUMBER		I/O megabytes per second during the previous minute for this PDB
AVG_ACTIVE_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were running during the 1-minute metric window
AVG_QUEUED_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were queued during the 1-minute metric window
AVG_ACTIVE_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were actively running as part of a parallel statement during the 1-minute metric window
AVG_QUEUED_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were requested by queued parallel statements during the 1-minute metric window
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.41 DBA_HIST_RSRC_PDB_METRIC

DBA_HIST_RSRC_PDB_METRIC displays information about historical Resource Manager metrics for the past hour by PDB.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	TIMESTAMP (3)	NOT NULL	Begin time of the interval
END_TIME	TIMESTAMP (3)	NOT NULL	End time of the interval
INTSIZE_CSEC	NUMBER	NOT NULL	Interval size (in hundredths of a second)
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes the V\$RSRC_PLAN_HISTORY entry to which these PDB statistics apply. When the instance is restarted, this value is reset to zero.
CPU_CONSUMED_TIME	NUMBER	NOT NULL	Cumulative amount of CPU time consumed by all sessions in the PDB, in milliseconds
CPU_WAIT_TIME	NUMBER	NOT NULL	Cumulative amount of time that sessions waited for CPU because of resource management, in milliseconds. This does not include waits due to latch or enqueue contention, I/O waits, and so on. When CPU resources are not being actively managed, this value is set to zero.
AVG_RUNNING_SESSIONS	NUMBER		Average number of sessions in the PDB that are currently running
AVG_WAITING_SESSIONS	NUMBER		Average number of sessions in the PDB that are waiting for CPU due to resource management. When CPU resources are not being actively managed, this value is set to zero.
AVG_CPU_UTILIZATION	NUMBER		Average percentage of CPU consumed by the PDB, with respect to the total number of CPUs in the system
IOPS	NUMBER		I/O operations per second during the previous minute for this PDB
IOMBPS	NUMBER		I/O megabytes per second during the previous minute for this PDB

Column	Datatype	NULL	Description
IOPS_THROTTLE_EXEMPT	NUMBER		<p>Indicates how much of the I/O per second in the current PDB was exempted from throttling.</p> <p>For example, if the value in the <code>IOPS</code> column is 20 I/Os and the value in the <code>IOPS_THROTTLE_EXEMPT</code> column is 5 I/Os, then 5 I/Os of the 20 I/Os in that second were exempted from throttling.</p> <p>I/O throttling is defined by the <code>MAX_IOPS</code> database initialization parameter.</p>
IOMBPS_THROTTLE_EXEMPT	NUMBER		<p>Indicates how many megabytes of I/O executed per second in the current PDB were exempted from throttling.</p> <p>For example, if the value in the <code>IOMBPS</code> column is 200 megabytes and the value in the <code>IOMBPS_THROTTLE_EXEMPT</code> column is 50 megabytes, then 50 megabytes of the 200 megabytes were exempt from throttling.</p> <p>I/O megabytes per second throttling is defined by the <code>MAX_MBPS</code> database initialization parameter.</p>
AVG_IO_THROTTLE	NUMBER		Average throttle time per I/O operation in milliseconds during the previous minute for this PDB
AVG_ACTIVE_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were running during the 1-minute metric window
AVG_QUEUED_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were queued during the 1-minute metric window
AVG_ACTIVE_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were actively running as part of a parallel statement during the 1-minute metric window
AVG_QUEUED_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were requested by queued parallel statements during the 1-minute metric window
SGA_BYTES	NUMBER	NOT NULL	The current SGA usage for this PDB in bytes
BUFFER_CACHE_BYTES	NUMBER	NOT NULL	The current usage of the buffer cache by this PDB in bytes
SHARED_POOL_BYTES	NUMBER	NOT NULL	The current usage of the shared pool by this PDB in bytes
PGA_BYTES	NUMBER	NOT NULL	The current PGA usage for this PDB in bytes
PLAN_ID	NUMBER	NOT NULL	Resource Manager plan identifier
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that <code>CON_DBID</code> identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data
MAX_AVG_RUNNING_SESSIONS	NUMBER	NOT NULL	Maximum value of <code>AVG_RUNNING_SESSIONS</code> during the last hour

 Note:

- "[MAX_IOPS](#)"
- "[MAX_MBPS](#)"

5.42 DBA_HIST_RSRC_PLAN

`DBA_HIST_RSRC_PLAN` displays historical information about resource plans.

This view contains snapshots of `V$RSRC_PLAN_HISTORY`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes a row. When the instance is restarted, this value is reset to zero.
START_TIME	DATE	NOT NULL	Time that the resource plan was enabled
END_TIME	DATE		Time that the resource plan was disabled; NULL if the row contains the current resource plan information
PLAN_ID	NUMBER	NOT NULL	Resource plan ID; NULL if the Resource Manager was disabled
PLAN_NAME	VARCHAR2(128)	NOT NULL	Resource plan name; NULL if the Resource Manager was disabled
CPU_MANAGED	VARCHAR2(4)	NOT NULL	Indicates whether the resource plan has parameters that specify a policy for how the Resource Manager should schedule sessions to manage CPU usage (<code>ON</code>) or whether Resource Manager is not managing CPU usage (<code>OFF</code>)
PARALLEL_EXECUTION_MANAGED	VARCHAR2(4)		State of parallel statement queuing: <ul style="list-style-type: none"> • OFF - Parallel statement queuing is disabled • STARTUP - Parallel statement queuing is enabled. This is a temporary state that can occur when an Oracle RAC database is undergoing configuration changes • FIFO - Parallel statement queuing is enabled. All parallel statements are managed in a single Oracle RAC FIFO queue • FULL - Parallel statement queuing is enabled. All parallel statements are managed in per-consumer group queues according to the current resource plan. This state is used when a resource plan that contains resource allocation directives (<code>MGMT_P*</code>) is enabled.
INSTANCE_CAGING	VARCHAR2(4)		Indicates whether instance caging is enabled (<code>ON</code>) or disabled (<code>OFF</code>). Instance caging is enabled if the <code>CPU_COUNT</code> initialization parameter is explicitly modified to a value other than 0 and Resource Manager is enabled.

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$RSRC_PLAN_HISTORY"](#)

5.43 DBA_HIST_RULE_SET

DBA_HIST_RULE_SET displays historical information about rule set statistics.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
OWNER	VARCHAR2 (128)	NOT NULL	Owner of the rule set
NAME	VARCHAR2 (128)	NOT NULL	Name of the rule set
STARTUP_TIME	DATE	NOT NULL	Startup time of the instance
CPU_TIME	NUMBER		Total CPU time (in hundredths of a second) spent in evaluation of the rule set
ELAPSED_TIME	NUMBER		Total elapsed time (in hundredths of a second) spent in evaluation of the rule set
EVALUATIONS	NUMBER		Number of evaluations on the rule set
SQL_FREE_EVALUATIONS	NUMBER		Number of evaluations on the rule set which did not internally issue SQL to evaluate rules
SQL_EXECUTIONS	NUMBER		Total number of SQL statements executed during evaluation of the rule set
RELOADS	NUMBER		Number of times the rule set object was reloaded in shared memory
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.44 DBA_HIST_SEG_STAT

DBA_HIST_SEG_STAT displays historical information about segment-level statistics.

This view captures the top segments based on a set of criteria and captures information from V\$SEGSTAT. The total value is the value of the statistics since instance startup. The delta value is the value of the statistics from the BEGIN_INTERVAL_TIME to the END_INTERVAL_TIME in the DBA_HIST_SNAPSHOT view.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TS#	NUMBER	NOT NULL	Tablespace number
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
LOGICAL_READS_TOTAL	NUMBER		Cumulative value for logical reads
LOGICAL_READS_DELTA	NUMBER		Delta value for logical reads
BUFFER_BUSY_WAITS_TOTAL	NUMBER		Cumulative value for buffer busy waits
BUFFER_BUSY_WAITS_DELTA	NUMBER		Delta value for buffer busy waits
DB_BLOCK_CHANGES_TOTAL	NUMBER		Cumulative value for db block changes (in blocks)
DB_BLOCK_CHANGES_DELTA	NUMBER		Delta value for db block changes (in blocks)
PHYSICAL_READS_TOTAL	NUMBER		Cumulative value for physical reads (in blocks)
PHYSICAL_READS_DELTA	NUMBER		Delta value for physical reads (in blocks)
PHYSICAL_WRITES_TOTAL	NUMBER		Cumulative value for physical writes (in blocks)
PHYSICAL_WRITES_DELTA	NUMBER		Delta value for physical writes (in blocks)
PHYSICAL_READS_DIRECT_TO_TAL	NUMBER		Cumulative value for physical reads direct (in blocks)
PHYSICAL_READS_DIRECT_DELTA	NUMBER		Delta value for physical reads direct (in blocks)
PHYSICAL_WRITES_DIRECT_TOTAL	NUMBER		Cumulative value for physical writes direct (in blocks)
PHYSICAL_WRITES_DIRECT_DELTA	NUMBER		Delta value for physical writes direct (in blocks)
ITL_WAITS_TOTAL	NUMBER		Cumulative value for ITL waits
ITL_WAITS_DELTA	NUMBER		Delta value for ITL waits

Column	Datatype	NULL	Description
ROW_LOCK_WAITS_TOTAL	NUMBER		Cumulative value for row lock waits
ROW_LOCK_WAITS_DELTA	NUMBER		Delta value for row lock waits
GC_CR_BLOCKS_SERVED_TOTALL	NUMBER		Cumulative value for global cache CR blocks served
GC_CR_BLOCKS_SERVED_DELTAA	NUMBER		Delta value for global cache CR blocks served
GC_CU_BLOCKS_SERVED_TOTALL	NUMBER		Cumulative value for global cache current blocks served
GC_CU_BLOCKS_SERVED_DELTAA	NUMBER		Delta value for global cache current blocks served
GC_BUFFER_BUSY_TOTAL	NUMBER		Cumulative value for global cache buffer busy
GC_BUFFER_BUSY_DELTA	NUMBER		Delta value for global cache buffer busy
GC_CR_BLOCKS_RECEIVED_TOATAL	NUMBER		Cumulative value for global cache CR blocks received
GC_CR_BLOCKS_RECEIVED_DELTA	NUMBER		Delta value for global cache CR blocks received
GC_CU_BLOCKS_RECEIVED_TOATAL	NUMBER		Cumulative value for global cache current blocks received
GC_CU_BLOCKS_RECEIVED_DELTA	NUMBER		Delta value for global cache current blocks received
SPACE_USED_TOTAL	NUMBER		Number of bytes used by user data
SPACE_USED_DELTA	NUMBER		Delta value for space used by user data (in bytes). A negative value indicates the number of bytes deleted in the segment.
SPACE_ALLOCATED_TOTAL	NUMBER		The number of bytes that are allocated
SPACE_ALLOCATED_DELTA	NUMBER		Delta value for the space allocated (in bytes). A negative value indicates the number of bytes deallocated to the tablespace.
TABLE_SCANS_TOTAL	NUMBER		Cumulative value for table scans
TABLE_SCANS_DELTA	NUMBER		Delta value for table scans
CHAIN_ROW_EXCESS_TOTAL	NUMBER		Cumulative value of number of chained row pieces that can be eliminated by table reorganization
CHAIN_ROW_EXCESS_DELTA	NUMBER		Delta value of number of chained row pieces that can be eliminated by table reorganization
PHYSICAL_READ_REQUESTS_TOTAL	NUMBER		Cumulative value of number of physical read I/O requests issued for the monitored segment
PHYSICAL_READ_REQUESTS_DELTA	NUMBER		Delta value of number of physical read I/O requests issued for the monitored segment
PHYSICAL_WRITE_REQUESTS_TOTAL	NUMBER		Cumulative value of number of physical write I/O requests issued for the monitored segment
PHYSICAL_WRITE_REQUESTS_DELTA	NUMBER		Delta value of number of physical write I/O requests issued for the monitored segment
OPTIMIZED_PHYSICAL_READS_TOTAL	NUMBER		Cumulative value of number of physical reads from Database Smart Flash Cache for the monitored segment
OPTIMIZED_PHYSICAL_READS_DELTA	NUMBER		Delta value of number of physical reads from Database Smart Flash Cache for the monitored segment

Column	Datatype	NULL	Description
IM_SCANS_TOTAL	NUMBER		Count of segment statistics
IM_SCANS_DELTA	NUMBER		Delta values for in-memory scans
POPULATE_CUS_TOTAL	NUMBER		Count of compression units (CUs) populated per segment
POPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) populate operations
REPOPULATE_CUS_TOTAL	NUMBER		Count of CUs repopulated per segment
REPOPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) repopulate operations
IM_DB_BLOCK_CHANGES_TOTAL	NUMBER		The total number of changes that were part of an update or delete operation that were made to segment blocks
IM_DB_BLOCK_CHANGES_DELTA	NUMBER		Delta value for database block changes
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.45 DBA_HIST_SEG_STAT_OBJ

DBA_HIST_SEG_STAT_OBJ displays all the names of the segments captured in the workload repository.

This view is used with the DBA_HIST_SEG_STAT view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
TS#	NUMBER	NOT NULL	Tablespace number
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object

Column	Datatype	NULL	Description
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example: partition)
OBJECT_TYPE	VARCHAR2(18)		Type of the object for example: table, tablespace)
TABLESPACE_NAME	VARCHAR2(30)		Tablespace Name for the object
PARTITION_TYPE	VARCHAR2(8)		Partition Type, if relevant
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.46 DBA_HIST_SERVICE_NAME

DBA_HIST_SERVICE_NAME displays the names of the Services tracked by the Workload Repository.

This view contains information for V\$SERVICES.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
SERVICE_NAME_HASH	NUMBER	NOT NULL	Hash of the service name
SERVICE_NAME	VARCHAR2(64)	NOT NULL	Name of the service
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none">• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.• 1: This value is used for rows containing data that pertain to only the root• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

 See Also:["V\\$SERVICES"](#)

5.47 DBA_HIST_SERVICE_STAT

`DBA_HIST_SERVICE_STAT` displays the history of important service statistics tracked by the Workload Repository.

The call rate statistics in this view can be used for making run-time routing decisions, for tracking service levels, and for per-instance diagnostics per call rate.

The elapsed timing for each call provides a relative value across instances for how well a node is processing SQL calls issued under a service name. When aggregation is enabled for the service name, this view provides historical data on the timing and work done for calls issued for the whole service. This view contains information from `V$SERVICE_STATS`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SERVICE_NAME_HASH	NUMBER	NOT NULL	Hash of the service name
SERVICE_NAME	VARCHAR2(64)	NOT NULL	Name of the service
STAT_ID	NUMBER	NOT NULL	Statistic identifier
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
VALUE	NUMBER		Value of the statistic
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.48 DBA_HIST_SERVICE_WAIT_CLASS

`DBA_HIST_SERVICE_WAIT_CLASS` displays the history of wait class information for services as tracked by the Workload Repository.

This view contains information from `V$SERVICE_WAIT_CLASS`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SERVICE_NAME_HASH	NUMBER	NOT NULL	Hash of the service name
SERVICE_NAME	VARCHAR2 (64)	NOT NULL	Name of the service
WAIT_CLASS_ID	NUMBER	NOT NULL	Identifier for the class of the wait event
WAIT_CLASS	VARCHAR2 (64)		Name for the class of the wait event
TOTAL_WAITS	NUMBER		Total number of waits for this event
TIME_WAITED	NUMBER		Total amount of time waited for this event (in hundredths of a second)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data

5.49 DBA_HIST_SESS_SGA_STATS

DBA_HIST_SESS_SGA_STATS shows usage statistics for high utilization Oracle GoldenGate and XStream sessions.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
OBJECT_NAME	VARCHAR2 (128)	NOT NULL	Object name
SESSION_TYPE	VARCHAR2 (64)	NOT NULL	Type of session
SESSION_MODULE	VARCHAR2 (64)	NOT NULL	Session module. Valid values: <ul style="list-style-type: none"> • XStream • GoldenGate
SGA_USED	NUMBER		The total amount of shared memory (in bytes) currently used by the session out of the amount allocated (SGA_ALLOCATED)
SGA_ALLOCATED	NUMBER		The total amount of shared memory (in bytes) allocated from the pool for the session

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.50 DBA_HIST_SESS_TIME_STATS

DBA_HIST_SESS_TIME_STATS displays information about CPU and I/O time for interesting Oracle GoldenGate and XStream sessions.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SESSION_TYPE	VARCHAR2(64)	NOT NULL	Type of session
MIN_LOGON_TIME	DATE		Minimum logon time
SUM_CPU_TIME	NUMBER		Total CPU time
SUM_SYS_IO_WAIT	NUMBER		Total system I/O wait time
SUM_USER_IO_WAIT	NUMBER		Total user I/O wait time
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
SESSION_MODULE	VARCHAR2(64)	NOT NULL	<p>Session module. Valid values:</p> <ul style="list-style-type: none"> • XStream • GoldenGate
CON_ID	NUMBER		<p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • n: Where n is the applicable container ID for the rows containing data

5.51 DBA_HIST_SESSMETRIC_HISTORY

DBA_HIST_SESSMETRIC_HISTORY displays the history of several important session metrics.

 **Note:**

This view is populated only if a session metric exceeds a server metric threshold that was configured using the DBMS_SERVER_ALERT package.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	DATE	NOT NULL	Begin time of the interval
END_TIME	DATE	NOT NULL	End time of the interval
SESSID	NUMBER	NOT NULL	Session ID
SERIAL#	NUMBER	NOT NULL	Session serial number
INTSIZE	NUMBER	NOT NULL	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	NOT NULL	Group ID
METRIC_ID	NUMBER	NOT NULL	Metric ID
METRIC_NAME	VARCHAR2(64)	NOT NULL	Metric name
VALUE	NUMBER	NOT NULL	Metric Value
METRIC_UNIT	VARCHAR2(64)	NOT NULL	Unit of measurement
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
